Before Combat Ajekrith enjoys perching among carved stone gargoyles and other city decorations, blending in and observing all who pass by. He sometimes waits above an alley or entrance to a spooky church, relying on stealth to give him an advantage against an unsuspecting victim.

During Combat Ajekrith prefers to ambush lone prey, silently tracking his target from above. When a choice moment presents itself, he swoops down with a flyby sneak attack. Once a victim is bleeding, Ajekrith pulls back and follows his prey from a distance until it collapses from blood loss. Against foes who fight back, Ajekrith uses Flyby Attack to stay out of range of his opponents' weapons. He only lands to make full attacks if he thinks he can quickly put an opponent out of commission.

Morale Ajekrith flees if reduced to below 20 hit points, to nurse his wounds and plot his revenge.

The Ecology of the Gas Spore

Not a beholder, but bad nonetheless

by Ed Greenwood

From the journals of Shulheddin, Master Thief, founder of the "Soft Hands" Brotherhood:

"... Kedulkin, who was always the eager one, claimed the right to descend first, since it was he who had discovered the shaft. If it was indeed a way into the Lost City, there would soon be treasure enough for us all, and so we agreed. Taking a deep breath of fresh air, Kedulkin drew one of his throwing blades and a dropline, and vanished through the opening without fanfare. The fighting-men crowded close around, trying to peer down into the gloom, but Mairclyn and I were too cynical to stay that close, and too old to be taken by surprise from behind in such lawless country. We were eyeing the tumbled rocks all about with ready weapons when there came the muffled thud of an explosion beneath our feet, followed by startled cries from the warriors. Kedulkin made no sound as his body, tangled with the rope, was flung high into the air like a child's doll, coming down to sprawl torn and lifeless on a high rock. Mairclyn and I were well away on the next rise when the fighters began stumbling about in a spreading yellow cloud of spores, coughing and crying out. Some were blinded, some shivered uncontrollably, and all seemed dazed and witless. We decided to leave that place ere a breeze came up to carry the spores our way..."

From the *Bestiary of Creatures Strange and Wonderful*, a tome of unknown authorship presently in the library of Piergeiron's Palace, Waterdeep:

"One of the deadliest deceivers in nature is the *aniatha*, or gas spore, a creature which precisely resembles the dreaded beholder. If an *aniatha* is struck and pierced, it explodes violently, injuring all within seven paces or so. Here follows all that is presently known of the true nature of this odd and hazardous creature.

"An *aniatha* is a large, mobile, fungoid plant of unusual sophistication. It derives energy from visible light, particularly sunlight, and feeds on other plants to gain chlorophyll (necessary for this process) and cellulose (which it uses for structural growth and repair). In this, it is no different from the luminescent "crawling night-moss" and other ambulatory fungus growths found in the forests and thickets, and it is just as unintelligent. But an *aniatha* has the unusual natural ability of **levitation** and floats slowly about, turning so as to absorb the maximum amount of light in the vicinity — sunlight, if above ground, or torchlight or phosphorescence if in subterranean regions. Areas of **continual light** radiance often serve as underground lairs for gas spores. The false eye

of an aniatha (so-called because of its external resemblance to the central visual organ of a beholder, whose magical powers the aniatha does not share) is indeed an eye, which is sensitive to all light and enables the creature to orient itself so as to gain the maximum possible available light, identify food, and navigate through its surroundings.

"The gas spore also has 10 tentacle-like arms which resemble a beholder's eye-stalks. These arms, sometimes called rhizome growths, are actually the feeding organs of the gas spore. With them, an aniatha sucks molds and lichens from rock walls, leaves from treetops and aerial plants, and duckweed or pond scum from the surface of pools of standing water. The arms also help the aniatha "walk" delicately along rock walls, tree trunks, and the like, keeping the central body of the gas spore from injury against such obstructions. Under certain conditions, the arms also discharge rhizomes. Gas spores often group together where food and light are plentiful, but they have no apparent intercommunication, and never attack or feed on each other.

"The danger to adventurers lies in the aniatha's asexual means of reproduction. The interior of a gas spore is a hollow cavity filled with gas, in which a cloud of rhizomes is suspended (in whirling motion), nourished, and protected. These reproductive spores are produced on the interior surface of the gas spore and released into the gas storage bladder when fully developed. Here, they whirl at a constant temperature and pressure, until a tentacle of the gas spore touches the flesh of a warm-blooded mammal of gnomish or greater size (for such are the aniatha's minimum needs for a reproductive host creature). Upon such contact, the flexible tentacle exudes moisture to create a temporary airtight suction-seal with the flesh of the mammal, and a jet of rhizomes is expelled through the hollow tentacle, where they stick to the hapless victim's skin, thus infesting the mammal. The tentacle constricts to pinch itself shut at its base (within the spherical body). The creature then withdraws from the mammal. Adventurers report that severing tentacles does not cause the central body to leak or explode.

"Warm-blooded creatures of sufficient size are located by a gas spore's infravision. The aniatha will pursue such a prospective host until the creature is contacted or until pursuit is ended by the disappearance of the creature, by a barrier, or by the availability of other food. (Being unintelligent, an aniatha will break off pursuit immediately to ingest plant material.)

"Unless the rhizomes are destroyed by magical means, an infested host creature dies, sprouting 2-8 gas spores from its body. In the last few hours before their emergence, the growing spores eat away and absorb surrounding bodily fluids and

tissue material, leaving only the empty husk of the host.

"If the tough, fibrous epidermis of a gas spore is ruptured and its gaseous interior contents are mixed with air, it will explode, as mentioned earlier. Accidental contact with branches, rock, flesh, and other obstructions rarely splits an aniatha's skin — it must be pierced by a thorn, spike of rock, or the cutting edge of a weapon or similar object in order to rupture. It is the violent reaction of the gas spore's internal gas with air — "a mere accident of nature," as the eminent naturalist, Gessage of Neverwinter, puts it — that makes the gas spore infamous and dangerous. It is thought that the tiny jet of gas exposed to the air when rhizomes are ejected at an intended host does not explode because it is chemically altered by cells within the tentacle, so as not to react with air. There is certainly no truth to the belief that a gas spore must die (that is, explode) to reproduce.

"Any aniatha that lacks sufficient food and energy to remain fully active will hibernate, floating motionless or drifting aimlessly in air currents with its bodily processes halted, eye closed, and tentacles curled in upon itself. Such suspended hibernation can last for centuries, until nearby light, heat, noise, or movement revives the gas spore. Truly, it is a curiosity of our world, if not a sentient creature proper in the sense that others in this bestiary are."

Notes

1. The explosion of a gas spore does 6-36 hp damage to all beings within a 20' radius (half damage if a saving throw vs. wands is made). Warm-blooded mammals within this range must also save vs. poison at +3 to avoid being infested with rhizomes (see note 5 for effects). Any creature in direct contact with an exploding aniatha (i.e., touching the aniatha physically or with a held weapon) takes full blast damage with no saving throw, but saves normally versus rhizome infestation due to the force of the blast, which tends to drive most rhizomes past the victim. This saving throw versus rhizomes represents the possibility of being infested at any time while a character is within the spreading, dissipating spore cloud — creatures remaining in the vicinity need not roll for a saving throw each round.

2. A gas spore's levitation is a natural, spell-like ability, and is *not*, as is popularly believed, linked to buoyant internal gases. Instead, this ability is the result of an independent power which is not fully understood at present. In this way, the gas spore's *levitation* is akin to that of the beholder, and it is perhaps magical in nature. Such *levitation* is an ability held only by the living plant and not by dead or severed portions thereof. It enables the aniatha to move 3" per round in any direction (horizontal, vertical, lateral, and at

any vector or angle), and is a strong force, capable of resisting normal breezes (although a *gust of wind* can often hold one at bay), and is thus unaffected by *dispel magic* or *reverse gravity*. A *push* or *repulsion* spell is effective in fending off a spore in most situations.

3. A gas spore's eye has 12" infravision and is sensitive to all forms of light and heat energy. Presumably, it can also detect vibratory and pressure-fluctuation disturbances, for a gas spore can detect noise and movement within 6" (although how it does this is unknown). It should be noted that a gas spore's eye cannot be blinded or dazzled by sudden or intense bursts of light, such as those produced by explosions and some creature and spell effects; these are merely absorbed by the gas spore.

4. A *cure disease* spell cast upon any rhizome-infested creature within 24 hours automatically destroys all the rhizomes. Note that from 20 hours of infestation until death (when the rhizomes hatch), a host body is being eaten away from within (see below).

5. Rhizome-infested creatures are *feeble-minded* within two rounds of initial infestation and cannot grasp objects, perform tasks, or even move without aid. This can only be cured by the application of *cure disease* as noted above. An affected person could stand, for example, but could not fight, defend himself, climb stairs, walk, or even push open a door unaided. If the character fell, he would lie unmoving until helped up. After 4-7 turns (3 + 1d4), the victim slips into a coma and remains therein until cured or killed by the hatching spores, regardless of external stimuli. (Application of a *temporal stasis* spell affects both victim and rhizomes normally, effectively freezing their activity.) After 18 hours of infestation, a victim ravaged by the spreading rhizomes must make a successful system-shock survival roll to avoid death. At 20 hours of infestation (and every hour thereafter), a host victim loses 1-4 hp. These losses accumulate until death occurs, whereupon 2-8 spores erupt from the corpse. These effects occur unless curative spells are used to halt the growth of the proto-aniathas. A *cure disease* will destroy the rhizomes at this point, but will not cure any internal damage. By attaching themselves to such hosts, the proto-aniathas provide themselves with protein substances not found in plant life — substances which are essential to their growth and survival.

Expelled, fledgling spores hatched from a host are of small size (4' diameter), do only 2-16 hp damage if ruptured, and are otherwise identical to a mature spore. They grow to full size at whatever rate available food and light energy permit (usually within the first one to five years of life).

The Ecology of the Gelatinous Cube

by Ed Greenwood

The adventurer Haptooth had spent many years exploring the vast, labyrinthine, subterranean ways of Undermountain, Waterdeep. Many and strange were the tales he shared over sour brintmash wine at The Sign of the Staff or before the Council of Mages upon the Feast of the Moon, at winter's onset.

At the last Feast, Phantas, a member of that Council, pointedly challenged Haptooth to do more than entertain by speaking of curious observations and dramatic events. Rather, he demanded that Haptooth inform that prestigious group by employing the adventurer's access to the unusual to increase the common knowledge of what is not common at all (as Phantas so eloquently put it). None could fail to note the sharp edge of the verbal dagger he thrust at his peer, though it was but one of a thousand such attacks he had made on Haptooth over the years.

For his part, Haptooth seemed chastened

*Unseeing,
unthinking,
unstoppable*

by the words of his rival and, indeed, came to the next yearly Feast with words of note, for he spoke of inquiries into the nature of that curious creature, the athcoid — more commonly known as the gelatinous cube.

Controversy over the athcoid has long raged among the wise — quite heatedly so in the corridors of the Hall of Beast-Tamers and in the offices of the Imperial Zoo of Amn, the keepers of which have managed to keep a cube alive in captivity for some 12 winters. Over and over, the questions are asked: How intelligent are the cubes? How amorphous are their forms? Of what is their digestive fluid composed, and can it be used as a weapon or in alchemy (or, for that matter, in medicine or in the handling of beasts)? How do athcoids mate — indeed, *do* athcoids mate? Haptooth provided all at the Council of Mages with answers.

"Even now," he said, "in the lightless ways beneath us, these great creatures glide noiselessly along, devoid of malicious intent — indeed, devoid of an conscious-

ness at all — but fully a menace to all who encounter them. Even children know that these nearly transparent, gelatinous monsters cannot digest metal or stone, but feed on plants and beasts of all sorts by paralyzing those encountered, engulfing them, and absorbing nutrients from such prey by means of corrosive digestive fluids.

"Athcoids have no thoughts as we know them, but rather respond automatically — and identically, in all cases — to certain stimuli. They cease to advance when they encounter a cold surface or object, then probe forward to seek a way past or around it. Athcoids are attracted to vibrations or warmth, but seem devoid of hearing. When flowing over or around objects, they seem quite fluid and mutable, but return always to a rectangular or rhomboidal form when their surroundings permit.

"An athcoid does not appear to communicate with any creature, nor can it be controlled, save by use of the stimuli I have already mentioned. When two athcoids meet — and this I saw happen — they merge to become one, of greater size and of an apparently stable nature. This monstrous combination has twice the innate hardness of either of its component creatures, though it eventually divides into two normal athcoids, each exactly like the original component creatures, which go their separate ways.

"More I can tell, gained from the darkest researches. Sadly, athcoids are ignorant of sex." Mutterings and chuckles from the Council followed the comment. "Rather, they reproduce by growing to sufficient size, then split into two slightly smaller creatures. These creatures then grow to a stage which passes for adulthood within a short time.

"As you all must know, athcoids anesthetize prey by means of a gummy secretion which is absorbed into the bloodstream of the prey through its skin. An oral antidote is now available to counteract this effect." Haptooth held up a metal flask, then returned it to its place beside another such flask on the lectern before him. "This antidote is of my own devise. It's expensive, but then so are the consequences if you lack it."

Haptooth paused, appearing to reflect upon some matter. "As to their digestive fluids — these are produced and held in movable, elastic cavities or bubbles within an athcoid's body. When prey is engulfed by a cube, one or more of these mobile bubbles are shifted into contact with the prey. Such fluid has no effect on metal of any sort, and, as we have all heard, metal objects are held for a time within the creature, then expelled through its skin; but the fluid has devastating effects on flesh and cellulose."

So saying, Haptooth undid his sash and pulled his robe open. The crowd mumbled grunts and oaths of amazement. Haptooth's ribs were laid bare in an ivory lattice on one flank. All about this gaping

hole, his flesh was gnarled and twisted like half-melted wax.

"I recently fought my way through a cube, when trapped in a dead-end passage, and this was the result," he said simply. He continued to hold his robe open, turning slowly to allow all in the Hall to see his injury. Then, dropping his arms, he went back to his lectern and took up the two flasks, pocketing the antidote. As he undid the cap on the other, he slowly walked toward the audience, in the direction of Phantas. "Dearly, I paid for my labors, but they were well rewarded. I captured a sample of the digestive fluid," he said in a loud voice, whereupon he drenched the astonished councillor with its contents. "Now, the eminent alchemist Phantas can in his turn increase the common knowledge of what is not common at all."

He left then, *teleporting* with a last fiendish grin, as Phantas's scream echoed loudly through the hall.

Notes

1. Gelatinous cubes may flow through openings as small as 1' across. They sense all living, moving beings within 120' from the vibrations and heat given off by such creatures, and actively pursue such prey.

2. Being so totally mindless, a gelatinous cube should be immune to all will-force and mind-affecting magical powers — particularly enchantment/charm spells and mind-reading talents. Charm *monster* thus has no effect upon them.

3. When two cubes meet and merge, the resulting "double cube" attacks as an 8-HD monster with a total number of hit points equal to the total of the two merged cubes. This combination creature retains a size of 10' x 10' x 20', the longest axis being pointed in its direction of travel like a thick-bodied (but square) worm. Otherwise, it is like a normal cube in all respects. Division occurs either immediately upon contact with a third cube or after a period of 2-8 days. Normal-sized cubes divide after a period of six years. Each of the two resulting cubes has 3 HD, half the number of hit points the "parent" cube originally had, and a size of slightly under 8' x 8' x 8'. These "little" cubes grow to maturity in three months. Technically speaking, the gelatinous cube is an immortal organism, since (unless destroyed by adventurers, starvation, or disaster) a cube never dies.

4. Cubes may move about underwater with ease, though the contact poison which paralyzes opponents is much diluted. Saving throws against this effect are made at +6 in this environment.

5. If Haptooth's antidote against a cube's *paralysis* is made available, it removes the *paralysis* within 1-4 rounds after being swallowed (an automatic reflex not stopped by the paralysis). However, the potion has no effect on any other form of *paralysis*, such as that from ghouls or carrion crawlers. The antidote is not magical in nature.

Ω

Gelatinous Cube

"We thought it was a ghost at first, some armored spectre slain long ago who still haunted the halls of his death. Brandeis, our cleric, stepped forward to banish it back from where it came. He froze in mid-prayer, then let loose a blood-curdling scream from paralyzed lips as the thing engulfed him. 'Twasn't a ghost at all, you see, but a vast cube of quivering jelly that filled the corridor from floor to ceiling. We fled then, and when we later returned, all we found was his silver holy symbol, gleaming wetly and etched by acid. Nothing else remained of poor Brandeis."

—"Scar" Helgask, retired adventurer

Dungeons are filled with a variety of subterranean slimes and oozes, some harmless, others—such as the puddle-like gray ooze, ameoboid ochre jelly, and much-feared black pudding—exceedingly dangerous. But perhaps no ooze is stranger than the gelatinous cube. Filling entire corridors with their surprisingly geometric shapes, gelatinous cubes scour their lairs clean of all organic debris, whether offal, carrion, or living creatures. Even inorganic objects are picked up in the cleansing sweeps of a gelatinous cube, forming a treasure trove of undigested riches, the sole remains of its devoured victims.

OVERVIEW

Gelatinous cubes are mindless scavengers that live only to eat, wandering aimlessly through caverns and underground tunnels, engulfing anything in their paths. They produce powerful digestive acids to break down organic materials. Gelatinous cube acid is also a paralyzing anesthetic, but different varieties have their own unique acidic secretions, some even capable of dissolving inorganic materials like metal.

While other oozes are known to climb, and can be found lurking in dark alcoves preparing to drop down on unsuspecting explorers, gelatinous cubes are firmly land-bound. Their mass and shape, and their slippery mucus coating, prevent them from climbing walls or clinging to ceilings. They can, however, move up and down stairs with no trouble, provided such impediments are less than half the height of the cube. While they can compress themselves to fit into narrow or low-ceilinged corridors, gelatinous cubes cannot fit into spaces smaller than half their width. Because gelatinous cubes breathe (a cube's entire body acts as a rudimentary lung), they are not normally found in aquatic environments. Shallow pools up to 10 feet deep provide no obstacle to gelatinous cubes, however, as long as at least some parts of their bodies protrude above the surface to allow breathing.

Unlike their amorphous brethren, gelatinous cubes have a defined shape; they are usually found inhabiting worked dungeons and mines rather than natural caves. Additionally, they are immune to electricity and nearly transparent. Experienced adventurers learn to watch for a strange shimmering in the air, the reflection of light off a cube's glistening sides, or faint slime tracks on the floor and walls—all telltale signs of a gelatinous cube's presence in a dungeon.

ECOLOGY

A typical gelatinous cube is 10 feet on a side and weighs over 7 tons. They grow to fit their surroundings, however, so a cube inhabiting a giant-built dungeon can reach sizes of 20 or even 30 feet to a side with enough food. Unlike most other large creatures, gelatinous cubes are single-celled organisms grown to monstrous size. The viscid interior of the ooze's body is surrounded by a thin, permeable layer called the cytoskeleton, which protects the ooze, enables it to move, and maintains its cubic shape. The cytoskeleton is able to repair itself at a remarkable rate, preventing its semifluid interior from gushing out when the creature is wounded. Like other oozes, a gelatinous cube has no eyes or other dedicated sensors. Instead, its entire body acts as a primitive sensory organ, detecting the scent and vibrations of nearby food sources, to the extent that even *invisibility* is no defense against it.

A gelatinous cube feeds by engulfing anything it encounters, using its anesthetizing slime to paralyze living prey. Once inside a cube's body, organic material is quickly dissolved and digested. Inorganic objects, such as metal or stone, remain suspended within the cube's gelatinous protoplasm until such time as they are expelled from the cube's body. Because of its simple composition, a gelatinous cube can survive long periods of time with no food, going into a state of torpor until it detects a nearby food source. Due to this ability to hibernate for extended

periods, the actual lifespan of gelatinous cubes remains a mystery.

The gelatinous cube is widely regarded as too bizarre to be the product of natural evolution. Scholars point to its cubic shape as evidence of intelligent design, and several obscure texts contain ambiguous passages that hint at strange rituals devised by ancient magicians to create gelatinous cubes. In fact, the first gelatinous cube was the accidental product of two warring obsessions in a demented mind. A long-forgotten sorcerer postulated that all ooze life was the product of a vast empire of intelligent oozes from another plane that sought to absorb all other forms of life across the multiverse. While he believed that oozes represented the pinnacle of pseudonatural evolution, this sorcerer was convinced that true perfection lay in geometric precision, and endeavored to merge the two into a race of loyal guardians and servants.

Using a variety of existing oozes as raw material for his experiments, the mage summoned bodiless alien beings from other realities in a blasphemous attempt to combine their alien intelligence with the raw potential inherent in protoplasm, imposing the order of the planes on the chaos of ooze life. Frustrated and maddened, his experiments grew ever more elaborate and crazed, but he was unable either to implant even rudimentary intelligence into the ooze or to constrain it into geometric shapes. His research ended abruptly when he ran an electrical current through a quantity of paralytic ooze, causing it to grow exponentially. He was overwhelmed and absorbed by his new creation, which continued growing until it completely filled the confines of the mage's 10-foot-square laboratory cell.

Although the researcher's experiments were a failure, the end result proved surprisingly popular among other mages and paranoid recluses: an unsleeping, remorseless killing machine, perfectly adapted to guard the rooms and hallways of a wizard's sanctum or dungeon. Over time, the secret of creating these singular guardians spread, and others expanded upon the lost sorcerer's work.

Although gelatinous cubes were originally created through magical experimentation, they can reproduce on their own, and can now be found throughout the world. Gelatinous cubes replicate themselves asexually, usually through the process of budding. When food is plentiful, a cube may extrude a small part of itself, which soon drops off to become a separate gelatinous cube. Such young are of Small size, and live in some danger, as they are frequently reabsorbed by their mindless parent. Given enough food and luck, however, a young budded cube can grow to full size within a month's time.

Rarely, gelatinous cubes have been known to reproduce via fission, though this has only been observed in large habitats with an overabundance of food. In these cases,

OOZE FEATS

Here are some feats for dealing with ooze friends or foes.

INDIGESTIBLE

You have acquired a resistance to the acids of oozes.

Prerequisites: Favored enemy (ooze) or survived engulfing by an ooze.

Benefit: You gain acid resistance 5.

OOZE COMPANION

Your understanding of oozes has grown to the point where you can bond with one as a companion.

Prerequisites: Ooze Whisperer, animal companion, wild empathy.

Benefit: Add the following oozes to your list of possible animal companions. 7th—gelatinous cube, gray ooze; 10th—ochre jelly; 13th—black pudding. Because of its non-intelligence, an ooze companion starts with 0 tricks (only your bonus tricks from druid levels apply) and can only learn the following bonus tricks: attack, come, defend, and stay.

OOZE WHISPERER

You have a special bond with slimes and oozes.

Prerequisites: Wild empathy class feature.

Benefit: You may target oozes with spells and special abilities that normally only affect animals as if the oozes were magical beasts with Intelligence 1, though they gain a +4 bonus to their saving throws. You may use wild empathy to influence oozes as easily as you influence magical beasts with Intelligence 1.

an adult cube divides itself into two equal cubes of Medium size. With plentiful food available, these cubes usually avoid the threat of reabsorption and quickly grow to Large size. As such, this method remains the most successful means of gelatinous cube reproduction.

HABITAT & SOCIETY

Oozes can be found across the world in nearly any environment, but gelatinous cubes almost invariably occupy underground or indoor habitats. They prefer damp tunnels to dry, and well-traveled dungeons to abandoned ones, as these provide plenty of moisture and food for a hungry cube.

A typical gelatinous cube lair is a dungeon or mine with worked, regular features. Unlike most such places, however, a gelatinous cube lair is amazingly clean—no mold or slime growing on the walls, no patches of fungi, and no sign of other subterranean creatures such as bats and insects. Even small amounts of rubble and dirt, commonly scattered throughout most dungeons, are missing. Careful investigation reveals signs of dried slime trails on the floors and walls, but these faint glistening patches might be mistaken for trace amounts of crystal in the walls themselves.

Rooms within such a dungeon are completely empty, with no sign of decayed furnishings or even dust, unless a stout metal or stone door bars entry. In dungeons where a gelatinous cube is used as a guardian, there is often one closely fitted, vault-like door of stone or metal to keep the cube away from the treasure it guards. One disused room may contain a small mound of shining metal and polished stone objects, comprised of indigestible items ejected by the cube, but there is just as likely to be a number of such tiny piles scattered randomly throughout the dungeon, constantly changing position and composition in an endless cycle of absorption and expulsion.

Gelatinous cubes and other oozes have no society to speak of, living solitary existences as scavengers. Rarely, more than one ooze may be encountered in close proximity, although gelatinous cubes avoid each other so long as food is plentiful. (Similar to how all creatures with at least Charisma 1 recognize themselves as separate from their environment, different cubes react to each other in a primitive, instinctual, “this is me, do not eat” sort of way.) In conditions of famine, one cube may attempt to engulf another. In such cases, the larger, stronger cube is the usual winner after a brief battle. A clash between two evenly matched cubes is a titanic struggle that can last for days, as the glutinous horrors push against one another, extruding pseudopods while they seek purchase on slimy walls and floors, with each attempting to envelop its opponent until one cube inevitably tires and is absorbed by the victor.

CAMPAIGN ROLE

Gelatinous cubes best serve as obstacles for low-level adventurers delving underground. Intelligent dungeon denizens may suffer the presence of a cube nearby as a guardian and janitor, and its square shape makes it preferable to other oozes, as even a simple stone door can easily block it from entering certain rooms. Perhaps the PCs have been hired to find an adventurer who recently disappeared in the local cave system and recover his ancestral sword, which can now be found floating in the depths of a gelatinous cube.

Other creative uses can make a gelatinous cube a greater threat. Due to a cube's transparency, it may not be readily apparent to inexperienced adventurers what danger they actually face. A shield suspended in a cube might seem to be hanging on the wall behind it, giving greedy adventurers a nasty surprise. A suit of absorbed armor, perhaps with a faint magical glow, might look like a ghostly figure in a darkened corridor (see *D1: Crown of the Kobold King* for an example of this tactic).

Due to its slow speed, a gelatinous cube is easily avoided once its presence is known. Canny dungeon designers may incorporate cubes into traps to address this shortcoming. A careless rogue who falls through a spring-loaded trapdoor into a 10-foot-square pit filled with a gelatinous cube is in some trouble until his companions can work out how to reach him. More dangerous are traps that drop a cube on top of the party.

TREASURE

Gelatinous cubes do not collect treasure. They do, however, absorb valuables as they sweep through their lairs, and the indigestible remains of past victims can remain suspended in a cube for weeks until they are expelled from the creature's body.

A gelatinous cube's treasure consists solely of various coins (1/10th the normal amount) as well as goods and items made of stone or metal. Weapons, metallic armor, gems, jewelry, and even the occasional potion in a metal or glass flask are all likely to be found in a cube's lair, or within the cube itself.

VARIANTS

As a product of magical experimentation, the gelatinous cube exists in several different varieties.

Ebony Cube: This creature is a gelatinous cube that has been crossed with a deadly black pudding. Vast cubes of inky slime, they lose their transparent ability, but their acid is more powerful, able to dissolve even metal. Any melee hit or engulf attack deals 1d6 acid damage and the opponent's armor and clothing dissolve and become useless immediately unless he succeeds on a DC 20 Reflex save. A metal or wooden weapon that strikes an ebony cube

OOZE-HUNTING GEAR

Ooze-hunting rangers and underground explorers have developed several alchemical and magical items to protect them from ooze attacks.

Alkali flask: This is a flask of caustic liquid that reacts with an ooze's natural acids. You can throw an alkali flask as a splash weapon. Treat this attack as a ranged touch attack with a range increment of 10 feet. A direct hit deals 1d6 points of acid damage. Every creature within 5 feet of the point where the acid hits takes 1 point of acid damage from the splash. Oozes and other acid-based creatures take double damage from the flask. **Cost** 15 gp; **Requirements** Craft (alchemy) DC 20; **Weight** 1 lb.

Alkali salt: These tiny granules can be dissolved in water, creating a slimy material used to coat metallic items such as weapons or armor. Such a coating neutralizes the metal-eating acid of black puddings and gray oozes, protecting the item from 1d3 contacts with an ooze's acidic touch. **Cost** 30 gp; **Requirements** Craft (alchemy) DC 20.

Ooze grease: This alchemical concoction can be spread over a Medium or Small creature's body as a full-round action. It provides a +5 alchemical bonus on Escape Artist checks, grapple checks to avoid a grapple, and Reflex saves to avoid an ooze's improved grab or engulf abilities, but gives a –5 penalty to disarm checks, grapple checks to start or maintain a grapple or pin, and other checks that may be hindered by a loose grip (such as Climb). One application lasts for up to 1 hour and can be removed with soap and water. **Cost** 50 gp; **Requirements** Craft (alchemy) DC 25; **Weight** 1 lb.

Sovereign glue: This fluid immediately thickens ooze protoplasm, acting as a permanent *slow* spell on the creature. Applying the glue is a standard action that provokes an attack of opportunity. Applying *universal solvent* to an ooze under the effect of the glue returns the ooze to normal (without doing damage, see below).

Universal solvent: This substance dissolves ooze protoplasm. A single application inflicts 4d6 points of damage to an ooze (Fortitude half DC 19). Applying the solvent is a standard action that provokes an attack of opportunity, or it can be thrown as a splash weapon (affecting only the targeted ooze) for half damage. *Stone salve* has the same effect against gray oozes.

also dissolves immediately unless it succeeds on a DC 20 Reflex save. The cube's acidic touch deals 20 points of damage per round to wooden or metal objects, but the ooze must remain in contact with the object for 1 full round to deal this damage. (CR +2)

Electric Jelly: This rare variant is capable of producing powerful electrical shocks. It has a purplish sheen, reducing Spot checks to notice it to DC 10. Once every 1d4 rounds, the ooze can generate an electric pulse in a 10-foot radius that deals 1d8 points of electricity damage and stuns creatures

FLESH TO OOZE**School** transmutation (polymorph); **Level** Sor/Wiz 6**CASTING****Casting Time** 1 standard action**Components** V, S, M (alchemical reagents worth 100 gp)**EFFECT****Range** close (25 ft. + 5 ft./2 levels)**Target** 1 creature or see text**Duration** permanent**Saving Throw** Fortitude negates, Will partial, see text;**Spell Resistance** No**DESCRIPTION**

This functions like *baleful polymorph*, except the target becomes an ooze. A creature of 3 HD or less becomes a gray ooze, 4–9 HD becomes a gelatinous cube or ochre jelly, and 10+ HD becomes a black pudding. Alternatively, instead of a creature you may target a quantity of inert flesh (such as that created by the *stone to flesh* spell) of sufficient mass, which becomes an ooze of your choice.

Because a target's gear does not transform with it, any items fall under or within the ooze's body, which may mean the items are destroyed. If the ooze has the split ability, splitting the ooze creates one ooze that retains the creature's original identity (for the purpose of memories or restoring the creature) and one normal mindless ooze of that type.

for 1 round. A DC 20 Fortitude save reduces the damage by half and negates the stunning effect. (CR +1)

Frost Cube: This ooze contains floating pockets of symbiotic brown mold (DMG 76). In addition to eating whatever organic materials they pick up, frost cubes feed on warmth and radiate cold. Living creatures within 5 feet of the cube take 3d6 points of nonlethal cold damage per round. Fire brought within 5 feet of a frost cube gives it fast healing 3. It takes +50% damage from cold attacks. (CR +1)

Sorcerer Ooze: Also called the brain cube, this is perhaps the strangest variant ever reported. Presumably some mad mage or ooze-cultist found a way to transfer humanoid intelligence into the cube's body as a way of achieving immortality without resorting to undeath, but at the cost of the humanoid's sanity. Still able to cast spells (using Silent Spell and Still Spell), a typical sorcerer ooze has Intelligence 10, Wisdom 12, and Charisma 18, with the spellcasting ability of a 10th-level sorcerer. Some know the *ventriloquism* spell, allowing them to communicate with others (though their madness means they eventually attack anyway), but most didn't plan ahead enough and have been locked inside a gelatinous prison, able only to eat and cast spells, never interacting with intelligent creatures in any meaningful way. (CR +6)

Stunjelly: This most commonly encountered variant is gray in color and slightly translucent. A stunjelly looks like a section of dungeon wall 10 feet square, where it waits to engulf passing prey. It has the same paralytic acid as a standard gelatinous cube, and requires a DC 20 Spot check to notice it, but may also be detected by the mild odor of vinegar it exudes (see *Tome of Horrors, Revised*).

GELATINOUS CUBES ON GOLARION

On Golarion, gelatinous cubes may be found inhabiting nearly any subterranean dungeon, from the ice-clad reaches of the Crown of the World to the steaming jungles of Garund and even farther afield. In Avistan, the Acadamae of Korvosa has at least one gelatinous cube sweeping corridors clean of garbage and wayward students, while the abandoned dwarf-holds of the Five Kings Mountains provide numerous lairs for the creatures. In the Garundi interior, gelatinous cubes are known to infest the vine-choked cities of the Mwangi Expanse as well. Scattered cults of Rovagug in Casmaron particularly favor the mindless, destructive oozes as guardians for their hidden temples.

Scholars of ooze lore usually attribute the origin of gelatinous cubes on Golarion to Jubilex, the Demon Lord of Poison and Ooze, who gave his inspiration or aid to one of three sources: the antediluvian wizardry of the alien aboleths (and their human protégés of Old Azlant), the slime pits of Haruka (the Thassilonian domain of Sloth), or the god-kings of ancient Osirion. While many sages scoff at tales of Osirian oozes, claiming the dry climate of that land is inimical to ooze life, stories abound of lost Osirian tombs rediscovered and opened after being sealed for millennia, empty of all living things save a single, ravenous gelatinous cube that suddenly stirs to life. It is just as undeniable, however, that the Thassilonian ruins of Varisia are home to large concentrations of gelatinous cubes. It is even rumored that aquatic varieties of gelatinous cubes can be found wandering the sunken halls of lost Azlant, though the secretive elves of the Mordant Spire drive away most explorers wishing to confirm these stories.

Perhaps the strangest story of all comes from beneath Golarion. Recently, reports have surfaced of a huge vault located in Orv, the deepest level of the Darklands. These accounts describe a gelatinous cube of truly mountainous proportions, worshiped as a god by an aberrant race of half-ooze humanoids who placate it with a never-ending tribute of food and slaves captured from neighboring vaults. Normal-sized gelatinous cubes are said to cleave like icebergs from the sides of this thing and wander aimlessly through the tunnels of the Darklands. Thus far, these statements remain unconfirmed on the surface, and a Pathfinder expedition to investigate these disturbing claims, led by famed venture-captain Rixmir Thal, has not been heard from in months.

GELATINOUS CUBE

This transparent, cube-shaped creature has no visible organs or appendages, only a few bits of corroded bone and metal suspended inside its quivering protoplasm.

SPECIAL ABILITIES

Acid (Ex) A gelatinous cube's acid does not harm metal or stone.

Engulf (Ex) Although it moves slowly, a gelatinous cube can simply mow down Large or smaller creatures as a standard action. It cannot make a slam attack during a round in which it engulfs. The gelatinous cube merely has to move over the opponents, affecting as many targets as it can cover. Opponents can make attacks of opportunity against the cube, but if they do so they are not entitled to a saving throw. Those who do not attempt attacks of opportunity must succeed on a DC 13 Reflex save or be engulfed; on a success, they are pushed back or aside (opponent's choice) as the cube moves forward. Engulfed creatures are subject to the cube's paralysis and acid, and are considered grappled and trapped within its body. The save DC is Strength-based and includes a +1 racial bonus.

Paralysis (Ex) A gelatinous cube secretes an anesthetizing slime. A target hit by a cube's melee or engulf attack must succeed on a DC 20 Fortitude save or be paralyzed for 3d6 rounds. The cube can automatically engulf a paralyzed opponent as an immediate action. The save DC is Constitution-based.

Transparent (Ex) Gelatinous cubes are hard to see, even under ideal conditions, and it takes a DC 15 Spot check to notice one. Creatures who fail to notice a cube and walk into it are automatically engulfed.

Creating a Gelatinous Cube

A variety of techniques for creating gelatinous cubes and other oozes in a laboratory exist, several of which may be found in an ancient tome called *A Treatise on Jellies, Puddings, and Other Dangerous Oozes*. One process involves summoned gangs of ooze mephits and lemures, which are transmuted into mindless protoplasm using the *flesh to ooze* spell. The resulting ooze is then treated with an alchemical concoction of aboleth slime and paralytic chuul extract before being poured into a large, 10-foot-square wooden mold. Kept warm and moist, by the time its acid has dissolved the wooden mold the ooze has solidified and matured into a full-grown gelatinous cube.

Despite the extraplanar nature of the creatures used in its creation, the gelatinous cube is not an outsider, although different recipes may create one with the fiendish template.

On the Care and Keeping of Gelatinous Cubes

By Jonathan McAnulty

Art by Ben Hodson

Some men raise dogs. Others train falcons. Some cultivate orchids or stunted trees. It is a select few, however, who nurture and shape gelatinous cubes—and they call themselves “cubists.”

Whether brave or mad, the small, tightknit circle of enthusiasts who breed gelatinous cubes are certainly dedicated. Regardless of alignment or vocation, cubists share a genuine fondness for these odd oozes. They regularly correspond with one another, sharing tips and concerns and advancing their hobby. Anyone looking to join their ranks will quickly find staunch supporters who are happy to see others take up the care and keeping of these transparent geometrical monstrosities.

The Basics of Gelatinous Care

Gelatinous cubes are not hard to raise: they require only living space and food. Cubes are constantly in motion and thrive best in stone corridors that are approximately 10 ft. wide and at least 30 ft. in length (3,000 cubic ft.). The massive bulk of a gelatinous cube requires constant nourishment—a minimum of 50 lb. of organic matter a day to maintain proper health and constant size.

A healthy cube is firm to the touch, giving slightly with small amounts of pressure, and has a glossy sheen at its surface. They grow noticeably with overfeeding, rapidly entering their reproductive cycle. Undernourished or confined cubes rapidly dry out and die, losing mass and vitality while their surface dries and cracks. Cubes that are too constrained or malnourished will eventually die.

PCs wishing to raise a gelatinous cube need place for their cube to live. The minimum upkeep for a cube is 1 cp/HD (or level)/day, which provides sufficient nourishment to maintain the pet's current size. Undernourished or confined cubes lose 1 hp each day until the cube dies.

A cube needs much more than this minimum to grow. Cubes can be deliberately overfed at the cost of 1 sp/HD (or

level)/day; a week of overfeeding will advance the gelatinous cube by 1 HD (or level). A cube with more than 4 HD (or greater than level 5) has a cumulative 5% chance per extra HD (or level) to experience mitosis within 1d6 days (i.e. a 5 HD cube has a 5% chance and a 7 HD cube has a 15% chance). Mitosis splits a single cube into two smaller cubes (divide the total HD or level in half and give one cube any extra). Make this mitosis check on a weekly basis for cubes. With insufficient space and food, new cubes risk recombining in a form of reverse mitosis.

Advanced Cube Care

All cubists start with the basics and find enjoyment in the simple raising of gelatinous cubes, but passing that stage, any true connoisseur soon discovers that the real joy of breeding cubes is in the art of shaping.

Cubists know many different ways to shape a gelatinous cube. The easiest is to slowly force a cube to mold itself into a rectangular shape by manipulating its living space. Careful use of moveable walls, floors, and ceilings can safely reduce an ooze in either width or height by 1 ft. a week. For every foot in width or height a cube is reduced, it gains an equal amount of cubic space in length. (Changing a cube in this way does not affect the creature's speed, size, or required nourishment and living space.)

Among certain members of the cubist community, it is quite fashionable to make long, snakelike “cubes.” These cuboids can be quite a surprise when encountered in small crawl spaces.

However, the art of shaping is not limited to the creation

of gelatinous cuboids. Glowing cubes, opaque cubes, giant cubes, dwarf cubes, and even round cubes have all been raised by cubists. Though seasoned adventurers are no doubt acquainted with the gelatinous cube, even the most experienced might be surprised when they encounter one of these variants in a dungeon belonging to a devoted cubist.

Opaque Cubes

Some cubists have discovered they can create colorful oozes by feeding metal-based dyes to their cubes. Such enthusiasts find beauty in these creations and have been known to build vast stone mazes with glass ceilings. Just as lesser men watch bright fish, these hobbyists spend their leisure time watching brightly colored cubes wind slowly through their homes. Evil cubists often enjoy throwing living creatures into their mazes to watch the ensuing feeding.

Fashioning an opaque gelatinous cube is as simple as purchasing the right dyes. Vast amounts of these dyes are required, however, and over time, they must be reapplied. In game terms, it costs 10 gp/HD (or level)/month to maintain a cube's coloration. Opaque cubes may be any color. They lose their transparent nature.

Glowing Cubes

Many cubists enjoy the effect created by the strategic placement of magical lights within their pets. When done correctly, the light appears to float through the air like a willow-the-wisp or fairy light.

In addition to the cost of the magical light—glass globes containing a *continual flame* are the current rage among the trendiest cubists—great care has to be taken in the placement of each light. In game terms, the cubist must make a Knowledge (dungeoneering) check (DC 15) or a Nature check (DC 20) to set a light inside a cube: failure means the light is placed askew, spoiling the effect, and failure by more than 5 points means the gelatinous cube attacks the cubist.

Cubes of Unusual Sizes

Raising huge cubes is not hard, requiring only that the cubes be overfed. Some enthusiasts like to see how long they can maintain their cubes in an oversized state before mitosis eventually occurs. They carefully regulate the diet of their wards, alternately overfeeding and underfeeding the oozes. With constant monitoring, they can keep a cube in an oversized condition indefinitely.

Keeping an oversized cube from undergoing mitosis requires a weekly Knowledge (dungeoneering) check with a DC of 10 + the HD of the

Fun Facts about Gelatinous Cubes

Gelatinous cubes are asexual. They reproduce through mitosis, dividing one creature into two. Additionally, small portions of a cube can be removed and, if tended with care, can be grown into a full cube: this requires a weekly Knowledge (dungeoneering) check (DC 15) or Nature check (DC 20). In the wild, gelatinous cubes will normally grow until they are about 15 ft. across before dividing.

Under the right conditions, two separate cubes will meld into a larger cube. Such unions seldom last long before mitosis occurs.

Gelatinous cubes can strip an entire cow to bare bones in under a minute.

Gelatinous cubes are not rigid cubes. Their forms are malleable and flow around corners. While they are normally encountered in nature as cubes, other shapes have been reported.

Gelatinous cubes can survive in fresh water. When submerged, their paralytic poison is not as effective (victims receive +4 to saving throws), but they are harder to notice, requiring a Spot check (DC 20) or Perception check (DC 30). Gelatinous cubes are too heavy to swim, but they feed and move on the bottom of some lakes. In these environments, they often achieve more massive sizes.

gelatinous cube or a Nature check with a DC of 15 + the level of the gelatinous cube. Even if this check fails, the weekly chance for mitosis to occur is unchanged. Huge cubes require living spaces of at least 9,000 cubic ft.

Dwarf Cubes

Just as some grow bonsai trees, certain cubists enjoy keeping miniatures of their monsters. Through weekly ministrations involving alchemical salves and careful cuts, a gelatinous cube can be kept as small as 3 ft. across in width and height. Dwarf cube enthusiasts often start their projects from cuttings (the removal of gelatinous material from fully grown oozes). More intelligent enthusiasts also know to trap their cubes in boxes or special rooms before beginning their weekly shaping.

Keeping a smaller cube alive without allowing it to grow in size requires 5 gp a week for the proper chemicals and a Heal check (DC 15) to keep the ooze from dying. Dwarf cubes have between 1 and 3 HD (or levels). The 1 HD cubes are 3 ft. across with a Strength of 6, a -2 attack bonus, and a CR of ½. The 2 HD cubes are 6 ft. across with a strength of 8, a +0 attack bonus and a CR of 1. The 3 HD cubes are 9 ft. across with a +1 attack bonus and a CR of 2. Medium cubes can only engulf Medium or smaller opponents. All other gelatinous cube abilities, including damage, remain the same.

Dwarf cubes range from level 2 to 4. Level 2 cubes are 3 ft. across with a -3 to attacks and defenses, -1 to damage, and 60 less hp. Level 3 cubes are 6 ft. across with a -2 to attacks and defenses, -1 to damage, and 40 less hp. Level 4 cubes are 9 ft. across with a -1 to attacks and defenses and 20 less hp. Medium cubes can only engulf a single Medium or smaller opponent at a time

Round Cubes

Only a select few ever reach the pinnacle of cube shaping—a round cube. For one thing, shaping a round cube requires a special container of massive proportions into which a cube must be lured. This metallic sphere, attached to an axle-like arrangement is akin to a giant hamster wheel and allows the trapped ooze the continual movement it requires to flourish. Food for the gelatinous monster is fed into the container through a special hatch. When the cube is properly molded within its spherical home, the container opens to release the rounded creature. Round cubes never retain their new shape for more than a week and those that raise them typically have two or three of the special containers in constant use.

The metal sphere in which the cube is shaped costs 5,000 gp. Luring a gelatinous cube into the sphere requires a DC 20 Handle Animal skill check. It takes 1 month of constant care and feeding for the cube to accept its new shape, and once released, the cube

reverts to its more natural shape within 1d6 days. Cubes cannot gain in size while in the sphere.

Gelatinous spheres have a speed of 60 ft. and are always assumed to be charging. They move in straight lines each round and cannot roll over obstacles higher than half their height.

ECOLOGY OF THE GENASI

by Rodney Thompson

illustrations by William O'Connor

*"I might despair, to see the aimless way
Such lawless elements exert their sway.
Yet no despair shall my resolve benumb;
Here I might struggle, here might overcome!"*

—Johann Wolfgang von Goethe, *Faust*

*"Nature that framed us of four elements,
warring within our breasts for regiment, doth
teach us all to have aspiring minds."*

—Christopher Marlowe, *Tamburlaine*

Imagine for a moment that every day, when you awaken, the first thing you feel is the heartbeat of the world around you. Imagine that each day, as you go about your tasks, you feel the ebb and flow of the very elements. Imagine that the elements are so strongly a part of you that your body feels bonded to the world around you. Imagine that the most common elements of the world are not just ingrained into your very being, but are also yours to command and to bend to your will. Imagine that this power was not learned or given to you, but is merely a part of who you are, and that the most powerful forces from deep in the Elemental Chaos course through your veins and react to your whims. Imagine the feeling of having the wildest, most primitive energies at your fingertips, beckoning you to call upon them.

Imagine that your thoughts and emotions swirl within you like a tempest, and every day you struggle not only to control the latent power you possess but also to keep from being swept up in a torrent of chaos that threatens to wipe away any sense of discipline or resolve you might have. This constant give and take, the struggle between the raw, elemental power in your blood and the rational, logical part of your mind, is an ever-present reminder of your tumultuous nature. Imagine that every time an obstacle comes into your path, you must struggle not to smite it with fire, stomp it into the earth, or flee from it with the swiftness of wind or water.

This is what it means to be a genasi.

HISTORY

The true dawn of the genasi race has been long lost in the tumult of the ages, but stories abound regarding their origins. The most prominent origin story, and the one sages near and far believe is true, is that the genasi are the result of dalliances and pacts made between ancient humans and elemental beings such as efreeti and genies. Long ago, human wizards known as sha'irs bound themselves to elemental beings with magic, bargaining with genies to gain the knowledge and wisdom those ancient elemental beings possessed. After spending decades in such close proximity to their gens, these wizards became infused with elemental power, so much so that their own offspring were transformed by these elemental energies. Other humans engaged in more traditional unions with elemental creatures that had disguised themselves as humans, and eventually enough children of such unions were born to create a true breeding race, which would come to be known as the genasi. As a result, the genies, dao, djinn, and other humanoid elemental beings of the world are seen by genasi as

distant cousins, even ancestors, and are afforded a greater degree of respect than other races offer.

A darker twist on the genasi origin tale, and one considered an insulting heresy by genasi, is that the genasi were created long ago by agents of the primordials. This tale, often whispered in dark corners by those who secretly revere the primordials, tells of human worshipers who were taken from their homes and twisted using elemental magic, creating men and women who could command the elements as easily as most humans eat or breathe. These new beings were meant to be the scions of the primordials and were commanded to go forth into the world and multiply. Adherents to this origin story believe that when the agents of the primordials created the genasi, they did so with the intention that the genasi would be the heirs to the world and would pave the way for a future where humans, elves, dwarves, and other races had been wiped out and replaced by the superior genasi race. This belief is widely held by heretics who worship the primordials and is not a tale genasi acknowledge.

Yet another tale tells of a brave band of human warriors, their names and identities long lost in the annals of time, who traveled to the Elemental Chaos to steal the primordials' power. Of the many who set out on this quest, only five survived to see it through to its end. The craftiest, most powerful, most cunning, and bravest of these heroes snatched the elemental power away from the primordials, in the process becoming forever changed. These five heroes became the progenitors of the genasi race, and each one embodied a different manifestation and became revered by those who believed this tale to be true. Their names have become common names in genasi society, and tales of their adventures are staples of genasi households.

Yet a fourth origin story declares that the genasi race originated in the depths of the Elemental Chaos. Like other origin tales, this one also has the

genasi beginning as humans. These humans became trapped in the Elemental Chaos, living for years and raising their children on that dangerous plane. Over time, the offspring of these humans began to take on the qualities of the plane around them, absorbing the chaotic powers of the elements. Eventually, the descendants of those who originally became trapped on the Elemental Chaos made their way back to the world of their forefathers, where they became the first of the new genasi race.

Regardless of which one (if any) of these stories depicts the true origin of the genasi, over time the genasi went through a transition period where they passed from being half-breeds into a full-fledged race of beings with their own unique culture and physiology. This transitory period began when genasi of all different types began drifting together, forming small communities and living among their own kind. These settlements started small and remained small, since many of the early genasi were already well integrated into other societies by virtue of their ancestors. However, as more and more genasi began forming pocket communities, a true genasi culture took form.

While many races rose from small settlements to form vast Empires, like the tieflings' Bael Turath or the dragonborn empire, Arkhosia, the genasi never truly formed the alliances necessary to forge a vast, far-reaching civilization. At best, some of the genasi communities became thriving city-states, but the chaotic nature of the genasi made extending the authority of these city-states difficult. For example, the windsoul genasi are reluctant to take part in any sort of permanent establishment, while firesoul genasi have quick tempers that make it difficult to maintain long-term diplomatic relationships. Many of the genasi city-states crumbled as their inhabitants scattered to the four corners of the world, and others were taken over, either through hostility or through an influx of outsiders, by other races.

The recent history of the genasi people sees them integrating themselves into multicultural environments and thriving there. Possibly because genasi share so many traits with humans (indeed, there is a reason that all the genasi origin stories involve humans in the creation of their race), genasi fit in well alongside humans, and most human cities are also safe havens for genasi. Likewise, genasi with different manifestations have made themselves valuable members of other communities; earthsoul genasi, for example, commonly make their homes among the dwarves, who share their affinity for the stone and

steel. In modern times, the genasi remain scattered, but they live in nearly any civilized settlement.

PHYSIOLOGY

Genasi resemble humans in many ways, but they have strong elemental features tied to their manifestation. Every genasi has a series of elemental lines etched into the skin from birth, and these lines glow with a color associated with the element they manifest.

These energy lines, called *szuldar* in primordial, are unique to each genasi. Similarities can exist in the *szuldar* patterns between genasi of the same family, or even living in the same area due to intermingling bloodlines, and genasi speak of a “family resemblance” when comparing *szuldar*. For many genasi, one’s *szuldar* are a point of pride, and many wear clothes designed to show off the *szuldar*. Some genasi are known to acquire tattoos designed to highlight or otherwise enhance their *szuldar*, and almost every genasi has an extremely sensitive understanding of even the subtlest variations in *szuldar*.

When a genasi is born, most of his *szuldar* are already fully formed in the patterns that remain for the rest of the genasi’s life. Sometimes physical alterations to a genasi’s body, such as scarring or intentional modification, can also alter the *szuldar* patterns, but this is a rarity. In fact, since genasi strongly identify their individuality with their *szuldar*, most see actual alterations to their *szuldar* as causing a loss of self-awareness, and avoid it. Some genasi, particularly those on the run from the law, have their *szuldar* altered by scarring or magical means to hide their true identities, but this is typically a last resort.

Though their origins are likely tied to a blending of bloodlines, genasi are a true breeding race that produces offspring that share their elemental traits. Genasi who produce children typically share at least one elemental manifestation, though rare exceptions to this rule exist. Likewise, the child’s primary manifestation is a matter of genetics; if both parents share the same primary manifestation (or, if both parents have only one manifestation and they share the same one), chances are extremely high that the child has the same manifestation. In essence, firesoul genasi have firesoul genasi children. Heredity becomes a bit muddled when the parents are of mixed manifestations, or if a particular family has a mixture of different primary manifestations throughout the generations. Essentially, a genasi child’s manifestation

KNOWLEDGE OF THE GENASI

Arcana

DC 15: Genasi are a race of humanoids who have been infused with great elemental power and affinity.

DC 20: A genasi manifests a single element from birth, which determines its appearance and the element with which it has an affinity.

DC 25: A genasi’s elemental manifestation also grants special powers tied to that element. An Arcana check at this DC can also identify the racial power of a particular genasi elemental manifestation.

DC 30: Some genasi learn to manifest multiple elements, which grants them access to the powers tied to each element. A small number of genasi can even manifest two elements simultaneously.

Dungeoneering

DC 20: Abandoned genasi cities and settlements contain elemental traps. These traps are the remnants of security systems used by the genasi who inhabited the settlement.

DC 25: Most genasi-made traps can be bypassed through the application of elemental power or manifestation, which allows genasi with certain manifestations to avoid the trap entirely.

History

DC 20: The genasi have never had a major empire, but they did build several great city-states, most of which have fallen into ruin or been taken over by other races.

DC 25: Many of the genasi city-states were built in places favored by the manifestations of the population. Earthsoul genasi built city-states high in the mountains, while firesoul genasi built city-states in the deep desert.

Religion

DC 20: Genasi worship deities tied to their own primary manifestations. In general, stormsoul genasi worship Kord, watersoul genasi worship Melora, earthsoul genasi worship Moradin, and firesoul and windsoul genasi worship Pelor.

DC 25: Among cults dedicated to the primordials, genasi hold high-ranking positions and are among the most dedicated followers.

DC 30: Secret sects of Tharizdun worshipers exist in almost every settlement with a large number of genasi. Most genasi consider worship of Tharizdun to be heresy, but a few revere Tharizdun as the master of all things elemental.

is inherited from his or her ancestors, just as humans inherit hair and eye color or other physical traits.

Genasi children are born with a single manifestation that typically remains their primary and only manifestation through young adulthood. Since genasi of the same manifestation gravitate toward one another, genasi children spend a good deal of time around others with their same manifestation, and they develop their mastery of elemental powers through exposure to other genasi doing the same. Similarly, genasi children that are exposed to other manifestations are more likely to develop a second elemental manifestation. Though the relationship between a genasi child's upbringing and the ability

to manifest a second element is not fully understood, scholars believe that proximity to alternate elemental manifestations is enough to trigger a second manifestation in a genasi. Likewise, genasi children that grow up in regions where the environment does not mirror their own elemental manifestation are highly likely to develop another manifestation later in life. For example, a watersoul genasi that grows up in a dwarven hold high in the mountains is likely to develop an earthsoul manifestation upon reaching adulthood. Developing a second manifestation does not occur until young adulthood, but some genasi adolescents have been known to manifest a second element early. Going through one's first shift between manifesta-

tions can be a harrowing experience for young genasi, since the transformation can come on suddenly and is typically physically uncomfortable, even painful.

For genasi, shifting between two elemental manifestations takes a physical toll, though a small one. The process of shifting manifestations is more than just a change of clothes; doing so is more like rebuilding oneself piece by piece out of new materials, and the result is feeling like having one's mind placed in an alien (if not unfamiliar) body. The change happens quickly, and genasi with multiple manifestations are so numbed to the physical trauma that changing manifestations is no more than a passing discomfort. It is no wonder that genasi with multiple manifestations develop multiple identities; such massive reconstruction of one's physical self can be horrifying the first time it is undergone.

A rare few genasi control their inner elemental turmoil and manifest multiple elements simultaneously. The genasi, known as tempests, are in a constant state of flux between two elements. These genasi embrace the chaos of elemental power within them, allowing it to wash over their bodies. In much the same way as genasi allow the elements to rebuild their bodies during the transition between two elements, these genasi tempests keep their bodies constantly changing—in part or in their entirety—between the elements they manifest. These genasi have a unique appearance, since their bodies appear to shift between two manifestations constantly. A genasi tempest's body flickers between elemental states, and they experience a constant physical strain of elemental flux—a feeling that they embrace.

NEW GENASI HEROIC FEATS

Any feat in this section is available to a genasi character who meets the prerequisites.

GENASI FIRE AFFINITY [GENASI]

Prerequisite: Genasi

Benefit: If you have resistance to fire, increase that resistance by 2. Whenever a creature makes a saving throw to end ongoing fire damage from one of your powers, that creature gets -1 penalty to the roll.

EARTHSHOCK MASTER [GENASI]

Prerequisites: Genasi, earthsoul manifestation

Benefit: Your *earthshock* power deals 1d8 damage when it hits, and it gains the Reliable keyword.

FAST MANIFESTATION [GENASI]

Prerequisites: Genasi, Extra Manifestation

Benefit: Once per day you can change your elemental manifestation as a minor action. If you have already used an encounter power associated with your elemental manifestation, you can still use the

encounter power associated with your newly changed elemental manifestation.

FIREPULSE MASTER [GENASI]

Prerequisites: Genasi, firesoul manifestation

Benefit: Your *firepulse* power gains the Reliable keyword and deals an extra 1d6 damage over its normal damage.

GENASI FROST AFFINITY [GENASI]

Prerequisite: Genasi

Benefit: If you have resistance to cold, increase that resistance by 3. You are immune to any slow and immobilize effects caused by cold powers.

PRIMORDIAL SURGE [GENASI]

Prerequisite: Genasi

Benefit: Whenever you successfully use a genasi racial power, you gain temporary hit points equal to 5 + your Strength, Constitution, or Dexterity modifier (your choice).

PSYCHOLOGY

The most important thing to understand about genasi is that their lives are dominated by the chaotic nature of their elemental aspect. A constant struggle takes place in the mind of a genasi, who must keep its chaotic urges in check—at least long enough to interact with members of other species. Even those genasi with the best self control are described as passionate by their comrades, since flashes of joy, anger, or sadness still break through even the most disciplined genasi exterior. There is no such thing as a true stone-faced genasi (though earthsoul genasi probably come the closest), and cracks appear in even the calmest genasi repose. Though it might seem like genasi are impulsive and prone to outbursts, the truth is that, with difficulty, most genasi control their inner turmoil enough so that they are no more chaotic than the average human.

Genasi philosophers believe that, regardless of the truth behind their race's origins, the genasi people came into being out of a cosmic sense of balance. These philosophers believe that the genasi people serve as the fulcrum on which the balance between the chaos of the primordials and the order of the mortal races rests. According to this philosophy, the genasi race came into existence when forces beyond the gods or the primordials—believed by many to be Fate, or something akin to it—deemed that the world and all the planes needed something to serve as an intermediate point between raw Elemental Chaos and the law of divine creation. As a result, this philosophy, which is embraced by many genasi, organizes them into two distinct camps: those who embrace their role as a tamer of chaos, and those who believe that they were created to break free of the shackles of order.

The genasi that believe that the genasi race was meant to tame chaos strive to do so first within themselves and then in the world around them. These genasi are among the most lawful, ordered beings, and they work hard to fit in among the other mortal races, to whom they feel more attached. After all, they reason, the genasi were meant to be brothers to the mortal races, those races created by divine beings, who could transform the chaos into order. These genasi discipline themselves and keep their emotions in check—they do not allow their passions to rule their minds. That accomplished, genasi of this philosophy then turn their attention to the world around them, seeking to maintain order and stamp out lawlessness. However, this philosophy, while lending itself well to civilization, does not always equate to goodness. Many genasi tyrants have embraced these same philosophies, and they took it upon themselves to impose order at the point of a sword. It is no surprise that genasi who believe in this philosophy join militaries or law enforcement organizations, such as town guards of night watches.

AMBIENT ENVIRONMENTAL EFFECTS

One way Dungeon Masters can bring the elemental nature of the genasi to life is through the use of ambient environmental effects. A genasi is strongly tied to one or more of the primordial elements, and as a result their bodies sometimes warp the environment around them, particularly when the genasi is experiencing strong emotions. For example, when an earthsoul genasi is angry, the DM can describe the room as trembling slightly—just enough that the player characters are aware of it, as the earth rumbles beneath the genasi's feet. A firesoul genasi might raise the temperature in the room by a few degrees as he makes a passionate plea for assistance from a local lord, while thunder might rumble or lightning might flash when a storm-soul genasi is troubled. A thin mist might precede a watersoul genasi as she enters a room where she fears danger might wait, and a slight breeze could accompany the righteous wrath of a windsoul genasi cleric who rebukes the forces of evil. These ambient environmental effects shouldn't have any mechanical benefit, but could serve as ways to flavorfully describe the elements bowing to the chaotic emotions of genasi player characters and NPCs.

On the other hand, those genasi who see themselves as chaos made flesh take a decidedly different approach. They embrace their emotions and have no compunctions about letting their passions dictate their course of action. These genasi see their role in the world as the breakers of chains (namely, the chains of law), and they believe that their elemental infusion is a gift, given to them by the primordials or other cosmic forces, so that they can show the other races of the world that chaos can liberate. These genasi are wild, passionate, and excitable, but not necessarily evil. Genasi who embrace this philosophy lead rebellions against tyrants, steal from the wealthy to help the poverty-stricken, and follow their passions wherever they might lead.

One trait that all genasi share, regardless of their level of self-discipline, is a strong sense of ambition. Genasi have an inherent desire to better themselves, or at least improve their station in life. They might do so through the pursuit of power, or by earning the respect of their peers, but nearly all genasi have great dreams and aspirations. Genasi chase their dreams with gusto, and though patience isn't their strong suit, genasi can put years of work into the pursuit of an individual goal. The passionate nature of the genasi keeps them pursuing their goals long after other, less dedicated races would have given up.

Genasi are passionate beings, which is a result of the surging elemental turmoil present in the fiber of their very being. Even those genasi who have a strong sense of discipline are susceptible to strong emotions. They rage with more anger, they love with more passion, and they mourn with more sorrow than any other race. Though genasi might keep a tight rein on their emotions, once they allow their feelings to show, there can be no question of their strength. Genasi clerics thunder with righteous wrath, while genasi rogues revel in the chaos they sow with maddened glee. Regardless of their chosen profession, their passions

reach the highest peaks and the lowest valleys, many times within the span of a single day.

Genasi are surprisingly good at adapting, for all their strong emotions might make them passionate about their own ways. Most genasi embrace change, either as an inevitability (spawned by the swirling chaos of existence) or as a natural part of existence to be welcomed and celebrated. Change, in their personal lives or in the wider world, brings about new experiences, new opportunities, and new allies. With the ambitious nature of the genasi, every new opportunity could be a means of growing one step closer to achieving one's goals. In many respects, genasi are among the most flexible races when it comes to accepting the changes that their lives have undergone. Genasi bend with the breeze, but they do not break, and they can adapt to almost any course of events that their lives take.

Just as a genasi's elemental manifestation is an important part of its physiology, it is also a major component to its psychology. All genasi have a primary manifestation from birth, and it is this manifestation that defines the genasi's basic personality. Most genasi identify themselves, the very essence of their beings, by their primary manifestation. Even if a genasi learns to manifest other elements, its primary manifestation is at the very core of who it is as a person. Humans and other races would call this their identity, but for the genasi the personality defined by their primary manifestation is so much more: It is a touchstone that the genasi uses to maintain the integrity of its true self.

Likewise, genasi that learn to manifest multiple elements might also develop multiple personalities, each one associated with a different manifestation. These personalities are not completely distinct from one another (unlike those developed by humans with mental illnesses), but rather are radically different aspects of the genasi's primary identity. A genasi with multiple manifestations effectively has strong person-

ality traits that come to the surface when a particular element is manifested. A genasi who is manifesting one element might behave completely differently when manifesting another, though the same knowledge remains through both manifestations. Similarly, a genasi might change its manifestation to better match or express its mood, physically reflecting the emotions it feels at the time.

The rare genasi tempest that manifests multiple elements simultaneously also has two strong personalities struggling for control at once. These genasi can be called mercurial at best, since they switch between strong emotions at the opposite ends of the spectrum in the blink of an eye. A genasi tempest manifesting two elements might seem somewhat schizophrenic at first glance, even talking to itself as its manifestations war for control of its psyche, though in truth these genasi are no more unstable than anyone under great stress or strain.

Though it might seem like genasi families would be prone to breaking apart when passions run hot, in truth genasi parents are monogamous and remain so for most of their lives. Perhaps because the relationships between genasi rarely lose their spark or become boring, genasi have large families with many children, and in turn have large extended families with dozens of aunts, uncles, and cousins. The fact that genasi refer to other genasi as "brother" or "cousin" is more than just a colloquialism—there is a chance that the person they are talking to is, in fact, a distant relation.

The following section includes notes about the general personality traits of different genasi elemental manifestations. These personality traits are commonly seen in genasi manifesting the related element, though exceptions exist even within these common personality manifestations.

EARTHSOUL GENASI

Earthsoul genasi are frequently stubborn and immovable. They are strong like they mountains and they know it. Earthsoul genasi also are proud and confident, and sometimes this spills over into vanity. Coupled with the inherent genasi ambition, many earthsoul genasi bend their strength into domination—physical or otherwise—of their enemies. Of all the genasi elemental manifestations, earthsoul genasi come the closest to possessing patience and engaging in contemplation. However, the true strength of all earthsoul genasi becomes visible when someone tries to push them in a direction they do not want to go. When this happens, earthsoul genasi resist with the might of the stone and the earth, and they knock down anyone that stands in the way.

FIRESOUL GENASI

Of all the genasi manifestations, firesoul genasi embody the passionate nature of their race the best. Firesoul genasi are the most aggressive, most impulsive, and the easiest to anger. Among all the genasi manifestations, they are the most in tune with the raw power of their elemental heritage. Firesoul genasi feels the raw energy at their fingertips and are among the most eager to use it. They are highly competitive as well, since they constantly seek a productive outlet for their passions. The tempers of firesoul genasi burn hot, but also fast, and once the heat of the moment has passed, they are just as likely to jump from rage to elation in a matter of seconds.

STORMSOUL GENASI

Wild and powerful as a sudden thunderstorm, stormsoul genasi are of the same mercurial nature as all genasi, but while they can be slower to rouse, they can be a far more terrible sight to behold. Stormsoul genasi lash out at those that trouble them, like a light-

ning strike that is accompanied by a roar of thunder. Stormsoul genasi are prone to brooding, but when the storm of their emotions rolls in, nobody can do much to stop it. Unlike firesoul genasi, stormsoul genasi can control themselves under great duress for long periods of time, but when they reach their breaking point, they snap and strike with sudden ferocity. Stormsoul genasi in the grip of their own emotions can be extremely unpredictable, since once they reach the point of unleashing their rage, they must do so until their wrath has run its course.

WATERSOUL GENASI

Watersoul genasi are strongly independent and determined to make their way on their own. Watersoul manifesters, feeling close ties to rivers and oceans, see themselves as possessing the same deep strength as those great bodies of water. In many ways, watersoul genasi can be recalcitrant, preferring to remain as untamed as the rushing river. Watersoul genasi have much of the same pride as earthsoul genasi, which manifests itself in a kind of fearlessness unmatched among others of their race. Since they can live both on land and beneath the sea, they have a strong sense of superiority; after all, they can go places where no other members of their own race can go, so they feel empowered by the ability to determine their own path in life.

WINDSOUL GENASI

Quick of speech and of gait, windsoul genasi are prone to flights of fancy and rapid changes in mood. They drift from one emotion to the next, though most have an air of carelessness about them. Windsoul genasi embody the genasi passion by quickly latching onto emotions and riding them for a short time, then just as quickly abandoning them. Windsoul genasi don't form strong attachments, at least not without great reason, and as a result windsoul genasi are seen

as loners and drifters. Likewise, windsoul genasi are among the most adaptive, and they can take whatever comes their way with aplomb.

CULTURE

Genasi are one of the most culturally diverse races—perhaps second only to humans. Owing to the fact that they integrate well into other societies, genasi culture is a melting pot of traditions drawn from those of many other races. Despite their ability to adapt to the customs of other races, genasi have developed unique practices of their own as well. The strong passions of the genasi people have made their culture vibrant and dynamic, and life in genasi society is compared to an ever-changing tapestry woven of the brightest threads.

SOCIETY

Genasi society is nearly as tumultuous as the genasi themselves. The strong sense of ambition fostered by the genasi leads to a constant struggle between those in power and those seeking power. Likewise, one's social status is far from static; the genasi have no real concept of a social class that cannot be transcended, and few genasi would even understand the meaning of "knowing one's place." Indeed, the genasi are constantly rising and falling in social status, and where a genasi might be a revered member of the community one week, he might be forgotten the next as another genasi's star is on the rise. As a result, few genasi look down upon any other being based on social standing, since the beggar you shun one day might be the governor of the town mere months later—at least in the genasi view.

Genasi have no concept of nobility or hereditary leadership, at least not of their own. They might adopt these concepts when blending into other societies,

but left to their own devices the genasi people do not divide themselves into social classes. There are only genasi on the rise, and genasi falling out of favor. The genasi do not believe in divine right, royal or noble bloodlines, or any transference of prestige from parents to offspring. Each genasi must achieve its goals on its own merits, and competition between genasi is fierce. Although this creates a somewhat level playing field as far as social prestige is concerned, the end result is that genasi society is like a constantly bubbling vat, where the entire social structure churns and boils, and can be radically different from one week to the next.

Since genasi society is so mutable, genasi truly believe (and rightly so) that no matter their current situation things change eventually. Genasi find it difficult to feel downtrodden in its society when fate has brought ill fortune, since it truly is only a matter of time before it can once again be in the limelight. Likewise, wealthy and powerful genasi are rarely as callous and unaware of the repercussions of their actions as human nobles can be, and though their fiery nature can lead them to be capricious and even hedonistic, they never forget that all their stature could be brought crashing down the next moment.

FAMILY

A genasi's family holds a very important place. Because it can be difficult for a genasi to form bonds with others without a great deal of time and effort, the genasi family is regarded as one of the few groups where a genasi can establish true life-long bonds. Though genasi families share the same problems and issues as families in other races, it is far rarer that genasi offspring become truly estranged from their parents. For genasi, family might be the only other people that they can rely on to understand them. Even the bitterest feuds might lead to only a temporary separation, and even when family members are spread to

the four corners of the world, they still look forward to their reunion.

In most cases, genasi children are raised by family members who share an elemental manifestation with the child. However, genasi parents go out of their way to make sure their children spend time with genasi of other manifestations, so that they gain a greater appreciation for the differences between members of their own race. This is particularly prevalent when members of the genasi's family have different primary manifestations; in some cases, genasi children go to live with relatives with other manifestations for weeks or months at a time, in the hopes that the child can come to respect those genasi who are different. In families with multiple manifestations, parents see the exposure of their children to multiple manifestations as being of utmost importance.

MANIFESTATIONS

For the genasi, their elemental manifestation is central to the fiber of their being. Culturally, genasi of different manifestations are not very different, much like humans of different temperaments still share most cultural trappings. However, a genasi's manifestation is as important to it as its religion or profession, if not more so. Though genasi respect the differences between members of their race, when confronted with prejudice against their manifestation, they anger quickly. Anyone who discriminates against a genasi due to its elemental manifestation might find the full force of an enraged genasi confronting him or her, since insults to a manifestation are the most offensive anyone can make. Genasi are proud of their manifestations, but also sensitive, and they can be very touchy about the subject unless it is breached with care.

MAGIC

As beings of great elemental power, genasi favor elemental magic as well. Genasi wizards are common, and when studying the ways of the arcane, genasi wizards research spells that are tied somehow to their elemental manifestations. Since the genasi have a built-in affinity for certain elements, they also have greater control over elemental magic and bend such spells to their will. When a genasi lashes out with elemental magic, most beings know to stay out of the way.

Though the excitable nature of the genasi makes it difficult for them to maintain the discipline of wizardly life, what they lack in control they make up for in natural accuracy. Genasi spellcasters harness raw power through strength of will and not through any sense of finesse or study. However, since the genasi knowledge of elemental forces is so great, other wizards value the insight of genasi spellcasters since they can see things that wizards of other races would never be aware of.

RELIGION

Genasi favor deities that share elements of their portfolio with the genasi's primary manifestation. Genasi with multiple manifestations might also be prone to calling upon multiple deities when in need, depending on the current manifestation they have. Regardless, genasi feel comforted knowing that something that is so integral to their very being is under the watchful eye of a powerful deity. Particularly religious genasi feel the hand of the divine guiding their actions, believing that, more so than any other race, they are intimately connected to the divine by the elements in the gods' portfolios.

Most genasi have small shrines to their gods in their homes, and they do not attend religious services at larger temples. Genasi tend to worship whenever the mood strikes them, which rarely conforms to the

more rigid schedules of worship held in organized temples. Genasi are rarely fond of formal ceremonies and rituals, instead preferring to confer their worship on their chosen gods at their own pace and in their own way. Genasi independence is present even in their religious practices, which, like the genasi themselves, are full of passionate belief and a willingness to embrace change.

THE PRIMORDIALS

A controversial subject among the genasi is that of the primordial. The ancient elemental beings known as the primordial are rivals to the gods themselves, and many genasi are well aware of this fact. Some genasi revere the primordial as though they were gods, conferring worship upon them in secret. These genasi believe that they were created to serve the primordial and spread chaos, and, as a result, this reverence for elemental forces takes the place of religion in their lives. Particularly zealous followers of this belief even seek to make pacts with beings of Elemental Chaos to bring themselves one step closer to the primordial.

Worse yet, a few misguided souls even seek out the Elder Elemental Eye, Tharizdun. These genasi are typically among the most evil and chaotic of their race, and some would argue insane, since they seek the means to free Tharizdun and unleash his destructive power upon the world. These misguided genasi think that Tharizdun placed them on the world, and that they were created when the Chained God strained against his restraints long enough to touch the world. They believe that the genasi race is a remnant of his awesome power, and that they were created at the moment he touched the world with the intent that they become his liberators.

At the same time, genasi see the primordial as beings of great evil and destructive power. These genasi revile the primordial, believing that the conflict within themselves (that between Elemental

Chaos and mortal order) embodies a great struggle in the universe. Since the genasi are mortal, they place themselves on the opposite side of the struggle from the primordial. These genasi believe that it is the duty of the genasi to harness the power of chaos and tame its destructive power, while the primordial continues to try to tear down these good works.

ART

Genasi art is nothing if not exciting. Genasi crafts embody the wild, untamed nature of the genasi soul, and even the simplest or most practical items (like furniture) look as though they were merely snatched out of the Elemental Chaos whole. Genasi art uses bright, vibrant colors that express a wide range of emotions, and carvings and sculptures feature swirling or bursting patterns that resemble surges of power or even explosions. For more functional items, such as weapons, genasi artisans like to make their mark with swirling color patterns, bright gems, and elaborate carvings that give the surface of weapons and armor a flamboyant feel.

Most genasi artists see their craft as a means of gaining prestige in society. Likewise, genasi artisans want nothing more than to be in high demand, so most work hard not only to please their own sensibilities but also to please their intended audience. For example, though genasi blacksmiths might not be as skilled as dwarves when it comes to creating swords, they go to great lengths to tailor the swords to the person who plans to wield it. As a result, genasi weapons are intended for use by a specific individual, and they can sometimes seem unwieldy in the hands of others.

LEISURE

Genasi love athletics and games of all kinds, thanks to their competitive nature. Most genasi see leisure time as just another opportunity to improve their standing in the eyes of their peers. Genasi prefer to remain extremely active during their leisure time, which allows them an outlet for their wilder urges and impulses. Festivals and celebrations in genasi communities are frequently marked by footraces, feats of strength, and other physical competitions.

Team athletics are somewhat more rare (mostly due to the fact that genasi teammates turn on one another when the pressure is on), though genasi find themselves quite at home in gladiatorial competitions and the like. In fact, many genasi actively pursue careers in the gladiator arena because it gives them a chance to vent their frustrations and bask in the adoration of others, all at the same time. Gladiatorial events play both to the genasi's pride and their uncontrollable nature, making for an excellent spectacle.

ENEMIES AND ALLIES

Despite their unpredictable nature, genasi work rather well with most races, especially humans. Genasi and humans share a number of common traits, including strong emotions and a sense of ambition, and any race that mixes well with humans is also likely to mix well with genasi. Elves and eladrin are uncomfortable around genasi, since their more reserved, measured perspective on life does not mix well with the genasi's impulsiveness.

With no inherent racial conflicts, the genasi can make allies anywhere they go, depending on the degree of control they keep over their more chaotic urges. However, when genasi make enemies, their rivalry forms quickly and burns hot. Genasi show their enemies none of the discretion they offer their allies, and they are not afraid to unleash their full potential on someone who has crossed them. Though genasi try to abide by the laws of the land, many genasi cannot restrain themselves from incinerating their enemies, which sometimes put the genasi in conflict with the authorities even if the killing was done in self-defense. A genasi enemy is likely to be ruthless and aggressive, two traits that combine to make genasi extremely dangerous.

Most genasi see themselves as related, if only distantly, to beings of elemental power and origin. They are inclined to show respect, if not reverence, to elemental creatures that they deal with, unless that creature is overtly hostile to the genasi. When encountering beings of great elemental power, genasi go out of their way to try to make peace with, or even make allies of, these beings in the hopes of fostering the bond between two creatures of the elements.

ENCOUNTERS

Genasi are aggressive and, in combat, violent without reservation. They call upon elemental power when dealing with enemies, and they prefer to use elements associated with their manifestation when possible.

GENASI FLAMECHASER

The genasi flamechaser is a firesoul genasi that has mastered the ability to create and manipulate fire. It needs no weapons since it creates them from pure flame.

Genasi Flamechaser		Level 6 Artillery
Medium natural humanoid		XP 175
Initiative +6	Senses Perception +8	
HP 61; Bloodied 30		
AC 18; Fortitude 19, Reflex 18, Will 18		
Speed 6		
⚔ Dagger of Flame (standard; at-will) ♦ Fire		
+10 vs. Reflex; 1d6 + 4 fire damage.		
⚡ Fire Bolt (standard; at-will) ♦ Fire		
Ranged 20; +11 vs. Reflex; 1d10 + 4 fire damage.		
⚡ Firepulse (immediate reaction; when hit by a melee attack; encounter) ♦ Fire		
+13 vs. Reflex; 1d6 + 4 fire damage.		
⚡ Explosive Burst (standard; recharge ⏏ ⏏ ⏏) ♦ Fire		
Ranged 10; +11 vs. Reflex; 3d6 + 4 fire damage, and the genasi flamechaser makes a secondary attack against each creature adjacent to the target. Secondary Attack: +11 vs. Reflex; 1d10 + 4 fire damage.		
⚡ Linger Flameburst (standard; encounter) ♦ Fire		
Ranged 10; +11 vs. Reflex; 3d6 + 4 fire damage, and any creature that starts its turn adjacent to the target takes 5 fire damage (save ends).		
Alignment Unaligned		Languages Common, Primordial
Skills Perception +8		
Str 14 (+5)	Dex 16 (+6)	Wis 11 (+3)
Con 19 (+7)	Int 11 (+3)	Cha 16 (+6)

GENASI FLAMECHASER TACTICS

The genasi flamechaser opens combat with its *explosive burst* or *linger flameburst* powers, depending on whether their targets are clustered close together. From there, the flamechaser attempts to stay back, lobbing *fire bolts* and *explosive bursts* (if it recharges), only resorting to *firepulse* if enemies move in too close.

GENASI STORMMASTER

A genasi stormmaster is a stormsoul genasi that combines swordplay with a mastery of thunder and lightning. The stormmaster sweeps across the battlefield like a maelstrom.

Genasi Stormmaster		Level 9 Controller
Medium natural humanoid		XP 400
Initiative +9		Senses Perception +7
HP 97; Bloodied 48		
AC 23; Fortitude 21, Reflex 23, Will 21		
Speed 6		
⚔ Longsword (standard; at-will) ♦ Weapon		
+14 vs. AC; 1d8 + 5 damage.		
⚡ Storm Sword (standard; recharge ⏏ ⏏) ♦ Lightning, Weapon		
+14 vs. AC; 3d8 + 5 lightning damage, and slide the target 5 squares. At the end of the slide, enemies adjacent to the target take 1d8 + 5 lightning damage.		
⚡ Wrath of the Thunderstorm (standard; recharge ⏏ ⏏) ♦ Lightning		
Area burst 2 within 10; +12 vs. Fortitude; 2d10 + 8 lightning damage the target slides 3 squares.		
Promise of Storm (minor; encounter) ♦ Lightning, Thunder		
Personal; until the end of its next turn, the genasi stormmaster deals an extra 1d8 damage with a lightning or thunder power it uses.		
Thunderclap Rebuke (immediate interrupt; when hit by a melee attack; encounter)		
The attacking creature is pushed 5 squares.		
Alignment Unaligned	Languages Common, Primordial	
Skills Arcana +14		
Str 10 (+4)	Dex 11 (+4)	Wis 16 (+7)
Con 17 (+7)	Int 21 (+9)	Cha 13 (+5)
Equipment longsword		

GENASI STORMMASTER TACTICS

The genasi stormmaster is a melee combatant who uses its sword to enhance its controller abilities. The stormmaster approaches its enemies, opening the combat with the *storm sword* power. If distant enemies are on the battlefield, the stormmaster uses its *wrath of the thunderstorm* to move enemies into position for further attacks.

GENASI TEMPEST

A genasi tempest has learned to manifest two elements at once. This particular tempest has a dual manifestation of earth and water.

Genasi Tempest		Level 8 Skirmisher
Medium natural humanoid		XP 350
Initiative +11		Senses Perception +5
HP 89; Bloodied 44		
AC 22; Fortitude 20, Reflex 21, Will 20		
Speed 6		
⚔ Rapier (standard; at-will) ♦ Weapon		
+13 vs. AC; 1d8 + 5 damage.		
⚡ Rush of the River (standard; recharge ⏏ ⏏ ⏏) ♦ Weapon		
+13 vs. AC; 3d8 + 5 damage, and the genasi tempest can shift up to 2 squares before or after making this attack.		
⚡ Earthshock (minor; encounter)		
Close burst 2; affects one creature in burst that is touching the ground; +13 vs. Fortitude; target is knocked prone.		
⚡ Thundering Earth (standard; encounter) ♦ Thunder		
Close blast 3; +11 vs. Fortitude; 2d10 + 4 thunder damage, and the target is pushed 2 squares.		
Pity is for the Weak		
The genasi tempest deals an extra 2d6 damage on melee and ranged attacks against any target it has combat advantage against.		
Swiftcurrent (move; encounter)		
The genasi tempest shifts up to 6 squares over ground or liquid terrain, taking no penalties for squeezing. The genasi tempest can move through enemy spaces, ignore difficult terrain, and take no damage if the surface it moves across would normally deal damage to it.		
Alignment Unaligned	Languages Common, Primordial	
Skills Acrobatics +14		
Str 13 (+5)	Dex 20 (+9)	Wis 13 (+5)
Con 17 (+7)	Int 12 (+5)	Cha 17 (+7)
Equipment leather armor, rapier		

GENASI TEMPEST TACTICS

A genasi tempest tries to gain combat advantage when possible. If it cannot flank its targets, the genasi tempest uses its *earthshock* power to knock a target prone, and then uses *rush of the river* to approach

the target and strike, or (if the target is more than 2 squares away) uses *swiftcurrent* to cross the battlefield safely as a move action before making its attack.

ENCOUNTER GROUP

The following is a sample group of genasi cultists of Tharizdun. It represents a small cell of cultists that might operate in any small town or city, including the stormmaster leader of the cultists, his tempest followers, and an elemental emissary from their hidden masters (a bloodfire harpy).

Level 8 Encounter (XP 1,850)

- ♦ 1 genasi stormmaster (level 9 controller)
- ♦ 1 bloodfire harpy (level 9 soldier)
- ♦ 2 genasi tempests (level 8 skirmisher)
- ♦ 2 genasi flamechasers (level 6 artillery) ☼

Rodney Thompson is a game designer at Wizards of the Coast, Inc. His previous design credits include the *Star Wars Roleplaying Game Saga Edition*, *Starships of the Galaxy*, and *Knights of the Old Republic Campaign Guide*.

Chapter Four

GHOST

THERE UPON THE HOUSE STAIRS STOOD THE LADY IN QUESTION HERSELF—MORE A THING OF AETHER AND ECTOPLASM THAN SKIN AND SUBSTANCE. STILL CLAD IN A GOWN BEFITTING A QUEEN OF THE LADIES OF THE NIGHT, HER IVORY SKIN SHIMMERED IN SPECTRAL TRANSLUCENCE, THE SUGGESTIVE CURVES OF HER SHOULDERS SWEEPING UPWARD TO A NECK WEARING GORE LIKE A RUBY CHOKER—AND NOTHING MORE! OUTSTRETCHED IN A DELICATE CLAW, GRIPPED UNCEREMONIOUSLY BY A SHOCK OF EPHEMERAL HAIR, SWUNG THE LADY'S MISPLACED HEAD, HER BEGUILING FEATURES DARKENED BY THE SIGHT OF VISTAS UNKNOWNABLE. SLOWLY SHE DESCENDED, HER EVERY SPECTRAL STEP HERALDED BY A GRAVE NOTE FROM THE TOWERING SALON CLOCK'S INVOCATION OF THE ELEVENTH HOUR—EXACTLY THE TIME BOLES HAD CONJECTURED THE HOUSE MISTRESS HAD BEEN SO THOROUGHLY FINISHED.

—AILSON KINDLER, *STEPS UPON THE SANGUINE STAIR*

Beyond the world of mortals lies a realm of spirits, an unknowable reach forbidden to all but departed souls and the guardians and gaolers of that fantastic and terrible realm. Death alone serves as both gate and key to this eternity, a supposedly one-way passage from which few return. Yet for some, even the laws of existence prove insufficient to drive them from the realm of the living, with injustice, delusion, fury, or fear compelling them to cling to the fleeting tendrils of their failing lives. In states of boundless sorrow or deathless malice, such spirits linger on, no longer kin to the quick, but death given an impression of thought and form, dire witnesses at the door to beyond—ghosts of the living.

With indescribable forms and myriad intentions, the wayward souls of those recently felled and long forgotten wreak their wills upon the mortal world, seeking to compel or terrorize the living with their undeniable ambitions. While the legends of ages spread stories of unquiet spirits, perhaps no tales prove so diverse and haunting as those of the disembodied dead, and what dread intentions they hold for the living.

NECROLOGY

More than merely wayward souls cast from the cycle of eternity by random chance, the vast majority of ghosts manifest for a purpose—whether one of their own desires or born from the method of their deaths. So-called “ghost stories” often tell of souls lingering upon the mortal world in an attempt to put right some injustice—typically whatever evil led to their deaths—or to prevent some terrible fate. Yet the circumstances leading to the appearance of a ghost need not be so iconic. Although the mysteries of death may never be fully understood by mortals, the most significant requisite in a ghost’s appearance seems to be extraordinary circumstances of trauma surrounding its death. Such a condition need not be a torturous murder or a violent betrayal—the knowledge of a great responsibility or the jeopardized life of a loved one can potentially prove sufficient cause to compel a soul to linger on past its physical capacity. Such leads some scholars of the afterlife to debate whether or not ghosts are truly wayward souls, or rather mere impressions of a single powerful emotion or desire, left as an obsessed copy of a powerful will.

Aside from personal determination, extreme circumstances might also lead to the formation of ghosts. Tales of unquiet battlefields, ghostly ships, and whole haunted cities typically arise from some manner of terrible collective ordeal. Such conditions must be exceptionally painful or damaging to the mortal mind, as not every fallen fortress or disaster-scoured community results in some mass haunting. While individual ghosts typically require some measure of personal connection, suffering, or desire to bind them to the land of the living, such is lessened for ghosts created en masse. The shared experience of multitudinous lesser horrors are seemingly significant enough to match the singular distress of a lone

spirit, allowing large groups of spirits to manifest due to an incident of extreme shared emotion or disturbance that might not provoke the ghostly manifestation of an individual.

While many forms of undeath carry with them some measure of dark appeal, such can never be said of ghosts. Foremost, the transition from life to spirit is mysterious and unreliable, with no known cases of a willing, purposeful transition into this state of unlife being recorded. Adding to this is the typically stagnant condition of the ghostly state. Unlike many varieties of undead, most ghosts are unable to retain new knowledge after their deaths, and even memories of their undead existences seem blurred and timeless. Only in exceedingly rare exceptions have ghosts that defy these truths been encountered, with even those existing for millennia having little impression of the modern age or the gulfs of time since their deaths.

HABITAT & SOCIETY

Encountering a ghost rarely proves as simple as stories of the macabre often imply. Few, for example, care to linger about the monument-dotted graveyards or moldering potter’s fields containing their remains. Such a seeming incongruity is perhaps better understood if one views ghosts as remnants of the living rather than as manifestations of the dead. Typically, ghosts arise near the places they died or at sites to which their lives were connected, with the manors of fallen lords, the vaunted halls of deceased statesmen, and the simple hovels of wayward peasant spirits all holding more connection to the time and meaning of a life than the circumstances of death.

To say that a ghost might appear anywhere only slightly hyperbolizes the truth. As noted, a traumatic event and a place of meaning characterize the unlives of most wandering spirits. Beyond these truths, though, nearly any location might give rise to ghostly hauntings. A certain genuineness hides behind the common fear of aged places, crumbling ruins, abandoned residences, and even shadowy attics. Such settings typically hold connections to lives past, whether as the homes of the deceased or repositories of the trappings of past generations, and draw an undeniable weight from the histories, events, and meaningful happenings that transpired within and about them. And with such weight comes the potential for connection, possibly strong enough to draw the spirits of former owners. This is not to imply that ghosts only linger in the dusty places of the world, though. Tales tell of innumerable ghosts with unusual haunts—such as apparitions upon pilgrim roads, the spirits of fallen mountaineers, or the ghostly beasts of ravaged wildernesses—even those that follow the vestiges of their former homes into new dwellings. Only reaches devoid of contact with the living are sure to be entirely free of ghosts, for where the quick tread, their spirits inexorably follow.

Despite nearly any place’s potential for a ghost’s appearance, lost spirits are an extreme rarity, for the laws and paths of natural life are powerful beyond the strength of most mortal

FACETS OF FEAR

More so than even the dread of death, ghosts embody the eternally unknowable, and the irreconcilable fear of the afterlife. Among the oldest of humanity's fears, the question of what occurs after one's last breath has been addressed by philosophers, theologians, and storytellers since prehistory. Finding evidence lacking, nearly every approach to the question suggests some manner of life after death, each such answer proving from one vantage comforting and, from another, singularly terrifying. The concept of one's flesh being possessed by a greater, spiritual self that goes on to life again—whether in reward or punishment, in this world again or on one wholly new—inspires more than just tales of the afterlife, but of spirits that fail to move past the mortal world, whether by cosmic accident or undying intention. Thus, one of the oldest literary and folkloric traditions, the ghost story, is born.

Aside from being intrinsically fearful creatures themselves—unnatural, disembodied manifestations of the dead—ghosts possess a deeper horror in the questions concerning their reasons for existence and intentions toward the living. Rarely do spirits forgo the afterlife without great cause, giving spirits typically dire motivations. The ghost that seeks to avenge its death, to right some injustice, to torment its murderer, or to lay claim to that which it eternally views as its own all occur again and again in the folklore and literature of dozens of cultures. To aid them in their dire goals, ghosts draw upon strange powers of the dead and the afterlife, manifesting a wide range of supernatural powers from intense cold to possession of bodies or items, moving or destroying objects, unnaturally changing their environment, or even wilder and stranger effects. The ghostly traditions of different cultures also have widely different explanations and descriptions of ghosts and their powers, making such spirits among the most variable and unpredictable of all undead.

wills and all but the most potent magic to defy. Even those that do appear only do so temporarily, as many circumstances that might draw a soul away from its final rest lose their significance with the passing of time. Souls attempting to protect someone, avenge some wrong, or see a loved one once more typically linger only for a matter of hours or days before their desires are fulfilled and they willingly release their holds on life. The will or dementia that shackles a spirit to the world for ages proves far rarer and born of elaborate circumstances. Thus, while sightings of ghosts or brushes with the dead are relatively common in the folktales of even the smallest communities, actual incidents of an established ghostly resident or continuous haunting prove truly extraordinary.

Even in areas where multiple ghosts do arise through the most unusual of circumstances, these spirits typically have no

concern for one another, showing little more interest toward the living. In most cases, such undead seek only to interact with those who hold some connection to their former lives, bearing on their deathless existences, or those who somehow interrupt their immortal reveries. For example, the ghost of a murder victim might only interact with those it deems sympathetic to avenging its death, while the spirit of lonesome dowager might only treat with those who resemble her lost ancestors. Even in exceptionally rare cases where multiple ghosts haunt the same area, how such apparitions interact largely reflects their relations in life, with the apparitions of strangers ignoring one another even after centuries of cohabitation and enemies playing out rivalries over endless ages.

CAMPAIGN ROLE

Ghosts generally serve GMs in a twofold manner: bluntly as enemies, and in a potentially more elegant form as storytelling devices. As undead foes, ghosts measure among vampires and liches in menace, though less so in terms of scale. Rarely are ghosts unfettered, even though their statistics do not require a place or purpose. While spectres, wraiths, and all manner of similar incorporeal undead make fine spooks and unquiet spirits to menace characters, ghosts imply a greater personality, history, and effort to banish. GMs are thus encouraged to create meaningful histories for these apparitions, as their value stems not from wide-reaching plots or even evil intentions at all, but from the stories inherent in their existences and the conditions that might lead them finally to rest.

As storytelling devices, ghosts serve as exceptionally useful links between the world of the present and the past, and manifestations of the wisdom of the realm of the dead as it might affect the lands of the living. Perhaps the ultimate method of “telling” rather than “showing,” a non-combative ghost might frame a tale of woe in no uncertain terms, presenting the ultimate in sympathetic victims—those affected even beyond death. Yet even under the most extreme and seemingly sympathetic conditions, ghosts retain the most strongly held goals and desires of their lives, and not all ghostly ambitions are altruistic or liberating. The trope of ghostly intervention should be carefully utilized, though, as it moves a measure of control and discovery from the PCs' hands entirely to the GM. Ghosts who guilt the living into doing their will or who possess all knowledge can swiftly feel heavy-handed or lead to lazy, unbelievable storytelling. Ghosts with an imperfect vantage, though, or with goals more mysterious than they at first seem, are typically more interesting, but still should be utilized only rarely so as not to force players into specific actions or to undermine their place in a story's spotlight.

VARIETIES OF GHOSTS

Much confusion arises in folktales and legends between the use of the word “ghost” referring to a specific type of undead and as a generalization for all ethereal undead. Aside from

ghosts, numerous disembodied undead exist, just a smattering of the most common being noted here.

Allips: Few fates could be more horrifying than having a life of fear and suffering end, only to find another existence of such torment stretching into eternity. Such is the doom of allips, the mad dead. Souls of the insane too hate-crazed and vicious to find their ways to the afterlife, these shades blather endlessly, spouting profanities and demented tirades from forms stripped of all mortal reason, reduced to nightmarish hallucinations themselves.

Shadows: Little more than impressions of wickedness, shadows are the souls of petty villains too fearful of their eternal punishments to pass on to the outer planes, yet too weak-willed to manifest as greater undead. Cursed to wander the darkened places of the world, these pathetic spirits become scavengers of life, sapping vitality from the living in a hopeless attempt to reclaim even an impression of their forgotten lives.

Spectres: While ghosts take on a fearful variety of forms for all manner of traumatic reasons, instances of extreme violence and hatred often give rise to a lesser form of spirit: spectres, souls of rage. Compelled to linger upon the mortal plane by their fury, these vicious spirits seek to revenge themselves upon all living creatures, violently afflicting others with their own terrible condition. The light of the sun weakens spectres, forcing them into dark, dismal haunts that only further fuel their loathing for life in all its forms.

Wraiths: The souls of exceptionally malevolent individuals, wraiths are manifestations of true evil. They torment the living not out of any particular desire or rampant emotion, but in the indulgence and sadistic enjoyment of malice for malice's sake. Those that intrude upon their darkened realms risk falling victim to their deadly touch, a freezing grip that drains the vital energy from the living until all that's left is an ashen husk and a pathetic soul enslaved to the wraith's cruel whims.

GHOSTLY CORRUPTIONS

Just as the reasons for ghostly materialization differ wildly, so too do the abilities manifested by the disembodied dead. Upon creating a ghost, GMs choose from a range of special attacks, each representative of the spirit's cause of death or undead intentions. Presented here are a variety of additional special attacks, available to further tailor the tales and powers of these lost souls. As with all other ghostly abilities, the DCs for these special attacks are equal to $10 + \frac{1}{2}$ the ghost's HD + the ghost's Charisma modifier.

Deathly Delusion (Su): The ghost died suddenly or unexpectedly. Not even realizing it's dead, this spirit goes about the routines of its daily life, ignoring the living in a state of undead denial. Should a ghost with this ability pass through the square

of a living being, that creature must make a Will save or fall into a fitful sleep full of nightmares that aren't its own for 1d4 minutes. For a number of following nights equal to the ghost's Charisma modifier, the victim must make an additional Will save or be affected as per the spell *nightmare*. (CR +0)

Fatal Fate (Su): The ghost died with some work undone or desire unfulfilled. In its desire to see its efforts completed, once per day, a ghost can lay a compulsive curse upon the living, forcing them to either take up its work or face a terrible end. A ghost can lay this curse by making a touch attack, which forces the target to make a Will save or be stunned for 1 round. During this round, the target receives a flood of images suggesting a course of action—though such might remain vague or require research into the ghost's history to discern an exact meaning. The target has a number of days to fulfill the ghost's intentions equal to 14 days minus the ghost's Charisma modifier, to a minimum of 7 days. If the target does not fulfill the course of action suggested by the vision within this set period, he takes 1d4 points of Constitution drain per day. This effect can be overcome via the spell *remove curse*, requiring a caster level check with a DC equal to this effect's initial DC. (CR +0)

Frightener (Su): The ghost's unique personality manifests even in death. The ghost gains a number of spell-like abilities equal to its Charisma modifier. It may select these abilities from the following list: *animate rope*, *chill metal*, *control undead*, *dancing lights*, *entangle*, *faerie fire*, *fog cloud*, *ghost sound*, *heat metal*, *hideous laughter*, *invisibility*, *minor image*, *open/close*, *pyrotechnics*, *scare*, *sleep*, *spiritual weapon*, *soften earth and stone*, *summon swarm*, *warp wood*, or *whispering wind*. A ghost may use each of these abilities 3 times per day. The DCs are $10 + \text{spell level} + \text{the ghost's Charisma modifier}$. (CR +0)

Grave Trappings (Su) The ghost died with a strong attachment to a specific item or set of objects. A ghost with this ability may choose a number of items it died with equal to its Charisma modifier to carry with it into death. The ghost continues to be able to use and benefit from these spectral

duplicates just as though they were the real things. Weapons and armor are treated as having the *ghost touch* special ability, while other items act as being incorporeal themselves and can be manipulated by the ghost. Regardless of the type of object, all selected items are treated as being part of the ghost's form and cannot be disarmed or removed from the ghost (even by the ghost). Should a ghost be destroyed, its equipment reappears with it upon rejuvenating. (CR +o)

Occasionally, and at the GM's discretion, the transition into death might imbue a single ghostly item with strange powers, granting it powers comparable to a magic item suited to the ghost's character level.

Phantasmagoria (Su): The ghost died as a victim of its own delusions or folly. A number of times per day equal to the ghost's Charisma modifier, the ghost can create an elaborate illusion. This illusion functions similarly to the spell *mirage arcana* in combination with multiple *major images*, allowing the ghost to recreate any scene, setting, or characters it wishes. The ghost can even incorporate itself into the effect, appearing as it wishes within the illusion as if it were under the effects of *alter self*. The entire illusion can be disbelieved with a Will save. The illusion is treated as a 6th-level spell created by a caster with a level equal to the ghost's CR. If any part of the illusion is dispelled, the entire illusion fades. (CR +o)

Reinvigoration (Su): The ghost died in the throes of a terrible fear, and is desperate for any way to escape its fate, both perceived and actual. Once per round a ghost can possess an adjacent corpse, merging with the remains and reanimating them as a skeleton or zombie. The skeleton or zombie animated by this ability may be no higher than the ghost's CR minus 2. If the animated corpse is destroyed, the ghost reappears in the corpse's square and cannot possess another body for 1d4 rounds. (CR +o)

Vehemence (Su): A ghost with a powerful connection to a specific location gains a measure of mastery over the objects in that place. Once per round, a ghost can possess an object of size Large or smaller, giving it life as an animated object. This animated object's CR can be no higher than the ghost's CR minus 2. If the target object is being held by a creature, the object can make a Will save using its bearer's saving throw to resist possession. If the animated object is destroyed, the ghost reappears in its square and cannot possess another object for 1d4 rounds. (CR +o)

KNOWN GHOSTS

All manner of geists and apparitions linger in the dark, ancient, and mysterious places of Golarion. A handful of some of the best-known local ghosts follows.

Coath, The Wight Whale: Tales along the eastern coast of Garund have long told of Coath, the Black Whale, a murderous leviathan that seemed to take umbrage at man's incursion into its watery realm. For years, the gigantic, dusky whale roamed the seas and brought ruin to even the

best-armed vessels, typically under the cover of starless night. Finally, whalers from Ilizmagorti managed to coax the beast into a stretch of sandy shallows, and with blade, poison, and great loss of life finally laid the monster low. Soon after, a gigantic ghost of radiant darkness was spotted near Mediogalti Island, seeming to circle the vast landmass in search of land-bound prey, with several able ships disappearing soon after. Claimed by pirates to be the vengeful spirit of that hateful sea beast Coath, many sailors of Ilizmagorti fear to travel on moonless nights, when the sea proves darker and the stars less bright, out of fear of what they call the Wight Whale, the king of the stormy seas returned to take revenge on not just its killers, but all who sail.

Lord Carnavy Trou: In life, the good-natured Lord Trou straddled Oppara's social and scholarly world, being a gentleman antiquarian of some repute. The third son of a minor noble family, he filled his sumptuous home with room upon room of bookshelves, creating a maze-like library mansion. When Trou finally took a wife (late in life and at his family's insistence), Lady Sharrine Lemmor, it was for show and entirely loveless. Lemmor, a vain and moody woman, demanded Carnavy dote on her, giving him little peace and coming to resent his historical pursuits. In her instability and bitterness, it was little problem to murder her husband by crushing him under a stack of his beloved tomes. In death, however, the timid nobleman found himself free of the demands of standing and courtesy, taking to haunting his terrible former wife with zeal. The Trou Manor, a half-day's travel from Oppara, is now a deadly trap of winding halls and shifting tomes wherein lurk the thoroughly insane Lady Sharrine Lemmor and the spirit of her vengeful husband.

Ordellia Whilwren: Tales in the Varisian city of Magnimar tell of the ghost of one of the city's first leaders, Mistress Ordellia Whilwren, who aided in establishing friendly relations between the fledgling city and the region's Varisian wanderers. Magnimarians have long claimed that during poor fishing seasons, at the threat of war, or when the people seem lost, a vision of the dead leader appears upon the towering Arvensoar, her comforting ghost often leaving some token to aid the city through its need, such as a historical relic or an encouraging Harrow card. The sightings and tokens often serve to hearten the people and comfort the city with the knowledge that the spirits of the past still watch over their descendents.

SAMPLE GHOST

From the taprooms and firesides of Galt comes the tale of the spirit known as Maven Mossflight. A modest maiden from an esteemed family, she led a fairytale life that fell under the shadow of a careless romance. Smitten with Lord Reneis Whitchaste, Maven confessed her intentions to tame his wandering ways. To her downfall, one who heard her avowal was the lowborn and envious servant Sylnia, a maid

in Maven's family's employ who physically resembled the young lady. Long obsessing over Lord Whitchaste herself, Sylania coaxed Maven into inviting the nobleman on a secret spring dalliance. As the women traveled by skiff to the twilight rendezvous, Sylania remarked on the fairy-like fish that seemed to guide their craft. Raising her lantern to see the fictitious creatures, Maven never saw the hefted oar her servant brought crashing down upon her, sending her headlong into the murky river.

Under the pretense of being Maven, Sylania met and eloped with Lord Whitchaste that very night, the dastard never knowing the ruse. Maven's body was never discovered, but for decades since, a soggy soul has wandered the mossy shores of the Boarwood, a mournful maiden with a lantern who ever seeks a lost love and leads all perceived imposters to a watery grave.

SQ grave trappings

Gear lantern of souls (grave trappings)

SPECIAL ABILITIES

Corrupting Touch (Su) By passing part of its incorporeal body through a foe's body as a standard action, Maven inflicts 10d6 damage. This damage is not negative energy—it manifests in the form of physical wounds and aches from supernatural aging. Creatures immune to magical aging are immune to this damage, but otherwise the damage bypasses all forms of damage reduction. A Fortitude save (DC 19) halves the damage inflicted.

Grave Trappings (Su) Maven bears a ghostly lantern that sheds an unnerving glow. This light functions like a *candle of invocation*, causing all evil creatures that come within 30 feet of Maven to gain a +2 morale bonus on attack rolls, saving throws, and skill checks. Once per day she can use the candle to summon 1d4 will-o'-wisps. Maven can interact with the lantern as though it were incorporeal. If Maven is destroyed, the lantern is destroyed as well, and reforms with her upon rejuvenating.

Rejuvenation (Su) If "destroyed" through combat, Maven restores herself in 2d4 days. She can only be put to rest if her sunken, fish-eaten remains and the richly interred corpse of Lady Sylania Whitchaste have their places swapped.

Telekinesis (Su) Maven can use *telekinesis* as a standard action once every 1d4 rounds (caster level 12th).

Chapter five

GHOUL

"THE SUBSIDENCE WAS EVIDENT IN EVERY GRAVE. A SUNKEN SCAR MARKED MANY OF THE TOWN'S BURIAL SITES, EACH FILLED WITH A MUDDY PUDDLE FROM THE AFTERNOON RAIN. YET MORE DISTURBING WERE THOSE GRAVES WITHOUT PUDDLES—FOR THESE GRAVES WERE SCARRED INSTEAD BY GAPING HOLES INTO THE DARKNESS. A TERRIBLE SMELL ROSE FROM THOSE HOLES, A SMELL OF DEATH AND DECAY FAR TOO PUNGENT AND STRONG TO COME FROM THE RELATIVELY SMALL NUMBER OF BODIES LIKELY BURIED IN THE BONEYARD, AND FAR TOO FRESH TO COME FROM ANYTHING MORE THAN A WEEK DEAD. YET WORST OF ALL WERE THE SOUNDS COMING FROM THOSE GRAVEYARD HOLES, SOUNDS OF A SLOPPY, FRANTIC FEASTING PUNCTUATED ALL TOO OFTEN BY SCREAMS."

—OFFICER VADE ANDERMEN'S TESTIMONY RECOUNTING THE AFTERMATH OF THE CLOVER'S CROSSING TRAGEDY

The lonely graveyard that looms on the outskirts of the rural town has long been a place to haunt nightmares. By day, such sites carry with them an air of loss, mournful memory, and somber gloom. Those who visit usually seem eager to leave, either in hopes of leaving their grief for departed loved ones behind or out of fear of being caught within the yard after sun's ebb. Animals spied amid the tombstones and graves seem to carry with them a lurking threat, be they feral dogs merely passing through the yard in search of prey or dark raucous crows and ravens perched on statue angels and stone markers. Even trees seem more ominous when they grow from amid the stones of a graveyard, as if they might draw foulness from the surrounding soil, drinking deep with hungry roots.

Yet these subtle terrors are nothing compared to what many graveyards hide. Stories of lone mourners going missing when a trip to pay respects occurs too close to nightfall, of graves mysteriously sagging as if collapsing from within, of uncounted tunnels and warrens winding maze-like below the graves themselves, and darker tales of hauntings and hideous coffin-births are unnervingly common as a traveler moves from township to township. In many cases, these legends and tales are simply the by-product of the grim power of a graveyard's mystique, but in a few, there is a very real and very dangerous source for the graveyard's ill reputation.

For not all the dead remain dead.

Tales of necromancers instilling a fell unlife in dead bodies and sinister ghosts with a vengeful hatred or jealousy of the living are common, yet undead created in this manner are, for all the horror their shambling frames hold, limited in number and hampered by madness or mindlessness. Zombies and skeletons are little more than the tools of evil, and possess no drive of their own. Golems crafted from the dead have something more of a mind, yet most remain under their creators' control, and of those who escape, most do not carry in their lumbering hearts an intrinsic evil. And wraiths and wights and spectres, for all their haunting malevolence, do not range far from the sites of their mortal end, bound to bone by lingering madness or mystic decree.

Viewed in this light, those among the undead who retain free will and a driving hunger for destruction are perhaps the most horrifying of the lot. And while the vampire might carry all the hallmarks of such horror, its evil is often of a more subtle nature—a vampire can mask its predation behind a veneer of civility and calm. Not so the ghoul, a feral, constantly ravaging glutton whose hunger compels it to seek out the living and whose curse is so horrifyingly fecund. Here, one sees the perfect synthesis of undead blasphemy and living cruelty—a death that brings no peace from madness or hunger.

CREATION

Myth holds that the first man to feed upon the flesh of his brother was seized by a most uncommon malady of the intestinal tract, and after lingering for days in the throes of this painful

inflammation of the belly, he died, only to rise on the Abyss as Kabriri, the first ghoul. Whether the demon lord of graves and ghouls was indeed the first remains the subject of debate among scholars of necromancy, but certainly the methods by which bodies can rise as the hungry dead are myriad.

Necromancers have long known the secrets of infusing a dead body with this vile animating force. With the spell *create undead*, a spellcaster can waken a body's hunger and transform it into a ravenous ghoul. Stories abound as well of spontaneous transformations when a man or woman, driven by bleakest desperation or blackest madness, resorts to cannibalism as a means of survival. Whether the expiration that follows rises from further starvation or the death of the will to carry on in light of such atrocity matters not, for when death occurs after such a choice, a hideous rebirth as a ghoul may occur.

In the Darklands, yet another route to ghoulishness exists—lazurite. This strange, magical ore, thought to be the remnant of a dead god who staggered through the Darklands and left behind black bloodstains upon the caverns of the Cold Hell, appears as a thin black crust where it is exposed. The white veins of rock in which it often forms are known as marrowstone. Lazurite itself exudes a magical radiation that gives off a strong aura of necromancy. Any intact corpse left within a few paces of a significant lazurite deposit for a day is likely to rise as a ghoul or ghastr, often retaining any abilities it had in life. The vast majority of non-humanoid "ghouls" in the Darklands rise from such conditions. Ghouls often build lairs near lazurite deposits, for its radiation bolsters them against holy energy.

Yet the most common route to transformation is through violent contact with other ghouls. Called by a wide variety of regional names (such as gnaw pangs, belly blight, or Kabriri's curse), this contagion is known in most circles simply as "ghoul fever." Transmitted by a ghoul's bite (or, more rarely, through the consumption of ghoulish flesh), ghoul fever causes the victim to grow increasingly hungry and manic, yet makes it impossible to keep down any food or water. The horrific hunger pangs caused by the sickness rob the victim of coordination and cause increasingly painful spasms, and eventually the victim starves to death, only to rise soon thereafter as a ghoul. That those who perish from ghoul fever invariably animate as undead at midnight has long intrigued scholars of necromancy—the general thought is that only at the dead of night can such a hideous transformation complete its course. Fortunately, ghoul fever can only be transmitted from ghoul to victim, not between the infected and the rest of their community—for if the ailment could be so spread, the ghoul apocalypse could be but one bite away.

NECROLOGY

Ghouls are somewhat unusual among the undead in that they have a strangely lifelike defining feature—their hunger. No

FACETS OF FEAR

Two particularly hideous fears lie at the rotten core of ghoulish genesis: the fear of cannibalism and the fear of disease. That a ghoul's bite can transform the victim, through a strange disease, into one of the ravenous undead plays to primal taboos and gut-churning horror. Being eaten alive is bad enough, but what about being eaten alive by a person? What if that person were a loved one, like a mother or wife or child? And would it be worse if you were the one doing the eating?

While ghoulish traditions have roots in Arabian folklore, where they were demons who haunted graveyards, the classic concept of what a "ghoul" is often has more to do with vampire or zombie myths. Stories like Lovecraft's "Pickman's Model" and "The Dream Quest of Unknown Kadath" (which introduces the concept of ghoul nations and powerful ghosts) and many of Clark Ashton Smith's stories of Zothique (a realm where necromancers rule ghoul empires) give us great sources of inspiration. Yet it is to filmmaker George Romero that the game's ghouls owe their greatest debt. *Night of the Living Dead* and *Dawn of the Dead* are popularly known as zombie movies, but the monsters featured in them have less to do with zombies than they do with ghouls. Zombies in this game (yes, even the fast ones) are really little more than mindless automatons, yet these movies have starving undead creatures that not only hunger for the flesh of the living, but whose bites result in a terrible infection that causes the victim to rise as one of the undead. While the mechanic of why the dead come back to life in zombie movies is often never explained, the end result is the same.

You cannot trust the dead.

natural biological functions continue within a ghoul's body, and to a ghoul, hunger is a constant sensation. Only during the actual act of consuming humanoid flesh does the hunger abate, and it returns immediately upon the end of the grisly meal, typically forcing the ghoul to seek out new prey immediately. A ghoul forced to go without food does not suffer for its fasting—its hunger remains as constant as ever, but does not grow in power. A ghoul could dwell in a crypt for ages with nothing to feed upon without suffering for the passage of time. Effectively, a ghoul's hunger represents the limit to which the sensation can go—there is no greater hunger than that of a ghoul.

Fortunately for the living, the ghoul is also an intelligent creature and not a feral beast or mindless automaton. As a creature of intellect, a ghoul has other needs than satisfying its hunger. It does not constantly seek to satiate itself, for hunger is such an abiding reality that, to a ghoul, it is the norm. Ghouls spend long hours decorating their underground lairs, tormenting prisoners, reading ancient texts, or simply exploring the remote corners of their territories. As a general

rule, a ghoul seeks to satiate its hunger once per day, often emerging from its warren at nightfall to seek out prey. Even then, each ghoul's tastes can vary widely, and these preferences can further limit violent interactions with the living.

The question of what exactly happens to all the meat ghouls eat has fascinated necromancers for ages. No natural digestive process operates in a ghoul's dead body, just as a ghoul has no need to breathe and its heart pumps no blood through its veins, thus ghouls do not excrete solid or liquid wastes. Nor do they become bloated with undigested food building in throats and bellies. *Something* happens to the meat. Although the exact process is still not understood, it seems that the act of swallowing carrion or fresh flesh causes the meat to be absorbed directly into the ghoul's decaying flesh. As a ghoul exists, it constantly sheds bits of flesh as its undead body endlessly rots away, yet over time, a ghoul's size does not diminish. Thus, the necromantic animating force somehow uses consumed flesh to replace what drops away in corruption. A ghoul forced to go long without feeding is correspondingly less likely to have parts of its body drop away, as if the process of decay were, ironically, fueled by the same mechanism that replaces spent flesh.

Beyond its hunger and the virulent disease it can inflict on the living, one other quality defines the dangers a ghoul presents: its paralytic touch. Mere touch is not enough to visit this doom on a foe, the ghoul must pierce flesh with tooth or claw and actually inflict damage before the paralysis can seize the victim's body. Victims of this hideous affliction who survive describe it as a sudden and overwhelming hunger that causes the limbs to go limp with weakness—while paralyzed by a ghoul, a victim can do little but lie in a nerveless heap of incapacitating hunger. Unfortunately, the paralysis afforded does not deaden physical sensation, and the despair and horror of those who are eaten by ghouls while paralyzed must be terrible indeed. The fact that elves have an unusual immunity to this paralysis is curious indeed, but most point to Kabriri's form (and to the almost elven features of most ghouls) as the answer. They say that before he succumbed to his cannibal urge and became a demon, Kabriri himself was an elf. The long ears and slender bodies that most ghouls develop, despite their original race, is thus an echo of Kabriri's legacy—and the fact that their paralytic hungers have no effect on elves is but another manifestation of this strange bit of history.

It should be noted that not all who begin the transformation into ghoul become actual ghouls. Particularly hearty humanoids (often those with racial Hit Dice, or who in life were already gluttons or cannibals by choice) often become ghosts, which are similar in many ways to ghouls but are generally more powerful and more aggressive. This increased aggression has the side effect of forcing them into confrontations with the living, and as a result, ghosts generally do not exist for long once created. Lacedons are another variant, ghouls who rise from the bodies of starving humanoids who died from

drowning, often as a result of a shipwreck. (See the nearby sidebar for an exploration of other variant forms of ghouls.)

HABITAT & SOCIETY

Although a ghoul's basest urge, to feed on humanoid flesh, might seem savage and bestial, the ghoul itself is an intelligent and often imaginative creature. They temper their insatiable hungers with other desires that are all-too-human: a need for companionship, entertainment, education, and comfort. Yet one would be foolish to assume that these traits instill in the ghoul a chance at redemption or peaceful coexistence with the living. For a ghoul, companionship means either time spent with others of its kind or time spent conversing with prisoners the ghoul fully intends to feed on. Entertainment is focused on grisly "dinner parties" where meals are served raw or rotten direct from coffin, or from tombstones serving as platters and plates. Education manifests as an urge to study the dark secrets, be they necromancy, demonology, torture, or some other vile pursuit. And comfort, to a ghoul, means the pursuit of the most grisly and hideous accouterments imaginable—chairs made of bones, curtains made of flesh, and decorations made from parts of the body a particular ghoul might find distasteful to eat.

Ghouls have a discerning taste. Despite (or perhaps because of) their horrific diet, all ghouls have favorite flavors of flesh. Some feed only on the most rotten of corpses, while others prefer flesh stripped fresh from living bone. All ghouls maintain that the nature of a creature's death infuses the flesh with a different flavor—and among most ghouls, flesh salted with fear and despair is the most delicious of all.

Ghouls dwell in large communities, a mocking parody of the societies to which they once belonged. A ghoul warren can extend for miles underground, although most are limited by the size of the graveyards under which they become established. In the Darklands, though, ghouls build towns or even cities in which they dwell, often around prominent repositories of lore or temples devoted to the worship of Kabriri. The greatest of these cities is deep under the nation of Osirion, a city of bone-white towers called Nemret Noktoria.

In rare cases, ghouls (particularly those who prefer the flavor of bodies who died of natural causes or old age, or that have been given ample time to ripen) can establish peaceful alliances with living evil allies. The ghouls of Nemret Noktoria maintain trade with several living cities, as an example. Ghouls are often unusually literate for undead, and many learn multiple languages as a result. Obscure languages of the Darklands (such as Gug or Orvian) are popular choices, as are ancient languages like Aklo or Draconic. The ghouls of the Darklands even speak their own language, a tongue called Necril that mixes elements of Aklo, Undercommon, and Osiriani with a long tradition of ghoulish interests and development.

VARIANT GHOULS

The typical ghoul is assumed to have come from a Medium humanoid like a human, half-elf, dwarf, or elf. Yet some humanoids have remarkably different characteristics that make these ghouls more or less powerful.

Larger Ghouls: A giant that succumbs to ghoul fever retains its larger size, its higher natural armor bonus, and all of its racial Hit Dice, but is otherwise treated as a ghoul advanced to its new Hit Dice and size.

Smaller Ghouls: Small humanoids who become ghouls have 1 HD and all of the appropriate bonuses and penalties for dropping from Medium to Small size (−4 Str, +2 Dex, +1 size bonus on attack rolls and to AC, reduced natural attack damage, etc.). A Small ghoul is CR 1/2.

Unusual Ghouls: Some humanoids transformed into ghouls have unusual advantages.

Boggard, Merfolk: These races always spawn into lacedons.

Bugbear, Lizardfolk, Troglodyte: These races always spawn into ghouls.

Ettin: An ettin ghoul has two bite attacks, in addition to being advanced to Large size and 10 HD.

Fire Giant: A fire giant ghoul gains the Fire subtype.

Frost Giant: A frost giant ghoul gains the Cold subtype.

Lycanthrope: While a ghoul cannot become a lycanthrope, a living lycanthrope who succumbs to ghoul fever could rise as a ghoul. In most cases, this transformation removes the lycanthropic curse, resulting in a standard ghoul, but in rare events the resulting monster is a true ghoul lycanthrope. To create stats for such a creature, simply apply the lycanthrope template to a ghoul—this is an exception to the general rule that you can normally only add the lycanthrope template to a humanoid.

GHoul FEATS

The following feats are intended to be used by ghouls (including ghastrs and lacedons), but could make interesting options for many other types of undead as well.

BRAIN EATER

You gain some of the skills and knowledge of a consumed foe by eating its brain.

Prerequisite: Ghoul, Intelligence 17.

Benefit: If you eat a portion of the brain of a creature with Intelligence 3 or higher, you gain a +2 insight bonus on all skill checks and Will saving throws for 1 hour. Eating a brain is a full-round action, and the target must be dead or helpless. If the target is living, you may attempt to eat its brain as a coup de grace attack on the target, but you gain the insight bonus only if your attempt results in the victim's death.

CIVILIZED GHoulISHNESS

Although undead, you can easily pass as living.

Prerequisite: Ghoul, Charisma 18.

Benefit: Your appearance is such that, while pale-skinned and gaunt, you can pass as a living humanoid of your choice. You gain a +10 racial bonus on Disguise checks made to appear human, and your channel resistance increases by +2. Ghastrs with this feat can activate or suppress their stench ability as a free action.

WARREN DIGGER

You can burrow through soil and dirt.

Prerequisite: Ghoul, Strength 17.

Benefit: You gain a burrow speed of 10 feet through earth, sand, or soil.

Special: You can gain this feat multiple times. Each time you take it, add 10 feet to your burrow speed, up to a maximum of your base land speed.

CAMPAIGN ROLE

Ghouls make excellent foes for both low- and high-level play. At low level, they serve as horrifying foes for their mix of disease and paralysis abilities, and a single ghoul can remain a dangerous foe for even the largest of parties. Ghouls' intellects and natural predisposition toward necromancy make them excellent subjects for advancement via class level, particularly as clerics, rogues, sorcerers, and wizards. Finally, a nation of underground-dwelling ghouls can make for a refreshing change from the norm. (See *Pathfinder Chronicles: Into the Darklands* for an extensive discussion of such a ghoulish society.)

KNOWN GHouLS

Although one might expect the majority of powerful ghouls to rise from the naturally more dangerous legions of ghastrs, in fact the opposite is true. Ghouls seem more capable of

retaining the shreds of civilization and sanity required to look beyond the constant hunger and seek more out of their unives. This is particularly true of those who dwell in the Darklands, where ghastrs are little more than man-sized feral beasts and the ghouls themselves rule an empire.

Captain Irnesee: Irnesee didn't begin her undead life as the captain of the *Avenaria*—she earned it. A stowaway aboard the merchant ship *Red Razor*, she was forced to abandon ship when it burned to the waterline. After many weeks adrift, the survivors in Irnesee's boat were forced to draw lots to determine who would be executed and provide food for the survivors. Eventually Irnesee was the only survivor, a desperate woman in a boat filled with the gnawed bones of her onetime fellow survivors. When the whaler *Avenaria* found her adrift, she was strangely quiet—the whalers assumed her necessary cannibalism had broken her mind. In truth, she had died of starvation just before the *Avenaria* "rescued" her, and had transformed into a ghoul. That night, her hunger wakened fully and she slew the *Avenaria*'s crew but was unable to gorge on them all before they rose as ghouls themselves. The *Avenaria* never returned to port, but whispered stories of the "ghoul ship" continue to this day, with sailors predicting that the night the *Avenaria* makes call in a port shall presage the end of that city and the dawn of an empire of ghouls.

Kortash Khain: Priest-King of the ghoul city of Nemret Noktoria and high priest of the cult of Kabriri on Golarion, Kortash Khain is a towering figure of power and tradition. One of the most powerful creatures in the Inner Sea region, Kortash Khain rarely leaves the city he founded so long ago. Kortash maintains open trade with the nations of Thuvia and Geb, and secret trade with many others, and periodically wages war on his Darklands neighbors or the sands of Osirion above, but his true desire is to see Nemret Noktoria become an unliving copy of Kabriri's Abyssal realm.

SAMPLE GHoul

While the Priest-King of Nemret Noktoria only rarely leaves his haunted palace, the same cannot be said for his ambassadors, assassins, diplomats, and spies. These agents are universally powerful ghoul necromancers, and while they are common on the streets of Nemret Noktoria where they might also serve as judges, executioners, or seers, the most dangerous are those found beyond Nemret Noktoria's walls. While some such ghouls might be on legitimate pilgrimages or missions to allies, the majority, like the one presented here, are dangerous exiles forced to relocate to the surface world.

In Ehrimun's case, this exile was self-inflicted. Always discontent with what he viewed as a lingering existence in the bowels of the world, he longed to dwell on the surface and devour all the flesh that its diverse nations could offer. Ehrimun can be an undead warlord or master necromancer—using a powerful ghoul like this instead of a lich gives an adventure against an undead lord a different flavor and style.

THE ECOLOGY OF THE GHOUL

Among the Carrion Crows

Alone in his study
late at night,
Pelagast the
Younger chanced to
notice a message
burning in the
brazier he kept
to warm his aging
bones.

THE PIECE OF PAPER HADN'T BEEN THERE A MOMENT BEFORE; indeed, the paper seemed to be pulling smoke out of the air, becoming more and more concrete with each passing second. Pelagast snatched at it quickly, lest the fully-formed note catch fire and be reduced to the smoke that had formed it.

The paper was still hot—he almost dropped it back into the brazier—but its smoky characters resolved themselves into letters. He recognized the handwriting as that of one of his colleagues, a fellow given to long absences in the pursuit of knowledge, one Wrennar the Laughing Mage. The message read thus:

"Learned colleagues and fellow necromages of the Bemmean council, I send you greetings from the underworld, and a report of the recent disruptions here. The objects of my study for the last year and more have been ghouls, ghosts, and a previously unknown ruling ghoule type, the shadow ghoule, a subtype that has formed a society among the ghouls. Among the races of the Underdark, these master ghouls are sometimes called the noble ghouls, or true ghouls. Their existence has shed much light on the formation and abilities of ghouls and ghoule-kind. Allow me to report to you the workings of this distinctly dangerous form of undead."

Wrennar's Expedition

My investigations began in the winter of 3812 by the Bemmean Reckoning, for I had required the entire summer to locate a group of at least marginally competent sellswords willing to take a chance in the deepest reaches of the Underdark. Our travels continued without incident until the twenty-third march below ground. Shortly after the first rest, we heard a sound like the dry rasp of insect wings—though we did not yet know it, it was a sound we would soon dread, for it was the sound of ghouls on the march.¹

Within a minute, they were upon us, a swarm of wasted creatures with lambent eyes, the first ghouls we met in the Lands Below. Balint, our priest of Ouroboros, stepped forward to turn them aside, brandishing his serpent staff. The ghouls seemed reluctant to recognize the serpent-god's power, but after Balint hurled a few choice scriptures their way, they turned and retreated to the side of the passage as might be expected.²

Brad McDevitt

1. Large groups of ghouls can march in almost complete silence; they do not breathe, and they prepare their weapons and armor for silent movement. When they march, only the vibration of their footfalls and the rush of air past their bodies marks their passage. This increases their chance of obtaining surprise to 1–4. When moving alone, a shadow ghoule has a 20% chance to move silently.

2. Shadow ghouls are difficult to get rid of; they are turned as wraiths. *Protection from evil* has no effect

on shadow ghouls, even when strengthened with cold iron. All physical attacks against shadow ghouls inflict only half normal damage, as they are already dead and are well-protected by their undead state. They are immune or resistant to any form of *charm*, mental or psionic control, and *ESP*. They have 4+4 HD, rather than a ghoule's standard 4 or a ghoule's 2. Shadow ghouls move at 12, are armor class 3, and enjoy Fanatical morale (17–18). They are worth 1,400 experience points.

We forged ahead, but I could not resist examining these creatures as we passed. More than that, I weighed the odds of successfully capturing an intact specimen. With my mercenary companions, the odds seems slim. Furthermore, the ghouls were not as I had been taught, bestial, lumpy forms bereft of intelligence. Indeed, several of them carried weapons and all of them wore clothing. Though much of the clothing was tattered or worn, the weapons were in good repair.³ Though the accouterments were surprising and at odds with what I thought I knew, the ghouls' distinguishing physical features were as I expected: forked tongues, hairy, doglike legs, and pointed or even ragged ears. A few of the older ghouls could be distinguished by their bald heads.⁴

Only scant seconds after we had passed them by, the ghouls rushed us in a body. Balint and the others were caught completely by surprise, but I had watched the undead things suspiciously and was ready for the attack. Invoking the elemental power of Osti's fire to destroy their front rank with a breath of flame, I gave my companions enough time to prepare a defense. Once the ghouls' first momentum was lost, we soon sent the rest of the pack howling into the darkness. Nevertheless, the entire incident was disturbing. Ghouls are among the easiest undead to turn or even to destroy utterly. How had these resisted? The question would not be answered for some days. We pushed the issue aside and set up camp.

Our rest was disturbed by the screams of Mandac, one of our younger warriors. He had been scratched in the fight a few hours ago, and already the wound showed signs of infection; red lines spread from the scab along the veins toward his heart.⁵ Balint performed a

healing ritual, checked the wounds for signs of similar problems, and then returned to sleep. By morning, Mandac's tracery of red lines had receded, and Balint reassured the warrior that such infections were rarely serious.

The next march we met and spoke with a small party of derro; they approached us with open hands from the shadows, and we had fought enough the day before. The degenerate dwarves warned us that the border of a ghouls' "kingdom" lay just ahead—the derro themselves were returning from a trade mission there and had just recently passed a checkpoint marked by the gnawed bones of a dozen drow. My companions and I were amazed that anyone could trade with such grave-robbing filth, but we did our best to disguise our reactions. We believed that ghouls put little or no value on anything other than meat, grave goods, and a few

shiny baubles. Why trade with them at all? But regardless, we spoke to the derro, listening to their tales of a ghouls' kingdom and a nation of the undead.⁶ Perhaps they were merely telling us stories to scare surface dwellers, or perhaps they hoped for some fee or trophy from us, but their stories did little but confuse. Balint asked the derro how the ghouls resisted his turning efforts, but they could tell us nothing. Given their consort with dark powers themselves, perhaps this should not be too surprising.

Not long after our meeting with the derro, we met our second group of ghouls, just as they had warned us. However, we were traveling quite stealthily at this point, covered by invisibility and priestly wardings, we caught them off-guard and chanced upon them as they fed. Two sentries stood watch while the rest slowly stripped the meat from a paralyzed victim.⁷ Our attack

3. Like ghosts, shadow ghouls can use weapons. When they fight unarmed, they inflict 1-6/1-6/1-8 with their claws and teeth. Common ghouls are too stupid to do more than rend and claw. While shadow ghouls prefer to use forged weapons in hand-to-hand combat, they may also attack with claws and teeth, and with these natural weapons each attack offers a chance of paralysis (saving throw applies). Creatures paralyzed by a true ghouls remain paralyzed for 8-18 (6+2d6) rounds rather than the usual 3-8 of common ghouls or the 5-10 of ghosts.

4. The lack of new growth leads to complete baldness, though younger ghouls may retain thinning hair for years with proper care. Indeed, some nobles among the shadow ghouls wear wigs made of human or drow hair. These wigs fool some observers but can be detected by anyone within 10 feet who

makes a successful Wisdom check.

5. All ghouls keep their teeth and claws full of the filth of carrion or the grave. Likewise, they keep their weapons smeared with charnel filth as a result, they spread numerous diseases. After each battle with ghouls, creatures wounded by the ghouls must make a saving throw vs. poison. Those who fail lose 1d6 hp each day until the disease is cured or until they make a Constitution check with a -4 penalty.

In the case of those injured by shadow ghouls, victims who fail are infected with ghoul-rot and begin the slow transformation into ghouls.

6. Ghouls have overwhelming effects on surrounding communities of creatures. They eat until all major sentient and animal species are exterminated or driven away, and they transform humans, derro, halflings, and half-elves into ghouls, increas-

ing the hunger of the ghouls community.

Underground and surface communities faced with armies of ghouls sometimes take to burning their dead and killing their wounded, to prevent ghouls from appearing among them.

7. The ghouls' diet is a subject of considerable interest; few undead need to eat in the usual sense, digesting and excreting. A ghouls' feeding is more spiritual than physical. While it must eat, just as vampires do, a ghouls is nourished by the link to the flesh of sentient creatures, not by blood. If ghouls do not eat, they cannot heal their wounds. In addition, prolonged lack of sentient flesh breaks the strength of the ghouls' undead state, eventually returning the ghouls to a purely animal cunning. For ghouls to retain their intelligence over time, they must feast on the brains of sentient creatures.

caught them completely by surprise and threw their vile feast into a quick retreat. The victim had been gnawed to the bone; we buried him as best we could under the circumstances, piling rocks to make a simple cairn and blessing the ground he lay on to prevent the undead from returning to finish their meal.

Transformation

We met ghouls again after we had given up counting days; instead, we counted marches, though Balint argued that we should refer to them as "rests" instead, since we did not always march. In either case, on our twenty-second march, we learned at last all we wanted to know about them: their use of

I ADMIT I WAS A LITTLE TAKEN ABACK hearing such fine speech from a reeking, split-tongued creature ...

tools, their resistance to turning, their "kingdom" and trade with other races, and the method of their creation. The answer to the last seems to be the key to understanding the life cycles of not only shadow ghouls, but also of common ghouls and ghouls. But I've gotten ahead of the tale. First, the tale of how our expedition found what it sought.

We had continued beyond the ghouls "border crossing"—the drow bones were there, just as the derro had claimed—for two marches when we saw the first sign of civilization: a set of three sentries, armored in ill-kept chain and armed with spears. One of them had spotted our advance, for we had grown tired of marching in darkness and had lit a lantern. The ghouls had a lantern as well, though it was unlit. I convinced Balint and the warriors to keep their weapons sheathed and approached the sentries with open hands, speaking in the Undercommon I had mastered for the trip. As I suspected, they answered me, saying, "Welcome to the Great Army of the

Ghouls. We are soldiers of Murliss, the Lady of Worms and general of this army. Who are you? What do you bring us?"

I admit I was a little taken aback hearing such fine speech from a reeking, split-tongued creature clearly meant for the grave years ago. But I rallied and spoke, "We are dwellers from the surface, come to learn the language and customs of the ghouls in return for precious gifts and magics." I made a little bow, as a mage should to an inferior.

"You'd best see the general, then," he said. "I am Surnliven, lieutenant of the second cohort. I give you my safe conduct into the camp to see the general."

"I see. And how can I trust this assurance?"

He straightened into a perfectly-straight, military posture. "A ghouls word is his bond. I swear by my king that you will suffer no indignity at the hands of my troops."

I motioned my marching companions forward. I told them that we were entering the ghouls camp under the protection of a safe conduct, and that there we would meet and bargain with the ghouls for permission to enter their kingdom. They seemed suspicious, indeed they opposed the idea, but I calmed their fears by mentioning that I could always *teleport* us out of harm's way. I neglected to mention that this spell would not be enough to transport all of us.

I couldn't have been more mistaken about the size of the ghouls army. The darkness and silence of the ghouls camp had fooled me: we walked for fully ten minutes past row after row of ghouls preparing weapons, eating, herding prisoners (food?), and praying under the direction of a white-clad priest of Arabis, god of death, travel, and wisdom. I had

expected the Lieutenant's boast to reveal little more than a patrol in force. The army we passed through numbered in the thousands. The darkness made an exact estimate impossible.

At last we came to a tent of spider silk, doubtless plundered from the drow. Two finely-outfitted guards in plate and full helms stood outside, though they stepped aside at a word from our escort. Within stood a ghouls regaled in black with a horned headdress and a wicked sword with a wavy blade. "I am Murliss, leader of this host. What do you bring me?" If it had not been for the pallor of her skin, I might have mistaken the figure before me for a knight of the surface world, so noble was her bearing and manner.⁸

"Ourselves and our strong swords, if you require mercenaries," I said.

The general waved the offer away. "What do you know of the city of Glimmerfell?"

"I have never heard of it," I said, truthfully. "But know that I am a wizard of Bemmea, and I have much to offer you. These soldiers behind me, for instance, will make good allies, and my knowledge of spellcraft is considerable. All I ask in return is the freedom to study your armies, your customs, and your soldiers." I heard a brief scuffle behind me as Balint protested, but I didn't turn to look. It was too late to turn back. Besides, my *stone skin* spell would protect me from the first of my mercenaries' blows, if they objected to my throwing in our lot with these ghouls.

"Your followers are already mine by virtue of their presence within my army's grasp. And if you are as ignorant of my enemies as you claim, I have little use for your either, surface mage." The ghouls calmly raised a goblet in my direction. "But I'm always looking for new recruits."

"Your lieutenant guaranteed our safe conduct," I said, making my words bolder than I felt.

8. Ghouls nobles have all of the abilities of priests except spell use, and may *summon shadows* once per day (as an 8th-level caster). They have 8+8 HD, AC or 2 or better, and often use magical weapons. They are turned as vampires.

Ghouls royalty cannot *animate dead* or *summon shadows* as their nobles do, but they can create

automata, golems, special *wizard eyes* (like the Eyes of the King), and necromantic siege engines, huge constructs that resemble fused flesh golems. Shadow ghouls royalty may also eat the knowledge of any creature they devour whole, from liches to dead adventurers—this grants them spell ability equal to the highest-level creature whose brain they have

devoured. They have 12+12 HD, an AC of -2 or higher, and always employ magical armor and weapons. Ghouls kings, queens, and emperors are turned as Special undead. Nobles are worth 6,000 experience points (plus 1,000 per level over 4th), while royalty is worth 14,000.

"Is this true, Surnliven?" asked the general.

"Indeed it is, general," said the lieutenant, saluting. "I personally guaranteed their safe passage into the camp," he smiled. "I said nothing of the trip out."

The general motioned to his soldiers. We turned to face them and heard the cry of a thousand hungry throats from without the tent. I had been outsmarted by a ghoul. I suspected it would be an embarrassing death.

A Final Journey

Listen closely: the transition from life to death is a path strewn with hazards, as the recent attempt at lichdom by Dragos the Mad showed. The great advantage of the shadow ghouls is that they have mastered portions of this path, and they help their future companions along it. This is not to say that all risks are circumvented. Creatures slain by a ghoul are often driven mad by the experience; they lose all memories of their former lives, indeed lose all their higher faculties, and become merely raving, fleshing-eating undead. These are the lesser or common ghouls.

But these sad husks are not the only possible result of a ghoul's transformation. Those who survive the transition into undeath with their faculties intact

are in all ways stronger than their lesser kin. These few retain the intelligence and cunning of ghosts, and their link to the shadow plane that grants them power is stronger, allowing them to paralyze elves as well as other humanoids. But even ghosts are not the highest form of ghouldom; to enter that state requires help or a force of sheer will that ghosts rarely possess.

Long after the fight at the camp, I was able to observe the birth of a fledgling shadow ghoul. The prey—a young svirfneblin male—had been run down by a pack of shadow ghoul nobles and their retainers, dragged to complete exhaustion and then brought before a priest of Nerull.⁹ Gnomes and dwarves were prized by shadow ghouls as breeding stock, because their small frames require less food than elven, orc, or human bodies do.¹⁰

The creature touched by a ghoul priest always become infected with a condition the ghouls call *grave rot*.¹¹ The resulting transformation is quite different from the creation of a common ghoul or ghost. First, the shadow ghoul is constantly attended by one of its fellows, who seems to provide an anchor point to strengthen the developing link to the elemental planes that power the undead. Though the transforming ghoul cannot see, it can hear even more keenly than

normal; even spoken voices seem to thunder in its head. The subject retains its intelligence and its memories, far more than one might expect.¹² It also gains some control over its link to the plane of Shadow.¹³ In fact, many humans retain the power of their former, breathing lives when they enter the ranks of the ghouls, just as many wizards retain their power when embraced by a vampire.¹⁴ The slow ebbing of bodily feeling continues until one is paralyzed, unable to do more than listen to the drone and feel heat and breath leave the body. Then, a black nectar is forced into the dead subject's mouth, and a power from without animates the limbs, restoring feeling, sight, and the ability to move though not to breath. The sensation of is quite remarkable, like an infusion of poppy nectar or the application of lotus powder to the lips—a jolt of primal energy animates the limbs. Priests, however, suffer a noticeable decline after the change—not only have they been denied the promised afterlife, but they have become what many of them abhor.¹⁵ Unlike lesser ghouls or ghosts, true ghouls emit no stench of death or decay, and they have fashioned a civilization of sorts here in the Underdark.

The transition to ghouldom is much easier for humans, dwarves, gnomes, and the humanoid species than it is for

9. The ghouls' patron god is Nerull, the deity of death and decay. Though the god is known to spurn the prayers and offerings of almost all sentient creatures, for some reason he accepts the devotion of the ghouls. Whether this is because his cold heart actually feels some warmth for the ghouls and their kin or because he finds them pitiful and amusing is a matter of speculation among ghoul theologians.

Shadow ghouls are led by two classes, priests and nobles, which are often at odds with each other. The powerful clerical leaders can create zombies and skeletons; the ghoul nobles lead most raiding parties and armies. Wizards among shadow ghouls generally arise among the priesthood but are occasionally found among the nobility as well.

The touch of a ghoul priest always drains 1 point of Strength, even when striking normally with a paralyzing claw. Great priests of 5th level and higher can *animate dead* once per week, with no limit to the number of undead they may ultimately control; high priests can fuse these dead into necromantic siege engines and conveyances of as many HD as they have levels. Priests range in ability from 1st to 11th level; they have 4+4 HD until they reach 4th level. Thereafter they gain 1+1 HD for each additional level they attain. Thus, for example, a 7th-level priest would have 7+7 HD. Priests are all turned as mummies, regardless of level. They are worth 3,000 experience point, plus 1,000 per level over 4th.

10. Small gnomes and dwarves transformed into ghouls retain their size but gain all normal shadow ghoul, ghost, or common ghoul abilities. In some

instances, these smaller ghouls are trained as bat-riders, soaring through caverns as couriers and scouts on the backs of enormous mobats.

11. While the true ghoul priests are indeed largely responsible for the maintenance and multiplication of the line, the mechanism by which they passed on the closer planar connection of the shadow ghoul was a secret for many years. It is apparent to any observer that the priests' touch inflicts a deadly disease; the shadow ghoul, duergar, and drow call this disease *grave rot*. This rotting disease superficially resembles that caused by a mummy's touch, but it serves another purpose, which is the simple heart of the shadow ghoul's secret. Unlike other undead, they do not need to kill their victims to multiply. Instead, ghoul-rot transforms living flesh into the undead flesh of the ghoul. The victim never dies and is reborn, as is a vampire or a zombie. Instead, living flesh is slowly but inexorably replaced by shadow material, the source of undead power. Much as shades, ghouls derive their power entirely from this shadow-flesh.

The role of *grave-rot* also explains the existence of lesser forms of shadow ghoul. If the *grave-rot* process is disturbed (for instance, by the death of the intended target), a ghoul or ghost is created from the flawed vessel.

The power and influence of the ghoul priests comes from the magical disease or curse they carry. This disease is *grave-rot*; anyone killed by a priest in combat become a ghoul after a number of hours equal to the victim's level. The victim must make a

saving throw vs. death magic; if it succeeds, he becomes a shadow ghoul. If it fails, he must make a system shock roll. If the system shock roll succeeds, he becomes a ghost in a number of days equal to his level or Hit Dice. If it fails, he becomes a lesser ghoul in number of days equal to victim's level or Hit Dice.

12. Common ghouls have a low intelligence (5-7), ghosts retain fragmentary memories and much intelligence (11-12), and shadow ghouls retain all memories and generally become more intelligent (15-18). However, all creatures transformed into ghouls gain chaotic evil or neutral evil alignments.

13. This control over the shadow link is limited to ghoul priests and wizards.

14. Characters of any level retain that level as ghouls and may continue to advance as members of the class. All kit, racial, and subclass bonuses are lost, however, with the exception of necromancer specialty wizards, who retain all their benefits.

Shadow ghouls can gain levels as do living things, strengthened by an ever-growing link to the plane of Shadow. They may be fighters, priests, thieves, or mages but may not be members of subclass other than necromancer. They are limited to 9th level in all the classes available to them except priests, who may attain 11th level.

15. Few gods embrace undead worshipers, and thus priests lose a level and lose all access to spells above second level when they become ghouls. However, gods of death usually take up the sponsorship of any such priest who embraces a new faith.

elves, half-elves, and drow.¹⁶ In general, however, any sentient, warm-blooded creature capable of magic can be transformed into a ghoul. As ghouls age, their original species becomes less and less obvious, and their similarity to other ghouls grow.

A ghoul's touch is the source of its power.¹⁷ All ghouls, even the lesser ones and the newly-created, can paralyze their prey, allowing them to feast on still-living flesh. Some can paralyze elves, some can mimic the effect of a *chill touch* spell, and the greatest among them can command shadows, inflict grave rot, and even command other undead. These powers are all derive from the ghoul's link to the Negative material plane.¹⁸ The link of common ghouls to this plane is weak, and thus their paralyzation

BTAINING WILLING EXPERIMENTAL SUBJECTS among the shadow ghoul nobility has proven . . . difficult . . .

ability is likewise weak. The link of ghouls is stronger, so their ability to paralyze elves is greater as well. However, the vile grave-stench of shared by common ghouls and ghouls is entirely absent in shadow ghouls. This is because the imperfect link of the two lesser species permits their bodies to decay over time, eventually collapsing altogether, while shadow ghoul's perfect link to the Negative plane permits their bodies to be entirely preserved from corruption. Any

source of contagion and rot is kept from them and focused on their enemies.¹⁹

This new race of ghouls is the greatest discovery of my journey, and indeed of my career in necromancy. I maintain that the ghouls commonly found on the surface world are pale reflections of the true ghoul race, for the ghouls of the Underdark are intelligent, obey the social ladder common to civilized races, and worship their own gods. Indeed, shadow ghouls are quite religious, for they see the survival of their intelligence as a gift from Nerull. Without his blessing, they believe, they would sink to the realm of common ghouls. As a result, all ghouls show some degree of piety, if only by uttering Nerull's name before they feed, or as a battle cry.²⁰

Preliminary research indicates that a true ghoul who is slain might still sur-

vive if its planar link is strong enough, becoming a spectre.²¹ This almost always means that the ghoul is a true ghoul and a noble; weaker shadow ghouls do not survive the transformation, presumably because too little of their substance has been replaced by shadow flesh. More research is necessary before I can verify this hypothesis; unfortunately, obtaining willing experimental subjects among the shadow ghoul nobility has proven more difficult than anticipated.

The White Kingdom

When I awoke from the transformation—for surely, dear reader, by now you have guessed that I have joined the Elect Nobles of the Great and Potent Kingdom of White Bone—I was lying on a simple tombstone graven into the cavern floor, meant to represent my mortal life, cast off and beneath me. As a ghoul, I would soon be expected to build a tomb of my own, for my final rest, though it might be centuries in coming. I could not yet read the tombstone's text, but it was surely mine.²² I had entered with all my faculties intact, and indeed even my wizard's gift had not abandoned me. I endeavored, with more fervor than ever, to continue my researches into the nature of the ghouls' undead state and into their secular state, a realm of simple needs and complex hierarchies.

The Kingdom of the Ghouls, sometimes called the White Kingdom, is both a city and a series of settlements in the deep Underdark.

Ruled by their founder and his small court, the city has expanded at the expense of other races of the Underdark, especially the drow and the svirfneblin, whose dead can be transformed to swell the ghoul army's ranks. Why do undead creatures need a city? For many reasons, but chief among them are the common defense and the need for workshops to construct automata.²³ Fearsome as ghouls are, they are social creatures, depending on one another for survival in the hostile environs of the Underdark.

16. The human transition to ghouldom is much easier than that of most other races except dwarves, whose high Constitution makes the shift bearable. Elves, however, perhaps because of their unsleeping minds, suffer greatly during the change and rarely become more than mere ghouls. They suffer a -4 penalty to all saving throws and ability checks related to the change into undeath. Half-elves suffer a -2 penalty, and gnomes and halflings gain no benefit except as provided by their Constitution.

In the Underdark, the most common prey of ghouls are drow, svirfneblin, dwarves, and derro, but any warm-blooded creature can be made into a ghoul.

17. Why touch? Elves are immune to the touch of lesser or common ghouls for the same reason they are immune to *charm* and *sleep* spells; the ghoul-touch is a type of glamour that paralyzes through suggestion and enchantment, rather than through any toxin or life-draining effect.

18. Some would argue the proper plane is that of Shadow; the correct answer is unclear.

19. Dagros the Mad has suggested that a ghoul's stench is due to the decay and absorption of rotting meat. This may be so, but it leaves the shadow ghouls' lack of odor unexplained. Dagros also suggested that the stench rather than touch is the

medium of its paralyzation, but he also suggested this of troglodytes. A few members of the Academy maintain that the two influences work in concert. More study is required.

20. In other realms, the ghouls pay homage to Orcus, Bane, Araxis, and to other powers of death, decay, darkness, and evil. Ghouls are as indiscriminating in their choice of patrons as they are in their choice of meats.

21. Any slain true ghoul noble who makes a saving throw vs. death magic immediately becomes a spectre, gaining 1 additional Hit Die and becoming more difficult to turn.

22. Ghouls speak a language of their own, Ghoulish, which they slowly "remember" in the first weeks after they awake from the transformation to undeath. It is thought that the knowledge is imparted to the ghouls either by the plane of Shadow or by some god residing there who created the ghouls. The transfer's principles are still unclear.

23. Ghoul priests and mages are experts at constructing, commanding, and destroying magical golems of all types, especially those of stone and bone. They have a love for automatons of all kinds, and they are experts at constructing new types of both servants powered by necromantic magic and at golem manufacture.

In addition, they have perfected a sort of undead siege engine called the ghoul war machine. This unholy contraption is composed of the fused remains of 40 or more zombified creatures; their flesh is magically melded to gather around a central beam to create a living battering ram. The flesh is then hardened to the consistency of soft stone; the result is a heavy, durable engine capable of battering down stone portals, gates, and obstacles of all kinds, as well as serving as a bridge over small chasms (up to 15 feet wide).

The creature has 40 legs and can be ridden comfortably by as many as four riders. INT semi- (2-4); AL N; AC 2; MV 9; HD 16; THAC0 5; #AT 1; Dmg 2-40; SA crush, trample; SD immune to mind-affecting spells; SZ G (30' long, 9' tall); ML 18; XP 10,000 each. It can be turned as "Special" undead, and it can crush foes. If a ghoul battering ram strikes a foe with a natural 20, it destroys all items carried by the target unless they save versus a crushing blow at -5. When the ram strikes a foe, he must make an ability check equal to half his Strength (percentile Strength counts as 19 for this calculation). If the check fails, the victim suffers an additional 2d10 hp damage as the ram tramples him.

In addition, their city contains many areas where the ghouls can build their war machines; these labors may require months of work and the industry of hundreds of priests, flesh-shapers, and necromancers. These war machines help defend the ghoul's city and attack their neighbors' cities.

The kingdom lies near the Cloaker Rift—a landmark surely as familiar to those who have traveled extensively in the Lands Below as the Vault of the Drow. There, between cavern and rift the two races exist in a fragile co-existence. Indeed, the cloakers and the ghouls have joined together in an alliance against their mutual enemies. Normally, the proud ghouls would disdain any such

alliance, but even ghouls have enemies they fear. In the case of the shadow ghouls, the enemies they fear are few. Their greatest foes are the kuo-toans, who are immune to the ghoul's paralyzation ability and whose ichthyoid bodies cannot be transformed into ghoul-flesh. In return, the psionically-immune ghouls assist the cloakers against their foes, the illithids.

The White Kingdom is lit by an unusual form of illumination called ghoul-light. This yellowish-green light is shed by special lanterns; it is a weak glow that discomfits drow but does not eliminate infravision. In addition, legends say that it reveals all hidden things to ghoul eyes, even those on another

plane or hidden behind thin screens or barriers.²⁴ The secret of manufacturing the special oils that create ghoul-light lanterns are closely guarded by the ghoul priests and unknown to other races. Indeed, it seems that the priests among the ghouls are the secret masters of the kingdom, for rarely do the nobles lead a simple raid—much less lead an army to war—without the backing of the priests.

The priests, while they are always eager for both sacrifices to their gods and new converts, are rarely found at the front lines. They prefer to work from just beyond the front, choosing some to be transformed into more ghoul soldiers, others to serve the ghoul armies as fodder. I have seen the priests' ceremonies, clouded in smoke and harsh incense, preparing to ease the transition from life to unlife.²⁵ To prevent a creature infected with grave rot from becoming a shadow ghoul, they either make sure it is quickly devoured (within 24 hours) or ensure that it is not attended by a spirit guide, leaving the body to linger and grow mad on the path between life and death.

Contrariwise, when they wish to strengthen the link to the shadow plane, they burn special gutting candles around the body until it rises. The ceremony is named the Chant of Flickering Hours after these lights, and after the flickering spark of the new ghoul's mind as it struggles to retain some memories while accommodating new appetites. Young ghouls are generally fed cooked meat for the first few weeks of their lives to ease the transition to an exclusively carnivorous diet; this behavior has never been recorded among surface ghouls.

These creatures were as distant from their surface-dwelling cousins as the drow are from the grey elves. Indeed, I was later to learn, they disdain their brutish relations, considering them distant kin at best, and embarrassing kinfolk at that. Having had a chance to compare the two at closer quarters, I am inclined to agree.²⁶

24. The magical, yellowish-green ghoul light is quite distinctive, a phosphorescent glow the color of marsh gas and rot. This light reveals hidden things and dispels illusions of all kinds; in a way, it is the reverse of *true seeing*. Invisible, ethereal, and shadowed creatures all become visible in ghoul-light, as

do creatures cloaked in illusion or altered forms, even lycanthropes. It inflicts the same penalties on drow as a continual light spell.

25. Since shadow ghouls are created by their priests, the priests' control over ghoulish politics is considerable. They can breed new generations to

support a war effort and create new worshipers for their god, or they can slow the transformation and prevent a body from becoming a shadow ghoul, leaving it to fall into the madness and decay of the ghouls and common ghouls.

All this information took me months of diligent investigation to ferret out: questioning the priests, speaking to the nobles (though not all answered), and generally annoying all who would suffer my inquiries. Perhaps I eventually grew too zealous in my search for the source of the kingdom's power, for one day, as I was dissecting and noting the degree of mummification in the form of a partially transformed goblin-ghoul. I received an unexpected visitor: a metallic herald of the realm's king. The figure was clad entirely in plate armor, well-oiled and coated in a layer of black enamel.²⁷ My indiscrete inquiries had

THE MAIN GATE was under the watchful eye of two strange devas—winged but black as pitch. Perhaps they were spirits . . .

aroused the notice of the king, and he requested my presence in the palace of Blackgate.

I had long desired an audience with King Doreisain, founder and tyrant of the realm, but so far I had been unable to obtain one. I donned my best robes, called Balint, my ghost servant, to attend me, and made my way to the center of the necropolis. I was told that he permitted no conflict among his subjects (an assertion I was later to discover false²⁸), and thus I felt safe approaching his palace. Its appearance did not inspire as much confidence: Blackgate teeters high on the edge of an abyss. The main gate was under the watchful eye of two strange devas—winged but black as pitch. Perhaps they were spirits; no one

could ever quite explain their origins to my satisfaction.

Beyond the portal, past the gatekeeper, my armored companion left me. I was handed to the care of a rosewater-scented chamberlain, though he seemed to have few words for me. "Follow me," he said, "and say nothing until you are addressed." Down black passages, I was brought into the coldest halls of the palace.

The halls leading to the audience chamber were cold and drafty; my ghoulish guide, of course, did not feel the chill, but my newer flesh still remembered chills. The king himself sat in a hall limned in

ghoul-light and surrounded by a set of floating skulls. I had heard of these: they were said to be the ensorcelled heads of wizards who had displeased him. I resolved to be careful, bowed deeply, and waited for the king to speak.

He took his time examining me, sending a small fiery bat closer to me. I had heard of these creatures and had even seen them from a distance—small green comets flitting through the darkness. Called the Eyes of the King, they are enchanted spies their liege used to keep watch on his distant servants and armies. Though they resemble bats constantly engulfed in green faerie fire, it is said that the king sees everything their eyes see.²⁹ I fidgeted until the thing disappeared down the hall.

The king spoke: "You are the first surface dweller in many years to stand before me. Tell me, are there many more of your kind who might come to visit."

"Yes, there are," I said. "In my breathing life, I was a wizard of a city of wizards. Many of them are curious about your realms. Surely they would come if you offered them an invitation and a chance at new knowledge." I considered that perhaps, with the help of a few members of the Council, it would not be too difficult to seize power here and take the riches of the ghouls for ourselves.

The king did not notice my treacherous thoughts. "Arrange it," he said. His hollow eye sockets turned away to contemplate the flickering of his skull-servants. I had half a hundred questions—about the mechanisms of paralysis, about my own growing and disquieting desire to possess grave goods³⁰—but the eldest of the ghouls had no time for them, or for me.

And so, before I close this missive, a last request. The king has invited you to come attend upon him and dine at the heart of this fabulous kingdom. Please do attend. The meal wouldn't be the same without you.

**Your devoted Servant,
Wrennar the Laughing Ghoul**

Wolfgang Baur maintains small shrines to Clark Ashton Smith and E.R. Eddison, and makes regular offerings. Many of the events detailed in this article figure prominently in Wolf's "Kingdom of the Ghouls" adventure appearing in DUNGEON® Adventures #70.

26. Ghouls are quite dangerous to other races of the Underdark, as they can overwhelm most living races with sheer numbers. If ghouls ever expand their numbers too far, they might be able to besiege and conquer a city stronghold of one of the major races and then convert many of the dead to their own cause, to take the next city. Despite the severity of this threat, in general, living races tend to treat the ghouls as a form of rot that must be contained. The reason is simple; none of them can afford the losses they might incur in an all-out assault against the ghoul capital. Even if they wiped out the ghouls, they might leave themselves easy prey for another inimical Underdark species.

27. This figure was surely a helmed horror or similar automaton, for the ghoul-king does not trust his

subjects and grants many tasks to the dozens of machines that inhabit the palace. The shadow ghoul nobles emulate this fashion, though few are able to construct or purchase such servants.

28. When there are too many of the undead and not enough living things for them to feed on, the ghouls enter a frenzy of madness, killing and slaying one another until their numbers are reduced to a level their environment can sustain.

29. The king of the ghouls commands a special form of magical scrying that no other race of the Underdark can match. The Eyes of the King are difficult to avoid or lose once they find an intruder; they flit through darkness almost more quickly than the eye can follow. They are said to patrol regular routes on the borders of the ghouls' kingdom.

Each Eye acts as a *wizard eye* of unlimited distance and duration. Only the king and perhaps the priests understand the spell that creates them. Others who claim to know the secret have been driven insane when they attempt to duplicate the spell's effect.

30. Ghouls develop a fetish for death and things of the grave; generally, this desire seems to be a sort of nesting principle, as they construct elaborate tombs for themselves. Far from feeling immortal as vampires do, most shadow ghouls seem to know instinctively that they will die again. Their time as ghouls merely gives them the opportunity to gather *memento moris*.

In practice, this love for grave goods gives shadow ghouls treasure types B, T, R, S, and T. Nobles also gain Q×3, X, and Y.

Ecology of the Hill Giant

By Richard Pett

Art by Arthur Rackham

O, it is excellent to have a giant's strength, but it is tyrannous to use it like a giant.

—William Shakespeare,
Measure for Measure (II. ii.)

The earliest tales tell of giants—beings like men but tall and strong. From the oldest religious texts to modern stories, the giant has been with us every oversized step of the way.

Giants appear in many mythologies; from the Jotun of icy Norse mythology to the Giant Kings of the Incas, they have been the subject of folklore and fairy tales throughout the ages. Giants originated when gods mated with humans, producing monstrous or gigantic offspring with superhuman strength and size; sometimes, giants were gods that walked among men and became heroes. They threw rocks, had one or more heads, and often had a taste for man-flesh. They could be 10 ft. tall like Goemagog or have a 10-mile stride like Bolster.

One thing all giants have in common is their slow wittedness, which perhaps casts hill giants in the truest spirit of the fantasy giants. Consider the tale of the origin of the Wrekin, a hill in Shropshire, England. The story tells that an old Welsh giant was carrying a spadeful of earth, intending to dam the river Severn and drown the people of Shrewsbury. On the road, he met a cobbler who, realizing the giant's evil intention, showed him a sackful of worn shoes, claiming he had worn out the shoes on the journey from Shrewsbury. The giant was so discouraged by the apparent distance that he dumped his massive shovel of earth and went back to Wales. The earth he dumped formed the Wrekin Hill.

This myth, though entertaining, is hardly unique in its portrayal of giants. Countless legendary giants exist and can provide inspiration for many unique adventures.

Physiology

Male hill giants stand around 10 ½ ft. tall; some tribes are barely larger than ogres (at about 9 ft.) while others are 12 feet tall, as large as smallish stone giants. Females tend to be 1 ½ ft. or so smaller than males although both tend to weigh around 1,100 lb. Their skin tone ranges from light tan to a deep ruddy brown, although the color often hides beneath a layer of filth. Their lank hair can be brown or black like their

eyes.

Both hill giant males and females tend to go bald in old age and are prone to being fat. Older females cover their bald pates with animal skins or heavy woolen cloaks to preserve their misguided vanity and keep their heads warm. Females tend to live much longer than males.

Hill giants dress in the badly cured hides of any animal abundant enough and large enough to wear. Because a hill giant body is large, giants dress in whatever gives warmth, and they can be found wearing an astonishing array of patched suits of armor, whole sheep skins, and cow hides (often with heads and legs still attached). Others simply wear stiff, untanned furs ripped from the carcasses of dire animals or monsters. Everything they wear is rotting and alive with lice and maggots. Hill giants seem untroubled by filth.

Psychology and Society

“Fie, foh, and fum”

—William Shakespeare, *King Lear* (III. iv.)

In most hill giant societies, males do practically nothing. Some have even given up the pretense of hunting in favor of sitting around drinking, eating, and bragging. Bragging is an important game and ritual in most hill giant groups. Worth, in males, is judged solely by size: the fattest and largest of the giants rule the roost although tenuous bloodlines are occasionally followed. Male giants make a great show of their hunts, and tribes give these occasions fanciful names although they invariably involve copious drinking, play-fighting, and shows of strength that tend to drive any

potential game away long before it is ever spotted.

Female hill giants, on the other hand, are generally the more skilled, resourceful, and—often—capable in a fight. Though slightly smaller than their male counterparts female statistics match those of their lazy, corpulent, menfolk. Those of good breeding stock—the fatter the better with wide hips and corpulent behinds—are prized above all mates, though skill at brewing ale is also particularly valued in addition to mending, cooking, preserving food, bringing up young, tidying up, repairing lairs, and hunting.

Young hill giants, if they're wise, stay out of the way of the adult males although the eldest son is usually considered an adult from birth and immediately brought into the group. The young daughters exist like cattle at best and, often, end up considerably worse off.

Hill giants are selfish and cunning creatures that survive through raiding and trading. Trading with them can be very dangerous, but also very profitable. Large numbers of dwarves, humans, and gnomes have made their fortunes by tricking stupid tribe leaders into taking pretty trinkets for dull, uncut gemstones, and other valuables. A giant's non-existent Sense Motive skill makes them easy to Bluff, but traders always run the risk that one of the more alert wives has the ear of the tribe leader. On his next visit, the trader may get more than he bargained for, or a giant may simply be bored and decide to hit the trader with his club to see what happens.

Dwarves take a particular chance in trading with hill giants, since giants regard dwarves as a succulent delicacy. Hill giants love to eat dwarf flesh above all other food and may even resort to cooking it to savor the taste and smell more. A giant always pays handsomely for some tasty fresh dwarf meat.

A typical hill giant lair is found anywhere an abundance of hills or mountains exist although many are also found underground in vast caves or

cavern complexes. All lairs are typically forsaken places that need repair and sanitation—or, better, demolition and burning.

Hill giants keep an astonishing array of livestock, pets, and guards—in most cases, the same creature fulfills all three functions. Wolves, particularly dire wolves, form close bonds with particular tribes of giants and are treated like pet dogs; occasionally, they are even given names and allowed to sit below feasting tables and eat scraps. Ogres and orcs often live with hill giants, but the giants typically treat them as naughty children and either beat them senseless for some misdemeanor or lavish affection upon them as “loyal followers.” Some hill giant tribes have even used chained giant lizards as guards; lizard is also a particular delicacy of hill giants. These creatures represent those more commonly found, but hill giants, the women at least, seem to be capable of capturing and eating anything.

Finally, hill giants are prone to falling in with those who wish for their “friendship,” the men at least. Constantly, huge numbers of hill giants find themselves in the service of wicked overlords, cunning drow, and powerful fiends without ever remembering how the situation came about.

A very brief word on clever hill giants...

Female hill giants, who effectively run the show, realize survival depends as much on cunning as on strength, and they often form sisterhoods (usually under the guise of a coven) that encourage women to learn and think. These matriarchal groups protect intelligent young girls, who go on to become wise women if they survive. Hill giant wise women are tutored in a class (favored class druid) and covertly run all their tribe's affairs. Without realizing it, the males become tools in an above average intelligent tribe, and adventurers have reported cunning traps, defense plans, and superior equipment in such lairs.

Hill Giant Feats

The following special attacks often develop from the drunken brawls and play fights in hill giant steadings.

Living Club {General}

You lift a creature and use it as an improvised club.

Prerequisite: giant, Str 25

Benefit: To use this attack, you must first make a successful grapple attempt on a creature at least one size category smaller than you. If you succeed, you establish a hold on your opponent

Hill Giant Lore

Characters with bardic knowledge or ranks in Knowledge (nature) may know about hill giants. With a successful skill check, a character knows all the information up to and including the DC value:

DC Result

- | | |
|----|---|
| 10 | Hill giants have a deserved reputation for stupidity and can be easily outsmarted. Unfortunately, their ability to be outwitted is matched by their short tempers. |
| 15 | Female hill giants are the true leaders and do all the work, while males sit around playing all day. Females are as tough as males and tend to be crueler and more tenacious. |
| 20 | Your average hill giant loves a tall tale and is easily fooled. Stories abound of giants swapping bags of uncut gems and other treasure for “magic” bread that makes the eater stronger or invisible gold clothes that are visible only to intelligent people. Some gullible giants happily lie down with their eyes shut to receive a special present of submission. |
| 25 | Some hill giants can use their foes as living clubs or toss them as if they were boulders. |

and can attempt to use this creature as a weapon. Because your opponent is unwilling, using a living club requires a full attack action, and the attack is made at a -4 penalty (this is on top of the -4 penalty for using improvised weapons). On a successful hit, you deliver $2d8 + 1\frac{1}{2}$ Str modifier in damage for a Medium living club ($2d6 + 1\frac{1}{2}$ Str modifier in damage for a Small living club) to both your opponent and to the living club.

Each round the grappled creature may attempt to escape the grapple in the usual manner.

Living Rock [General]

You lift a creature and use it as a thrown weapon.

Prerequisite: giant, Str 25

Benefit: To use this attack, you must first make a successful grapple attempt on a creature at least one size category smaller than you. If you succeed, you establish a hold on your opponent and can attempt to use this creature as an improvised thrown weapon. Because your opponent is unwilling, using a living rock requires a full attack action, and this attack is made at a -4 penalty (this is on top of the -4 penalty for using improvised weapons); the increment is 60 ft. If

the hit is successful, you deliver $2d6 +$ Str modifier in damage for a Medium living rock ($2d4 +$ Str modifier in damage for a Small living rock) to both your opponent and to the living rock. The creature can resist being thrown if it makes a Str check (DC 10 + your Str modifier).

The thrown creature takes the damage listed above even if you miss.

Death from Above [General]

You deliver a deadly belly flop to prone opponents.

Prerequisite: hill giant

Benefit: To use this attack, either you must be physically above your opponent by at least 10 ft. or your opponent must be lying prone. You hurl yourself onto your opponent as a full attack action in an attempt to crush the creature. If you succeed in this slam attack, you deliver $6d6$ damage to your opponent and can attempt to start a grapple as a free action without provoking an attack of opportunity. If you miss, you are considered prone.

Fun and Games

Male hill giants have plenty of time on their hands and play any number of games to distract themselves from drinking too much, too early. Each tribe has a selection of games—usually cruel, violent, and dangerous in nature. Of course, any visitor or trader must participate in these tests of skill.

Rugbyalive—This game consists of two teams that must each defend a goal (usually a stone) against the opposing team while trying to score a goal themselves. The ball is invariably some living creature. Hill giants consider dwarves to be the best balls since they put up the biggest fight and provide the most sport. Smashing the ball's skull against the goalstone scores a goal.

Scrum—A mass fight; the last giant standing wins.

Bragging—Bragging contests amongst giants are the stuff of their legends. Sadly, the giants' total lack of Bluff or Perform skills means that it is

generally the most ridiculous brag that wins; the game is often won by a catastrophic fail of the skill check by one of the participants. The bigger the brag the better, and contestants' prowess as a troll juggler, eating seven whole chimera at a sitting, or being king of the whole world are always well received. Traders able to spin incredible yarns using high (or even mediocre) Bluff skills quickly gain a hill giant's respect.

Stag Fight—Played between maturing males, this game involves two giants starting some considerable distance apart, running at each other with heads down, and making a bull rush attack. To add spice to the proceedings, they occasionally play this game on narrow ridges.

Touch Kill—One giant is the Touch Kill (or "It"), and is allowed to have a weapon of his choice. The other giants must get past him by fair means or foul when their names are called and try to reach some prearranged safe point beyond the Touch Kill.

Drinking Games—An uncountable number of giant drinking games exist. Usually, the games revolve around the giants either drinking a whole gallon of alcohol without taking a breath or facing a forfeit. Forfeits tend to be suicidally dangerous affairs.

Rock Games—These usually involve tossing rocks of incredible size. Some local variations allow the opponent to dodge or attempt to catch such rocks, but others insist he stays still until the rock has landed or that the catcher is blindfolded. Throwing rocks at (often living) targets is another common game.

History of the Hill Giant

Wise women have kept up the stories of old; though variations occur from tribe to tribe, the general story of hill giant genesis remains the same.

The Great Womb Hill was born when the world was young, and she was the first hill seen; her sides were steep and laced with virgin scree, her summit wore a white crown of snow, her vales were hidden under countless

sheep, and her caverns were filled with dwarves and gold. Every aspect of the hill lived, and soon, the rocks themselves began to walk, these were the first hill giants.

They wandered the hills for many days and talked to all the inhabitants, including the dwarves. The giants were kind hearted and wanted only to help their new friends. Soon, however, the dwarves had the giants digging in the mines and working all day while those dwarves simply grew fat from the proceeds. They fed the giants only the worst cuts of mutton while they gorged themselves on only the choicest meats, wines, and beers, which they traded for with merchants from far away.

A particularly cruel and fat one, Thamris Goodbody, led the dwarves. One day, he brought the giants together and told their leader, a huge and strong hill giant called Tam, that they would have to work harder. You see, Goodbody had heard that, farther away, men made a drink called ambrosia, the nectar of the gods, and

he greatly desired to taste it. However, the ambrosia was expensive, so the giants would have to mine harder and bring up more gold. The giants toiled and toiled and soon the dwarves became so fat they could no longer move without help from their giant friends, who had now become little more than slaves.

The time came when at last the ambrosia was brought to the dwarf king, who Tam himself now carried about (with no gratitude, of course). The dwarf king drank the ambrosia and found it very good, but Tam was thirsty too; he and his followers had nothing to eat or drink for days, and he asked the dwarf king for a little ambrosia for the giants. The dwarf king grew angry and told Tam that far from getting any ambrosia, they would get no food at all for their impertinence, and further, they would have to work even harder as he needed more ambrosia for his dwarves.

Tam grew angry for the first time in his life, and as he did, he saw the truth

of their position, of how the dwarves had pretended to befriend the giants but, instead, treated them like slaves. He saw his starving kin and bellowed in fury, biting the dwarf king's head off and throwing the body at his kin. And as he swallowed the dwarf he could taste the ambrosia, and the wine, and all the fine foods the dwarf had eaten, and it tasted good. He roused his people and they fell upon the dwarves, feasting on their flesh, which they all found good to eat.

For many days, the giants ate and flung the dwarves about like rocks, and soon, they became the rulers of Womb Hill and lived there happily ever after.

Hill Giant Encounters (Sample Hill Giant Tribes)

The Terrible Feudal Lords

Advanced by the influence of a great coven of sorcerers, witches, and druids, this hill giant society has achieved a level of feudalism. The males wear heavy mail armor and dwell in crude castles; they ride dire

Sculpted, fully painted Dungeon Mats.

GreatVictoryWidgets.com

The advertisement features a large, dark, textured Dungeon Mat with a grid pattern. On the mat, there are several small, colorful miniature figures. To the right of the mat, there are two markers: a 'WET ERASE DUNGEON MARKER' and a 'WET ERASE DUNGEON MARKER'. Below the markers, there are two pre-painted terrain pieces: one with a fiery, lava-like texture and another with a rocky, cave-like texture.

boars, mammoths, and dire wolves and engage in jousting. The women plot, seduce, and murder to gain power and use the men as tools for their ambitions.

These hill giants are identical to those found in the rulebook except they have access to better equipment (generally favoring plate armor) and can ride and fight mounted. Despite these differences and a few more airs and graces, they are still hill giants and quickly revert to type when angered. **AC** 25, **touch** 8, **flat-footed** 25; **full plate** (+8 armor, -1 Dex, +9 natural, -1 size)

Skills Ride +6, Spot +0

Feats (add) Mounted Combat, (remove) Improved Bull Rush

The Dolmen Men

These hill giants have a particular love of working stone (a talent encouraged by the women), and the lands about are full of great stone circles, menhirs, and dolmens. These giants, when bored, have taken to using menhirs as rocks to throw though they are generally too heavy to throw directly and, instead, are tossed like a highland caber. They are again the same as standard hill giants, except they throw rocks a little harder.

Ranged rock +6 (2d10+7); **Increment** 60 ft.

The Lazy Giants of the Long Mountain

A decade ago, the men in this tribe lost patience with the women and killed them all. It wasn't until the last skull was broken that they realized how much the women did for them. The men almost starved before a stroke of luck brought a tribe of ogres into their area. The hill giants have lapsed into using the ogres for everything—as slaves, food, and mates—and the ogres have finally had enough. They have sent one of their kin out into the lands of men to seek help.

A Quartet of Unusual Hill Giants

Zarig Garr (male hill giant rogue 4)—The muscle of the Free City Thieves Guild, Zarig's skin is a patchwork of self-inflicted cuts and scars. He

carries a huge scythe into combat and is renowned for attacking his victims by removing the roof of the building they are sleeping in.

The Sjeumatr  Giant Rat (female hill giant wererat rogue 4)—The Giant Rat of Sjeumatr  hobbles spastically through the stinking canals beneath the Great City of Triolo. She is always so hungry and lonely in the dark since her chosen prey of young men so seldom visit these days.

The Pressed (male hill giant barbarian 6)—Dare anyone face the Pressed Giant? Boxing impresario Tangle Flasmind offers a prize of 1,000 gp to anyone who can spend 1 min. in the ring with his hill giant and live.

The Towering Queen of Deceit (female hill giant druid 12)—Beneath Thorn Tor she dwells, guiding her children in the dark. The wise woman's followers have grown braver from the harsh winter and hunt in the lands of men. Her pack is beyond counting: dozens or even hundreds of hill giants cursed with lycanthropy, part giant and part wolf.

Obscenity of Hill Giant Half-Breeds

One particularly foul practice that many races of giants engage in is slavery. Having little need for anyone to fetch and carry (since the women do all that sort of thing), male prisoners are killed and eaten (not necessarily in that order). Female prisoners are kept as breeding stock to provide impure fodder both as guards and, if necessary, food. Often the female hill giants are so outraged by this behavior that they slay the female slaves and, occasionally, all the male hill giants.

When humanoids learn of a tribe that practices such unspeakable acts, they generally do not rest until the entire tribe (and often the progeny of the tribe) are put to the sword.

The outcome of this horror is a hill giant half-breed. Theirs is a terrible life: hated and tormented by true giants and often loathed even by their own mothers, many of these unfortunates slip into madness. Some, however, escape and make their way in civilized lands while still others scavenge in or

near hill giant lairs.

Hill Giant Half-Breeds

Creatures suffering gigantism possess giants for fathers but other humanoids for mothers. They exist as their mother's race but with distorted and enlarged features, brutish faces, thin hair, and their father's skin color. They are also prone to deformities and many have twisted spines, bones that rupture through inadequate flesh, or one feature of their father's at his proportion—such as a huge bloated eye or a distended hand or foot.

Creating a Hill Giant Half-Breed

"Hill giant half-breed" is a template that any humanoid (hereafter referred to as the base creature) can have. The template can only be inherited from birth. Mechanically, the creature remains the same as the base creature with the following exceptions:

Size and Type increase size category by one; add augmented subtype

Speed increases by 10 ft. (to a maximum of 40 ft.)

AC +4 natural armor bonus

Special Attacks mixed blood, rock throwing

Special Qualities low-light vision, mixed blood

Str +4, **Dex** -2, **Con** +2, **Int** -2, **Wis** +0, **Cha** -2

Skills Climb, Jump, Listen, and Spot become class skills

Environment temperate hills (if living with hill giants), otherwise any

Organization solitary or cattle (11-40)

Treasure none (if living with hill giants), otherwise standard

Level Adjustment +1; **CR** +1

Rock Throwing (Ex) Hill giant half-breeds retain some of their father's skills at throwing rocks. The character can hurl a rock weighing 20-25 lb. up to 5 range increments. The range increment is 60 ft., and the rocks deal 1d8 damage.

Mixed Blood (Ex) The blood of half-breeds can run thicker with one or the other parent, and this manifests itself in one of three ways. The effect is chosen when the half-breed is created and never changes:

Blood Rebel (Ex) The blood of both parents has rebelled and left something with a twisted and tragic appearance, which causes repulsion in all who see them. On viewing the hill giant half-breed, any creature within 30 ft. must make a DC 10 Fortitude save or be shaken for 1d3 rounds. With a successful saving throw, no further saves are required to avoid this effect. Characters with this trait gain +4 to Intimidate checks.

Changeling Blooded (Ex) Such a child favors the female parent and can pass in civilized lands as nothing more than an individual of unusual size. The half-breed's features retain some of the father's blood: dark hair, ruddy skin, clumsy hands, and low brow.

Giant Blessed (Ex) This child favors the father's blood with unusually thick and swollen limbs, thick skin, and brutish demeanor. These characters gain an additional +2 Str and -4 Int.

Possible uses for the hill giant half-breed template

PCs

The template provides excellent opportunities for roleplaying. Perhaps, the first adventure pits the other PCs against Count L'aress and his wicked troupe of actors, and the lead male is the half-breed PC.

An Encounter

The PCs travel through a lonely locale when they spot a fleeing figure. What they first mistook for a man is actually a half-breed youth. He begs the PCs for help just as a hunting group of hill giants arrives.

An Adventure

The stealing of villagers must stop, and a robber-baron hires a group of brave adventurers to infiltrate the offenders—a distant tribe of hill giants. He suggests that the PCs may have more success if they allow themselves to be captured and led directly into the hill giant's rotting lair.

An Adventure Path

The initial adventure above is but an aperitif to an ongoing adventure path. The PCs learn that the giants are but an outpost for an entire kingdom: in fact, numerous villages in the mountains are preparing for war with the intention of invading the PC's homeland and enslaving it. Before long, the raids begin, and as they increase in ferocity, it becomes obvious that unless a blow is struck at the heart of the giant's kingdom, the raids will never end. A small group of adventurers, working independently, has the best chance of infiltrating the giants' lands, learning its secrets, and striking a fatal blow by killing its ruler, the Broken King.

Other versions of gigantic half-breeds, including ettin and titan half-breeds, may occasionally be encountered.

The Ecology of the Giant Leech

*Not all assassins
kill with their hands*

by Anthony Gerard

Slowly, like a drugged man regaining consciousness, the sun rose over the dead water. The quavering calls of the night birds, the croaking of the frogs, and the hidden plops and gurgles were slowly replaced by the drone of the day insects and the songs of distant sparrows. The sun began to burn away the night mist, revealing the thousands of shades of green in the vast swamp of the Wet Maze.

Jaffang swatched it all and hated it. It was the wrong place for a full-blooded orc. He hated the birds, the frogs, the insects, the green of the plants. Most of all, he hated Sasher.

He looked at his silent companion. Sasher squatted motionless, looking out across the water; only his yellow eyes moved. A myriad of gnats and mosquitoes swarmed around his face and arms, but he made no effort to slap them away. On either forearm were curious Y-shaped scars — probably the brand of the thieves' or assassins' guild. Sasher *liked* it here. Jaffang knew he did. It was the human half of him. Sasher liked it here, and he probably liked it that much more because he knew Jaffang hated it. Jaffang hated him that much more for it.

Sasher stood up slowly. Taking an onion

from a leather belt pouch, he rubbed it vigorously over several spots on his pants and shirt before he took a bite. That was also the human in him — afraid to eat a dirty onion. What more could one expect of a half-breed?

Drawn by his companion's gaze, Sasher looked at Jaffang. Jaffang tried to smile, but it didn't work. He thought of running his spear through Sasher and the smile came, but by that time Sasher had turned away.

"Light enough. Better take off your armor," Sasher said, as if to no one in particular.

Jaffang's immediate suspicion was slowly replaced by the realization that he couldn't swim well, and that armor would just be a bother. As Jaffang removed his armor, Sasher arranged a wooden box on a shield-sized raft, then waded out waist-deep in the swamp's green water, probing with the butt of his spear as he went. "You bring the box," he said.

Jaffang started to curse but caught himself. With Sasher in front, the half-breed would be the first to meet any possible danger. Jaffang contented himself by watching the place between Sasher's shoulder blades — the place where one day an orchish spear would rest.

For now, Sasher was necessary. Soon, Jaffang would learn the secret of making

blade venom from the leech's spit, the venom which could make a man bleed to death from a single cut. Then, by One Eye's Spear, they'd all have reason to fear Jaffang. And he would kill Sasher first — of that he was certain.

The water was warm, almost like fresh blood. Jaffang's bare feet sank ankle deep into the receptive ooze on the bottom. He pulled the raft along the trail Sasher created as he pushed through the water plants. Suddenly, Jaffang tripped on an underwater snag, fell headlong, and came up sputtering. Sasher looked back and laughed out loud.

Laugh now, Jaffang thought. He decided to kill Sasher slowly. But first he needed to learn about the leeches and the blade venom.

"Where do we find these leeches?" Jaffang asked, to cover his rage more than to get a response.

Sasher maintained his distant gaze. "We don't," he replied. "They find us."

Jaffang looked suspiciously at the water, belly-deep on him. "Ragshaf says they're bigger than a man." It was more of a question than a statement.

"Ragshaf's a fool. Besides, he's only seen one." Sasher seemed more talkative than usual. So much the better.

"When?"

"Not long after I got into the guild." Sasher rarely talked about anything at all, much less about guild activities. "Me, Ragshaf, and a couple of other boys from the canting crew were supposed to pop a smuggler coming down river at night." Sasher smiled as he stared into the distance. "Ol' Jandamon was along to guide us. We were in a boat on the river, not

knowin' exactly when he'd come by, so we decided to draw lots for a watcher while the others slept.

"Anyway, after a while Ragshaf — it was his watch — got spooked over something and woke us, all but Jandamon. We went to wake him, but he's as limp as a worm. When we rolled him over, there was a leech as big as your leg and just as thick, hanging on his neck. It must have crawled over the side. Killed him while he slept, and he never so much as squeaked. And him such a warrior and all. We laughed so hard our prize heard us, and we lost him. Ragshaf killed the leech with the boat gaff, which was a real waste."

"I thought the leeches breathed water."

"They don't have to. They live just fine as long as they're wet, so they come out at night or in a rain. Good climbers, too. Watch for some on the tree trunks — it's still early enough yet."

Sasher stopped. From a fallen tree, a sinuous, mottled gray-brown form lazily sculled across the stagnant water toward them.

"A leech! A leech!" Jaffang cried as he readied his spear. Now that they had found their quarry, he was not sure what to do next.

"It's a marsh adder," Sasher said, leaving the word "fool" unspoken. He reached for an arm-long cane tube slung across his back. As the adder swam slowly past, he put the tube to his lips and puffed his cheeks. After what seemed to be the longest seconds Jaffang could remember, the snake convulsed violently and disappeared underwater.

"A leech wiggles up and down when he swims, not side to side like a snake," Sasher murmured, putting the blowpipe away. "Leeches swim fast, too."

Jaffang stared at the water where the adder had vanished. "Can one swim down a man?"

"Probably could, but they don't. Leeches sit and wait for something to pass by. They only swim to get away from something."

"What would a giant leech need to get away from?"

"Big snapper turtles, garfish, lots of things. Kobolds spit 'em on a stick and roast them like a rack of lamb — when the runts can catch 'em, and if the leeches don't eat the kobolds first."

"How many people wade through here for leeches to eat? They must have a long time between feeds."

Sasher smiled crookedly. "You think they eat nothing but people and orcs? I've never seen a swamp troll without a couple on him — 'course, trolls don't care. A leech'll eat other things than just blood, too — frogs, mud dragon eggs, eels, and the like. Mama leech feeds her brood on small frogs. They may suckle on her, too; I'm not real sure. After a good meal, they just find a hiding place and lie low for a time."

Jaffang sneered. "Mama leech? You expect me to believe that a big worm takes care of its babies?"

Sasher spat. "Better mother than my own — they ride their babies on their bellies, like little piglets on a sow."

Sasher was making fun of him now. Big mother worms riding their babies around! Damn him for a half-human anyway! Soon enough, he'd wish he'd been respectful.

Jaffang asked no more questions, and Sasher lapsed into his usual silence.

The sun was straight overhead as Jaffang jerked the raft across yet another snag. The full sunlight hurt his eyes, and his jerkin and pants were heavy with mud and water. He had begun to fall further and further behind Sasher. Often, he lost sight of the half-breed altogether and was left with only the trail through the water weeds to follow. He would eventually come upon Sasher sitting on a fallen log or leaned against a tree. Sasher would immediately lead out again, without time for a rest, but always with an amused smile. *By the Cave Mother's Claws*, Jaffang thought, *You'll eat that smile and choke on it*. He was going to love killing Sasher.

Sasher was ahead of him again and out of sight. Jaffang began feeling the heavy press of exhaustion. This was worse than the forced march on the Dunlands last year. Jaffang shoved the raft through a thick mat of cattails. Following through, he found Sasher sitting cross-legged on the bank, eating an onion. Why was this place so familiar . . . no!

It was the place from which they'd started! Sasher had played him for a fool! Jaffang had hauled the damned raft through a swamp all day for no reason, and Sasher was smiling about it!

He'd kill Sasher *now* — to the Hells with the blade venom! Tired as he was, Jaffang knew he could still handle any half-human dog.

Dropping the raft rope, Jaffang advanced purposely toward the bank, clutching his spear. Then it hit him — something was wrong. He hefted his spear to throw, but he fumbled it in clumsy fingers. The spear fell and splashed into the green water. Jaffang swayed but managed to stagger forward again, pulling his dagger free with a nerveless hand. Something. . . something was very . . . very . . .

Sasher watched Jaffang come toward him. The fool meant to kill him. The fact that he was still walking was a credit to his race's endurance; he might even have to be finished by a dart in the throat. Perhaps it would be wise to . . .

Jaffang dropped his dagger. As Sasher relaxed and watched, the life drained from the orc's eyes like liquid from a slashed wineskin. The orc stumbled ashore and fell face forward onto the grassy bank.

Sasher finished his onion. Tossing the core aside, he waded out and retrieved the raft. Taking a large heavy canvas sack out of the box, Sasher dumped its contents of rocks. Returning to Jaffang's body, Sasher drew a dagger and slit the orc's mud-

stained jerkin up the back.

"Oh, ho, now!" he murmured. "Don't you boys look fat and happy!"

Attached to the middle of Jaffang's back were two glistening leeches, each mottled red and green, and each a forearm in length. Sasher found a third of similar size on Jaffang's calf.

Sasher removed a small pouch from around his neck and took out a pinch of salt. Gently, he sprinkled the salt over one of the leeches. The passive leech released its hold and began a series of wild undulations. Sasher splashed a handful of water over the leech and quickly worked the parasite into the bag.

Where the leech had been attached, a neat Y-shaped cut began to well up with thin, watery blood. Sasher repeated the operation for the other two leeches.

Wasting no time, Sasher removed a smaller leech from a pouch on his belt and put it in the bag with the others. Each time he was well ahead of Jaffang, Sasher had searched himself carefully for leeches. The onion had worked well; only one had dared get near him.

Sasher turned to go but stopped short. Out from a tangle of roots at the water's edge, a leech worked its way up the bank. The leech's head waved back and forth as it followed the thin stream of blood which ran from Jaffang's body. Sasher gently placed the opening of the bag in the leech's path, and the leech obligingly crawled inside.

Five leeches. It had been a good day's work, even if he did have to spend it making conversation with an orc.

Notes

1. Leeches (both the small variety of our world and the giant variety of AD&D® game worlds) are segmented worms. The posterior and anterior segments of leeches are modified into suction disks. The posterior disk is larger and is used only to hold the leech in place against rocks and the like. The smaller anterior disk contains the leech's mouth, which is equipped with three jaws of teeth which make a clean, Y-shaped incision.

A leech's saliva contains an anesthetic; because of this, a leech bite is painless and almost always goes unnoticed. This viscous saliva acts immediately upon contact with the victim's skin, and is only removed by alcohol, ether, or similar liquids. Additionally, leech saliva contains an anticoagulant (hirudin) and a substance which enlarges the blood vessels in the area of the bite (a vasodilator, in medical terms) for increased blood flow. Some leech saliva even contains a substance which dissolves pre-existing blood clots.

Due to these anticoagulants, blood continues to flow from a leech bite much longer than from a normal wound. Characters bitten by a leech lose blood at the rate of 1-4 hp per melee round for 1-12 rounds after the leech is removed (or until the wound is bound). Clerical healing

spells negate this excessive blood loss, as may other actions at the DM's discretion. As an example, some swamp-dwelling races commonly use spider webs to help clot leech bites.

In addition to anticoagulants and vasodilators, a leech's saliva contains antibiotics, so leech bites rarely become infected. It is suggested that the Monster Manual section dealing with increased chance of disease from leech bites be disregarded, and that leech bites should be treated as any other wound for chances of infection.

2. Not all leech species are blood-sucking parasites. Many are predacious species which feed on other animals, and many parasitic species eat other animals on occasion. Some leech species also eat carrion.

Leeches typically rest attached to plants and other underwater objects, waiting for prey to pass by. Extremely sensitive to vibrations, leeches become restless and attempt to locate the source of the vibrations by stretching and waving their anterior disk through the water.

A leech may thrive for months on a single meal. Once sated, a leech typically finds a sheltered place and stays relatively inactive for a time. A well-fed leech cannot be induced to feed again for weeks.

It has long been known that blood in a leech's digestive tract does not coagulate. This knowledge may be exploited by some

evil forces in the AD&D® game world to keep blood used in ceremonial liquids for a longer duration.

3. A leech's eyes typically consist of groups of light receptive cells (ocelli) which register light intensity but cannot see images. Leeches often react when light conditions change, such as when a shadow is cast by a passing boat, fish, or a wading person.

Receptor cells on the leech's skin are sensitive to slight amounts of certain chemicals. This keen sense of "smell" allows leeches to home in on substances or organisms attractive to the leech or to avoid those which may be harmful.

Blood-sucking species may be attracted to bloody areas in the water. In AD&D® game terms, the chance for encountering giant leeches should be doubled for wounded characters.

4. Leeches have two main modes of locomotion. The most common is an "inch-worm" movement, by which the leech stretches forward and attaches its anterior disk, then moves the posterior disk forward and attaches it in turn. This method is slow (3"/round) but very efficient. A leech can climb any vertical or overhanging surface in this manner, although it generally avoids those that are potentially harmful (such as one covered with thorns or salt). Additionally, a leech may swim very rapidly (12"/round) by employing

vertical undulations, but it will not attack prey in this manner.

Leeches do not bite in self-defense. If attacked while unattached, a leech tries to escape as soon as it is wounded. An escaping leech swims away or attempts to crawl into a protective tangle. Since leeches are invertebrates, a relatively large leech can crawl through a very small space.

5. While attached to prey, leeches are very unresponsive to outside stimuli. Salt, ashes, or other dehydrating substances cause them to release their hold quickly, as will an open flame. An attached leech which is slain continues to draw blood at the normal rate for an additional 1-4 rounds.

6. Leeches are hermaphroditic, but they cannot fertilize their own eggs. Eggs may be laid in protective cocoons attached to underwater rocks or logs, or buried in the bottom ooze. Some species of leech carry their eggs in membranous sacs on their underside. In such cases, the young live for a time attached to the parent's ventral surface, although they gain no nourishment from the parent in this manner.

7. Leeches are very sensitive to traces of metals in the water. Copper in their water always proves fatal to captive leeches. Additionally, captive leeches must be provided with a rock or other rough surface to rub against, in order to slough off old skin.

The Ecology Of the Giant Scorpion

by Ruth Cooke

Artwork by Tony DiTerlizzi

The little ones are dangerous enough, but the *big* ones . . .

Brandi remained hidden among the rocks until the sun had been down for almost an hour. Then she slowly began to make her way back across the mountainside to the others, her scouting of the ancient mine entrance complete.

Her slipper-clad feet were silent as she invisibly traversed the rocky ground. She was very careful not to dislodge any loose stones. A single sound could be fatal, revealing her whereabouts to the denizens of the mountainside. Goblins might be

living deep in the old mine, but goblins were the last things on Brandi's mind.

Brandi's keen elven eyes spotted several faint red glows ahead of her, weaving among the rocks. She froze instantly, watching. After a moment, she sighed

with relief. A fire beetle, she thought to herself. Not terribly dangerous, certainly not something she would have difficulty dispatching, but to be avoided nevertheless. She didn't want to forego the benefits of her spell of *invisibility*, and any fight would attract more powerful predators.

And there were many such predators in these mountains. She watched with interest as the fire beetle neared a pile of loose stones, for she knew from research and experience that such places were seldom uninhabited in the Dragon's Teeth Mountains. Her vigilance was rewarded in an unexpected way. As the beetle passed the stones, a pale and unmistakable shape the size of a pony arose from behind the stones in the twilight. It rushed over and down the rock pile with lightning speed and great silence, tail high and pincers outstretched.

A giant scorpion. Brandi gasped in horror, resisting an urge to run. With an effort of sheer will, she forced her emotions into detachment and began to observe what transpired.

Barely a dozen yards away, the scorpion hurled itself upon its intended meal. The fire beetle became aware of the danger too late to scramble away, and the scorpion caught it easily, holding the beetle down with both pincers. Brandi watched, disgusted and fascinated, as the scorpion cracked open the struggling beetle's carapace. Then, when all resistance had ceased, the pale monster proceeded to tear its meal into small, twitching pieces.

Brandi was widely traveled, but she had never heard of a scorpion living outside the desert.¹ And this scorpion was white, not green like the other, smaller versions she had seen. Overcoming her fear and revulsion, she approached the feeding scorpion as closely as she dared. The thing stank with a bitter smell, one she couldn't identify. With her heat-sensing infravision, she soon noticed that the monster was drooling on the pieces of the beetle before it ate them. Probably helps with the digestive process, the elf thought to herself.²

She was only six or seven yards away when she made a second unpleasant discovery. The scorpion's white carapace had appeared to be moving or rippling before, and almost seemed furry. Now she saw that the giant scorpion was not actually white itself, but was covered by what appeared to be white baby scorpions with their tails up.³ She shivered. This was definitely something to ask about when she and Ortega and Michael returned to the village!

Brandi could see that the scorpion would be occupied for some time, so she withdrew and gave the beast a wide berth as she continued on her way, carefully observing potential hiding places before she passed them. She had heard that

scorpions hunted in swarms, and she fervently wished to avoid this one's companions.⁴

The elf had crossed a few hundred yards when she recognized the great rock where her companions were awaiting her. She could barely see at all now except with her heat vision and the faint starlight overhead. Brandi smiled as she approached the rock. Wait until she told Ortega about the scorpion. He was always teasing her about her fear of spiders. She started to giggle.

In the next second, the monster had her.

A terrific force crushed the wind from her lungs. Two of her ribs snapped and stabbed into her chest. She tried to scream but the pain was blinding, and she choked. She looked down as she struggled. A crablike claw three feet long held her from behind. The air reeked of the bitter scorpion-stink.

Brandi's right arm was pinned down in the pincer's vise-tight grip. Nearly overcome by panic, she fought to reach the sword hilt at her side. The pincer clamped harder into her chest. She couldn't pull the sword free. A second giant claw appeared from her left and seized her one free arm at the shoulder, tearing her skin. Brandi drew in a shallow breath and shrieked, her lungs on fire with agony. "Ortega! Michael! Gods help me!"

A roaring sound was building up in her ears. Brandi's vision grew dim at the edges. She kicked backwards, striking nothing. With her left arm, she pounded at the ceramic-like surface of the two huge claws. It was almost impossible to breathe. Use a *magic missile*! cried the sane part of her mind. She half-turned in the claws' grip to prepare the spell. The claws shoved her forward. Brandi stumbled and sank to her knees, her shin striking a sharp rock outcropping. The pain erased the spell's words from her mind. She twisted again and tried to kick upward for the giant scorpion's claw-arm, but couldn't connect. She remembered the scorpion's tail stinger, but it hardly seemed to matter now. The roaring in her ears was louder, now louder, now louder, now—

A wild battle-cry split the night sky. Boots scrambled over rock shards on the giant scorpion's right side. Brandi dazedly felt the giant claws shiver from some great impact, then abruptly release her. She fell forward on the rocks, barely conscious. In moments, the pain in her chest forced her back to wakefulness. She took a gasping, burning breath and opened her eyes. The air was filled with Ortega's maddened war screams and the whir of a long axe slicing back and forth.

Help had arrived.

Perhaps too late.

A sob escaped Brandi's lips. With an effort, she mentally forced the all-consuming pain aside and concentrated on breathing slowly and with shallow

breaths. Did she have enough strength to reach the healing potion in the pouch on her belt? She tried to move her hand, but her whole right arm felt like lead. The claw had cut off all circulation from her elbow down. She tried with her left arm, but her fingers fumbled with the potion's stopper.

Bootsteps quickly came up and stopped in the dust and gravel beside her head. Someone was kneeling over her.

"Just lie still," a deep voice said, calm but tight with concern. "I'll take care of you."

Thank Corellon, she thought, Michael made it in time! She closed her eyes and lay quietly as the half-elven priest cast a healing spell. She felt a warm hand press down on the center of her chest. The burning pain in her lungs was lessened, then—abruptly—was gone. She raised her arms and covered her face with her hands, giddy with relief and exhaustion.

"I thought for a minute there I was doomed," she gasped, then shivered violently. "It could have stung me!"

"Scorpions have little venom in their stingers," Michael murmured as he checked her over, "so they only use it if their prey is able to effectively resist—which you obviously weren't."⁵

Michael quickly got to his feet. "Stay back," he warned, and was gone himself. She struggled to sit up, eyes focusing on the furious battle taking place barely fifteen paces from her. Heat images danced and dodged in her vision.

Ortega had managed to wound the scorpion severely, judging from the warm ichor splattered about the place, but he was now caught in the giant scorpion's pincers and unable to act. The dwarf roared with pain as he fought to escape. Brandi looked up and saw the huge tail curl forward, the venomous sting ready to strike. If it hit home, her best friend would be dead in just seconds. She knew that although the poison of the smaller species of scorpion was seldom fatal, the sting of a giant scorpion almost always meant death.⁶

The tail struck down; there was a dull clanging sound. Brandi flinched, then realized that the stinger had hit a plate of the dwarf's heavy armor. She could even see a large splash of warm poison dribbling down Ortega's armored back.

Energy surged through her. Before the thing could strike again, Brandi was on her feet, the words of a spell on her lips. She fired off several *magic missiles* from her fingertips, the glowing bolts lancing into the beast's side. The giant scorpion jumped wildly from the attack. A moment later, Michael came in and dealt it a solid blow with his mace. The scorpion's carapace split from the impact. Ortega, using his enormous strength, managed to free himself from the pincers and roll out of harm's way.

Brandi raised a hand and shouted the words to another *magic missile* spell.

Power bolted from her fingers into the monster. The creature's tail and pincers suddenly flailed about spasmodically as the scorpion danced in a tight circle. Without warning, it fell on its side, limbs shivering. Then the legs, pincer arms, and tail stiffened—and slowly, very slowly, fell back against the rocks. They did not move again.

It was dawn before the three adventurers could bring themselves to examine the dead scorpion from close range. Each kept a weapon ready and one eye out for further trouble, but none came.

"No wonder I didn't see the thing," Brandi said, running a hand through her golden hair. "I always thought scorpions were green, but this one's the same color as the rock."

"Maybe scorpions in different environments have differently colored shells to help them hide," Michael said.⁷

"That's possible," Brandi admitted. "I don't think they have the ability to change colors automatically, so they must gain their coloration at birth."

"What are those hairs for?" Ortega asked, pointing with his axe handle. "They're all over the thing's body."

"I believe the hairs help the scorpion detect prey by sensing vibrations in the air," Michael answered.⁸ "Think of them as being like a cat's whiskers."

"So that's how it found me!" Brandi exclaimed. "I was invisible when it attacked me, and I swear I wasn't making any noise, but it knew exactly where I was."

"Next time, you'd better fly," Ortega advised grimly.

"I don't think flying would have helped her, unless she was high enough to be out of the scorpion's reach," Michael told them. "My brother once captured a few normal scorpions so that he could study them, and I watched one of them grab a fly from midair."

Ortega shook his head. "And I thought scorpions were just big stupid insects!"⁹

"They're not insects," Michael said quickly. "Insects have only six legs, but scorpions have eight. They're arachnids."

Ortega grinned wickedly at Brandi, his old humor returning. "That means they're related to spiders, you know."

Brandi pretended to shiver, but her act was no longer as forced as it once was. "Don't mention spiders! I've had enough of them to last me for my next ten lifetimes!"

Footnotes

1. In the real world, scorpions are found in habitats as diverse as scorching deserts, temperate woodlands, dark caves, tropical rain forests, and snow-covered mountains. It only makes sense that their larger cousins would be able to adapt to similarly diverse situations.

2. In fact, the saliva liquifies the fleshy parts of the scorpion's meal. Victims killed and eaten by a giant scorpion are unrecoverable by magic, unless a *wish* spell or similar means is used.

3. Scorpions do not actually lay eggs. The eggs hatch inside the mother, and the female gives birth to live young. After they are born, they climb on her back and ride there until they are old enough to fend for themselves. At the DM's option, 5% of scorpion encounters can be with a mother scorpion carrying 5-20 young on her back. Since the young do not eat or have effective attacks, it is possible that adventurers could sell those babies that survive to interested alchemists or wizards.

4. As befits a species with cannibalistic tendencies, scorpions are usually solitary creatures. However, during the colder months of the year, they do congregate in large groups of a hundred or more individuals. Encounters with these groups probably started the rumor that scorpions live and hunt in swarms.

5. Normal scorpions have enough venom for only one attack, and it takes a week to replenish the poison. A giant scorpion will use its stinger only against an opponent with an effective means of attack. I suggest a limit of two stinger attacks per week for large scorpions, four per week for huge scorpions, and five per week for giant scorpions.

6. Most of the 1,500 or so species of normal scorpions presently known to exist in the real world deliver stings no more harmful than a bee sting. However, about 25 species have venom that is potentially lethal to humans. (It's a wise adventurer who always checks her boots before she puts them on when adventuring in the desert.)

7. Because of the camouflaging and their ability to remain motionless for long periods of time, scorpions have a greater chance of surprising the party (-2 to party's roll to detect them). Giant scorpions cannot be surprised unless the players can think of a way to nullify the advantage given by the sensitive hairs, which detect all movement through the air, visible or not, within a 90' radius. Large and huge scorpions have 30' and 60' radii of detection, respectively. The first giant scorpion Brandi met simply ignored her in favor of its meal, leading her to think she was still unnoticed.

8. These hairs are sensitive enough to allow the scorpion to attack *invisible* opponents with no penalty. In addition, a large, huge, or giant scorpion can attack any flying creature which comes within range of its pincers, again with no penalty.

9. Suggested revised experience-point values for scorpions with the extra powers listed in this article are: large scorpions, 420 XP; huge scorpions, 975 XP; giant scorpions, 1,400 XP.

The Ecology of the Gibbering Mouthers

Artwork by Stephen Schwartz

All talk but no brains, with a bottomless appetite to boot

"Lykan."

There are times when a single word can be more startling than a heavy-handed clap on the shoulder. Lykan is my birth name. The problem? It wasn't the name I was using at the time.

I turned around toward the speaker with an inane grin and a denial on my lips. "I'm sorry, kind sir, but you must have

mistaken me for . . . oh, hell." (That last bit came as I saw who was accosting me.)

I'm a big man—unfortunate, since it's hard to disguise size—but this guy was even bigger. The impression of size wasn't hurt by the fact that he was carrying a mace the size of a small watchtower, and by the fact that he stood a full head taller

than the two fighters in plate mail who flanked him.

I knew his face, of course. Who doesn't know the face of the vice prelate, second-ranking cleric in the Order of the Prelacy? I knew his name too—Reifus endearingly nicknamed "the Pagan Hammer"—and he obviously knew mine, which he proceeded to demonstrate a second time.

by Nigel D. Findley

"You are Lykan," he said in a growl that would make a war dog proud, "the thief."

I glanced over my shoulder at my audience, which was listening with growing interest, and I gestured for him to lower his voice. "Peace, good sir," I said, playing to the gallery. "Perhaps we can clear up this . . . misunderstanding." I stepped closer to him—his bodyguards stiffened—keeping my hands in plain sight and a fawning smile on my face.

"You are Lykan," he growled again. But this time his voice was pitched lower. "I have need of your services."

With an effort, I kept astonishment off my face. "Well, then," I said, "perhaps we can deal."

He scowled. "I talk. You obey. You live." Whatever happened to the fine art of negotiation? I sighed. "All right."

They escorted me to the Prelacy's headquarters, the Basilica—you know the building, the only church built according to the Ancient Barbarian Fortress school of architecture—and into a reception room large enough for the prelate to receive a full battalion, should it strike his fancy. I stood while the Pagan Hammer sat on an ornate wooden throne (the throne normally reserved for the prelate). I raised an eyebrow.

Reifus nodded and answered the unspoken question. "Yes. The prelate has gone to his eternal reward, as the Father wills." He made a complex gesture, but his heart wasn't in it and his presentation was desultory. Then he got down to business. "The Order of the Prelacy keeps its coffers and its treasures within this Basilica," he said—and I could hear the capital letters—"within the Vault of the Holies. You probably know that, considering your occupation."

Though he said it with a sneer, I took it as a compliment to my thorough research. "Of course," I told him. "And I also know that the vault is guarded by a trap that your prelate designed himself. What of it?"

Reifus raised his eyes to whatever heaven the prelate was now occupying, and he controlled himself with an effort. "Yes, the trap. That's where your skills will prove of use."

I caught on then and tried not to giggle. "He didn't tell you how to disarm it, did he? How inconsiderate of him."

Reifus scowled again; he was very good at scowling. "I need—the Order needs to gain access to the treasures. You will disarm the trap and open the vault."

"And if I won't?"

His face was like a rock. "Then I shall kill you."

I sighed, having already known the answer to that question. "I need some information first. What's in the vault?"

"You have no need to know," he said gruffly.

"Well, did the prelate leave any notes behind—personal writings, anything like that?"

"You have no need to know."

Again, I sighed. "When did he set up the trap? Where had he been just beforehand? What had he been reading? Tell me anything that'll give me a clue—"

He cut me off. "You have no—"

"—need to know. Right." I ground my teeth in frustration. "Look, did the prelate know he was dying, and did he tell anyone—anyone—the secret?"

The Pagan Hammer's lips made a single thin line. He stared at me in a new and uncomfortable way. "Yes, he knew he was dying, but no, he didn't tell anyone." There was a strange tone to the cleric's voice. I made a mental note not to ask in any depth *how* the prelate had met his maker.

I gave up. "Okay, you win. Take me to the vault."

He did. Down into the bowels of the Basilica we went, eventually stopping in front of a heavy ironbound door. Reifus dismissed the two guards who'd been dogging my steps. I watched them leave, then turned to the cleric with a nasty grin. "So you think, wearing your armor and packing your mace, you're more than a match for a sniveling, unarmed thief. Is that what you think?"

"Yes," he said.

I glanced him up and down a moment, then put my mind on business and looked at the door. "Is this the vault?"

"The first door."

"And beyond the first door?"

"The second door."

His dialogue was beginning to irritate me. "What if I refuse to go farther?"

"I'll kill you."

"And if I try but fail?"

"If the trap doesn't kill you, I will."

I was as good as dead, so I quit stalling. I pulled out my thieves' kit and turned to the lock—a big, clunky, old fashioned one. I laugh at locks like that. I laughed at this lock, picked it, and swung open the door. Just before I stepped through, I said to Reifus, "Shut the door behind me, but don't lock it. And don't come in, or I just might disarm the trap by letting you walk into it." His expression told me I had no worry on that score; the thought of the trap scared the religion out of him. I grabbed a lit torch from a scone on the wall and stepped through the first door. Reifus shut the door behind me.

There was a short passageway between the first and second doors. I scanned the floor for trip wires, trapped stones—the usual things. There was nothing. But when I rested my hand on the stonework beside the second door, the surface felt slightly warm. Oh-ho, I thought.

I knew something about the prelate—my research was even better than Reifus thought. While he was working his way up the hierarchical ladder, the prelate had been a busy boy with his traps, setting up tricky protections for various church valuables. Like any ambitious thief checking out the prize purses in his territory, I'd read everything I could about the prelate's masterworks, and I was impressed (as

much as I can be by an amateur). The prelate, it seems, favored biological traps. In fact, he might have been the one who conceived that oft-imitated beauty where the trap dumps the victim into a gelatinous cube. With that in mind, I knew exactly what was on the other side of the door.

I pulled a glob of soft wax out of my kit and quickly fashioned a pair of earplugs. Next, out came some gauze from my first-aid supplies (it pays to be prepared); I bound a strip across my eyes. I could still see, but dimly—which is how I wanted to see. I picked the lock—it was as easy as picking my teeth—and swung open the second door. Prepared as I was, I almost choked on the reek of ammonia and other noxious substances that wafted out.¹

There it was, just as expected: a gibbering moulder, the prelate's biological trap, sitting in the middle of a bare room with glass-lined walls.

Gods, but it was ugly in the torchlight—all eyes and mouths, like a bevy of stool pigeons. The moulder lurched its green, slimy body toward me, all its mouths working. Some were biting at the floor, pulling its nasty bulk along; others were babbling nonstop.

Imagine all the inmates of an asylum talking, screaming, and mumbling at once. The noise the moulder was making was even worse than that—or it would have been if I could have heard it through my earplugs. At least madmen speak in voices that are human. The moulder doesn't; its din is a combination of sounds resembling human voices, animal noises, and things you would rather not think about. It's enough to unseat your reason. It's the sound of chaos incarnate—not just the voices of the insane, but the voice of insanity itself. It's the voice of every creature that makes up the moulder, each crying out its torment.

I used to wonder where the moulder got all of its eyes and mouths. One day someone told me. There's a theory—and I've no reason to dispute it—that creatures absorbed by a moulder become part of the moulder.² Their minds merge with its mind, and they exist forever, irreversibly mad, in a horrible form of living death. When I saw this moulder, I believed it all.

I know a little about moulders (it's good business to learn at least something about all the things in the world that want to eat you), but I don't know where they come from. Apparently, no one does. Some cite these hideous creatures as examples of why mages shouldn't be allowed to experiment with magic.

Gibbering moulders are very hard to kill. People will tell you the moulder's brain is buried somewhere in its middle, and that's why it's so hard to land a telling blow. Actually, the creature's nervous system is distributed throughout its bulk; it has no distinct organ that you can point at and call a brain. Hit a small pseudopod and you're just as likely—or unlikely—to hit brain tissue as you are when you run

the beast through with a battle lance. You can't even suffocate it properly.³

One thing I do know about mouters reinforces one of my pet peeves. I've got some advice for people (like the ex-prelate) who do their own traps: Don't. Use a thief to stop a thief. I could have told the prelate the problem with the gibbering mouter. Yes, it'll confuse, it'll kill, it'll eat anyone who comes in to steal your treasure. But if left alone long enough, it'll eat your treasure—that is, if the treasure's not on fire. That's why I wasn't too surprised to find a bare room—once a treasure room—at the end of the passage.⁴

I didn't stop to ponder all of this then and there. I acted. Otherwise, I would have known the mouter's secrets more intimately than I really cared to. I backpedaled fast, just as the monster advanced and one of its mouths cut loose with a nasty gob of saliva. The liquid struck the wall behind me (I duck fast) and exploded impressively. I almost dropped the torch when I felt the heat and pressure from the burst on my back. Even through the gauze, the flash was impressive enough to almost blind me. Mouter spittle contains what alchemists call ammonium iodide, an unstable compound and an effective contact explosive: lots of flash, some punch, and an impressive bang. It's easy to concoct in a lab; I've used it myself on occasion. But the mouter does it naturally.⁵

I kept moving back. The mouter kept advancing. The stone floor around the monster smelled like it was baking; it was probably beginning to soften now that the creature was out of its glass-lined cell. This was just another of the mouter's tricks. Lots of people think a mouter's control over ground consistency is magical. Not really; it secretes a hellish mixture of acids, solvents, and other foul fluids that break down the integrity of stone. The heat I felt was simply the heat liberated by this chemical reaction—an exothermic reaction, an alchemist friend called it. If there's any magic, it's in the fact that the mouter can wallow in this corrosive stuff and not dissolve itself. (Incidentally, that's why the room was lined with glass. The prelate must have known something about mouters. Glass is one of the few substances they can't digest.)

The mouter let fly with another spitball—flash, bang!—but I was out of there, already at the other end of the corridor by the first door. Mouters are nasty beggars, but they're slow. I had enough time to take off the gauze blindfold, remove the earplugs, and pocket the lot. Then I threw the torch at the mouter as it closed in. A mouth opened to catch it, and the flame went out immediately. The mouter shut up, probably startled by the pain. I opened the door just enough to slip through, then shut it calmly behind me.

Reifus was anything but calm, almost hopping from foot to foot. His face was streaked with sweat. I smiled up at his face and said casually, "Piece of cake."

His jaw dropped. "You did it?"

I didn't dignify his question with an answer. "Everything that's in there is yours."

Reifus stared hard into my eyes. But if the eyes are windows to the soul, I'd long ago learned how to close the shutters.

I knew Reifus intended to kill me, but not until he'd made sure of his new-found wealth. He opened the door and stepped inside, striding down the dark hall. I remembered only at the last second to slap my hands over my ears.

His scream was very, very loud—louder than the babble. I wished I'd kept the earplugs in. I won't trouble you with details on my subsequent escape.

I suppose I could have told him the mouter was probably just on the other side of the door—that, I could have done. But then again, I figured he had no need to know.

Footnotes

1. Under ideal conditions, a mouter's pungent reek can give warning of its presence up to 20' away.

2. A mouter drains blood and nutrients from its victim—hence the additional 1 hp damage per round per mouth attached. When the victim reaches zero hit points and falls into a terminal coma, the mouter flows over the body and begins to absorb it. The mouter secretes digestive juices that dissolve the victim's outer tissue. Complete dissolution takes 1d6 + 2 rounds for a human-size body; the body is irrecoverable after 1d3 + 1 rounds. The secretions have an additional effect, however: they supply the nutrients needed by the victim's brain and nervous system to keep the creature alive. The tissues making up the victim's central nervous system and its eyes are absorbed into the mouter, intact and functional. Though the nervous tissues are spread throughout the bulk of the mouter, they remain in contact through thin fibrils of mouter nervous tissue. The victim's brain, therefore, never actually dies, and its anima (its soul or spirit, as described on page 10 of the AD&D 1st Edition *Legends & Lore*) is never freed. Thus, a creature absorbed by a mouter cannot be reincarnated or resurrected, and cannot be contacted through a speak with dead spell, since the victim is not strictly dead. It is only when the mouter is slain that the victim's anima is free to travel to the Outer or Inner plane awaiting it.

Once the absorption is complete, the mouter grows new eyes to surround and utilize the victim's corneas. The victim's teeth are not affected by the enzymes since the enzymes cannot dissolve dental enamel, and these are also "pirated" for use by the mouter.

Absorption by a mouter invariably causes the victim to go incurably insane. The mind of a victim known to have been absorbed by a mouter can be contacted

through ESP, telepathy, and similar spells, but with great difficulty (+ 6 bonus to saving throws, for spells that allow them). The mind is totally insane, however, and nothing of use can be communicated to or learned from the absorbed intelligence. In fact, there is a cumulative 25% chance per round of contact that the spell-caster performing such mind reading will become insane for 1d4 + 8 rounds following such contact.

3. Metabolically, the mouter is as confused as its appearance implies. Though it doesn't breathe in the traditional sense, some parts of its body require oxygen and some do not (the latter using other chemicals to respire). As a consequence, it is impossible to asphyxiate a mouter: it simply shifts to anaerobic respiration so that it no longer requires oxygen. Similarly, poisonous gases (e.g., *cloudkill*) are ineffective; the mouter shifts its metabolism to a different system that is unaffected by the poisonous gas. Injected and ingestive poisons are somewhat effective against a mouter (though the creature saves at +6), because these typically cause tissue damage in addition to their metabolic effects.)

4. A gibbering mouter eats virtually anything, whether the food is animal, vegetable, or mineral. While it prefers animal tissue (preferably still alive and kicking) and vegetable matter, the mouter can also absorb and make use of most metals and minerals. This is a consequence of its strange metabolism: Virtually anything can be incorporated into its makeup or used as a life-giving nutrient. If there is no animal or plant tissue available, a mouter can change its metabolism so as to sustain itself by absorbing other material. If they actually swallow or absorb it, mouters can dissolve and utilize any material except dental enamel (i.e., teeth), glass, diamond, adamantite, and mithral. These materials are resistant to all of a mouter's corrosive secretions and are eventually expelled.

When it is well fed, a mouter can reproduce through binary fission, much like an amoeba; one mouter becomes two smaller mouters. The offspring are initially 2 HD but grow to full size (assuming an adequate food supply is available) in 3-6 months. Offspring have the full powers of an adult from the outset. When a mouter divides, its mouths and eyes are shared evenly between its offspring. When a mouter has insufficient food or must live on minerals, it does not reproduce.

5. These secretions are also highly corrosive to flesh. Touching a mouter causes 1d4 hp corrosive damage to bare flesh. Metals are unaffected unless they remain in contact with the mouter for an extended time or are absorbed. Nonmetallic weapons, armor, and other items (e.g., wooden clubs, staves, leather armor, etc.) that come in contact with a mouter for even an instant must save vs. acid or dissolve immediately.

Gnoll

“The resemblance of gnolls to hyenas only begins with their appearance. Gnolls make a chattering ‘laughing’ noise like that of hyenas when excited or agitated, and like their bestial cousins often drop to all fours when pursuing prey. Possessing formidable jaws and steely stomachs, they’ll eat things no other thinking race would even imagine as food and, worse still, thrive on such scraps. Yet, most like their feral counterparts, they prefer to let others perform the hard work and then skulk in to snatch up the spoils.”

—Sivoah Huot,
The Savagekind of Garund

Feral, savage, and bloodthirsty, gnolls represent the brutal, unforgiving aspects of nature. Discordantly, they also represent the laziest aspects of nature. While slothful gnolls can quite effectively hunt and craft and build for themselves, they favor forcing slaves to do their hardest labors. Opportunists of the highest caliber, gnolls also take as a sign of Lamashtu’s favor the accidental discovery of food, housing, or materiel.

Overview

Gnolls live, work, and fight in groups. A lone gnoll is a survivor of some calamity inevitably looking for a new band to join or an exile trying to find some other group of humanoid to join. Strong believers in the power of community, most gnolls cannot comprehend the lure of independence exhibited by other humanoids. That is not to say gnolls do not have individual tastes and desires, but rather that they cannot imagine living alone or without the presence of other gnolls nearby.

Although they typically live on warm savannahs and plains, they can frequently be encountered underground.

Gnolls are not strong miners, however, and combined with their legendary laziness, they tend to rely on the backbreaking labor of slaves for their subterranean homes. In some cases, gnolls invade dungeons or the underground homes of other races with the intent of controlling and residing within the tunnels.

Gnolls possess a reputation for laziness that, while deserved, occasionally becomes overstated by detractors. While gnolls do despise hard physical labor and most forms of even moderate exertion, they do enjoy hunting and are also more than willing to work hard for a brief period in order to acquire slaves and workers (who then work hard for them thereafter).

Leaders of gnoll bands call themselves all manner of lofty titles, from Chieftain to Consort (of Lamashtu) to Emperor. Regardless of title, although, a gnoll band's leader only retains control with the careful application of force. As the strongest among his band, he leads with brute strength, and his control only extends as far as his reach. Gnolls in an area all pay some homage to a particularly powerful chieftain who goes by a truly grand title, such as the King of All Gnolls.

As the children of Lamashtu, gnolls strive daily to serve the Mother of Monsters. Every band has at least one (and usually more) cleric or shaman of Lamashtu. Clerics are universally female, while shamans always are male.

Ecology

Despite their unnatural creation, gnolls have fully integrated themselves into the natural order. As a species, they have affected the world less than some other humanoids, especially the digging dwarves, plant-manipulating elves, and industrious humans. Gnolls live as a part of nature, serving as upper-level predators who only provide food for true monsters that sit at the very top of the food web, such as dragons.

A gnoll begins life as part of a litter of three to five siblings. Few gnolls come into the world naturally, by passing through a bitch's birth canal. Instead, most are forcefully removed from the womb when their mother slices into her own belly with a knife or claw and delivers her pups by a grotesque form of caesarian delivery. The rarest of gnoll births occur in a similar manner, but initiated instead by a robust pup who rips his own way out of the womb. Such a birth occurs maybe once a century, and he who performs it becomes a great leader of gnolls. These great leaders, called in the gnoll tongue *Garrgartarrm* ("Most Holy Son" in Common), tend to unite massive armies and become legends not only among the gnolls, but also among those who battle them.

At three years of age, a gnoll is dangerous. At eight years it is considered physically mature and is forced to hunt or otherwise contribute to the band. Females become fertile as young as 10 but sometimes not until 18. Late bloomers

GNOLLS AND HYENAS

Bands of gnolls in the appropriate climates live, hunt, and travel with hyenas and hyaenodons (dire hyenas). Some sages speculate that gnolls get along so well with hyenas because Lamashtu created gnolls from the scavengers. Gnolls themselves believe this and hold hyenas in high regard, worshiping them even as some cultures worship ancestors. Indeed, the Gnoll word for hyena is *Rrgarr-rr*, which translates directly to "grandmother" (and which is sometimes mistranslated as "great mother," a title reserved for Lamashtu herself).

When a particularly beloved hyena dies, the band with which it traveled (gnolls become insulted if a visitor suggests they own their hyena "brethren") gives its body to Lamashtu in a day-long ceremony. This ceremony, in truth, involves little more than skinning the hyena and slow-cooking it over a smoky fire to be eaten at sunrise. Such an honored hyena's skull is cleaned, bleached, painted with numerous "magical" symbols (little more than swirls and wavy lines), and drilled with a third eye socket above and between the other two. Gnolls consider these specially prepared skulls extremely sacred, usually as the holiest objects a band possesses.

do not receive sympathy from the band, as females must become either mothers or clerics of Lamashtu by 15 (or, preferably, both). Those incapable of motherhood by that age strive to serve Lamashtu in the hopes of being chosen by her. The unfortunate gnoll bitch who does not meet one of the female obligations by 15 is sacrificed to Lamashtu and consumed by the band. Males have a much easier time in life and are merely required to provide at least 20 pounds of meat to the band before they reach 12. Many gnolls die or are killed in their 20s, but most survive into their 30s, giving the species an average life span of about 28 years. Only the most wily, clever, and lucky gnolls live into their 40s. When a gnoll dies, it becomes meat for the rest of the band. If the gnoll proved itself worthy in life, it gains a short ceremony where its soul is sent along to Lamashtu for eternal service. Otherwise, the gnoll is merely consumed.

A gnoll looks like (and in many ways is) an anthromorphic hyena. It has a hyena's blunt muzzle and rounded ears, coarse hair (which covers its entire body except the pads on its feet and the leathery skin of its palms), hairy tail, and doglike hindquarters. As a humanoid, a gnoll mostly moves about on its legs, carrying weapons and food with its human-like hands. When agitated, a gnoll frequently drops to all fours, yapping and laughing like a hyena and jumping straight up and down. A gnoll walks and trots on its hind legs with an inefficient loping movement that resembles a half-hop, but when it needs to cover ground quickly it again drops to all fours and breaks into a smooth run reminiscent of the locomotion of a normal hyena.

CRIME AND PUNISHMENT

The gnoll concepts of crime and punishment do not correspond with any other intelligent race. To them, exile is considered the worst punishment imaginable. The following list shows a few of the crimes humanoid tend to commit against one another (as well as a few distinctly gnoll crimes), with their accompanying punishments.

Crime	Punishment
Regicide	Ascend to leadership of band
Murder (non-gnoll, non-slave)	None
Rape	None
Theft (not from band)	None
Theft (from band)	10 lashings
Murder (slave or non-band gnoll)	10 lashings
Possession of contraband	Must share goods with band
Murder (band-mate)	Sacrificed and consumed
Treason (with other gnolls)	Sacrificed and burned
Force other gnoll to work	Exile
Freeing slaves	Exile
Treason (with non-gnolls)	Exile
Worshipping Lamashtu enemy	Exile

Gnolls scarcely affect the surrounding environment, and in fact they tend to aid the natural health of the area in which they settle. Consummate scavengers, gnolls pick up after other races and creatures, reusing or otherwise recycling the leftovers and discards of more industrious creatures. Although most gnoll bands survive by hunting, in truth they use the term “hunter” to truly mean “scavenger and gatherer,” as hunting groups more often return with meat (and other foods) originally brought down by other predators, who are then driven off by the gnolls. In addition to food, gnolls scavenge clothing, armor, weapons, supplies, and even homes. Gnolls live in the wilderness for the most part, but they sometimes take up residence in a village or settlement left behind by another humanoid group. They never build their own homes and they try to avoid displacing groups for a place to live, instead waiting for more powerful creatures to clean out an area before moving on.

In order to support themselves with a minimum of work, gnolls take from and enslave weaker creatures and hire, bribe, or avoid stronger ones. The stronger creatures they hire, such as trolls, act as guards and enforcers. Gnolls actively seek out the service and company of trolls for this reason, and the two races in general get along very well.

Habitat & Society

Gnolls live in small, aggressive bands of raiders and hunters brought together and ruled by a large, powerful male. These

small groups exist for as long as their leaders live, disbanding if their chieftains die naturally. Members of disbanded groups melt into the wilds and join other bands still extant. Despite their warlike ways, gnoll groups rarely fight among themselves (and do so mainly to establish hunting territories), and when they do they rarely fight to the death.

Every region infested with gnolls suffers from one particularly large band led by an especially strong leader, often a flind (see Variants). This leader calls himself the King of All Gnolls (a title that does not carry past his particular region) and his decisions indirectly influence the decisions of other bands’ leaders in the area. Of course, because his subjects are all gnolls, his actual authority only extends as far as his own band.

Religion: At the same time worshipers of Lamashtu and misogynists, gnolls give their females the choice of two paths in life: mother or cleric of Lamashtu. Many of the latter are also the former. A gnoll bitch who has not become one or the other by her 15th birthday finds herself at the receiving end of the sacrificial knife. She who becomes both by that day receives great honor in the band, for she has received twice the blessings of the Mother of Monsters.

The worship of Lamashtu follows two lines: the female clerics and the male shamans. Clerics of Lamashtu perform all the normal functions of clerics in societies—they oversee the births of litters, enforce the spiritual laws of the goddess, perform appropriate sacrifices and other rites, and officiate at the deaths of those deserving of a death service. In these ways, the clerics perform the heavily ritualistic and infrequent practices of the clergy. The day-to-day services performed by religious leaders fall to the male shamans. Shamans bless the daily food of the band, provide magical and mundane healing, beseech Lamashtu for great success in both war and hunting, and advise the band’s leader.

Clerics of Lamashtu show their status in ways recognizable by any creature of the Mother of Monster’s faith, with great gashes in their bellies and sagging mammary glands heavy with milk. A gnoll cleric is regarded by her bands as its mother, and is called as such, regardless of who actually births its members. The cleric serves her band as teacher and caretaker, in addition to her divine duties. It is considered a high honor among the males to be chosen by the cleric for breeding, and even the laziest males work hard to impress her enough to earn a nighttime visit.

A shaman of Lamashtu shows his status with a grotesque practice known as *Raffgarrhurrttauff* (“growing the third eye”). Once he becomes a shaman (a process requiring 2 years of apprenticeship followed by a ritual that determines if Lamashtu blesses the acolyte or desires his flesh in sacrifice), he pierces his own forehead just above and between his eyes. This piercing provides either tiny

studs or hooks from which the shaman hangs the eyeball of a humanoid victim. This eyeball, periodically replaced from a ritualistically sacrificed slave or prisoner, acts as the shaman's divine focus, symbolizing the third eye of Lamashtu and allowing him to channel her divine magic through himself.

While gnolls faithfully worship Lamashtu before all other deities, they also practice a form of secular and superstitious iconographic devotion to the Moon that echoes the devotion of other races to astrology, numerology, and other forms of mundane divination. Gnolls pay great heed to the movement of the Moon and enthusiastically study its position and phase, always carefully noting the best time of day, month, or year in which to undertake a major activity. Most gnolls only pay lip service to this Moon-based divination, but even the most jaded among them speak of *Baufffgarr* and *Bauffftahk* ("good moon" and "bad moon," respectively). This culture infiltrates the gnoll psyche to such an extent that many constantly look toward to nights of *Baufffgarr* to begin important tasks, such as raids.

Laws: Gnoll society relies very heavily on the cohesion of the band. To that end, all gnoll laws prohibit activities that harm the band. While causing permanent harm to gnolls outside the band is seen as improper, it is generally not a punishable offense. Hurting a non-gnoll is never considered a crime, unless the creature harmed belongs to another gnoll or is an ally of the band. Gnolls grow up learning that the good of the band outweighs their own good, and the desires of the band supercede their own desires. Betraying the band is the worst possible crime.

Outside of the band, gnolls respect others of their species. If given a choice, most gnolls do not harm other gnolls, for the two might someday be band-mates. This respect for one another only goes so far, however, and gnolls frequently murder and rape members of other bands, receiving relatively light punishments for the former and pats on the back for the latter (except for clerics of Lamashtu, female gnolls occupy the same social position in a band as non-gnoll slaves). Two gnolls who disagree settle their differences with a nonlethal combat.

Intelligent creatures who work for the gnolls but who are not slaves (such as hired troll guardians or the like) are considered members of the band for as long as they remain with the group. These honorary members of the band can lose their standing more easily than can true gnolls,

however, but most adjust well to living with the gnolls and become true members of the band after a few years.

Punishments: The harshest punishment for a gnoll is exile. A gnoll prefers death to loneliness, and one who is cast from his society frequently seeks companionship from other humanoids—usually orcs or trolls. When a gnoll is exiled, his head is shaved and scarred, showing to all who meet him that he was cast out of his band. Gnolls reserve this punishment for only the most horrific of crimes, which in gnoll society include freeing slaves, betraying the band to non-gnolls, worshiping a deity not allied with Lamashtu, or forcing a fellow gnoll to perform hard labor.

If a gnoll cannot find camaraderie among other races, he walks. He continues walking in as straight a line as possible until hunger, exhaustion, exposure, or predation finally ends his pitiful life. This practice, known as *Garrurwarr* ("holy walk of death") allows the gnoll to regain some amount of respect from his kind. If the *Garrurwarr* walker comes across another gnoll, and after a brief exchange the encountered gnoll is convinced of the legitimacy of the *Garrurwarr*, he might kill the walker and end his punishment.

Relations With Others: Gnolls hire or otherwise coerce trolls to guard their lairs and homes, and the two races tend to get along well. In addition, gnolls cooperate with many goblinoids and orcs. Bands of gnolls who dwell underground frequently take up residence in caves occupied by those other races, working with their neighbors to protect their subterranean homes and to maximize the effectiveness of slave-gathering raids. Groups of other creatures weaker than the gnoll band usually become slaves (although they particularly favor dwarves and humans in that role), groups of equitable strength become partners, and stronger groups are avoided or paid preemptive "protection money."

Campaign Role

Gnolls work well in one of two roles in a campaign: either as slavers of middling importance or as savage and unpredictable antagonists.

As they put precious little effort into anything, even the acquisition of slaves, gnolls tend to keep few of them (usually numbering no more than one slave per gnoll in the band). Slaves of gnolls must work hard in order to

FLINDBAR

Flinds use a weapon unique to themselves known as a flindbar. A flindbar consists of two iron bars, approximately 18 inches long, connected by a short piece of chain (or, in some cases, connected to one another directly with loops at the ends). A flindbar is a one-handed exotic melee weapon that deals 1d8 points of damage as a Medium weapon, 1d6 as a Small weapon. While using a flindbar, you get a +2 bonus on opposed attack rolls made to disarm an enemy, including the roll to avoid being disarmed if such an attempt fails. Flinds are automatically proficient with flindbars and, thanks to their familiarity with similar weapons, treat nunchaku as martial weapons.

provide for the band to which they belong. Those who become ill, injured, or exhausted shortly find themselves the main course in the next day's meal. Thus, the turnover rate of slaves for gnolls is exceedingly high, meaning gnoll bands are almost constantly on the search for new and easily acquired ones.

Feral and savage but also settled and lazy, gnolls are difficult to predict and, thus, to interact with in any meaningful way. A gnoll might immediately attack, attempt to bargain with, run away from, or loudly threaten any human or demihuman who tries to interact with it, and a particular gnoll's response one day has no bearing whatsoever on its possible reaction the next.

Treasure

In theory, everything a gnoll possesses belongs to the band in which it lives, with the leader of the band the final arbiter of ownership. In practice, however, gnolls very much believe that possession grants ownership. Individual gnoll treasure therefore usually consists of items easy to carry and conceal (especially gems), armor, and weapons. Gnolls rarely carry coins, as the jingling made by multiple coins can give away a gnoll's position during a hunt or attract the attention of its band's leader.

Larger pieces of treasure or those too fragile to survive rough handling become the communal property of the entire band. The leader of the band, then, exerts marginal control over these group treasures. Such treasures include finely crafted furniture, expensive trade goods and commodities, chests full of coins and other amassed precious metals, and magic items unusable by anyone in the band or that provides no benefit on a hunt or in a fight.

Variants

In addition to regional and climactic variations, gnolls have a close relationship with a cousin race known as the flind.

Flinds: Larger, smarter, and meaner than normal gnolls, flind tend to become leaders of gnoll bands in which they find themselves. As a race, gnolls look up to flind as younger siblings admire their older brethren.

Perhaps as a result of their creation or for some other reason, flinds are almost universally sterile. That alone keeps their numbers low, and those flinds who can produce young tend to have relatively easy lives, possessing influence at nearly chieftain level.

Flind lifestyles very closely mirror those of gnolls, although with more pronounced extremes of savagery and lethargy. Most flinds live among their gnoll cousins and blend in almost seamlessly. Those who do not study gnolls cannot tell apart the two races except by size, as the largest gnolls and smallest flinds are roughly the same. Flinds have 4 Hit Dice, use the elite array for their ability scores, and are proficient in the flindbar. Flinds are CR 2.

Gnolls in Golarion

Gnolls live on almost every continent, and every geographic area produces its own slightly different version of gnoll.

At the height of Thassilon, most gnolls of Avistan lived in Haruka, where their apathy and laziness were appreciated and encouraged. The armies of Haruka contained thousands of gnolls who ostensibly served as scouts and forward observers. With Thassilon's fall, the gnoll population in Varisia was cut in half. Stricken with fear, the gnolls fled from the region, leaving behind only a few exceptionally brave (or lazy) bands. Most gnolls in Avistan now live beneath the ground or in the forests of Razmiran, the River Kingdoms, Kyonin, and Galt.

Gnolls of Garund live as seminomadic raiders in the northern deserts (except for Osirion, which actively exterminates gnolls it discovers) and as slavers in the central jungles. The desert-raiding gnolls tend to move between known trading routes, attacking caravans to loot food and—most importantly—water. Long before the great cataclysm that created the Mana Wastes, gnolls lived in the area currently occupied by Geb and Nex. With the magical destruction wrought by those two nations, however, gnolls have completely fled the area. Those that remained became crocottans, which continue to terrorize the area.

Names

Gnoll names often sound like the growls and yipping of wild hyenas, having a variety of hard consonants and rolling "r"s.

Male: Daag, Fekkur, Garrou, Gegg, Gurr, Hakk, Hurrurr, Kaggur, Kurrmrr, Lok, Nrurr, Tarr-Kurr, Tukrr, Vogg, Vorum

Female: Aaturr, Akaam, Arruggurr, Eag, Ekurrn, Errnhor, Ilnn, Irrok, Itrugg, Ok-Ur-Okk, Orrot, Ovvurr, Ukramak, Urmnmarr, Uud

GNOLL

This humanoid stands slightly taller than a human (despite a slightly stooped posture) on doglike legs. It has the head, neck, and fur of a hyena, with a humanoid torso and arms.

TACTICS

Before Combat Gnolls try to set up ambushes which are usually crudely planned and poorly executed, but they prefer to let allies and slaves fight for them whenever possible.

During Combat Against foes they consider evenly matched (or stronger than themselves), gnolls work together only so far as ganging up on a single powerful target to bring it down before moving onto the next target. An individual gnoll might switch targets if it is damaged by another opponent or its attention is otherwise drawn away from the target at hand. Against foes weaker than themselves, gnolls fight individually, engaging their opponents one-on-one in an attempt to gain individual glory. Regardless of the relative strength of their opponents, if gnolls have slaves available they force their slaves into battle beforehand to weaken or overwhelm their foes.

Morale A gnoll flees as soon as it is reduced to a quarter its total hit points, it is the last combatant on its side, or if all its slaves and allies flee.

In Qadira it's said that gnolls were once thieves who were exiled into the desert. Facing starvation, they forsook their tribe's taboos and ate hyena meat to survive. For their trespasses against the laws of both man and the gods, the desert cursed them with the blood of hyenas, condemning them to be outcasts forever more.

Goblin

“So you wanna know about goblins, huh? Wanna know the best way to kill them? Of course you do. S’why you came to me. Trick is, they’re cowards. Dogs, horses, and even words will stop them dead in their tracks—they think words steal their soul, or some such. Anyway, once you got them all ascairt’, it’s just a matter of what weapon you prefer. Me? I prefer the hatchet right to the middle of the skull. That’s how I put down ol’ Chief Whartus. Put one right in his head. I got him in a barrel of brine out back... wanna see?”

—**Daviren Hosk: owner,
Goblin Squash Stables**

Few creatures take such glee from destruction and mayhem as goblins. These small pests can be found in nearly any environment, straining the local food chain, menacing the locals, and generally causing trouble for any forced to deal with them, including their kin. They are goblins, and to them, life is here for their twisted amusement, much to the detriment of everyone else.

Overview

To most races, goblins are little more than a nuisance. Their penchant for keeping their own numbers under control from in-fighting, poor common sense, and general accident-prone tendencies prevents them from forming sizeable nations. Their own laziness and disinterest in making anything bigger for themselves leads to them living in small tribes. Notorious cowards and gifted scavengers, goblin tribes can often be found living in relatively close proximity to human and demihuman settlements—since the goblins can’t organize themselves into proper raiding parties and tend to run in terror when confronted with even a half-hearted defense (or a single barking dog), most

view them as little more than amusing pests. It's only when a particularly ambitious chieftain rises among their kind, or (more often) a bandit or warlord of another race seizes upon their numbers and bullies them into a more organized force, that they become honestly dangerous.

When properly motivated and organized, goblins can cross the line from comical nuisances to ruthless killers with surprising and disconcerting ease. It's almost as if they grow smarter and more cunning the more of them there are involved in an attack. In actuality, larger numbers simply increase the odds of one goblin in a group being particularly brave or foolhardy, but the net result can't be ignored. Goblins, used properly by a crafty or ambitious warlord or bandit, can be as effective a tool for mayhem as any number of highly paid mercenaries or trained man-eating monsters.

Ecology

Goblins have it rough from the day they're born. Goblin babies are treated little better than pets—they're kept in cages and fed and watered when the goblins remember, and often left to fight and bicker as they will. Few goblin parents take an active interest in their children—the only real exception being chieftains interested in preserving their bloodlines. Of course, since most goblin chieftains would rather die than give up their throne to anyone (sons and daughters included), these exceptions are rare. Fortunately for goblins, they mature quickly, achieving adulthood by the age of 5. A goblin who survives childhood is thought to be either lucky or tough—in either case, a quality that can help the goblin in its life to come.

Goblins are somewhat short-lived, rarely surviving longer than 50. Of course, the reality of a goblin's lifestyle means that most never reach the age of 20. Goblins are high-strung and energetic, a result of their accelerated metabolism to a certain extent, but also a result of their society. The goblin who can react swiftly to danger (real or imagined—mostly imagined) tends to be the goblin who lives to see another day.

One amusing side effect of their fast metabolism is the legendary goblin hunger. Goblins are voracious—not because of gluttony, per se, but simply because their bodies digest food with shocking speed. A goblin's life is usually one of constant hunger, since as a race they are not patient enough to fish or farm or hunt. Most of a goblin's food comes from raiding, and most goblin raids are fueled by little more than the constant quest for more food. In times of desperation, goblins can subsist on lichens, mushrooms, grass, and pine needles, but they find such food to be foul-tasting at best. Salty foods and meat are much preferred. Goblins usually enjoy cooked food better than raw (mostly because they like watching things burn), but often their hunger is at odds with their desires in

this venue. Many goblins are particularly fond of pickled foods of any type. Soak anything in brine long enough and chances are a goblin eats it, given the chance.

Habitat & Society

Goblins have a fairly minimal impact on their environs, and actually have a relatively healthy respect for the natural world. Most goblins are quite gifted in seeing how their surroundings could be used as defenses for their lairs. Rather than clearing tangled undergrowth to make room for their homes, goblins instead make the thistles themselves their homes, settling into the undergrowth's natural animal trails and hollows. Caves are also popular lairs, both because they're easy to defend and because they provide so many handy places to hide. Often, goblin tribes can be found inside of larger buildings, stockades, and ruins—in most cases, these buildings are leftovers from previous inhabitants. Goblins only rarely build their own structures, but they do enjoy the comforts afforded by furniture and roofs and windows that can actually be closed, so when they find an out-of-the-way structure that suits their needs, they waste no time claiming it as a lair. In some cases, these buildings might still be inhabited—if goblins want a building hard enough, their desires can sometimes overcome their natural cowardice enough that they might even lay siege to such a site.

Goblins are gifted scavengers—this, combined with their fecundity and willingness to eat anything that even remotely smells like food, makes it easy for them to prosper in most any environment. Goblin tribes have been encountered in deserts, on glaciers, atop mountains, deep in jungles, and far underground. Yet given the choice, most goblins seem to prefer coastal environs for their lairs, likely due to their preference for heavy amounts of salt in their diet as much as for any other reason. While goblins are adept at hiding and possess some level of skill at disguising the entrances to their lairs, they generally don't understand the point of hygiene and sanitation. Perhaps because they're resistant to the more common forms of filth-associated disease, goblin lairs have a certain unmistakable odor about them—when seeking a goblin lair, it's usually best to follow the nose rather than the eyes.

Goblin tribes typically number only a few dozen. A tribe is led by a chieftain, and in the cases of tribes numbering more than two dozen, it often has several sub-chiefs as well, selected from the tribe's toughest warriors. The majority of the rest of the tribe squabbles and fights over pecking order, but the actual breakdown beyond sub-chief rarely amounts to anything more than which goblin happens to be loudest that particular day. Successful goblin tribes also incorporate mounts into their lairs—goblins are gifted riders, after all. Worgs and wolves are

TYPICAL GOBLIN DISTRACTIONS

Goblins have notoriously short attention spans, even at times when they should be concentrating and focused—like in the middle of combat. Feel free to have a goblin take actions during a fight that aren't the best choices—some of these actions might even provoke attacks of opportunity. As a general rule, a goblin shouldn't waste his turn more than once per combat, but having a host of goblins take strange actions during a fight goes a long way toward establishing their personality.

Several possible goblin distractions in the middle of a fight are given here. During combat, any given goblin might...

- Bend over to pull a fat earthworm from the ground, blow the dirt off it, and either stick it in a pocket or eat it.
- Take a full round to laugh at another goblin's misfortune.
- Attempt to grapple a foe who's obviously much stronger.
- Run a circle around a foe in a feeble attempt to attack from a direction the foe doesn't expect.
- Try to pickpocket another goblin, or attempt to bite another goblin's ear.
- Drop his weapon and furiously try to scratch his back.
- Cough out a wad of phlegm, spit it somewhere inappropriate, and then brag to another goblin about it.

classic goblin mounts, as are the rat-like goblin dogs, giant lizards, or even giant spiders. Yet for all their skill at riding, a goblin would never consider a horse or horselike creature as a mount. Goblins have a strange and irrational fear of horses, and most horses seem to realize this and antagonize goblins whenever the opportunity presents itself. Among most goblin tribes, "being stepped on by a horse" is the number one feared way to die.

The relationship between goblins and dogs deserves special mention as well. Logically, one might assume that a race that lives in close harmony with wolves, worgs, goblin dogs, and other relatives of canines would make for a natural ally to the common dog, but nothing could be further from the truth. Goblins hate dogs with a fierce and universal strength. As with horses, dogs seem to pick up on this hate and bark right back at goblins. To a goblin, a dog is the ultimate insult—a domestication of the raw power evident in their favored mounts. There's no surer way to insult a goblin than to call a wolf a dog. Often, goblin raids on human-held lands fail only because the goblins lose sight of their actual goals when they notice a few barking dogs on an outlying farm and sacrifice the element of surprise just to have a chance at killing a few dogs. Guard dogs are, as a result, popular pets in communities with known goblin problems.

Goblins live in constant fear—of dog attack, of rampaging horses, and of the daily possibility that a band of adventurers might discover their lair. This fear carries over into their religious beliefs—for a goblin, the one

thing that can be counted on to offset these daily fears is the fear of divine retribution—most often delivered via the weapons and magic of the tribe's shamans and priests. Larger goblin tribes almost always have favored deities that they venerate—sometimes a demon lord or arch devil, but usually one of the various deities of the relatively small goblin pantheon.

Smaller goblin tribes often lack members capable of becoming actual priests, yet even in these tribes religion holds an important role. It is that situation which gave rise to tales of goblins worshiping stumps that look sort of like monster faces, patches of mold on the wall that could might be mistaken for a three-armed goblin, or even the bones of some large creature that dwelt in their cave before they moved in. Although humorous and ridiculous to most other races, this crude form of animism seems to serve smaller goblin tribes well—fear that the Monster Stump might be behind the unexplained midnight disappearance of the last chieftain works just as well whether or not the stump actually ate him or he was secretly assassinated by a goblin witty enough to come up with the story.

Although a significant portion of a goblin's life is spent raiding other tribes or nearby humanoid settlements for food, goblins don't spend all of their waking hours at war. In fact, left to their own devices, goblins are generally content to stay within the bounds of their territories—food shortages and the meddling of more powerful individuals seeking to use the tribes as private armies are the typical reasons behind goblin raids. Goblins who aren't worried about where their next meal comes from can be quite creative in finding ways to entertain themselves. Goblin games tend to focus on cruelty and sadism as core concepts—the suffering of creatures smaller than them is a surefire way to mirth in goblin society, and most of their games involve using small animals in key roles. Fire is also a common entertainment in goblin society—the dancing of flames is a constant source of interest to them, and in many tribes, arson is considered an art form. To the untrained eye, a goblin's fascination with fire might seem to be a recipe for disaster, but goblins have such a deep respect for fire that they very rarely accidentally burn things down. In fact, many goblins consider it a mark of pride to be able to wrap a prisoner in dry leaves, light him up, then watch as the prisoner tries frantically to put himself out while not being able to actually spread the fire to the surroundings.

Yet cruelty and fire aren't the only goblin pastimes. Perhaps their least destructive form of entertainment is song—goblins actually have rather good singing voices, and their songs are catchy and memorable. Yet while the act of singing isn't destructive, the topics of their songs invariably are, with subjects like raiding, dog killing, arson, and torture being classic favorites. Goblin bards

are of well thought in tribes, and those tribes that count among them skilled war chanters are generally the more dangerous in battle, for a rousing song is an excellent way to distract a goblin from being afraid of what he should be afraid of.

No two goblin songs from different tribes are ever quite exactly alike, though, and with good reason: No goblin has ever written down a song. Perhaps one of their strangest quirks, goblins are profoundly suspicious of writing. A few scholars believe this strange fear is some sort of deep racial memory of the original barghests exiled in goblin form to the Material Plane, for that story tells that each barghest was required by Asmodeus to sign away his true name (and all his resulting power) to a twitching scroll of haghide, and in so doing consigned himself to exile. Whatever the source of this fear, most goblins believe that writing down words steals them out of your head—you can't get them back. Writing down a goblin's name is a surefire way to send the little monster into a blind frenzy of fear and panic.

Campaign Role

Goblins make great “first monsters” for a campaign. Not only are they relatively weak and easy to kill, they're lunatics. You can have a goblin “waste” actions in combat, which not only helps to make the game more entertaining, but gives 1st-level characters an even greater advantage over them. And those poor 1st-level characters need all the help they can get.

Although the rules of the game certainly support concepts like goblin arch-villains, you should generally try to resist the urge to make a 15th-level goblin assassin or a 20th-level goblin necromancer. Not only does it stretch credulity to have a goblin much higher level than 5th level (that goblin better be one bad-ass menace to live that long!), but goblins are so iconically the chumps of the game that it just feels a little strange to run into one that can go toe-to-toe with a dragon or a pit fiend. Players want to be facing “real” monsters once they're high level, after all. Now, that's not to say you should *never* build a high-level goblin—but really, that's only a stunt you should pull once per campaign.

Treasure

Goblins aren't picky about their treasure. In fact, they often don't really understand what constitutes treasure in the first place. To most goblins, the shinier something is, the more valuable it must be—it's not uncommon to see a goblin lair's treasury to be filled with polished but poor-quality weapons and bits of scrap

metal, while a crooked wooden *wand of stoneskin* might be regulated to the ignominious role of back scratcher or baby poker. Goblins don't help their treasuries much with their habits of scavenging the junkyards and garbage heaps of nearby humanoids. Granted, most goblin tribes can make an old bent dagger or a torn bit of saddle go a long way—most of their armor and weapons are made of scavenged refuse, after all—but in the long run, garbage is mostly just that.

The true treasure in a goblin tribe invariably resides with the chieftain. Often, a chieftain squirrels away stashes of treasure in secret areas of the lair, hoping to keep his best baubles and magic trinkets safe from his minions. Sometimes, a chieftain forgets where he hid his last stash—more often, he gets deposed by a younger upstart who has no idea where the previous chieftain hid his goods. As a result, goblin lairs tend to look fairly ramshackle and run-down, yet the canny adventurer who knows where to look can often find a surprising amount of wealth hidden away under rocks, in hollow logs, buried in the dirt, or stuffed inside the previous chieftain's skull.

Goblin Variants

Goblins are but one of three elements of goblinoid kind—the race also includes hobgoblins and bugbears. Both of these races are more powerful and more dangerous than their goblin kin, and both tend to look down on goblins—hobgoblins see them as little better than vermin, suitable only for the most undesirable jobs in society and war, while bugbears find them endlessly amusing and too tiny to take seriously. The ironic part is that goblins were here

GOBLIN DEITIES

Barring simple animism and druidic tradition, the following five deities are the ones most often worshiped by goblins.

Deity	AL	Portfolios	Domains	Favored Weapon
Hadregash	LE	Goblin supremacy, slavery, territory	Law, Evil, War	flail
Lamashtu	CE	Madness, monsters, nightmares	Chaos, Evil, Madness, Strength, Trickery	falchion
Venkelvore	NE	Famine, graves, torture	Death, Destruction, Evil	spear
Zarongel	NE	Dog killing, fire, mounted combat	Animal, Fire, Travel	dogslicer
Zogmugot	CE	Drowning, flotsam, scavenging	Chaos, Trickery, Water	sickle

first—both hobgoblins and bugbears developed after the first goblin tribes appeared in the world.

Yet the goblin race itself is far more complex than even this. In the extremes of the world, goblins forced from their ancestral homes by war or expansions from other, more powerful cultures must live in places other societies avoid. Glacial rifts at the edge of storm-haunted frozen seas, parched and searing deserts, or even the lightless deep of the world below become the homes of these displaced goblin tribes. Over the course of several short generations spent in these rugged regions—it takes a surprisingly short time for such a tribe to change—the hardest goblins survive and pass on their traits to their offspring. An arctic goblin is furrrier than its kin, covered with white hair that grants it cold resistance 5. Those who seek shelter in the endless caverns of the deep underworld grow large bulbous eyes that grant darkvision out to 120 feet and long spidery limbs that give them a +5 racial bonus on Climb checks. At their core, though, these subraces retain most of the traits that make goblins goblins.

Goblins in Golarion

The goblins of Golarion worship a small pantheon of deities. Their religions teach that, in the beginning, there was Lamashtu. As the mother of monsters and beasts, she saw the creatures known as barghests as slaves to the devils of the Outer Rifts. She saw promise in their bestial form, yet shackled as they were to their devilish masters, they were hobbled. Lamashtu, in goblin myth, stole into Asmodeus's barghest kennel and rescued the four most promising, fleeing with them to the Material Plane, where she set them loose on the western coast of Avistan to hide and wait for Asmodeus' wrath to fade. Of the four barghests, handsome Hadregash was the strongest and the greatest leader. Obese Venkelvore was perhaps the most beautiful of the barghests—she was Hadregash's consort. Zarongel was blessed with fire for hair and alone among the exiled barghests retained a portion of his wolflike body after Lamashtu snatched them away from Asmodeus. Finally, there was keen-eyed Zogmugot (who was ugly even for a goblin), the most gifted at scavenging treasures from the land.

These four powerful barghests quickly noticed that when they killed creatures native to this realm, the spilled blood gave birth to smaller versions of themselves—goblins. Each of the barghests set about building small armies of followers in their own way. Hadregash was the most successful, and he organized his goblins into tribes to serve his needs. Venkelvore's ravenous hunger made keeping her goblins alive difficult, for they rarely had enough food and often starved. Zarongel's goblins fared little better, for he dwelt in a region infested with wild dogs, beasts that found the taste of goblins delicious. Poor Zogmugot, so obsessed with what washed up on the shore, found that many of her goblins drowned before they figured out that they could not breathe water.

Eventually Asmodeus grew tired of his search and gave up on the four stolen barghests. The Mother of Monsters created a realm for the four barghests above her rift in the outer spheres, a place she called Basalfeyst, and it was to here she brought them. In return for this new home, all she asked of them was the loyalty of the hordes of goblins they left upon the world.

So it is that today most goblins venerate Lamashtu as their primary deity. The four barghests became gods and goddesses in their own right, but even they acknowledge Lamashtu as their true mother. Recently, though, rumors have surfaced of heretic tribes who worship one of the barghests exclusively, who seek to elevate their chosen deity above his kin and even above Lamashtu herself. The mother of monsters doubtless knows of these heretics, but as of yet she has made no move to oppose them—perhaps they work according to her hidden goals?

Goblin Names

Goblins have characteristically mean-spirited naming conventions, usually employing one of their language's hundreds of curse words or combinations of crudely funny noises.

Male: Chuff, Churkus, Drubbus, Gawg, Ghorg, Irnk, Kavak, Lunthus, Mogawg, Murch, Pogus, Ronk, Unk, Vogun, Zord

Female: Aka, Chee, Fevva, Gretcha, Janka, Klongy, Lupi, Medge, Namby, Olba, Rempy, Ruxi, Vruta, Yalla, Ziku

GOBLIN

This small creature stands about three feet in height, yet its elliptical head is almost comically oversized for its gangly physique. Its eyes are set wide apart—tiny red beads in a wrinkled face that almost seem too eager to reflect firelight. Just below is a wide maw full of tiny, sharp teeth. The creature is of green-gray hue, dressed in cast-off bits of scavenged refuse and hand-me-downs, right down to its sword—a long jagged piece of broken metal that it waves about menacingly.

TACTICS

During Combat Goblins prefer to attack in groups, preferably so that a single target can be attacked by at least two (four is better) goblins at once. Not only does this allow the goblins to enjoy flanking bonuses, but it lessens the odds for any one goblin to be attacked in return, giving those goblins not attacked a better chance to run in terror when their enemy fights back. Only when faced with truly hated enemies (typically dwarves and gnomes) does a goblin's natural cowardice go away.

Morale Goblins are brave only when they outnumber foes at least two to one. Often, a goblin gives up the fight after even taking one hit, assuming he survives the blow. Against foes who use horses or dogs, goblins typically flee at once, hoping for tougher goblins to step in to save the day.

CHASE THE BABY, CATCH THE PUP.
BONK THE HEAD TO SHUT IT UP.
BONES BE CRACKED, FLESH BE STEWED,
WE BE GOBLINS! YOU BE FOOD!

Legends of the GOLEM

A Breath of Life in Clay

By Ross Byers

"They are not men. They are better than men! They are untiring workers, obedient servants, and eternal guardians. They are my legacy."

—Aris the Golemwright

"You want to go traipsing around in some forsaken crypt, fighting goblins, seeking treasure, that sort of thing? Lemme give you a piece of advice, kid: never trust statues."

—Drogar, a retired adventurer

A golem is a magical wonder, known by its creators as a marvel of elemental magics and by its foes as an unstoppable juggernaut. Now golems are legend, and countless mages and holy men have dedicated their lives to the study and creation of these constructs. But the first of them was something special.

Origins: the First Golem

Golems are a wholly artificial race, so their origins involve the work of men, not gods.

It is said that at the dawn of creation, the gods molded the first mortal races from the base materials of the world. Dwarves were sculpted from the solidity of stone, their hearts full of forge-sparks. Elves were carved from living wood, their souls filled with

the wind and the sky. Lizardfolk were elevated from the simple creatures that already crawled across the surface of the world. The races of men, however, had no single benefactor and—made of humble, shapeless clay—were given spirits consisting of all the elements, allowing both their lives and destiny to be of their own making.

This legend inspired Father Marcello Joirus to create the first golem. A master of healing and other life-giving magic, he sought an understanding of the gods and, perhaps, the attainment of a bit of divinity for himself. Joirus believed that creation is the fundamental act of divinity. He worked tirelessly for years, researching the nature of life itself and the function of the soul. He conferred with the most righteous priests, the most brilliant sages, and the

wisest druids and hermits. He concluded that every living creature was composed of all elements and that the soul was a reflection of this mixed composition. Therefore, he could construct a soul out of elemental essences. Since the purpose of a soul is to bring vitality to its vessel, Joirus reasoned that he need not craft a full body of flesh if he could keep the soul from departing a vessel.

In imitation of the making of humankind, Joirus brought together a great mass of virgin clay and spoke over it words of great power. He shaped the clay into the form of a man, and as his words infused it with the semblance of life and a soul, he anointed it with sacramental oils and wines to seal the ersatz soul-essence within the vessel.

Before long, the clay effigy rose from

where it lay, and Joirus named it after himself, as he would any natural-born son. Joirus was overjoyed. His 'son' was stronger than any man, and would perform any task he asked without error or hesitation. While the creature was mute and lacked any intelligence or initiative, so was a newborn baby, so Joirus assumed that in time it would learn and grow in time, like any living being.

As time passed, though, Joirus became more and more disappointed in his creation. It never seemed to learn, not even through coaching and repetition of simple tasks. The priest realized that he had created a mindless hulk, little better than zombies that are forced into a semblance of life with the trapping of their once-living souls.

It would be necessary to start over.

But when Joirus tried to destroy the clay man, he discovered it was immune to both his blows and all the heavenly power he could summon. Eventually, in desperate anger, he ordered the hulk to leave and never return. Obedient as ever, the thing walked off into the distance, never to be seen again.

Joirus made no secret of his work: the creation of a soul was a great theological puzzle and his primary goal. However, those he consulted were far less picky, and it was not long before many others built upon his works to produce their own golems as servants, temple guards, and status symbols. Some of these creations broke free of their masters' control and rampaged with berserk fury until they destroyed themselves, proving the imperfection of Joirus' creation.

Joirus could only shake his head.

Arcane Imitators

Once it became known that the golems of clay were not truly divine creations, countless young mages turned their will toward improving on Joirus' designs. They were soon disappointed to discover that their eldritch magics could not bind a soul-essence within an artificial body.

One particularly gifted, if amoral, wizard decided that if an artificial

body would not suffice, then perhaps a natural one would. Flesh, after all, is naturally meant to contain a soul. After a few failed experiments, he and his cohorts brought to life an artificial being composed of once-living human remains.

Hailed as a marvel, the stitched man became an object of intense study. And while this golem eventually ran amok during a trial, information gleaned from its creation (and destruction) allowed mages to instill soul-essences in more perfect, more durable forms of stone and steel.

Physiology

Golems have wildly varying physiology, since their basic physical makeup is dependent on their maker's whim. Golems share the same basic design, consisting of a roughly humanoid shape made of a base material and, usually, with no actual moving parts beyond simple joints. But the physical build of golems is not their defining trait. Golems are unified by the nature of their magical construction.

The motivating spirit of a golem is a synthetic soul forged from elemental essences. While it is commonly believed to simply be an earth spirit, this is merely an oldwives' tale brought on by the solid and earthy nature of a golem's body. Like most living creatures, a golem's soul-essence is made of equal parts of all elements. Unlike a true soul forged by a divine source, however, the different elements are not fully merged with one another as they are in a true soul. It is this incompleteness that deprives a golem of free will and leaves it completely suggestible to the will of its master.

Generally speaking, a soul requires a living (or at least undying) vessel to reside in. The natural action of a soul placed in dead matter is to depart, in a similar manner to how a man's soul deserts the body upon death. Powerful magic is required to bind a golem's essence within its body as it forms a semi-permeable membrane and creates extradimensional space within the body of the golem.

These containing magics grant golems their nigh-invulnerability to both physical attacks and magical effects of all kinds. The binding magic that holds a golem's soul together also binds its body, strengthening the material such that ordinary weapons cannot reliably damage it, and the same magics that safeguard the soul-essence within also keep other magical forces out.

In practical terms, golems have a skintight antimagic field. Only spells that directly affect its elemental essence can penetrate that field. Of course, certain types of magical energy can also pass through the field and be directly absorbed by the elemental essence. Mundane versions of the same energies are not transmuted in this manner. That is, an iron golem may gain energy from being struck by a *fireball* but will melt in a blacksmith's forge as easily as any heap of steel.

The Wakening

Golems have a reputation for breaking free of external control, becoming uncontrollable berserk monsters. While this reputation is well-deserved, it is not entirely true. A golem is a blank slate and bears no inherent malice toward anything.

The elemental forces that make up a golem's soul-essence can spontaneously fuse, transforming the soul-essence into a proper soul. Usually, this effect is temporary: the golem continues to follow its programmed functions and the soul breaks up again. If this 'awakening' occurs in a threatening or strenuous situation, however, the newborn soul can snap to awareness, reacting on a primitive level to destroy the threat. Even once the immediate threat is destroyed, the only thing the waking golem has known in its exceedingly short life is fear and violence, and it will continue to attack anything and everything nearby. In exercising its newfound free will, the golem cements the existence of its soul.

Left unmolested, the rampage will eventually run its course. After a few days, a berserk golem will give pause as its primitive mind realizes it has

choices other than destruction and violence. Over the course of several weeks, the golem gains a mind equal to that of a man, although an ignorant one. An intelligence emerges, and its inherent wisdom and charisma are further developed: each of its Intelligence, Wisdom, and Charisma scores becomes equal to 3d6, and it gains feats and skills according to its hit dice. This can result in a reduction of an awakened golem's wisdom score. The golem's memories and personality vary wildly from case to case. Some recall nothing before their berserk rampage. Some remember even less. For others, their previous life as an automaton is remembered only in glimmers of previous waking. Some flesh golems even inherit some of the memories and personality traits of their 'donors'.

An awakened golem understands the language of its creator, plus additional languages its creator knew as determined by its new intelligence score. A recently awakened golem may still have trouble learning to speak or articulate itself, and golems crafted without a mouth may never be able to speak at all. A character with the Craft Construct feat can grant a mute golem a mouth with which to speak by spending one day and 50 gp/HD of the golem.

Psychology and Society

Golems have no minds to speak of. They merely carry out their most recent order until given a new one. Even an inactive golem is following the order, "Go, and wait over there." Likewise, they have no society and merely serve whatever purpose their master designates for them.

Awakened golems have minds, but each is tempered by a unique creation and history. Two men from opposite sides of the world will think more similarly than two awakened golems. However, since almost all awakened golems are born from violence, they do tend to share a distrust of men. Golems recall them only as enemies intent on destroying them and men in turn view golems as dangerous monsters.

Awakened golems are exceedingly rare, and as a result, they do not form societies. Usually, they either hide from civilization or integrate themselves within another society in a similar manner to a gray render by bonding with and protecting another creature. Occasionally an awakened golem will seek to wake more of his "brethren" to build a colony of free-willed constructs. Thus far however, these occurrences have all inevitably failed when one of the golems turns to violence against humanity, resulting in the group's dissolution or even extermination.

Creating Golems

Creating golems is an ancient practice, and by now, countless formulas for creating golems exist as practitioners tinker by improving older recipes or attempt to fill in the missing pieces. The resulting golems differ in the nature of the binding magic needed for the golem's soul-essence.

In all cases, the body must be crafted from the best materials available, lest the enchantments simply fail for the same reasons a common sword cannot be enchanted.

Variant Golems

While the commonly known golems are certainly the most tried and true formulas, these are not the only paths to making a golem. Presented below are variants on the most common golem varieties. Except as described, they are the same as their more ordinary counterparts.

Barrier Golem

Stone golems are frequently designated as the guardians of arcane complexes and other important sites. Barrier golems are built almost exclusively for this task, especially when it is necessary to keep something in, rather than keeping others out. Where ordinary stone golems can slow their foes down, a barrier golem can stop them entirely.

Barrier golems lack a stone golem's *slow* ability.

Wall of Force (Sp) Every 1d4+1 rounds, a barrier golem may use *wall of force* as a spell-like ability at CL 5th.

CL 16th; Craft Construct, *antimagic field*, *geas/quest*, *wall of force*, *symbol of stunning*, caster must be at least 16th level; Price 100,000 gp; Cost 55,000 gp + 3,800 XP.

A barrier golem is CR 13.

Forge Golems

These iron golems are created by dwarf magesmiths and major artificers' guilds. Designed to help forge massive metal objects, their hands resemble massive hammers. Instead of breathing poisonous gas, the forge golem can spout fire for heating the metal it is working or

Golem Lore

Characters with ranks in Knowledge (religion) or Knowledge (arcana) can learn more about golems. When a character makes a successful skill check, reveal the following lore, including the information from lower DCs.

DC Result

- 10 Golems are powerful constructs animated by elemental forces with bodies constructed of various materials.
- 15 A golem's unique construction shields it from the effects of most magic, and they can sometimes absorb the energies of a magical attack.
- 20 A golem's body is also strengthened by its magical bindings. Only weapons forged of adamantite can reliably pierce their hides.
- 25 The elemental spirit that animates a golem is imperfect and incomplete. Golems have been known to break their controlling bindings and go on a berserk rampage of destruction.
- 30 Golems that go berserk are actually developing free will. Given time, they can gain a real personality.

incinerating its foes. Forge golems are particularly dangerous in groups as their fiery breath can heal each other.

Forge golems lack an iron golem's breath weapon.

Breath Weapon (Su) A forge golem may breathe a 10-ft. cube gout of fire as a free action once every 1d4+1 rounds. It deals 10d6 fire damage. Reflex DC 19 negates. The save DC is Constitution-based.

CL 16; Craft Construct, *wall of fire*, *geas/quest*, *limited wish*; Price 150,000 gp; Cost 80,000 gp + 5,600 XP.

Warden Golems

Clerics of oppressed religions occasionally create golems to protect their people from harassment and mob violence. Since a clay golem's unsubtle ways are not ideal for this situation, warden golems were created that can walk through the marketplace unseen.

Warden golems lack a clay golem's *haste* ability.

Invisibility (Su) As a full-round action, a warden golem can cloak itself from view as if by *invisibility*. This lasts as long as the golem maintains concentration and ends when the golem stops concentrating. The warden golem may only affect itself in this manner.

Berserk (Ex) A warden golem has an increased chance of going berserk. It has a cumulative 2% chance of going berserk each round of combat.

CL 11; Craft Construct, *animate objects*, *invisibility*, *commune*, *resurrection*; Price 40,000 gp; Cost 21,500 gp + 1,540 XP.

Death Golems

A favored creation of necromantic golemwrights, a death golem is a flesh golem made from the parts of zombies and other undead, rather than normal corpses. Death golems lack the muscular vitality of fresher golems, but more than make up for it with a life-sapping touch.

A death golem's Strength score is 16. (This replaces the flesh golem's Strength of 21.) Other stats are not affected.

Energy Drain (Su) Living creatures hit by a death golem's slam attack gain one negative level. The DC is 9 for the Fortitude save to remove a negative level. The save DC is Charisma-based. For each such negative level bestowed, the golem gains 5 temporary hit points.

CL 8; Craft Construct, *animate dead*, *enervation*, *geas/quest*, *limited wish*; Price 20,000 gp; Cost 10,500 gp + 780 XP.

Other Constructs

Spellcasters of all stripes practice golem crafting, and a wide variety of golems exist. Druids have even been known to create golems of wood or soil. Additionally, spellcasters have developed other constructs as well. Unlike golems, these constructs lack anything resembling a soul although some of them have minds of their own, such as homunculi. Even the fire-hearted brass men lack souls of their own, being powered instead by enslaved efreet.

Only the mysterious inevitables seem to possess souls and minds of

their own (though some might argue that they are so purpose-driven as to lack free will), but they are not created by mortal hands. Many an aspiring golemwright has sought to dismantle an inevitable to learn its secrets. Some have even captured one, but thus far, the details of their power remain hidden to mortals.

History of the Golem

The term *golem* comes from a Hebrew word meaning “unfinished.” In this use, Adam was the first golem, created by God from the dust of the Earth. (Adam ceased to be a golem when God gave him a soul.) In Jewish folklore, holy men gained a portion of God’s power, and the wisest and most powerful rabbis could bring life to the lifeless, using knowledge from the *Sefer Yetzira* (or the Book of Formation). Some even used this ability to create calves, which they slaughtered and ate. However, unlike God, they could not create a being with a soul: only animals or soulless golems. Animating a golem this way required the use of holy words, frequently the names of God, both as part of the ritual and as part of the golem itself.

Creating anything in this way required utmost purity: clean white vestments (discarded afterward); virgin, untilled earth; and clear, fresh rainwater. Any impurity and the creation would fail.

Owning a golem servant was seen as a great honor, because it proved closeness with God. Golems, however, were still viewed as dangerous since they lacked souls, and their intelligence was quite limited and literal.

Golems were usually visually indistinct from real humans, only being discerned by their lack of intelligence and inability to speak.

The Golem of Prague

The best known of the golem legends is that of the golem of Prague. As the story goes, in 1580, the Holy Roman Emperor Rudolf II issued an edict expelling the Jews from Prague. Rabbi Judah Loew the Maharal received a

vision, telling him how to create a golem to protect his people. He carved the golem’s body from the clay bank of the Vltava River. Loew called on his fellow rabbis Isaac Ha-Cohen and Jacob Ha-Levi to assist him: Cohen was born under the sign of fire, while Levi was born under the sign of water. As Loew himself was born under the sign of air, together with the earth of the body, they represented all four necessary elements. Loew and his assistants performed the ritual, carving the word ‘*Emet*’, meaning ‘truth’, into the golem’s forehead as the final step.

The golem, named Yosele, was tasked with protecting the Jews of the Prague ghetto. This it did, but over time, Yosele became more powerful, and more violent. Its magical powers included invisibility, a burning touch, and the ability to summon the spirits of the dead. Eventually, the Golem began attacking Christians indiscriminately (and in some versions, it attacked the Jews or even the Maharal as well).

In light of the terror and destruction wrought by the golem, the Emperor begged Rabbi Loew to destroy Yosele Golem, promising that the violence and harassment of the Jews would stop. The Golem having served its purpose, Loew accepted the offer. He went to Yosele and wiped the first letter from its clay forehead, transforming ‘*Emet*’ into ‘*Met*’, meaning ‘death’. The golem fell still, and the rabbi hid its body in a coffin in the attic of the Old New Synagogue in Prague and banned anyone else from entering the room.

According to legend, the body lies there to this day, ready to rise if it is ever again needed. Indeed, some credit the golem with protecting the synagogue during the Nazi occupation of Prague.

Other Golems

Rabbi Elijah of Chelm, a contemporary of Rabbi Loew, is also said to have created a golem. Elijah’s golem was activated with the name of God and grew larger and more powerful each day. Eventually, the golem grew so

large that Elijah feared it would be too large for his house and deactivated it. The golem was nearly too tall for Elijah to reach the name on its forehead. The deactivated golem then fell onto Elijah, scarring his face.

In other versions of the story, Elijah is killed by the falling golem. Since one of this golem's duties was to defend Jews from beatings in the marketplace, the Golem of Chelm may have inspired the legend of the Golem of Prague.

Legends of the golem inspired many, and variations appear in Goethe's *The Sorcerer's Apprentice*, Shelley's *Frankenstein*, Meyrink's *The Golem*, Capek's *Rossum's Universal Robots*, Pratchett's Discworld series, and Steven's "Ecology of the Homunculus" (*Kobold Quarterly* #5).

Marcello the Mendicant

An awakened clay golem lives as a hermit on the outskirts of a small village. Hiding his form under a great hooded cloak, most of the townsfolk assume he is an outcast ogre or hill giant. They also know he can fix anything and answer impossible questions.

Marcello spends his time meditating on creation and on the mysteries of life. Known as a scholar, he receives visitors seeking knowledge or specially crafted items. While he speaks readily about theology and arcana in a booming voice, he guards his privacy carefully, not wanting to become a curiosity himself. Instead, he lets people believe that he is some kind of giant, ogre, or ogre magi. When a visitor earns his trust, he casts off his cloak, revealing his earthy complexion and great expressive face. To these people, he claims to be the first golem of them all.

SPECIAL ABILITIES

Aura of Good (Ex) Marcello radiates a strong aura of good.

Cursed Wound (Ex) The wounds left by Marcello's slam attacks do not heal naturally and resist healing spells. A character attempting to cast a conjuration (healing) spell on a creature damaged the way must succeed on a DC 26 caster level check, or the spell has no effect on the injured character.

Domains (Ex) The Artifice and Creation domains grant Marcello a +4 bonus on all Craft checks and allow him to cast all conjuration (creation) spells at +3 caster level.

Haste (Su) After 1 round of combat, Marcello can *haste* himself once per day as a free action for 3 rounds.

Immunity to Magic (Ex) Marcello is immune to any spell or spell-like ability that allows spell resistance. In addition, certain spells and effects function differently against him.

A *move earth* spell drives him back 120 feet and deals 3d12 points of damage.

A *disintegrate* spell slows him (as the *slow* spell) for 1d6 rounds and deals 1d12 points of damage.

An *earthquake* spell cast directly at Marcello stops it from moving on its next turn and deals 5d10 points of damage. He gets no saving throw against any of these effects.

Any magical acid damage heals 1 point of damage for every 3 hp damage it would otherwise deal. If this healing would lead Marcello to exceed his full normal hit points, he gains any excess as temporary hit points. He gets no saving throw against magical attacks that deal acid damage.

Turn or Rebuke Undead (Su) Marcello may attempt to turn undead 4 times per day. He gains a +2 bonus on turning checks because of his ranks in Knowledge (religion).

Chapter Two

FLESH GOLEM

SOON MY BELOVED ELSA WILL ONCE MORE LIE IN MY ARMS. AFTER HER UNTIMELY DEATH, I HAVE FINALLY FOUND A WAY FOR MY LOVE TO REJOIN ME. UNFORTUNATELY, BY THE TIME I WAS ABLE TO RECOVER HER BODY FROM THE PRIESTS, SHE HAD ALREADY BEGUN TO DISPLAY THE RAVAGES OF DECAY. I WAS ONLY ABLE TO RESCUE HER HEAD AND MOST OF HER LISSOME TORSO, BUT I HAVE FOUND REPLACEMENTS FOR WHAT SHE LOST. I HAVE DEPLETED MY INHERITANCE PURCHASING THE ALCHEMICAL UNGUENTS NEEDED TO TREAT HER DELICATE SKIN, BUT I HAVE STITCHED THE PARTS TOGETHER WITH LOVING CARE, AND I CAN HONESTLY SAY THAT HER BEAUTY IS STILL AS RARE AS WHEN HER CHEEKS YET BLOOMED WITH LIFE. ALL THAT REMAINS IS TO ADD THE FINAL SPARK THAT WILL RETURN HER TO LIFE. TONIGHT WE SHALL BE REUNITED!

—FINAL ENTRY IN THE JOURNAL OF DR. SEPTIMUS THESIGER

Towering monstrosities of stolen, necrotic body parts, flesh golems are neither alive, dead, nor undead. Instead, they are lifeless constructs, given a spark of lifelike mobility through the animating spirit of a bound elemental. Though weaker than their counterparts of clay, stone, and iron, flesh golems nevertheless possess a horror all their own, as they are composed of the mismatched limbs and pieces of multiple humanoid cadavers.

Utterly mindless, flesh golems have no independent thoughts or emotions and are completely beholden to their creators. While incapable of strategy or tactics, they prove tenacious, implacable foes, explicitly following the commands they are given. Flesh golems obey their last instructions until the task is completed, whether that be to attack, guard a room, or kill all creatures that enter. Only its creator's command, or the golem's total destruction, can stop it from fulfilling its orders.

But flesh golems have a shortcoming as well. Under the stress of combat, many types of golems can go on a berserk rampage, caused by the elemental spirit within the golem as it struggles against its bonds. In flesh golems, however, this berserk frenzy usually has another source. While the golem's creation rituals firmly bind the elemental spirit in place, they have no such power over the angry spirits of the bodies used in the golem's construction. Outraged over the misuse of their stolen flesh, these spirits can usurp control of the golem, sending it into an uncontrolled, destructive rage. Only when the spirits have vented their fury can the golem's creator once more assert his command over the monster.

Rarely, flesh golems have been known to gain some measure of consciousness after going berserk. These exceptional specimens become gifted with a simple intelligence, and often rebel more purposefully against their masters. Such awakened golems are typically destroyed by their creators, but occasionally one escapes to make a life for itself, usually somewhere beyond the bounds of civilization.

Flesh golems are usually crafted by powerful wizards with the help of potent magics and rare alchemical or pseudo-scientific processes, although the common methods are well known and instructions can easily be found in assorted texts, including magical *golem manuals*. Yet other varieties of flesh golems exist, usually of a more crude construction. Carrion golems (see *Pathfinder Adventure Path* volume #7) are similar to the standard flesh golem, but are not limited to human corpses for their constituent parts. These patchwork horrors are often diseased, and their assortment of flesh makes carrion golems weaker than their larger cousins—though considerably easier and cheaper to construct as a result.

Stories from the deepest jungles also speak of more primitive flesh golems crafted by the witch doctors and shamans of savage tribes. The creation process often differs from the more generally accepted methods, and usually incorporates religious rituals and magic (and some say, dark sacrifices and

long-forgotten rites). Such barbaric flesh golems are generally stronger, but have a higher chance of going berserk and turning against their masters.

ECOLOGY

A typical flesh golem stands about 8 feet tall and weighs almost 500 pounds. Its skin has a sickly green or yellowish tint, like that of decaying flesh, and it is usually clothed in no more than a ragged pair of trousers. It carries no weapons and owns no other possessions. Incapable of human speech, flesh golems are only able to produce a hoarse roar from their lifeless mouths. They are prodigiously strong, but somewhat clumsy, moving in a jerky, stiff-jointed manner akin to a puppet.

Physically, awakened flesh golems look no different from their unintelligent brethren. They clothe themselves in whatever hodgepodge scraps they can scrounge, and may own battered, discarded weapons, as well as a handful of belongings that have some personal value only to them. No longer under another's control, intelligent flesh golems move more easily and naturally, though they can never approach the grace of a living being. Unlike normal golems, intelligent flesh golems also have the ability to speak. Because they learn language through mimicry and self-teaching, however, their speech patterns are often childlike, but with a disturbing groaning quality, as if their voices are rusty from disuse.

As unliving constructs, flesh golems do not eat, breathe, or sleep. Their dead organs and other bodily systems no longer function, although their eyes are magically enhanced far beyond the human norm. Flesh golems are tireless, effortlessly able to stand perfectly still or labor continuously. They do not age or die, nor are they susceptible to poisons or diseases that afflict the living. Their dead flesh is alchemically preserved against decay and deterioration, and proves highly resistant to damage of any kind. Barring accident or misfortune, a flesh golem can exist indefinitely, ceasing to function only when its body is damaged beyond repair or suffers complete destruction.

Although flesh golems are unable to heal naturally, electricity can be used to repair their preserved bodies, even strengthening them for a short time if enough power is applied. Flesh golems are immune to most other magical spells, but they are somewhat susceptible to cold and fire. While such energies do no additional damage to a flesh golem, they do slow the creature temporarily.

Flesh golems are generally constructed of parts from no less than six human corpses, none of which can show signs of significant decay. Occasionally, parts from additional bodies may be required to complete construction. Once the pieces have been gathered, they are stitched and stapled together, creating the golem's composite humanoid body. Because of the difficulty in replicating and connecting the tiny parts of the human body, flesh golems usually

VARIANT FLESH GOLEMS

The exact methods of creating a flesh golem frequently differ as a result of knowledge, geography, or culture. These variations in the creation process can sometimes result in flesh golems with previously unheard-of powers and abilities.

Electrified Flesh Golem: Through unknown processes, some flesh golems retain some of the electrical power used in their creation, while others are fashioned with implanted electro-thaumaturgical dynamos and capacitors that generate and store electrical energy. Electrified golems are able to channel this electricity into their attacks, as well as absorb electrical attacks to increase their speed. An electrified flesh golem's melee attacks deal 1d6 points of electricity damage in addition to their normal damage.

The golem has the supernatural ability to generate a blast of electricity that strikes one creature within 60 feet. The golem must make a ranged touch attack; if it hits, the bolt deals 4d6 points of electricity damage. The golem can use this ability once every 1d6 rounds. It cannot use this attack on itself.

Electrical attacks against the golem heal it just like a normal flesh golem and also *haste* it (as the spell) for 1 round per die of damage the attack normally deals. (+1 CR)

Unholy Flesh Golem: Evil golem creators sometimes infuse their creations with negative energy. Positive channeled energy harms them and negative channeled energy heals them as if they were undead, although they are unaffected by special abilities that use channel energy (such as *Command Undead*, *Turn Undead*, or the power of the Sun domain).

Any living creature hit by an unholy flesh golem's melee attacks also takes 1 point of Strength damage. This is a negative energy effect. An unholy flesh golem has an evil aura. Creating an unholy flesh golem is an evil act. (+0 CR)

end up significantly larger than the typical humans they superficially represent. Once the body has been assembled, it is wrapped in special bindings and alchemical unguents are applied, followed by the casting of the required spells. A final application of electrical energy animates the golem and gives it the semblance of life.

HABITAT & SOCIETY

As unintelligent constructs, flesh golems have no culture or society of their own, other than those physical trappings given to them by their creators. They can be found anywhere wizards and alchemists quest for power, from the jungles of the Mwangi Expanse to the frozen wastes of the Crown of the World. Flesh golems are often

created as guards, whether at entrances to a wizard's tower or in deep vaults to watch over a precious treasure. They can also be found sealed within ancient tombs to safeguard those interred there, animating only when grave robbers attempt to plunder the treasures buried within. Some powerful crime lords have even been known to use flesh golems as indisputably loyal enforcers and brute muscle that diligently follow orders without question.

Uncontrolled, berserk golems can be found anywhere, wandering aimlessly and without purpose, although usually far from civilization, where they would otherwise be hunted down and destroyed. Intelligent flesh golems, on the other hand, live solitary lives by nature and necessity. Faced with fear and prejudice if not outright hatred, awakened flesh golems are usually driven away from civilized areas. Nevertheless, humans fascinate the golems, and these unfortunate outcasts try to eke out what meager livings they can on the fringes of human society, lurking in crumbling tenements and slums, dank sewers, and isolated cabins or abandoned ruins, often providing fodder for local tales of terrible monsters.

Rumors persist, however, of a settlement of awakened golems that have banded together deep in the wilds. Led by an intelligent flesh golem known as the Thinker, this community welcomes golems of all makes who have achieved consciousness. Their goal is to create a civilization of their own, far from the frightened and intolerant meddling of human society, where awakened golems can learn to control their berserk rages and work together to build a unique golem culture. Still, most human nations that hear of this place continue to fear these uncontrolled golems, and would eradicate or try to control them for their own ends if the settlement's location ever became known.

SPARK OF CONSCIOUSNESS

Through some unknown process, rare berserk golems have been known to spontaneously generate consciousness and intelligence, breaking free of their masters' control and setting them far above their mindless counterparts. This can only occur if the golem has ever gone berserk.

The golem becomes an intelligent, sentient creature. Roll 3d6 for its new Intelligence and Charisma scores. The awakened golem immediately gains skill points equal to 2 + Int modifier (minimum 1) per Hit Die, as well as feats based on its Hit Dice. A golem has no class skills. The golem also gains the ability to speak the language of its creator and chooses any bonus languages from among those its creator speaks. While the golem retains its immunity to magic and most other construct traits, it loses its immunity to mind-affecting effects.

An awakened golem can advance like any other creature, even taking levels in character classes. An awakened golem has no favored classes. Though intelligent, an awakened

golem may still be controlled by its creator, but it can attempt to break free of its master's control with an opposed Charisma check.

An intelligent golem also has a higher chance of going berserk. An awakened golem has a cumulative 5% chance each round to go berserk during combat. The golem's creator, if within 60 feet, can try to regain control of the awakened golem, which requires a successful Intimidate check, but the golem gets a Will save (DC equal to creator's Intimidate result) to resist. It takes 1 minute of inactivity by the golem to reset the golem's berserk chance to 0%.

CAMPAIGN ROLE

Flesh golems are frequently encountered as guards in powerful wizards' sanctums. Yet a flesh golem can be even more effective when it is least expected. A flesh golem among the undead inhabiting a necromancer's lair, for example, might appear as a large zombie, giving the party's cleric a nasty surprise when his turning ability doesn't work and the creature proves far more difficult to destroy than simple undead.

A flesh golem can also be behind a series of unexplained, grisly murders in a town, which the PCs are tasked to investigate. The reasons behind the murders can be varied—is it just a golem gone berserk, or is it following its creator's orders for some darker purpose? Is it perhaps an intelligent flesh golem blindly lashing out at those who have hunted and persecuted it, or even worse, collecting spare parts?

An intelligent flesh golem can make for an interesting roleplaying opportunity. Hired by an angry mob to hunt down and destroy a berserk golem, what will the PCs do when they find the golem is not a mindless automaton, but rather a tragically misunderstood thinking creature? Or perhaps an awakened golem seeks out the PCs, hoping they might be able to teach it about human ways and help it join human society, or even hiring the PCs to procure the materials it needs to create a mate for itself.

KNOWN FLESH GOLEMS

The following are a few well-known monsters believed to be flesh golems.

The Beast of Lepidstadt: A terror stalks the mist-shrouded forests and fens of northwestern Ustalav, a monster held responsible for the deaths of several high-profile figures in the Palatinate of Vieland. First appearing 20 years ago in the city of Lepidstadt after a spate of grave robberies, the Beast of Lepidstadt (as it is called) is thought to be an unnatural creation made of the corpses

of condemned criminals who died hanging from the city's gallows. Although human in appearance, the Beast is said to have the strength of an ogre and be prone to murderous rages. There seems to be some purpose behind the Beast's killings, however, as it has been known to ignore some people, and has even helped children in need on more than one occasion. Also known as the Dippelmere Horror, the creature hasn't been seen in Lepidstadt since the Lampblack Murders 5 years ago, and is now believed to lurk among the strange stone monoliths of the Dippelmere swamp.

The Carcass-Man of Belkzen: Rumors from out of the Hold of Belkzen speak of a terrible flesh golem created by a shaman of the Defiled Corpse tribe from the body parts of their slain human foes. This primitive monstrosity is said to be taller than a hill giant, towering over the orcs, with three powerful arms and two heads like an ettin. The Carcass-Man leads the tribe into battle, crushing the orcs' enemies with a giant spiked tree-trunk club and ripping foes limb from limb with its mighty fists. Its effectiveness in battle has catapulted the Defiled Corpse to a position of strength among the warring orc tribes of Belkzen, but the monster frequently goes berserk in battle, tearing into both friendly and enemy combatants with mindless abandon. It is believed that the Defiled Corpse orcs cannot hold their position of power for long, as they are losing more warriors than they can easily replace due to the destructive rampages of their pet war machine.

The Red Guardians: Erszebet Lavenza is a woman long fascinated with the sciences of alchemy, biology, and galvanism. A gifted wizard and the newest member of Galt's Revolutionary Council, her fascination became an obsession after studying at the golemworks of Oenopion in Nex. Having returned home to Galt, Erszebet took a position as surgeon at the Torvin Academy in Edme, now a notorious prison. Using the cadavers of condemned prisoners, Erszebet crafted a flesh golem which she brought before the Revolutionary

Council. Impressed with the unshakable devotion and phenomenal strength of her first "Red

Guardian," the Council instructed her to create more golems for the Revolution.

Citizen Goss hopes to eventually have a small army of flesh golems at his command to enforce the Council's will, protect him from the mob's anger, and even replace the worrisomely independent Gray Gardeners as Galt's loyal executioners. Thus far, Erszebet has completed three flesh golems using the body parts of those executed by Edme's guillotine, Razor Jenni, not realizing that using the victims of the *final blade* as components

FACETS OF FEAR

Flesh golems can be viewed as a warning against unhindered progress, representing both the fear of magic gone amok and—especially in magical societies—of unchecked scientific discovery. There are some things that human beings were not meant to understand, such as the boundary between life and death, and tampering with such forbidden subjects treads on the domains of the gods themselves. And if magic or science can animate dead bodies without divine intervention and control them like puppets on a string, might they not also be able to do the same to a living, thinking person?

In another sense, flesh golems also reflect humans' intolerance toward one another, for it is easier to fear and hate than to love and accept. People have a tendency to make anyone different from them an "other"—an object, not a person, something to be feared, hated, and reviled. Flesh golems represent this prejudiced and narrow-minded part of ourselves, the little voice inside that whispers incessantly and cannot be ignored.

To a lesser extent, flesh golems also embody a fear of death, or more specifically what happens to a person's remains after death, the dread that one's deceased loved ones can be used to create something unnatural and horrid. And while other terrors of the night have their weaknesses—the undead can be repelled with holy symbols or even something as simple as garlic or running water, and silver can be used against werewolves—what can stand against the brute strength and mindless, implacable rage of a golem?

for her creations has had an unforeseen side effect—with the souls of the condemned trapped inside Razor Jenni, Erszebet's golems have a much lower chance of going berserk than normal.

SAMPLE FLESH GOLEM

It is not known for sure who built the golem now known as the Beast of Lepidstadt, but those who have studied the creature believe it to be the creation of Dr. Henri Moritz, a promising student of alchemy and magic at Lepidstadt College and the first victim attributed to the Beast. Over the past 20 years, the Beast has been blamed for a series of brutal murders, including many notables of the Palatinate, all butchered with the Beast's signature weapon, a jagged ogre hook. Strangely, a few witnesses to the Beast's attacks have claimed to hear it reciting poetry before its rampages.

The Beast of Lepidstadt is that rarest of all flesh golems, one who has gained intelligence, having achieved consciousness after it killed its creator in a berserk rage. Ashamed of what it had done, but curious about the wider world, the Beast attempted to make contact with the citizens of Lepidstadt, but its appearance frightened the people it met. When the city

watch was called to attack it, the Beast went berserk again, and when it came to its senses, half a dozen guardsmen and a passing merchant were dead. A series of similarly unfortunate encounters followed, enough that the Beast grew angry and began targeting specific powerful individuals it viewed as threats to its existence.

Over the years, the Beast has learned to embrace and control its rage somewhat, though the stress of battle inevitably causes it to lose control and go berserk. It doesn't understand why the humans hate it so much and seeks to better understand them, even memorizing the verses in an old book of Taldan poetry it came across in an attempt to find some meaning. Although it no longer makes the mistake of trying to join human society, the Beast desperately wants to be accepted, and has returned children lost in the forest unharmed to their homes in hopes of gaining some measure of tolerance.

About 5 years ago, the Beast found a *flesh golem manual* on the body of a self-professed "golem slayer" it had killed. Hoping that the book might help it to overcome its monstrous nature, the Beast fled to an abandoned hovel deep in the Dippelmere swamp to study the text in isolation. So far, it has been unsuccessful, but it perseveres in trying to decipher the esoteric manuscript. Occasionally, however, the Beast's frustration proves too much and it is unable to contain its rage. Its berserk rampages through the swamps (and the deaths of three unfortunate swamp dwellers so far) have given rise to the new legend of the Dippelmere Horror.

THE BEAST OF LEPIDSTADT

CR 13

XP 25,600

Flesh golem barbarian 6

N Large construct

Init -1; **Senses** low-light vision, darkvision 60 ft.; **Perception** +1

2 slams +21 (2d8+7 plus 1d6 electricity)

Ranged double crossbow +12 (2d6/19–20 plus 2d6)

Space 10 ft.; **Reach** 10 ft.

Special Attacks berserk, knockback, rage (14 rounds/day),

rage powers (knockback, moment of clarity, renewed vigor [1d8+2 hp])

TACTICS

Before Combat The Beast tries to avoid combat if at all

possible, unless hunting a particular foe.

During Combat The Beast begins by attempting to demoralize its target before attacking with its ogre hook. If faced with multiple opponents or ones who seem able to bypass its damage reduction, the Beast rages. While raging or berserk, the Beast has little grasp of tactics, pummeling a single enemy with its fists until it stops moving.

Morale With no way to heal itself except its renewed vigor rage power, the Beast flees from battle if reduced to less than half its hit points. If berserk, the Beast fights until destroyed.

Base Statistics When not raging, the Beast's statistics are as follows: **AC** 25, touch 8, flat-footed 25; **Will** +8; **Melee** ogre hook +19/+14/+9 (3d6+5/x3) or 2 slams +19 (2d8+5 plus 1d6 electricity); **Str** 21; **CMB** +21 (+23 bull rush); **CMD** 30 (32 vs. bull rush); **Skills** Intimidate +16 (+20 against Medium or smaller creatures)

Feats Cleave, Exotic Weapon Proficiency (double crossbow), Improved Bull Rush, Improved Iron Will, Intimidating Prowess, Iron Will, Power Attack, Skill Focus (Stealth)

Skills Disguise +8, Intimidate +18 (+22 against Medium or smaller creatures), Perception +1, Stealth +7

Languages Common

SQ fast movement, moment of clarity, renewed vigor (1/day; 1d8)

Gear battered masterwork breastplate, double crossbow (see *Pathfinder Chronicles Campaign Setting*), ogre hook, boots of the mire (see *Pathfinder Adventure Path* volume #3), cloak of elvenkind, flesh golem manual, shock amulet of mighty fists, ragged and torn explorer's outfit, headless doll, tattered book of Taldan poetry, aquamarine worth 100 gp.

SPECIAL ABILITIES

Berserk (Ex) When the Beast enters combat, there is a cumulative 5% chance each round that it goes berserk. This increases to 10% per round when using its rage ability. The uncontrolled golem goes on a rampage, attacking the nearest living creature or smashing some object smaller than itself if no creature is within reach, then moving on to spread more destruction. It takes 1 minute of inactivity by the golem to reset its berserk chance to 0%.

Immunity to Magic (Ex) A flesh golem is immune to any spell or spell-like ability that allows spell resistance. In addition, certain spells and effects function differently against the creature, as noted below.

- A magical attack that deals cold or fire damage slows a flesh golem (as the *slow* spell) for 2d6 rounds (no save).
- A magical attack that deals electricity damage

breaks any *slow* effect on the golem and heals 1 point of damage for every 3 points of damage the attack would otherwise deal. If the amount of healing would cause the golem to exceed its full normal hit points, it gains any excess as temporary hit points. A flesh golem gets no saving throw against attacks that deal electricity damage.

Knockback (Ex) The Beast can make one free bull rush attempt against one target hit in melee this round. The Beast does not need to move back with the target if successful. This power is used as an immediate action after the attack roll is made.

Open Mind (Ex) Unlike other constructs, the Beast is susceptible to mind-affecting effects (charms, compulsions, phantasms, patterns, and morale effects).

Rage (Ex) The Beast does not gain a bonus to its Constitution while in a rage, nor does it gain any extra hit points. Likewise, it is not fatigued after rage.

When mutant killer
beholders ravage the
countryside, it's the
Monster Hunters to
the rescue!

The Ecology of the Gorbelt Full of Hot Air

With much more force than was necessary, Dreelix slammed his gavel three times onto the table in front of him, leaving three curved indentations in the hard wood. "I hereby call this meeting of the Monster Hunters Association to order," he barked, bringing the whispered conversations among the sages and wizards making up his audience to an immediate halt.

The pre-meeting conversations were much more animated today than normal, for everyone was eager to see what Dreelix's reaction to his recent travails would be: He had spent the better part of the past week in a pseudodragon-induced coma, along with his cohorts in crime, Zantoullios and Grindle. True, such a coma was an occupational hazard when engaged in a pseudodragon hunt;

however, Dreelix was less likely to accept Buntleby's having placed them on display in embarrassing positions during their immobility. Still, the three renegade wizards had magically impersonated Buntleby, Willowquisp, and Spontayne during their depredations, an action explicitly forbidden by the Association's bylaws, so it would be difficult for Dreelix to bring Buntleby up on charges without bringing his own improprieties out into the open as well.

Buntleby stared directly into Dreelix's eyes, silently daring him to take action. Willowquisp and Spontayne sat at either side of the young wizard, adding their looks of determination to Buntleby's own. Dreelix fumed in silence, then took a deep breath and began the meeting minutes.

"Tonight we'll go over Zantoullios' formula for potions of healing and attempt to reduce the troll-skin side effects plaguing his most recent batches; Old Gumphrey, your expertise is especially relevant in this endeavor, so try to stay awake! Grindle will read a list of those members delinquent in their monthly dues payments and will assign a suitable fee for tardiness. Then, the rest of the meeting will be spent on our initial planning for the Mage Fair later this year." He looked around the room. "Anything else? No? Then Grindle, approach with your list!"

As the corpulent wizard ambled up to the front podium with a crumpled sheet of parchment in one pudgy hand, Buntleby turned to his companions and whispered, "See? Told you he'd cave!"

Grindle had no sooner reached the podium when there was a commotion at the front entrance of the meeting hall. The door burst open, and in walked a mustachioed warrior in a suit of fine mail links, a thick sword at his belt.

"What's the meaning of this?" demanded Dreelix. "You can't just burst in here—"

"You the Monster Hunters?" interrupted the warrior.

"Indeed we are, and we're not accused—"

"Let's go, then," said the warrior. "I've been sent to fetch you; there's trouble in the Duke's fields."

"Trouble? What kind of trouble?" demanded Dreelix.

"Monster trouble," said the warrior, as if that should have been obvious. "Let's go, people, shake a leg! I've got a wagon waiting outside." Despite Dreelix's blusters, the Monster Hunters were unceremoniously herded out the door of their meeting hall and into the back of a wagon pulled by two tired-looking nags. By reason of his importance, Dreelix sat up front with the warrior.

"Perhaps now would be a good time to discuss our fees," suggested Dreelix.

"No need. As Undermarshall, I'm authorized to deputize the lot of you; you are now working for the city and must take any appeals for monetary compensation to the Duke himself, an undertaking for which I wish you good luck." He encouraged the nags to greater speed, as if eager to discharge his passengers at the earliest convenience.

"Hrrmph!" scoffed Dreelix, folding his arms in disgust. "Again we are forced to work for free!"

"If I might ask, what type of monster is it we're being sent after?" asked Buntleby from the back of the wagon.

"Beholders,"¹ replied the Undermarshall. "About a dozen or so, chomping away in the Duke's cornstalks, and he's none too happy about it. My men refuse to go up against beholders without magical assistance. Hence, your immediate deputization."

"Yes, completely understandable," agreed Dreelix, his spirits brightening at once. "Why should your simple soldiers, armed solely with the knowledge of how to wave a spear around, be expected to confront such a menace? Have your men stand aside while the bold and brave Monster Hunters show them the true power of the wizardly arts!"

"This, essentially, was my plan," said

the Undermarshall as the wagon pulled up to the edge of the Duke's fields. The Monster Hunters piled out of the wagon in a disorganized gaggle.

A trio of guardsmen approached the Undermarshall and saluted.

"They haven't moved much," reported the highest-ranking of the three. "Don't seem to have spotted us yet, either."²

We've got guardsmen posted around the fields, but we've held off the attack until your arrival."

"Good, good, excellent," replied Dreelix, as if the comments had been addressed to him. "Now, just keep your men out of our way, and we'll have this little beholder problem taken care of in no time." He motioned for the other Monster Hunters to gather around him. "Okay," he whispered, "What do we know about beholders?"

"Well, for one thing," remarked Zantoulios, "if there's really a dozen of them out there in the cornfield, we're gonna get our butts kicked but good! I don't think the lot of us could take on a single beholder right now, without having made the appropriate preparations. I, for one, have only a small handful of combat spells memorized at present."

"My inventory is similarly spare," lamented Spontayne.

"Let's not hear such pessimistic thoughts!" replied Dreelix. "We're in the spotlight here; a successful routing can enhance our reputation to no small effect!"

"Unless we're the ones getting routed," mumbled the gangly wizard.

"We'll probably fare better than you might expect," remarked Willowquisp. "For one thing, I don't think we're up against beholders at all. To the best of my knowledge, they seldom travel in such numbers out in the open. Even if such were the case, I doubt they'd have entered our fair city merely to munch on some corn."

"So what else could they be?" asked Buntleby. "Gas spores?"

"Doubtful. Gas spores don't eat corn, either."

"Then what?"

"A good question. Lady Ablasta, I wonder if you might have a wizard eye available?"

"By purest chance, yes, I do," replied Lady Ablasta with a sniff. She settled herself onto the ground, closed her eyes, and began the preparations for her spell. "Ready," she said momentarily.

"Send it off, then, and tell us what you see."

"Perhaps a view from above would be best," suggested Spontayne.

"Very well, it's off. I'm hovering above the corn, higher, higher ... there they are!"

"How many?" demanded Dreelix.

"Eight, ten ... looks like thirteen."³

"Choose a target and move in for a close-up," commanded Willowquisp. "Count the eyestalks if you would, please."

"I see six, evenly-spaced around the body. The eyes are red, just like the skin."⁴

1. Gorbels are distant cousins of beholders and can easily be mistaken for them from a distance. The gorbels appear as a red, rubbery sphere, floating suspended in midair like a balloon. A ring of six eyes on narrow, retractable eyestalks crown the top of the gorbels' body, while two clawed limbs dangle down from below. A circular mouth ringed with numerous tiny teeth appears to the front of the two limbs. The gorbels lack the beholder's central eye, however, and is much smaller: 3 feet in diameter, compared to the beholder's standard 5' girth.

2. Had the gorbels spotted the guardsmen, there would have been no doubt about the fact, for gorbels immediately attack anything that moves (except other gorbels), often including trees swaying in the breeze.

3. Unlike beholders, gorbels travel about in small herds numbering up to twenty or so. The herds constantly move on to new territory as they deplete the vegetation of a given area. The size of the herd fluctuates as individual gorbels drift off on their own or two smaller groups merge into a larger herd.

4. Because of a gorbels' eyestalk distribution, the creature generally enjoys a full 360° vision. It is therefore difficult to approach one without being spotted; rogues incur a ~20% penalty when attempting to Hide in Shadows within a gorbels' field of vision.

Fortunately, the creatures have only the approximate visual acuity of a human, without infravisual capabilities. They sleep at night, pulling their eyestalks into their central body mass and closing their six sets of rubbery eyelids.

"There you go," said Willowquisp matter-of-factly. "Beholders have ten eyestalks, these have six. Therefore, these are not beholders."

"Shhh! Keep your voice down!" demanded Dreelix. "Maybe they're just a different kind. Lady Ablasta, do these beholders have a large eyeball in the front?"

"No, they don't. Wait a minute, what's this? Goodness, they've got little arms and fingers! Or is that legs and toes?"

"Definitely not a beholder," confirmed Willowquisp.

"That still remains to be seen," argued Dreelix.

"What's going on?" demanded the Undermarshall, who had sidled up to see what all the fuss was about.

"Silence, please!" demanded Dreelix. "We are in the midst of intense magical reconnaissance, and interruptions are not helpful! We will inform you of all in time; for now, be apprised that these are no ordinary beholders, but a rare strain of mutant killer beholders! Have your men double their vigilance while we investigate further!"

"Mutant killer beholders?" gasped the Undermarshall, blanching at the thought. "I'll inform the men at once!"

As the warrior rushed off to do so, Buntleby directed a look of scorn at the Association President. "Wasn't that laying it on a little thick?" he asked.

"It does no harm to enhance our reputation," remarked Dreelix.

"Getting back to the monsters..." suggested Willowquisp. "Lady Ablasta, what exactly are they doing?"

"The one I'm watching is chewing on corn. It's floating in place, holding onto the stalk with both of its claws, and biting off ears of corn. Goodness, look at that!"

"What?" asked Buntleby.

"Its arms bend funny," she replied. "Not like elbows or knees, but more like tentacles!"⁵

"Okay, so just what is it we're up against?" Buntleby asked Willowquisp.

"From the description, I'd almost have to say gorbels," he replied, scratching his head. "But that doesn't make sense; if I recall correctly, gorbels live in the tropics. How would a herd of gorbels have made it all the way up here?"⁶

"Okay, so we're up against gorbels," said Buntleby. "How does that help us? What do we know about gorbels?"

"Eh? What's that? Gerbils?" asked Old Gumphrey from the back of the huddle, cupping his hand over his ear to make out the whispered conversation going on ahead.

"I wish I had my notebooks with me," lamented the elderly sage, ignoring the ancient alchemist. Old Gumphrey gave a snort of disgust and stopped paying attention. "I've never actually seen a gorbels, only read about them," continued Willowquisp. "They are mentioned only briefly in Ronassic's definitive work on the beholder races, I'm sure of it.⁷ I just wish I could remember more of the specifics."

"Do they wield magic?" asked Dreelix.

"I don't think so," responded Willowquisp. "If memory serves, they're rather simple creatures, with an animal-level intelligence."

"Excellent!" replied Dreelix, rubbing his hands together with glee. "This will be even easier than I had hoped for! Has anybody got anything else for Lady Ablasta? If not, I say we head in there and let the Hunt begin!"

"I think I'll keep my wizard eye active, nonetheless," said the Conjuror Ablasta, struggling to her feet. "You never know when it'll come in handy."

"All right, we're going in!" Dreelix called to the Undermarshall. "Have your men at the ready for immediate action, in case any survive our initial assault! They'll no doubt scamper like frightened kittens at the first sign of our raw power, so be on your guard! Follow me, men! Uh, you too, Lady Ablasta." And Dreelix entered the cornfield, to disappear between the rows of tall stalks.

One by one, the other Monster Hunters followed into the cornfield. Old Gumphrey the alchemist was the last in line; as soon as the others were out of sight he turned and went back to the wagon.

"Shouldn't you be going with them?" asked the Undermarshall.

"Pshaw! I'm eighty-seven years old; let them go on without me! Besides, uh, as the most powerful and intelligent of the wizards, my expertise is needed here, as coordinator! What's that, Dreelix?" he asked suddenly, closing his eyes as if in telepathic communication with the rest of the party. "No, ahead another twenty feet, then turn right. Yes, that's it." Old Gumphrey turned back to the Undermarshall. "If you'll excuse me, I'm rather busy here." The armor-clad warrior, suitably impressed, backed off to give the old man room.

5. Gorbels have no bones. Their central body is basically a gas-filled bag, similar to a balloon, from which dangle the creature's two short legs. Each leg moves by means of numerous strips of muscle running the length of each appendage; gorbels can therefore bend their legs in any direction with equal ease.

Each leg ends in three sharp claws, two fore and one aft. The claws are the gorbels' only means of attack; the creatures inflict a total of 1-4 points of damage with their initial claw strike. Once their

claws have made contact with a victim, they latch on with a remarkable strength, automatically inflicting 1-6 points of damage on subsequent rounds. Once a gorbels has sunk its claws into a victim, nothing short of the victim's death causes it to release its grip.

6. While most often encountered in a tropical environment, the far-ranging gorbels can be found in nearly any temperate climate. Since their lighter-than-air gas performs best in warm areas, they do not stray too far from warm climates, as the cold tends to keep them grounded.

7. Much of Ronassic's master work—*Observations on the Sphere of Many Eyes, Its Habits and Behavior, Its Settlements and Community, And What Not To Do In Its Presence*—was incorporated into *I, Tyrant*. Gorbels are mentioned briefly on page 17 of this work, which erroneously states that the gorbels' eyestalks end in claws. The *MONSTROUS MANUAL*[™] tome mentions gorbels in passing (page 26); the best source of information is *MONSTROUS COMPENDIUM*[®] 14: *Fiend Folio Appendix*, where the obnoxious little creatures have their own listing.

Dreelix halted the Monster Hunters as soon as they were out of sight and earshot of the guardsmen. "Okay, what's the plan?" he asked.

"What's the plan? I thought you were leading this little expedition!" replied Willowquisp.

"What's our weapons status?" asked Buntleby. "I've got a dagger."

"As do I," replied Spontayne. Zantoulios brought forth his collapsible staff, and extended it to its full length.

"Anyone else? Nothing?"

"Oh goodness, gentlemen," said the Lady Ablasta, rolling up the puffy sleeves of her embroidered gown and exposing several thin wands strapped to each forearm. "Here: wands of fire, frost,

lightning, magic missiles, paralyzation, and fear. Go easy on the wand of fear, though; it's nearly depleted. I've been using it on the neighborhood kids, the scamps!"

"You're a regular walking arsenal!" marveled Grindle, as the Lady Ablasta distributed wands and explained their command words.

Gorbel

The creature's six eyes form a "crown" atop its body, giving it 360° vision. These are the main reason the creatures are often mistaken for beholders.

The gorbel's body is full of lighter-than-air gas, though it moves by means of limited telekinesis.

They aren't obvious to casual inspection, but the gorbel's "ears" are tympanic membranes to either side of its mouth.

Boneless limbs can move in any direction, so a gorbel that appears to have a "broken" arm is merely reaching backward.

The claws are stronger than they look. One a gorbel has latched on to a victim, it causes 1d6 points of damage each round until the gorbel or the victim dies.

Gorbels' skin is highly sensitive to air pressure, so even if blinded and deafened, they can sense movement within 50 feet.

The Gorbel's rubbery skin membranes allow certain gases—those responsible for the "rotten egg" smell—to escape from the body.

"It pays to be prepared," she sniffed.

"So we go in wands ablazing?" asked Buntleby.

"And the tanar'ri take the hindmost!" agreed Dreelix.

"Actually, I'd like to volunteer for the position of 'hindmost,'" said Willowquisp. The elderly sage was not one for combat. Buntleby handed him his dagger, just in case.

"Let's try to pick them off one by one," suggested Spontayne. "Lady Ablasta, is there one apart from the others?"

Lady Ablasta closed her eyes and reactivated her wizard eye. "Yes," she replied after a moment. "This way."

As they trudged on through the field, Zantoulios suddenly winced in an expression of disgust and started waving his hand rapidly in front of his face. "Ugh!" he complained. "Grindle, was that you?"⁸

"Was that me what?" asked Grindle innocently. "I didn't do anything."

Lady Ablasta halted them behind a row of corn; ahead, through the leaves, the Monster Hunters could see a floating red sphere and hear the sounds of crunching as the gorbel mindlessly chewed its meal. "I'll take this one," boasted Dreelix, Lady Ablasta's wand of magic missiles in his hand.

Boldly, Dreelix stepped through the row of corn to stand face-to-face with the gorbel. The creature

immediately stopped its meal and swung several eyestalks in Dreelix's direction. It mewled like a kitten,⁹ released its hold on the cornstalk, and sped toward the Monster Hunter with alarming speed.¹⁰ Dreelix bleated in terror but managed to fire off a shot with the wand.

The results were spectacular. The magical beam of energy no sooner touched the gorbel's skin than the creature exploded in a puff of flame.¹¹ Dreelix jumped and was half-propelled back into the midst of the other Monster Hunters, gorbel guts splattered over his head. A rain of gorbel parts fell down among the stalks of corn, fortunately still wet from a recent rain.

"Down!" warned Zantoulios. "Here come some more!" Sure enough, several more red spheres could be seen through the leaves of the corn stalks, apparently investigating the explosion.¹² The Monster Hunters crawled away in silence to huddle several rows distant.

"What did you do?" asked Willowquisp.

"One magic missile, that's all. I swear!" replied Dreelix, wiping slimy entrails from his face and hair.

"Lady Ablasta, if you've still got that wizard eye up and running, I'd be interested in hearing what those others are up to," said Willowquisp.

The Conjurer Ablasta composed herself, straining her senses to peer through her magical construct. "Three of them have investigated the explosion," she reported. "They're gulping down—huh!—it looks like dandelion fluff! Look at them go! They're like goldfish at feeding time!"¹³

"What's all that about?" Buntleby wanted to know.

"Beats me," admitted Willowquisp.

"Who cares? Let's go get them!" said Dreelix, eager for further combat now that he knew how easily the gorbels could be slain.

"Hey, go easy on my wands!" called Lady Ablasta. "I'd like them returned with some charges left, if you please!"

But Dreelix was having fun now. He raced through the cornstalks, hooting and hollering, with Grindle and Zantoulios right behind. Buntleby turned to his friend Willowquisp and suggested that he stay with the Conjurer Ablasta, and that she monitor their progress through her wizard eye from their current position. Then he and Spontayne followed in Dreelix's wake.

A few rapid-fire explosions told of several gorbel deaths. When Buntleby and Spontayne caught up to the others, they found them covered in gorbel-gore, grinning like idiots. "C'mon!" called Dreelix. "I think there's some more over this way!"

Two more gorbels popped over the next row and sped toward the Monster Hunters, circular mouths opening wide.¹⁴ "I got this one!" called Zantoulios, his collapsible staff poised above his

8. Gorbels produce their lighter-than-air gas as a by-product of their omnivorous diet, which consists mainly of green foliage, bark, and trace amounts of scrap metal or ore, as well as any carrion they might come across. Small quantities of gas constantly "leak" out of the gorbels through their pores; the gas smells significantly like rotten eggs and often betrays the gorbel's presence before it is seen.

9. While normally silent, gorbels make mewling noises when curious. They lack the intelligence and vocal apparatus for a formalized language.

10. Gorbels usually float as a result of their gas-filled bodies and drift serenely in the breeze when in no particular hurry. They can, however, move with an innate telekinetic ability at a Movement Rate of 18 and have an aerial Maneuverability Class of C. The gorbel's speed and agility often come as quite a surprise to those accustomed to the beholder's relatively slow movement rate.

11. Unfortunately (for the gorbel), the creature's lift-producing gas is pyrophoric, exploding into flames upon contact with the air. (The gorbel's rubbery skin membranes allow certain

gases—those responsible for the "rotten egg" smell—to escape from the body, but these gases, while nauseating, are not pyrophoric.) Any slashing or piercing weapons used to attack a gorbel penetrate its balloonlike body, causing it to explode in a small fireball that inflicts 1–4 points of damage to anyone within a 5' radius. Magically-induced damage, such as that produced by a magic missile spell, have a similar effect upon the hapless creature.

To make matters worse, gorbels are not themselves immune to the explosive properties of their own gas. A properly positioned blow with a sharp weapon can cause a cascading chain reaction, blowing up several gorbels in turn if they happen to be in each other's blast radius.

12. Like beholders, gorbels have no external ears, but they do have two tympanic membranes, spaced equidistant on either side of the mouth, that give them a limited sense of hearing. Gorbel skin is very sensitive to the slightest of breezes; a gorbel explosion creates a small shock wave that other gorbels within 50 feet can easily sense.

13. The gorbel's mouth is the only opening in the gorbel's body, and so must perform a variety of functions. Not only is it the orifice through which the gorbel eats and breathes, but it also has a role to play in gorbel reproduction.

Gorbels are hermaphroditic. Each gorbel produces eggs within its hollow body cavity, and these eggs are fertilized only upon the explosive death of another gorbel. When a gorbel explodes, its balloonlike body is instantly ripped asunder, and eyestalks and appendages fly off in all directions. The explosion also frees the dead gorbel's "seed pods," burning off the harder outer layer and releasing the fluffy, dandelion-like interior cells. These cells float in the breeze and, if swallowed by another gorbel, act to fertilize its eggs.

Gorbel gestation time is about a month, after which small, 6" infants float out of their parent's mouth. The newborn gorbels grow to full size within 6 months. Gorbels live for 6–8 years.

14. A gorbel's tiny, sphincterlike mouth can slowly stretch to accommodate food as wide as 18 inches. The mouth is ringed with little teeth; these

shoulder, ready to swat the approaching gorbels like a living piñata.

It didn't turn out that way. Zantoullios' staff bounced off the gorbels without any visible effect,¹⁵ and only Spontayne's thrown dagger prevented the creature from reaching the gangly wizard. It popped like an overripe melon, spewing entrails every which way.

Grindle, meanwhile, had put his borrowed wand in the sash of his stained robes and jumped up at the other approaching gorbels. Grabbing it by an eyestalk, he tucked it close to his stomach and belly-flopped on top of it. It burst asunder, squished nearly flat between the ground and Grindle's massive frame. Even the small explosion was muffled under Grindle's prodigious belly; when he rose to his feet, the only evidence of the battle was that his robes were a little more stained than normal, and now slightly singed.

Suddenly, a shriek rang out. "That's Lady Ablasta!" called Buntleby, rushing

toward the sound of the scream, Spontayne at his heels. Emerging between two rows of corn, they saw Lady Ablasta's predicament. A gorbels had approached her from behind and sunk its sharp claws into her back.¹⁶ She hopped around in a panic, trying to shake the beast off of her, while Willowquisp frantically chased her, attempting to get into position to "pop" the gorbels with Buntleby's dagger without harming Lady Ablasta further.

Buntleby tackled Lady Ablasta around the knees, dropping her to the ground; Spontayne helped hold her still while Willowquisp poked the sharp

point of the dagger into the gorbels's skin. It popped with the obligatory fireball, sending the elderly sage flying backward into Zantoullios, who had just stepped through the row of corn. The two tumbled to the ground in a tangle of limbs.

Buntleby, meanwhile, was pulling the gorbels's claws out of Lady Ablasta's back with great

effort; even though the gorbels was no more, its severed

limbs retained their death grip.¹⁷ "She's going to need medical attention," said Buntleby to the others.

"Here," said Zantoullios, pulling a flask from his robes. Unstoppering it, he helped the Conjurer Ablasta to a sitting position and watched as she drank it down. "Potion of extra healing," he said.

"Ought to fix her up in a flash."

"Let me see," said

Buntleby, looking at the wounds on Lady Ablasta's back. As he watched, the deep claw grooves sealed themselves up, leaving only traces of blood to show that she had ever been injured. "Good as new," he said. "I don't think there'll even be any scars."

teeth are too small to inflict damage and are primarily used to hold struggling prey while the mouth expands to engulf the rest of the prey.

15. Because of their rubbery nature, gorbels are immune to all attacks from blunt instruments, like clubs, maces, hammers, and staves.

16. The gorbels instinctively strikes humanoid victims in the upper back and shoulders, where it is the most awkward for the victim to strike back at the gorbels. This is in the gorbels's best interests, for its Armor Class drops from 3 to 10 as soon as it perches on a victim.

17. A gorbels can "lock" the muscles of its feet into position at will and habitually does this when attacking. The ability is also put to good use at night, as well: Gorbels usually clamp tight onto a tree branch or heavy stone before sleeping, as this prevents the herd from being scattered by the wind.

Lady Ablasta turned her head with a look of anger flaring in her eyes. The reason was instantly obvious: Her nose had grown by an extra six inches, and green warts had popped up along both sides of her face. "You and your stupid potions!" she screamed at Zantoullios. In fear, the gangly wizard backed up several steps, bumping into Willowquisp and sending him toppling back down to the slippery ground.

"That does it. I have had it with the way this day has gone!" screamed Lady Ablasta, her neatly coiffured hair now standing out in all directions, several strands hanging in her face. Grabbing up Buntleby's dagger, she raced through the cornfield rows screaming like a banshee.

"What's all that screaming?" asked the Undermarshall, concern and a little tinge of fear in his voice.

Old Gumphrey closed his eyes as if mentally conferring with the others. "Everything's under control," he said.

Back in the cornfield, Grindle and Dreelix had encountered a group of four gorbels in an unusual position: they were on the ground instead of hovering in the air, waddling awkwardly about on their stumpy legs.¹⁸

"Oh, I like this!" said Dreelix, grinning evilly. He raised his wand and fired a magic missile into the nearest creature; its explosion took the gorbels next to it along as well. The two remaining gorbels, eyestalks pointed at the two Monster Hunters and eyes wide open in obvious fear,

started vomiting up their recent meals in a panic.¹⁹ Two more magic missiles, and they were no more.

"That should be nearly it," said Grindle. "Thirteen, wasn't it? We should be around ten or eleven by now. Do you think we should try to take one of others alive? You never know what we might be able to do with their body parts."

"Ah, let's just skip it this time," dismissed Dreelix. "I don't know how we'd harvest anything from a stupid creature that explodes when you kill it, anyway.²⁰ Let's just call this a public relations exercise and be done with it!"

"So where's Lady Ablasta?" asked Grindle. "We should get her to sniff out those last gorbels with her wizard eye." As if on cue, Lady Ablasta came shrieking through the corn, dagger held high, intent on bloody murder. She passed from view through another corn row, and, before either wizard could move, there were explosions from nearby—and a wild scream of savage triumph.

"Was that her?" Grindle asked timidly, all three hundred pounds of him quivering in fear.

"I'm not quite sure," admitted Dreelix, equally cowed.

By the time Lady Ablasta returned, the other Monster Hunters had found Grindle and Dreelix, and the six men stared in awe (and not a little fear) at their sole female member. She was a bedraggled mess: Her hair hung in wild disarray, her prim and proper garments were ripped and singed, and wet, glistening gorbels guts covered her from head to toe. Even without the temporary troll features, she looked scary.

"I believe you all have wands of mine," she said, holding out a greenish hand. The wizards stumbled over themselves in their efforts to return them to her immediately. In return, Lady Ablasta handed Buntleby's dagger back to him. "Thank you, young man," she said to him. "Now then, shall we go?"

Old Gumphrey watched as his fellow Monster Hunters trudged out of the cornfields, as messy and disheveled as he'd ever seen them. "Your mutant killer beholder problem has been dealt with," Dreelix informed the Undermarshall with regal haughtiness. "You may notify the Duke that the Monster Hunters expertly defeated the menace, and any physical manifestations of his gratitude can be delivered to our meeting hall; I believe you know its location. Into the wagon, Monster Hunters! I believe the Undermarshall is ready to deliver us home!" The Undermarshall, in awe at the Monster Hunters' obvious power, scrambled to comply.

On the way back to the meeting hall, the Monster Hunters were a silent and introspective bunch—even Dreelix—each thinking his or her own private thoughts and thoroughly exhausted by their efforts. Only Old Gumphrey, who had rested comfortably in the wagon while the others went off on their Gorbels Hunt, had anything to say:

"Those must have been some gerbils!"

Johnathan M. Richards, like Willowquisp the Zoophile, has an inordinate fondness for some of the goofier of the AD&D® monsters. Fortunately for him, he's not likely to run out of goofy monsters any time soon.

18. After eating a heavy meal, the gorbels' excess weight forces it to land, where it awkwardly walks about on its two legs at Movement Rate 1. The gorbels are then pretty much defenseless, unless it can manage to walk onto its enemy and claw him or her that way. For this reason, gorbels don't often overindulge, usually eating only until they begin to "hang low" in the air.

19. In an emergency, a gorbels can force a regurgitation to get rid of excess weight (or "ballast"), vomiting up enough to get the creature airborne again, where it is both much more maneuverable and able to use its claws. Once the danger is over, the gorbels can then retrieve its meal.

20. It isn't easy, but it is possible to harvest useful gorbels byproducts. Gorbels eyes can be used as substitute material components for the *wizard eye* spell, but must be harvested before the gorbels explodes. (The explosion generally damages the gorbels' eyes and eyestalks, making them useless.) The easiest

way to do this is to capture the gorbels in a net or otherwise immobilize it (*hold monster* spells are useless for this task, as gorbels move about telekinetically and can continue to do so while under the effects of the spell), then cut off the eyestalks with a knife. Severed eyestalks do not cause the gorbels to explode, as the eyestalks and limbs are not filled with the gorbels' buoyancy gas. (This also explains why gorbels have 2 HD when they are immune to all blunt damage and explode instantly upon being pierced or cut: It allows them to take some damage to eyestalks or limbs before bleeding to death. Hitting a gorbels in these areas during combat requires a called shot; the rules for called shots are found in the "Combat" section of the *DUNGEON MASTER® Guide*.)

Another byproduct of possible use is the pyrophoric gas produced in the gorbels' hollow body, which, if extracted, can be used in the production of potions of *fire breath*. Since harvesting this gas

is nearly impossible without setting it off, however, the best receptacle for the gas is the gorbels' body itself. Some have attempted fastening gorbels to catapult stones and bombarding them at enemy fortifications; if the impact doesn't detonate the gorbels, a simple arrow shot can do so afterward. Others have carefully slain a gorbels (with poison or by severing the eyestalks and limbs and letting the creature bleed to death), then carried it around like a balloon on a string for future use against enemies. The problem with this last approach is that the "gorbels balloon" makes a good target itself, and the creature decomposes within a day or two in any case. Gorbels, never the most sweet-smelling of creatures, exude a horrific stench upon decomposition.

The gorbels' rubbery hide, if taken intact, could be put to use in fashioning a lighter-than-air craft like a balloon or a zeppelin. Of course, it would take many gorbels hides to create a large craft; to date, no successes in this endeavor have been documented.

The ecology of the

GORGON

by Ed Greenwood

"The gorgon," Elminster told me severely, "is best avoided."

I nodded. And waited. He eyed me for two or three puffs of his pipe, and then sighed. "I expect you will heed that advice — and," he added with a wry smile, "I also expect you will want an explanation."

"Oh, yes," I responded. "And who better to provide that explanation than yourself?"

"Very well," said the sage, satisfied that I had played my part by showing the proper respect for him and his knowledge. "I will tell you what I know, and what I have heard, about the gorgon. The folk where I grew up called it the 'stone bull.' They killed one by loosing a rust monster upon it and thus forcing it into a dead-end cavern, and then unleashing several volleys of arrows — but several members of the hunting party did not return to share in the glory of their accomplishment. I know of no tales about the gorgon that have a happy ending."

"Indeed," I chimed in. "Still, there are a lot of unanswered questions about the beast."

"Aye," Elminster agreed. "I have with me an excerpt from a traveller's diary, and the researches of several colleagues of mine, notably Asheyron of Arabel, who possesses an amulet that prevents petrification. He tells me, by the way, that a gorgon's breath smells like stewed cabbage."

The excerpt is reproduced below, followed by footnotes that sum up what Elminster had to say about Asheyron's research (and that of Elephras of Melvaunt and Kiiragar of Port Llast). From the way he expressed himself, it is obvious that Elminster hates gorgons; in fact, he revealed that he once lost a pet dog to one. I asked him what he would do if he met a gorgon, and

he indicated a piece of jewelry around his neck, half-hidden by his beard. "This is a thing of magic — a necklace of missiles," he said. "This big bauble near the center is my gorgon-killer."

From the diaries of the adventurer and naturalist Djaril Phylapur:

The gorgon is a bull-like creature greatly feared by travellers in the wilderness hereabout, because of its fearsome breath. Four times each day a gorgon can turn creatures to stone by its breath, using this attack whenever it meets creatures it senses to be dangerous, such as man.¹ Certain beasts (notably the xorn, pech, piercer, rust mon-

ster, earth elemental, and the gorgon itself) are known to be immune to this effect, and other such immunities doubtless remain to be discovered. Gorgons will ignore an apparently petrified victim, instinctively realizing that it is no longer dangerous. Some have been known to escape the creature by feigning death — but just as many others have tried this tactic and failed, because they were unable to keep completely still, and their deception was found out. Even the mere blink of an eye at the wrong time will alert the gorgon to the fact that its quarry is still alive — for the moment.

Gorgons are omnivorous, subsisting on carrion, vegetable material of all types, and small creatures which they gore or trample but do not petrify, seeing them as food and not potential adversaries. A lone, unarmed or weak human or humanoid would be considered food, and attacked as such; a creature that is petrified is a meal forever lost.

The breathing of the petrifying vapors is entirely a voluntary act, these vapors being produced by and stored in an internal organ opening into the roof of the mouth. The corpse of a gorgon is often still dangerous for hours after the beast's death, as a result of the slow seepage of this gas from the still-active organ, or the sudden explosion of a full cloud of gas that will envelop anyone or anything that disturbs the body. After this seepage has run its course, the gas-producing mechanism within the gorgon's body is inert and useless, so no one has succeeded in storing or synthesizing this gas, and its nature and method of manufacture remain a mystery.

Gorgons are always in an irritable mood,

and quick to attack.² They will kill prey whenever it is encountered (even if their appetites are presently sated, in which case they may return to devour the prey at a later time). They lair in wilderness caverns, canyons, or "badland" areas, and there they keep treasure acquired from prey. The spoils found in a gorgon lair will be chiefly coinage and other metallic treasure, which is useful to distract the attention of would-be gorgon-killers (including rust monsters) that might stumble upon such a hoard.

The skin of a gorgon is covered with close-fitting, irregularly shaped metal scales. The scales are actually composed of impure iron; in order to maintain their strength and durability, a gorgon must derive substantial amounts of iron from its diet, chiefly from green plants and the blood of mammals. The gorgon cannot consume actual metal, in either raw or refined form (such as a suit of armor), and accumulates such metal as part of its "treasure," as described above.

The scales are coated with a waxy secretion that is constantly drying out and being worn away, and at the same time is continually replenished by the beast's internal processes (exuding from the cartilaginous seams between the scales). This coating keeps a gorgon's scales from rusting due to rain or dampness, and — coupled with the irregular shapes and curves of the scales — makes a gorgon difficult to grapple, and causes many blows to glance off its hide.

The plates are rather soft (being easily marked by weapon-blows, even if those blows do not actually harm the creature), but are both thick and durable; they will not crack under crushing blows. The scales are useful as a source of iron for smelting (although other, better sources are usually available), but cannot be used directly for protection — for example, as bucklers — because they are too small and too soft. A gorgon plate of average size might bring a price of 10 copper pieces, or perhaps more if it is sold in an area where metal is scarce and in great demand.

The creature most feared by the gorgon is the rust monster, and gorgons rarely delve deeply into subterranean areas as a result. Rust monsters are themselves well armored against a gorgon's hooves and horns, and view gorgon scales as a desirable and substantial meal. At the touch of their antennae, a scale will rust and fall off³, and although a biting, kicking gorgon will rarely let a rust monster munch happily upon the result (usually biting off its antennae or overturning the rust monster with a horn and then running away), the damage is then done. For their part, rust monsters can move more rapidly than gorgons can, and will pursue one, or even a group of gorgons, fearlessly.

Gorgons often hunt⁵ together in small bands (of two mated⁶ pairs, three males plus a female that one or all of them are court- ing, four or fewer young males, and so on).

They wander a wide range, and typically know of most caverns (potential lairs) within a sixty-mile radius. If large numbers of human, demi-human, or humanoid creatures begin to move into a gorgon-inhabited area, solitary gorgons and isolated pairs not raising young will gather in the more inaccessible and labyrinthine caverns for mutual protection.

Notes

1. The breath weapon of a gorgon consists of a truncated cone-shaped cloud of visible, misty grey-green vapors. For reasons not fully understood, this cloud exists simultaneously on the Astral, Ethereal, and Prime Material Planes, and has the same effect upon creatures in any of those environments that are within the area the cloud occupies. Any creature enveloped by the cloud of vapors (which billows out with some force to fill a conical area, ½" wide at the gorgon's maw to a maximum diameter of 2" and a maximum length of 6", within 2 segments) must save versus petrification to avoid being turned to stone (which takes effect in 1-4 segments thereafter, and is permanent unless somehow counteracted at a later time). The vapors hang in the air throughout the round after the round in which they were expelled, clearly visible, and are effective until the end of this second round, whereupon they will have dissipated sufficiently to lose their petrifying power. Gorgon breath does not work underwater, and will be harmlessly destroyed by the whirlwind of an air elemental, a wind walker, or similar force of moving air. A *gust of wind* spell or similar effect will merely shift an intact breath cloud from 1" to 6" in the direction of the gust. A creature who has successfully saved versus a cloud of vapors can remain in, re-enter, or move through its confines without fear of petrification — but any creature entering a particular gorgon-breath cloud must make a save; i.e., if characters are battling a gorgon who breathes in four successive rounds, they must save four times, even if the clouds are all breathed in the same area and the characters do not change their locations. If the breath weapons of two or more gorgons overlap, however, a creature within their confines need make only one save, not two or more.

A spell caster employing a statue spell prior to encountering breath vapors is immune to petrification while in statue form, as is a druid within a tree, and any character(s) in an extra-dimensional space created by a *rope trick*, *portable hole*, or similar magic.

Petrified creatures are immobile and have no sense of the passage of time, nor awareness of their surroundings (they are effectively deaf, dumb, and blind, but still technically alive). Some soon become insane; most sleep, retreating from conscious awareness into an endless dream-world. They may be conversed with by means of *stone tell*, or mentally communicated with by ESP or *telepathy* magic and similar

TRACK COMMANDER™

Roleplaying a Tank Crew?
Sayaret/Track Commander™ (Recon™ Supplement 1)
 Sayaret (Hebrew for Recon) is the necessary
 background information for your Recon™ character
 to be a member of the elite Israeli recon/
 commando units in the Middle East. **Track
 Commander™** is a roleplaying system for
 Recon™ characters to become crew
 members of tanks and armored personnel
 carriers. Finally, a roleplaying system
 where "armor class" means some heavy
 duty damage. Both in one volume for

 supplements, and miniatures.

pionic powers. A stone to flesh spell will free a petrified creature, but *dispel magic* will not. "Stoned" creatures are immune to all illusion and vision-related magics (e.g., *demi-shadow monsters*), and cannot be affected by fire, electricity, any death magic, or spoken *power words* — but a *dig*, *shatter*, or *disintegrate* spell will destroy such a creature instantly.

2. In battle, gorgons breathe, gore with horns, strike with hooves, or bite — listed in order of preference; only one type of attack is possible per round.

Goring (or ripping and slashing) with horns does 2-12 hit points of damage (-1 per die of damage if the target is bearing a shield or wearing plate mail in such a location or manner as to lessen the strike). On a natural "to hit" roll of 20, a gorgon has impaled a victim with its horns; the character takes maximum damage (12 hp) on the round in which impaling occurs, and may (50% chance) remain impaled for one round afterward, taking another 2-8 points of damage if this is the case. (A gorgon can mount another attack in the round during which a victim remains impaled, but obviously this cannot be an attack with the horns.)

Gorgons can readily stand and walk about on their hind legs as well as on all fours (movement rate is the same in either stance), and can rise up on their hind legs to lash out with their front hooves. In most cases (75% of the time), the gorgon will only strike with one front hoof, using the other foreleg for balance. Its hooves do 2-8 points of damage apiece so that a creature that is trampled may suffer as much as 8-32 (2-8 times 4) points of damage if all four hooves hit. The gorgon's rear hooves can lash out just as their front ones do, but the creature will only use this attack form if it is assaulted from behind — and obviously it cannot lash out with front hooves and rear hooves both in the same round.

A gorgon rarely bites in battle unless its breath weapon is expended (or the beast has chosen not to use it) and its horns are gone or encumbered (usually by another, impaled creature). A gorgon bite does 1-3 points of damage; this attack mode is often employed to finish off a victim that has been incapacitated

or rendered unconscious by its other physical attacks, and which the gorgon intends to use as a meal.

3. The attack of a rust monster upon a gorgon only affects the one or two body plates that are touched by the rust monster's antennae; the non-metallic, cartilage-like seams between plates prevent the rusting effect from traveling any farther than the plate(s) it actually hits. A rusted, corroded plate will immediately (in the same round) detach from the skin underneath and fall off. A gorgon cannot re-grow or otherwise replace body plates that fall off (due to rusting or any other effect). A young gorgon's plates will grow in area and thickness as the creature matures, but will always be the "original equipment"; i.e., there is no moulting or shedding process involved.

The repeated loss of body plates can render a gorgon more vulnerable to physical attacks; whenever 20% or more of the surface area of a gorgon's body is devoid of metal plates, there is a chance equal to that percentage that a strike against the gorgon's body will be made against AC 8 (the unprotected area) instead of AC 2 (the creature's normal armor class).

4. A gorgon can see in normal light as well as a man does, and simultaneously use normal vision out to a 6" distance on the Astral and Ethereal Planes. It has infravision out to a range of 8", on the Prime Material Plane only. A gorgon can smell most creatures within 3", and will always try to

confront (or in some way react to) a creature it detects by smell — whether it is a potential meal, a strong adversary who must be fought off or killed, or a rust monster, which must be led to another source of metal and then fled from as fast as possible.

5. Male and female gorgons are identical in size and powers and are externally indistinguishable (except to other gorgons). A mated pair will stay together for 2-6 years and will reproduce approximately once a year (more often if food is plentiful, less often if it is not). The female will bear 1-3 offspring 6-8 months after mating, and will keep to the lair (her mate hunting for her) from the fourth month of pregnancy until she gives birth. A newborn gorgon is able to move and attack for itself at one month of age; young are size S, have 3 hit dice, can breathe a half-normal-size cloud of vapors twice per day, and do half normal damage on all physical attacks. At 3 months of age a young gorgon has grown to size M and 5 hit dice, and can use its breath weapon (still a half-sized cloud) three times per day. A gorgon reaches full adult size and powers within 5-7 months after being born. It will achieve maturity (the ability to mate) at the age of two years, at which time it will leave its parents' lair (if it has not done so already). Very rarely, a gorgon will mate with a chimera to produce a gorgimera (see *Monster Manual II* and *DRAGON®* issue #94), but the two creatures will not habitually consort together for any length of time.

Guidelines

If you're interested in contributing an article to *DRAGON®* Magazine, the first thing you need is a copy of our guidelines for writers. Send a self-addressed, stamped envelope to "Writer's guidelines," c/o *DRAGON* Magazine, P.O. Box 110, Lake Geneva WI 53147; and we'll send you back a sheet with all the basic information you need to make sure your manuscript has the best possible chance of being accepted.

THE ECOLOGY OF THE

GRIFTON

Taking flight with *Felis aquila*

by Christopher Kederich

From a popular lecture by forest warden Defaeben Knazzer, of the Royal Zoological Gardens of Zinfinjord:

One of the best known of all fantastic creatures, the griffon is seen both as a feared monster and a much-desired flying mount. The griffon is accurately described by sages as a ferocious avian carnivore, and it is probably the most successful large flying predator, being more common and voracious than any sort of dragon. It is the true king of the air.

The origins of the griffon are unclear. Some scholars have speculated that it was the result of magical experimentation by an ancient civilization. Yet the legends of griffons seem to be older than the earliest records, older than this theory would explain. Like the centaurs, griffons are probably the result of natural magical forces granting an adaptable creature the traits of different mundane animals. In the griffon, these forces produced a powerful being indeed.

Anatomy

In appearance, griffons resemble great lionlike cats with the taloned forelimbs, wings, and heads of great eagles, but with prominent tufted ears. Their body fur colors range from golden bronze to dark brown, the colors darkening with age. Males have touches of red on their breast feathers; females have duller coloration than males.

The size of an adult griffon is on the order of the largest of lions and tigers, being of similar proportions though with an especially heavy chest and with the shoulders to accommodate wings and flight muscles. While standing on all fours, the overall length from beak to rump measures 7-10'. An adult male may weigh up to 1,100 lbs., with females averaging one-third less.

Artists and heralds have incorrectly pictured griffons as having thin, sticklike forelimbs. In fact, a griffon's forelegs are as heavy as a lion's and are capable of

striking like clubs with sufficient force to break a victim's neck. The raptor's talons, which are up to 6" long, can not only slash but can clench in a bone-crushing grip. Like lions, griffons can bowl over large animals with one sweep of a foreleg.

With pinions fully stretched, the griffon's wingspan is often eight or nine yards across, a magnificent and awe-inspiring sight. Though without tail feathers and looking entirely lionlike, the griffon's tail helps it steer and stay balanced in flight. The moderately pointed wings are well suited for soaring and for diving onto prey. A griffon's feathers are gold in color, often with patterns of black washing across them.

The eyes of the griffon have been said to resemble living flames, usually being ruby red, burning yellow, or icy blue. Griffons have the same keen vision that giant eagles have, being able to see a horse from two miles away in the air. It is said that if a griffon could read, it could see normal print clearly from 100'. It lacks infravision but can see clearly in the dark as its eyes gather the faintest of light. Its sense of smell is only average for a predatory animal, still much better than that of humans but inferior to that of dogs. It might be possible for a griffon to track quarry by scent alone, and one would certainly be able to detect most enemies approaching from upwind, but not as readily as could many of its prey. A griffon's sense of hearing, on the other hand, is very sharp. It can hear hoofbeats on packed earth from at least a mile altitude, and a trainer's call will reach it from the same distance.

Flying

Eagles can roll completely over in midair and griffons can do likewise, but not without some difficulty. Due to their great size, it would take longer to correct an error or regain height, making aerobatics dangerous. Midair loops and somersaults may be possible under good conditions but probably not with a rider. Nevertheless, the

griffon is a nimble and powerful flyer, though less so than the Pegasus, which is both faster and more agile in flight. The griffon is built to catch moderately quick prey and carry it back to a high nest.

Griffons can fly in almost any weather, having an elemental feel for the sky and its conditions. They can sense changes in the weather and can detect downdrafts and thermals. Griffon riders need at least as much training to learn how griffons fly as their griffons need to learn how to carry their riders. Griffons can be intractable at times and simply may not want to fly, much less convey a rider, though usually not without good reason; they are quite sure of themselves in the air.

Hunting

Very few carnivores are as superbly capable of hunting as is the griffon. With its combination of speed and agility, as well as its natural armament, the griffon is a tenacious predator. Although a griffon can strike large prey out of the air, it favors hunting ground-dwelling animals, especially herd animals and most especially horses, which it craves. The variety of potential prey is very large, as griffons are opportunistic hunters; they feed on almost anything from the size of a rabbit to a buffalo—including, at times, humans. Unlike lions, griffons are not scavengers and will usually ignore food that isn't fresh. A griffon can locate prey in near total darkness, but it normally hunts during the day as it is easier to fly on sun-heated thermals and many herd animals are up and about during this time. Open plains, savannahs, and rolling grasslands are its preferred hunting grounds.

If it is injured, a griffon can function as a land predator as well as an aerial one, though it will be slow and is then most likely to become a man-eater. When acting as a land hunter, it will behave much as a big cat, though it shows some flexibility in adjusting its hunting techniques. It may stalk and pounce like a leopard, or stalk

and charge like a tiger; if there are two or more griffons, a group charge, as per the lion, might be used. If the griffon's wings are partially functioning, it is then able to drop onto its prey from a tree or cliff.

Although griffons can and do hunt a large variety of prey, equine flesh is their obsession. Griffons wing their ways at once toward any horses they see, selecting the group that offers the best feeding with the least danger. Young griffons pay no heed to warriors who may be riding or leading horses, attacking with no regard for swords or arrows. An older griffon, however, devotes a few moments to consider such an attack in advance. An unprotected wild horse is an immediate target, but a column of cavalry may be given up as too much trouble unless the griffon is extremely hungry, stupid, arrogant, or has never fought warriors before.

Griffons are not often clever, but experienced ones have learned a few tricks. Adventurers tell tales of griffons that bide their time until after dark when a large mounted party is bedded down, then approach on the ground from upwind to spook the horses into bolting from the camp. The griffons then follow the horses for a safe distance before making the kill to minimize the hazards from the party. If horses are tied down, a quick kill from the air and an immediate escape will ensure something worth eating after the party is gone. The less-intelligent lion is well known for similar tactics.

Family matters

The griffon's range is extremely wide, from the tropics to the subarctic, and from coastal areas to high mountains. Because of the wide variety of prey it can hunt, and its ability to fly long distances for food or water; the griffon is the dominant predator in most areas unsuitable for other large hunters.

A griffon's preferred nesting place is in the most remote and inaccessible part of its territory. High places commanding a wide view of the surrounding countryside are typical, including cliffs, mountaintops, mountainous caves, and large ruins. Even some great trees can support the weight of a griffon's nest. These nests are normally far apart, but if prey is plentiful griffons can be gregarious and live among a small cluster of nests within earshot of each other.

As with eagles, griffons are monogamous and mate for life. They are devoted parents and will defend mate and young unto death. The young are fed first from any family kill. It is the male that hunts while the female guards the nest, again much as with eagles. Typically, two agate-colored eggs are laid at a time, hatching in four weeks. The hatchlings are ravenous and eat at least their weight in food a day for the first three months of life. At four months, the fledglings are the sizes of large dogs and can climb and move about on the ground. The parents now begin to

teach their young hunting methods without using wings. At six months, the young begin flight training and aerial hunting, which lasts at least six more months. The nest is moved if necessary until the young can fend for themselves. Leaving the parents after two years, the young travel great distances before establishing their own home ranges.

On occasion, two or more griffons (usually males, typically brothers) team up and hunt together. This may last for a short time, a lifetime, or until one finds a mate. Less cautious than mated pairs, these bachelor groups are more likely to be seen than others and are the basis on which most people form their impressions of griffons. Intensely loyal to each other, these griffons will back each other up in almost any situation.

Griffons rarely fight among themselves in the way many other predators do. The males are very protective of females, even if they are not mates. It is this instinctive sense of loyalty and discipline that makes a griffon a much more dependable battle mount than a horse or most other flying steeds. Griffons are naturally combative and fear almost nothing, yet neither will they fight for no apparent reason.

Treasure

Suspicious and bold, griffons may investigate anything that interests them despite possible danger. Attracted to shiny objects to decorate their nests, some griffons collect assorted treasures solely for their looks and will fight strenuously to protect what is theirs, but may trade precious items for something more interesting.

The treasure types to be found in a griffon's nest are those that have survived examination and rough handling. Potions are likely to be broken because the griffons like to toss colorful things about and try to catch them in their beaks, or drop them to hear how they sound upon hitting the rocks. Furs, clothes, and leather goods are apt to be employed in tugging matches or claw sharpening. Scrolls similarly suffer unless well protected. Only durable metal objects will last.

An exceedingly rare species of griffon is known to have a peculiar sense that allows it to detect gold up to 10' away. Since gold is of little value to griffons except as nest decorations, they do not often exercise this ability. Even so, this species can tell a fake piece of gold at a glance. A narrow strip of dark fur over the middle of the chest seems to grant this ability. It is possible to use this fur to enchant an item to locate gold. The difficulty in this is that the fur must come from a live griffon, and few if any are willing to part with their fur. If fur is removed from a live donor (which is necessary in order for this power to be transferred), the griffon's gold-detecting ability fades for a year while the fur grows back on its chest.

Being both possessive and curious, even a trained griffon will not take kindly to

being completely left out of the division of the adventure's spoils, especially if the griffon's sense for gold helped to locate the treasure. On the other hand, a nestless griffon is likely to quickly tire of its valuable "toys" and will soon discard them.

Training

Griffons can be trained to be companions and mounts with striking loyalty, though not without unique problems. Horses are tamed and trained with ease by comparison; domesticated horses find the company of other horses or herbivores often makes them feel secure. Griffons are more solitary and dislike crowds. They do poorly in captivity, needing open spaces to exercise. Most would eventually refuse to eat if caged, making it difficult to hold them against their will.

Gaining a griffon is difficult at best. Griffon eggs and fledglings command a high price—2000 and 5,000 gold pieces each respectively on the open market. Raising the young is often more trouble than most adventurers expect. Fledglings must be captured before their first feathers grow in at three months of age in order to bond with an owner. If taken later, the griffon will not readily accept its new "family" and has a 10% per month chance of deserting (if mistreated, 20% per month; confinement is considered mistreatment).

Training the young must include hunting in order to make the fullest use of the griffon's abilities and to maintain a balanced mind. Here, the outdoor skills of the trainer become the common ground between rider and griffon. Although flying is instinctive, the fledgling must be coaxed into flight. During the training, a trainer may teach the griffon special skills to be used on an adventure, such as dropping bombs or grabbing ground-based objects from the air.

Unlike the griffon, any adventurer will find learning how to fly competently very difficult. The time required is usually about 11-16 weeks. Use of *speak with animals* spells or the like will lessen the time by another 2-5 weeks. Those with less than normal agility and dexterity cannot fly with any competency, but they may be tied on and carried about as baggage. Characters with low endurance will not be able to fly without becoming helplessly ill from motion sickness. Griffons bob up and down a great deal in their flight, unlike pegasi, making riding one rather like being a jockey in a steeplechase. A large part of riding one lies not merely in being strapped down but in hanging on, resisting the wind and moving with the animal to make it easier on both parties.

On occasion, adventurers may earn the gratitude of a griffon by releasing it from a trap or saving it from some illness or injury. If made to feel a part of the "family," such a griffon is more likely stay with a group indefinitely. Since only adult griffons are likely to be encountered in this

way, there will be no need for flight or hunting training. The griffon will be most likely to bond to an adventurer to whom loyalty is an important virtue.

One cannot subject griffons to the indignities commonly placed upon horses, like corraling, hobbles, and branding. Bit and bridle would, at best, interfere with their own defenses and would probably be intolerable. Vocal commands and body movements are sufficient for nearly all situations, and a hackamore helps for special ones. The best battle-trained horses are trained to obey complex vocal commands; griffons are both more intelligent and naturally battle-ready creatures, and they can obey even more complex orders.

A horse saddle will not fit on a griffon. Any saddle made for a griffon must take into account its wings and should not hamper flight. Sidesaddles are out of the question. If made out of horse leather, a saddle may even be eaten. The saddle may be positioned in front of or behind the wings; it may be less tiring to the griffon for the weight to be behind the wings but will restrict the rider's vision and ability to fight. Barding is rarely used, as it always lowers flight speed and maneuverability. Simple and light head, neck, and chest armor should create no problems as long as it weighs much less than a rider.

A rider should be able to do anything that can generally be done 'in a high wind while bobbing up and down strapped between the flapping wings of a large predator that will probably object if the rider sits up and creates drag. If properly buckled in, the rider will have at least one free hand much of the time and be able to fight or grasp objects. Flight clothing should take into consideration wind chill, weather, weight load, etc.

As mounts, griffons should not be counted on to travel overland even though they can handle rough terrain easily. If you are going to ride—fly. Griffons may be more argumentative and uncooperative than horses, but they don't spook at rabbits, birds, or shadows. On the other hand, horses are not often known to hungrily chase rabbits, deer, or other horses, and they don't eat riders who've been abusive to them. Griffons are fearless if aggressive and loyal if moody. Griffon males usually make better mounts, being not only larger and stronger than females but also calmer and more patient.

Unfortunately, there are other problems involved in owning a griffon mount. For example, after long contact with griffons, a rider may walk upwind of someone's horse; what will the horse do upon smelling its worst enemy? After an adventure, heroes may want to relax in town for a while—and so might their loyal griffons, whether or not the townspeople agree. Naturally, the disappearance of any horses will be blamed on the griffons. And if a character is eating steak, his griffon will not easily tolerate left-over iron rations.

Abilities

Just how strong griffons are is a matter of measurement. Griffons can fly carrying loads as great as their own body weight, though not for long periods. With their taloned forelimbs, griffons can grasp objects and hold them, probably damaging anything fragile. If so trained, they have a 40% chance to bend bars or lift gates. With the same basic strength as a lion, a griffon will be far stronger than any normal humanoid. On the ground, a griffon should be able to do the same sort of feats that a huge lion or tiger can manage.

A griffon's appetite is remarkable. Even if not flying, a griffon will eat more than a similarly sized lion, typically on the order of at least 25-30 lbs. of fresh meat a day. If flying, it will eat half again to twice as much when possible, depending on whether or not a load is being carried. When hungry, a griffon becomes very irritable and aggressive. Although a person to whom the griffon is loyal is in no danger of being eaten, anything else is considered fair game.

Without proper food, the griffon will be a poor flier and very uncooperative. When food is available, griffons sometimes consume tremendous amounts and may be too gorged to fly well, but won't require another feeding for some time. Riders should make sure that their griffons don't overindulge themselves between adventures and become lethargic.

Friends and foes

Being choosy, griffons will not serve as mounts or companions for humanoids prone to mistreat animals. These are such beings as the griffon would consider dirty, disgusting, and incapable of returning trust, such as orcs, gnolls, and kobolds. A griffon will also not hunt other griffons.

A griffon has very few natural enemies, and none count it as regular prey. Only humanoid species present a significant threat. Some creatures will nevertheless always be enemies with griffons. Hippogriffs and pegasi are no match in a fight and will normally be chased if rarely caught. Manticores are slower if more difficult prey. Harpies will always be attacked at the first opportunity. The hypnotic song of the harpy does not affect the griffon as it does a human, but if such a song is heard, it will enrage the griffon and bring it winging in to attack. Perytons are another natural adversary; although invulnerable to most nonmagical attacks, they are subject to predation by the innately powerful griffons. Thus griffons help clear the skies of certain hazards that threaten humanity.

Having as few natural allies as they have enemies, griffons are compatible with giant eagles, for example, and are generally on good terms with them. Those races and classes more attuned to nature, such as elves and druids, are best apt to understand and be compatible with griffons.

Centaurs, on the other hand, and other quasi-equine species (even if they don't taste like horses) will be in perpetual strife with griffons.

Sacred to Apollo, griffons are said to draw this god's chariot home from his winter retreat. Several other deities have held griffons sacred and may have had something to do with their creation, but whatever their origins, the griffon is such a successful predator that it needs no guiding force to sustain it. There are even reports of sentient griffons which may represent a separate species largely indistinguishable from the familiar one and which may wish to remain unrecognized.

Miscellaneous

Griffons have a language that sounds like a collection of squawks and growls to other creatures. It is composed mostly of words relating to flying, hunting, weather, and the visual appearance of things. It is not suited to abstract concepts.

Like tigers, griffons can swim, but if their feathers are wet they must dry off before flying. By nature compulsively neat and tidy, enjoying baths and frequently preening for hours, griffons are not likely to accept filthy would-be riders or accommodations.

The lifespan of a griffon is very long, some serving several generations of a family. Actual lifespan is dependent on many factors but may extend as long as several centuries. One hundred and fifty years is considered average in the wild.

A griffon is a magnificent creature to be treasured by all humanity. Dangerous it is, but marvelous, too. As long as it wings through the skies, we can look up at it and know the meaning of courage.

Game information

In combat, griffons prefer to use their beak and talon attacks first. If diving onto a victim from a greater height (at least 60') or a victim that is flying more slowly (MV fly 24 or less), the griffon will double its claw damage and gain a +2 to hit, but not be able to employ its beak in the same round. If a griffon can strike an enemy on the ground with both of its foreclaws, it can employ its rear claws for an additional 1-4 hp damage, but at a -2 to hit because they are not accustomed to doing so unless so trained. A griffon can use the rake even in midair, but it loses altitude rapidly and disengages as soon as possible. Its last means of defense may include a wing buffet, but this does only 1-2 hp damage per wing because the wings are feathered and soft. If a flying griffon snatches someone from the ground (requiring one to-hit roll), it causes 1-6 hp damage from roughness even if it does not mean any harm. Training the griffon in this snatch can lessen the damage to 1-4 hp.

For more information on flying, see "Flying the Friendly(?) Skies," in DRAGON® Magazine #124.

THE ECOLOGY OF THE

GRIMLOCK

In the dark realms below lives a race of stalwart, aggressive, and paranoid creatures capable of operating with equal ease in darkness and in light. These creatures, known by many on the world above as grimlocks, possess preternatural camouflage in their cavernous homes, the heightened senses of true Underdark predators, and a xenophobic mistrust of all other races. Often toiling as slave-warriors in the armies of the drow, duergar, and mind flayers, grimlocks have endured centuries of enslavement and deprivation. Although these creatures demonstrate a remarkable capacity for evil, they nonetheless display qualities of bravery, determination, and sometimes even fierce loyalty. The races of the surface world rarely witness this grim nobility, however, and thus most consider grimlocks as nothing more than twisted, evil, and degenerate monsters.

HISTORY

In the distant past, grimlocks lived on the surface as a race of stony-skinned, mountain-dwelling barbarians. Carving out a fierce warrior society upon their mountaintop homes, they made war with all those who lived below, subsisting by raiding the settlements of more peaceful races. Although widely feared, such brutality could only be tolerated for so long, and eventually an alliance of their victims struck back, forcing the grimlocks from their lofty homes. Hunted by their one-time prey, those grimlocks who weren't exterminated hid wherever they could find shelter, many retreating deep into the tunnels below the peaks they once called home. Thus, grimlocks gained both their place among the creatures of the Underdark and their race-wide loathing of all other beings.

Unexpectedly, grimlocks found a pathetic kind of purchase within the Underdark, wandering widely through its depths

in separated groups and multiplying as they could. Their stone-colored skin allowed the surviving grimlocks to hide from many of the Underdark's greatest predators and flourish within the lightless depths. However, their survival was not assured by their own tenacity to survive, but unexpectedly by the cruel whimsy of one of the Underdark's greatest horrors: illithids.

When a group of blindly wandering grimlock refugees encountered and wiped out a group of their kobold thralls, the mind flayers turned their sinister attentions upon this new band of interlopers. Seeking out and capturing this displaced people, the illithids found that the grimlocks' weak will combined with martial prowess made them perfect thralls. Altering their forms to better suit the grimlocks' new darkened homes and the needs of their masters, the illithids and the strange radiations of the Underdark warped the grimlocks into the perfect slave race. Breeding them as cattle, the mind flayers put the newly adapted grimlocks to widespread use as servants, food, warriors, and as trade goods to the other foul races of the Underdark. Thus, sold

and traded like animals, grimlocks spread far and wide.

Only a few roving bands of grimlocks remained free, adapting to their new environments through exposure to the Underdark's strange radiations in much the same way as the illithids warped their enslaved cousins. Today, these tribes, as well as bands of slave grimlocks who have somehow found their freedom, roam the Underdark in search of food. Many free grimlocks also serve other creatures to improve their chances of survival and worship powerful creatures like aboleths, medusae, deep-dwelling dragons, or other powerful, intelligent monstrosities. The grimlocks bring them food, slaves, and other offerings in exchange for protection.

A handful of grimlock cities have developed throughout the underground realms. Such communities, small by human standards, survive in remote locations, distant from other races. If anything, a grimlock city resembles a fortress more than a settlement. Grimlock builders make use of natural terrain as well as obstacles such as rivers and ravines. Often, these communities originate when a grimlock tribe breaks free from enslavement and many might even be within

the ruins of another race's fallen city. Former slaves often prove more successful and fiercely independent than their free brethren, as they understand the price of failure. Ex-slaves of the Underdark's cruelest masters, these grimlocks almost universally prefer death to servitude.

PHYSIOLOGY

In the light, a grimlock's appearance resembles a half-formed, almost fetuslike humanoid with drooping skin and under-defined features. A smooth mask of skin stretches taut across grimlock faces in place of eye sockets and their splotchy gray flesh appears mottled and sickly, like melted stone. Although average grimlocks stand over 5 feet tall, they walk with a hunched, stooped posture that gives them a shorter, bulkier appearance.

Grimlocks possess impressive strength significantly beyond that of a normal human. Because the Underdark consists of endless tunnels, caverns, and cliffs, grimlocks gain much of their might through constant climbing, jumping, running, and toil. In addition to their wiry physical power, grimlocks boast a high degree of agility and flexibility, along with a hardy stamina. Even the weakest

grimlock walks, runs, hunts, or performs heavy labor for long periods of time without tiring, as life in the Underdark permits only the strongest and healthiest to survive.

Although blind, grimlocks enjoy heightened hearing, sense of smell, and even touch. In combat, they detect enemies through both noise and smell, using their acute senses to pinpoint nearby targets. Using their improved sense of touch, grimlocks can run their hands across a surface and learn almost as much about it as any sighted creature looking at it. With only a fleeting touch, a grimlock perceives minute variations and changes in temperature and texture.

Young grimlocks mature rapidly and gain strength over their first three years of life. The weak fall prey to monsters, accidents, or the slaver's lash; the survivors representing the strongest, fastest, and sturdiest of their generation. Although children appear emaciated and small, the scrawniest grimlock child possesses considerable strength and impressive speed.

Grimlocks often ritually scar their bodies with intricately tattooed spiral patterns. The older a grimlock lives, the more scars one accumulates, with each tattoo growing more elaborate by the year. Grimlocks recognize one another through scent, speech, and by each other's scars. Indeed, a grimlock's tattoos describe his name, his skills, his profession, his deeds, and his history with remarkable detail. While some scholars believe this practice might be an extreme reinterpretation of one of the grimlocks' lost surface traditions, others suggest that it is an attempt by grimlocks to exert some control over their forms, which have been so altered by the Underdark and torturous illithid augmentations. Grimlocks take excessive pride in their tattooed scars and many grimlock masters, primarily drow who favor using whips in culling their slaves, have been overwhelmed by unexpectedly enraged grimlocks whose ornate scars are marred by the lash.

PSYCHOLOGY & SOCIETY

Grimlocks live harsh, brutal, and often short lives. Because most grimlocks serve as slaves and live in the Underdark, day-to-day survival is always uncertain. Free

grimlocks spend their time foraging for food and hiding from enemies, while enslaved grimlocks serve as disposable soldiers or perform bone-crushing labor all day. Regardless, an individual grimlock struggles every day to survive.

Scraping together sufficient food often proves difficult in the Underdark and free grimlocks must forage daily for sustenance. Grimlocks will eat nearly anything, but prefer fresh meat and fish. Quite regularly, grimlocks are forced to subsist on mushrooms and other fungi, insects, carrion, and rodents. With true adaptability, grimlocks digest anything remotely edible, regardless of taste or consistency. Without regard to morality, grimlocks frequently practice cannibalism, disposing of the weak, aged, and infirm before they become a hindrance to the tribe.

Grimlock tribes are little more than loose-knit groups of families. While families care for children for the first year, after that the tribe shares responsibility for the young. Indeed, after the first year, the average grimlock maintains the same degree of contact with his parents as with everyone else in the community. Tribes consider their children a shared resource for the future, something for which every member holds responsibility.

Whether enslaved or free, grimlocks learned to expect the worst from other races. Other races inevitably attack them, enslave them, or steal their food and resources. In the cruel world of the Underdark, grimlocks expect brutality, violence, and betrayal from everyone they encounter. Since their relocation to the Underdark, grimlocks have endured the bullying and abuse of every major underground race. As a result, trust remains a difficult concept for them to accept. For the most part, grimlocks prefer peace and isolation. When other races steal their food and enslave their children, grimlocks must raid to survive. At times, simple desperation forces grimlocks to raid surface villages and farms, creating a monstrous cycle of predation and survival.

In rare circumstances, grimlocks come to treat other individual creatures as equals. For example, grimlocks

might view someone who saved a tribe member's life as an equal. Although the grimlock language includes no word for "friend," these creatures understand the concept of an ally, fellow hunter, and brother. When an outsider enters grimlock culture and demonstrates he deserves equal status, usually through skill at the hunt or in battle, an unusual bond might develop between that individual and the grimlocks. Although such intense loyalty remains rare, it demonstrates grimlocks share a few traits in common with surface dwellers. Grimlocks share their food with adopted friends and demonstrate a willingness to fight alongside that person, as long as the individual continues to prove his usefulness. Understanding that a weak individual is a sickness to society who makes the whole tribe vulnerable, grimlocks do not allow frail members of their own race to survive and feeble outsiders are cast out or quickly put to another use—often as food.

Despite the grimlock familiarity with aggression and xenophobia, their culture involves more breadth and depth than survival and hunting. Grimlocks enjoy several unique styles of art and entertainment, and demonstrate a knack for music. Thanks to their acute sense of hearing, grimlocks interpret a wider range of sound than many other races. Their material art, seemingly little more than cave etchings to most cultures, relies on touch and scent rather than sight and includes variations in texture, moisture, and temperature to create pictures and tell stories. Grimlocks have also cultivated a unique art form that combines their skill at music and sculpture. By shaping cavern walls and creating complexly shaped hollow pillars within windy tunnels, grimlocks are able to alter the sounds underground breezes create as they pass through such formations. This art, called wind sculpting, has thus far only been mastered by grimlocks, although it appeals to many of the Underdark races that hold them as slaves and has appeared near the cavernous homes of many such peoples.

On rare occasions, grimlocks abandon their tribes or their tribes abandon them—often in the case of extreme

KNOWLEDGE CHECK

The following table shows the results of Knowledge (nature) checks as they relate to grimlocks. Those who travel the Underdark or have dealings with evil Underdark races might possess this information.

DC 10: Grimlocks are blind creatures that dwell underground.

DC 15: Grimlocks possess exceptional skill in hiding when in the mountains or underground. Grimlocks often ally with drow, duergar, illithids, and other powerful Underdark monstrosities.

DC 20: Grimlocks rely on sound and smell to navigate and are thus immune to most illusions and all gaze attacks. Xenophobic in the extreme, grimlocks are often held as slaves and eagerly rebel against their masters.

DC 25: Because grimlocks sense their surroundings through sound and scent, sonic attacks and strong smells render them effectively blind. Strength of arms and offers of food might win a grimlock's assistance if not its trust or loyalty.

illness when cannibalism seems more dangerous. A few exceptional individuals survive alone, living short nomadic lives constantly on the run from the Underdark's countless threats. A few of these individuals journey to the surface, either seeking a more hospitable home or with the desire to learn about the world above. Yet even these unusual grimlocks must struggle each day to be viewed as more than monsters, rely upon what allies they make, and put aside their inherent mistrust of other races.

VERSUS GRIMLOCKS

Underground or in darkness, grimlocks make vicious enemies. Alone, a grimlock is a fierce but often unmotivated combatant, favoring its own survival to needless fighting. However, a grimlock raiding party fights in total silence and cooperates like a pack of wolves, exhibiting savage fury and fearlessness. Although a grimlock raiding party poses a serious threat, when motivated by a cruel taskmaster like a mind flayer or other monster, grimlocks become even deadlier.

Beware Ambushes: Against most opponents, grimlocks rely upon their stealth and camouflage abilities as well as natural cover. The preferred grimlock tactic involves hiding and waiting

for enemies to enter melee range. Often, grimlocks position themselves in nooks or crevices above enemies, waiting for hours if necessary until prey passes close.

Once in melee, grimlocks attack with heavy, simply made weapons such as axes or clubs. Grimlocks fight almost exclusively with such melee weapons as their senses don't allow them to perceive distant creatures with the clarity ranged weaponry requires. Thus, PCs combating grimlocks should consider using spells that limit their enemies' mobility and access to allies, such as *entangle*, *web*, and the various *wall* spells.

Blind Them: Countering either a grimlock's hearing or sense of smell effectively hampers its blindsight ability. If a grimlock loses both its hearing and sense of smell, it experiences the full effects of blindness.

Give Them Targets: Grimlocks lack the tactical awareness to attack spellcasters or other specialized targets. When confronted with an enemy, they attack. When characters face grimlocks, they should find ways to bring in allies and thus provide more targets for grimlocks to attack. The *summon monster* and *summon nature's ally* spells provide quick and inexpensive allies to the party and force grimlocks to spread their attacks. Even if the party's spellcasters summon weak creatures such as wolves or monstrous centipedes, grimlocks lack the ability to immediately differentiate a weak opponent from a strong one. The party's spellcasters should also place a few summoned monsters between them and the battle as a front line of defense. Spellcasters should avoid casting spells like *mirror image* or similar illusions, as the sight-based nature of such spells prove completely ineffective against blind grimlock attackers.

Look for Leaders: Often, non-grimlocks command grimlock raiding parties. Any creature capable of controlling grimlocks and commanding their fear deserves the PC's respect. Aboleths, drow, duergar, medusa, mind flayers, and numerous other more intelligent monstrosities often control a band of grimlocks on patrols or raids. In most

cases, leaders remain hidden while their minions fight. As such, characters should take steps to locate and eliminate the creature leading the grimlocks. Because such leaders often prove cowardly, characters should look for concentrations of grimlocks or other creatures serving as bodyguards or defenders. However, in some cases, a leader might prove even more powerful than its entire grimlock entourage, so PCs should exercise extreme caution.

Remember Immunities: Grimlocks lack both eyes and eyesight. A grimlock's blindness renders him immune to all visual illusions, gaze attacks, and any spell or effect dependent on sight. A great many spells become ineffective against grimlocks, including *blindness*, *color spray*, *dancing lights*, *darkness*, *deeper darkness*, *flare*, *fog cloud*, *mirror image*, *obscuring mist*, and many others.

Show Overwhelming Strength: Despite their savage and barbaric culture, grimlocks possess intelligence and self-preservation instincts. If adventurers demonstrate overwhelming strength and superiority against a grimlock band, the grimlocks might accept truce or parley. PCs also stand a better chance of ending a battle if they eliminate the grimlocks' leader. Certain destructive spells, such as *fireball* or *lightning bolt*, might convince grimlocks to retreat or offer a truce rather than fight to the death. Of course, such diplomacy can only take place if the grimlocks aren't being driven on by a master they fear even more than the PCs.

Target Scouts: As grimlocks rely heavily on their sense of hearing while traveling, bands of grimlock warriors and hunters often send lone scouts in various directions ahead of them. These scouts perform the dangerous role of providing warnings to their brethren as they stumble across danger or draw them on when they come upon prey. By the sounds of either the scouts' screams or a series of swift barks, a scouts' allies can swiftly close on its position. Thus, PCs who encounter lone grimlocks should seek to dispatch them swiftly and quietly, before they have the opportunity to alert other grimlocks in the area. ■

An illustration in the top left corner shows two men on a stone wall. One man, with a long beard and wearing a dark robe, is leaning over the wall and looking down at another man who is also leaning over the wall. The wall is made of large, irregular stones. The man being looked at is wearing a dark tunic and a hood.

The ecology of the GULGUTHRA

by Ed Greenwood

The Gulguthra, or "Dung-Eaters" (the *otyugh* and *neo-otyugh*), are strange and deadly creatures indeed. I asked Elminster about them some time ago, and it happened that upon his next visit the house was — unexpected by us both — full of children; a captive audience to any sage worth his tongue. Elminster did not disappoint.

"Gather round," he said with a twinkle in his eye, "and I'll tell you of Erammon and the Kitchen Midden." He waited until the small whirlwind of visiting nieces and nephews had settled at his feet, and his pipe had drawn into life, green smoke rings rising from it. I had introduced him as "Uncle El," and he was enjoying the role gleefully — although he had muttered an aside to me that it had better only last this one night. I'll set down the tale as he told it — although, of course, without the voices'. (Elminster is a master vocal mimic when he wants to be.)

Erammon was a minor lordling of the eastern Dales — of Harrowdale on the Inner Sea, even then a sleepy farmers' land.

His father, the Lord Oraun, was wise and just, strong in battle, and well respected in the Dales. Erammon was a young prince like any other, reckless and fun-loving and full of himself. He longed for battles and ravening monsters and fell wizards so that he could swing his shining sword and win the day and walk into the taverns in Harrowdale to a hero's welcome (and not the usual hushed, wary silence). One day he asked his swordmaster why Harrowdale was so tranquil (that was not the word he used) and why his father was so respected as a fighter, since Oraun never seemed to fight.

The swordmaster, old Thaeron, replied: "Harrowdale's at peace because it's strong, boy, and it's strong because of your father. I fought with him, in the wars with Thar and with the outcasts of Sembia; he's a man to be feared over blades."

"But why then does he not fight?" Erammon persisted. "Why does he not raid into the elven-woods, or strike down the upstart in Scardale?"

Thaeron fixed a cold eye on the prince and said, "The wise man fights only when he has to. The fewer enemies made, the fewer to come at you all at once."

"But father *has* enemies," said Erammon. "Scardale, and Featherdale — and

everyone's an enemy of Archendale. . . ."

"Aye, but they are enemies who fear him more than they hate him. Remember that, boy — when the hate overcomes the fear, you'll see their swords. Besides, your father protects the dales to the south from the fell elves, and the brigands who live in the woods along the river Lis."

"But I've never even seen an elf, or a brigand!" Erammon protested.

"He does a good job, then," replied Thaeron, wrinkling his moustache into what might have been a grin.

"But how do the other lords think these brigands, and the elves, so dangerous — and Harrowdale's force of arms so strong?" the prince demanded.

Thaeron was silent for a moment, and then said, "Those who come threatening your father, or, come uninvited, he does not protect — and they vanish; this the other lords know."

"But I've never seen any fighting, nor any strangers with swords."

"Only brigands threaten with swords, boy," Thaeron answered. "Learn that, if you learn nothing else from me." The swordmaster paused, jerked his head in the direction of the feasting hall, and said, "Come."

"To the hall?" Erammon asked, following hastily.

"This is where all guests come, is it not?" Thaeron replied, waving an arm at the great hall, where servants were scrubbing and dusting and filling lamps with oil for the evening ahead. "Aye," Erammon said, not understanding why the swordmaster had brought him here.

"And then they go to your father's chambers for wine and sweets, do they not?" Thaeron continued.

"Aye," said the prince again — and then his mind leaped ahead. "You mean . . . poison?" At that, Thaeron turned on him a look of such cold disgust that the prince recoiled as though menaced by a dagger-thrust.

"No! You think the other lords have no spies in our kitchens? Nor your father in theirs? No one dares to use poison in the Dales, lest all the other lords retaliate."

"What, then?"

"Some visitors disappear, do they not?" the swordmaster asked, returning to his earlier line of discourse. Erammon nodded. "So, even you have noticed that," the old warrior said sarcastically.

"And how not?" said Erammon in an irritated tone. "Word spreads, among travelers as well as among those who live in Harrowdale."

"Aye, talk travels," Thaeron agreed. "Those who disappear are brigands, or so your father tells the gossips."

"But — no bones? No corpses on the battlements?" Erammon asked, still bewildered. The pair kept walking through the hall, and Thaeron made a gesture toward the far end.

"The kitchens? You mean we *eat* . . . ?" The prince gasped and began to go pale.

Thaeron shook his head. "One so dense will not hold Harrowdale for long, helm-head!" he barked. "What is a corpse but garbage? And where do the kitchen-maids throw the garbage?"

"In the midden," Erammon said, following the swordmaster up to a stout, barred wooden door.

"Have you not wondered why the balcony of your father's audience chamber overlooks the stink of his kitchen midden?" Thaeron asked, unlocking the last chain and hurling its bar aside.

"Oh," Erammon thought for a moment. "Yes . . . yes, so it does. But why?"

Thaeron swung open the door and pointed out into the fetid pit beyond, ringed by a stout palisade of weathered timbers.

"Look out to the base of the wall there . . . look hard, and look for an enemy." Erammon peered into the midden as he had been told, and suddenly realized that he had locked gaze with —

"An eye!" he cried. "An eye — coming up from the ground like a worm!"

Thaeron was already pulling the door closed, but an instant before it slammed shut, Erammon saw the festering garbage ripple, undulating right before his wide eyes as though the refuse itself was alive.

"But — but — what is it, out there?" Erammon fairly screamed.

Thaeron fastened chains and set bars in place for a long time before he turned to face the prince. When he did, his face was blank, his eyes cold and level. "Only your father can tell you that, Erammon," he said. "And if I were you, I'd make sure he was in a good mood when I asked him."

The children were petrified, or thrilled, or asleep when Elminster finished the tale. They were tucked into their beds, and "Uncle El" and I took up mugs of cocoa and sat for a time in silence, enjoying the peace of the evening by the fireside. Then I broke the quiet, opening a discussion I could wait no longer to have.

"That was an otyugh in the midden?" I asked, for the benefit of my hidden tape recorder.

"Was," Elminster replied. "It turns out that Lashan, at least, knew of it — when he overran Harrowdale, his archers emptied flasks of oil and then quiversfull of flaming arrows from that balcony until the whole midden was aflame."

"What about Erammon?"

"He lives, some say, hiding in exile, but has not come to reclaim his seat since Lashan's fall. Certainly his body has not been found. Thaeron died fighting Lashan's armies . . . and of course Oraun died of heart-stop some winters ago." The sage stared into the fire and shrugged. "Interesting times, indeed. But I have more than a tale to answer your query. I have brought with me a certain document, and know more besides. Bend thine ears, then — and be sure that recording instrument you hide so well is working properly."

I flushed a bit, shifted in my seat to hide

my embarrassment, and leaned forward attentively as Elminster began to read. . . .

From a report by Phiraz of the Naturalists to the Commissioner of Public Sewers in the city of Scornubel:

. . . The greatest of the nuisance creatures that will plague your system is the "dungheap" or otyugh, a scavenger of the strangest appearance and habits. The otyugh and its larger cousin, the neo-otyugh, share the form of a pile of festering dung with a toothed maw set into it. An otyugh's body is lumpy, mottled purple, green, and (primarily) brown, and the creature stumps about on three fat legs of similar appearance. From this delightful bulk — which the creature is wont to bury in piles of rubbish and dung — protrude two long¹ ridged tentacles with large, heart-shaped gripping ends, and a flesh-colored and segmented wormlike stalk containing two yellow-purple eyes. A buried otyugh watches its surroundings constantly by means of this stalk, so look for it when you suspect that one of these creatures is near.

An otyugh is never surprised by the approach of a creature; take care that you or your men are not in turn surprised by one lying in wait. Otyughs often happily attack and kill parties of three people or less; they will eat fresh meat as readily as they consume carrion, dung, or offal. Beware this predator!

Otyughs are terrifically strong, able to snatch warriors off their feet, armor and all, and fling them aside as children throw dolls. They are under no circumstances to be fought alone.²

The otyugh is most often solitary, but may exist in symbiosis with another (often more dangerous or energetic) creature, such as a doppleganger, ettin, will-o-the-wisp, or even a beholder. For such creatures they serve to guard treasure, which they always conceal at the very bottom of their offal pile, hidden from view beneath the otyugh itself. Encountering an otyugh is bad enough — but if you do see one, be sure to look around for another even more fearsome foe!

Thankfully, otyughs mate only seldom (perhaps once in every seven years or so), traveling by night and subterranean routes to bonepits deep under the earth, where the remains of many ancient creatures lie in vast layers. There they mate in mass gatherings with others of their kind who have made the same journey.³

Notes

1. Elminster provided precise details of a gulguthra's reach (tentacles can grow up to 14 feet in length, fully extended) and senses. An otyugh can communicate telepathically with creatures up to 4" away; the neo-otyugh's telepathic range is 6", and the higher intelligence of the latter creature enables it to communicate on a more sophisticated level with creatures it encounters. Only rarely, however, will a gulguthra initiate such communication, for it has little

to "say" to any other creatures. The eyes of a gulguthra have infravision and ultravision, both out to a range of 9". Both eyes are positioned on the same side of their stalk, but this does not contribute to any lack of alertness because the eyestalk continually swivels, periscope-style, and any creature that comes within range of its visual powers is instantly detected. (The creature does sleep, but only when it is not threatened, and even in this semi-dormant state, its eyestalk and eyes function as though it were awake, for the purpose of detecting approaching creatures.) The eyes function very well in gloom or darkness, but narrow to mere blurred slits in bright sunlight — for which reason the creature lives below ground. The presence of a torch or the casting of a *light* spell can sometimes so disconcert these creatures that they do not attack. Gulguthras cannot smell with any acuity, probably due to the dung and decay that customarily surrounds them, and so they cannot track prey, nor readily discern the true natures of disguised creatures.

2. Phiraz, never having fought a gulguthra and having viewed only one such encounter through the eyes of a sedentary scholar and not a fighting-man, is both vague and brief as to their fighting style and abilities. Elminster has other sources, and their information boils down to this: When it is attacking, an otyugh's tentacles erupt from the concealing pile of offal and slap

victims with force equivalent to 18 (no percentile) strength for purposes of matching the creature's grip or the force of its thrust against the strength of an opponent. A tentacle does 1-8 points of damage on a slap that hits its target, and can also curl about an opponent within range, constricting for 2-4 points of damage per round until the hold is broken. The otyugh can lift a grasped opponent and hurl the victim into a pit or against a wall; the more intelligent neo-otyugh also likes to use a grasped creature as a shield, flailing the victim about to fend off attacks from other adversaries.

Either sort of creature can sense when a grasped opponent is weakened or disabled, and will try to push such prey into reach of its suckerlike, toothed mouth. Due to the creature's favored habitat (proximity to dung and carrion) and its digestive system (wastes are spat back out of its mouth), anyone bitten will suffer both 2-5 points of damage and a 90% likelihood of contracting *typhus* (treat as a parasitic infestation; see pages 13-14 of the DMG). There are no known cases of gulguthra suffering from any such diseases carried in waste and filth themselves, and they are thought to be immune or at least highly resistant to these.

3. Phiraz again is vague; his research had gone so far as to confirm at least the partial truth (periodic journeys far underground) of a legend concerning gulguthra mating — but, having a mistrust of legends, he merely

reported it briefly and without comment. Elminster checked with the sorcerer known as Jovriam of the Mines, and certain *svirfnebli*, and was able to glean the following facts and observations:

Every gulguthra is bisexual. Each produces, once every seven winters, a jellylike "eggmass" and travels underground (in a slow, patient journey) by instinct and memory until it reaches others of its kind. Then it regurgitates the eggmass from a secondary stomach and wanders off, that part of its task done. In some manner not yet understood, another gulguthra can fertilize any eggmass (except its own) by taking it briefly into its mouth, or perhaps some internal organ, and expelling it again.

An eggmass that is fertilized, if left undisturbed, will develop in one week's time into a miniature version of the parent that provided the eggmass. (An otyugh eggmass will only produce another otyugh, and likewise for the neo-otyugh, even though either species can fertilize any eggmass.) This "newborn" creature is driven by an instinctual urge to find warmth and food, and will wander off to seek its own "fortune," returning to its birthplace years later to breed in its turn.

Gulguthra young are smaller (3-5 HD) and weaker (damage of 1-6/1-6/1-4, tentacle strength of 16) than mature specimens, but are otherwise identical to their parents, and grow to maturity within 4 months. ¶

WANTED!

Generals, Mercenaries, Commanders,
and Heroes of all levels and classes.

NOW RECRUITING for fierce battles,
high danger, great excitement, and
incredible treasure!

Join the battle at your local hobby or
game store!

Contains 32-page rule book, 24-page scenario book, 16-page "Art of 3-D Gaming" booklet (a "how-to" guide for painting miniatures and making terrain), 2 player aid cards, 801 die-cut counters, pad of 50 forms, 8 sheets of 3-D *ADVENTURE FOLDUPS*™, and two 25mm metal Lords to lead your armies to victory — plus a special, never-before-published *DRAGONLANCE*™ adventure scenario. Completely compatible with any official magic spell, plane of existence, or monster, no matter how obscure.

Official AD&D®

BATTLE SYSTEM™

Fantasy Combat Supplement

A miniatures wargame fully compatible with both the AD&D® and D&D® games.

	2 — there is no floor, but there are stepping stones suspended in midair, 2-5' apart		(i.e., square peg in a round hole)	71-76	Floor has a trap door leading to a set of stairs or subchamber
	3 — while there is no floor at all, a character will be telekinese-sized to the point in the room that he or she wishes to go	49-52	Floor has a painting or mosaic on it (1-10% chance it is prophetic or magical, portraying players in combat, etc.)	77-79	Floor is metallic and gives off echoes when walked upon with hard boots or metal-shod feet
	4 — there is no floor; a series of tightropes connect any doors present	53	Floor appears solid, but is similar to a trampoline when stepped upon	80	Floor is covered with <i>dust of choking</i>
24-26	Floor has an alignment and only allows those of similar alignment to touch it (others suffer cause <i>light wounds</i>)	54-55	Floor is divided into sections of varying heights (10% chance that these sections rise and fall at random)	81-84	Floor gives an electrical shock (damage and saving throw potential determined by the DM)
27-32	Depending on the nature of the room (i.e., whether it is a prayer room or a vault for gold), the floor can cast a malevolent or benevolent spell on those who enter the room (automatically so for those effects which are harmful, and a percentage chance determined by the DM for those spells which are of benefit; beneficial effects should only be checked once per day at the most, regardless of time spent in the room by characters). Harmful spell effects (at 12th level of ability; roll 1d10) include:	56	Floor is divided into tiny squares that record the portraits of characters over zero-level who enter the room	85	Floor is transparent/translucent, and acts like a (one-way?) window to the next level
	1 — <i>fear</i>	57-61	Portion of floor is magnetic	86-87	Floor is quicksand, made to look like sandstone
	2 — <i>paralyzation</i>	62	Sections of floor are removed; the holes serve as viewing/entry portals from other planes of existence	88	Floor makes random, unusual noises when touched
	3 — <i>suggestion</i>			89-92	Floor is phosphorescent
	4 — <i>teleport</i> (no save)	6 3	Floor is shaped like (roll 1d4):	93	Under certain conditions, floor emits <i>sleep</i> gas
	5 — <i>repulsion</i> (no save)		1 — a bowl	94-95	Runes or glyphs carved into floor's surface (5% chance that each party member reads a different writing)
	6 — <i>slow</i> (no save)		2 — an inverted dome or bubble-shape	96	Persons standing on floor begin to speak a different, random language (as per <i>tongues</i> , reversed)
	7 — <i>maze</i> (no save)		3 — pyramid		
	8 — <i>cause blindness</i>	64-67	4 — upside-down pyramid	97-98	Objects (and, optionally, people) in the room that are in contact with the floor <i>blink</i> (as a blink dog) at random intervals to random locations
	9 — <i>cause critical wounds</i> (no save)	68	Floor is covered with a jagged, crystalline growth	99-00	Floor alternates between two different states; roll twice and apply results as desired
	10 — <i>feeblemind</i>	69	Anything touching the floor is rendered <i>invisible</i>		
	Beneficial spell effects (at 12th level; roll 1d8)	70	<i>Invisible</i> caltrops on floor		
	1 — <i>dispel exhaustion</i>		Floor alternates from solid to semisolid state at a given interval (like a <i>transmute rock to mud</i> spell)		
	2 — <i>cure light wounds</i>				
	3 — <i>slow poison</i>				
	4 — <i>protection from evil/good</i>				
	5-8 — <i>bless</i>				
33	Floor rises to meet ceiling in one round under specific conditions, doing exceptional crushing damage		Here are some suggested modifications to the most obvious floor hazard, the pit trap, as a supplement to the ideas in Appendix G on page 216 of the DMG. Most are unsuitable for low-level characters as presented below. Unless otherwise stated, modifications come into effect when something hits the bottom of the pit.	43-45	One wall of pit is actually a stone golem, stone guardian, or caryatid column, and it attacks the victims in the pit
34-38	Floor dumps characters into pit (roll 1d4):			46-55	Pit has ethereal spikes that come into phase when victim hits the floor
	1 — floor opens like a pair of shutters			56-65	When something hits bottom of pit, a horizontal portcullis slides out, separating party from victim(s)
	2 — floor slides under walls like a pair of elevator doors			66-69	As above, but portcullis is replaced by a <i>blade barrier</i>
	3 — floor unlocks and spins on a central axis, spilling unfixed objects			70-79	Pit is enclosed in a <i>silence</i> spell, as are its victims
	4 — portion of floor over pit goes temporarily <i>ethereal</i> or <i>astral</i>			80-89	Pit is 50-75% (45 + (5 x 1d6)) filled with (roll 1d100):
39	Floor lowers like a ramp/elevator platform to the next level				01-60 — water
40	Floor is an opaque block of ice				61-66 — acid (1-8 hp damage/round of exposure)
41-42	Floor (and ceiling and walls) are carved and painted to look like a monster's mouth				67-73 — grey ooze/green slime/other mold
43-48	Floor's size and shape are inconsistent with those of the room				74-90 — garbage
					91-00 — <i>webs</i>
				90-96	A mischievous creature teases victims in the pit (roll 1d4):
					1 — doppelganger
					2 — leprechaun
					3 — pixie or sprite
					4 — unseen servant (performing automatic activities)
				97-00	Victims who fail to save vs. spells undergo a gradual alignment change

Chapter Six

HAG

WHEN THE BOATS HAVE BEEN DRAWN UP ON SHORE, AND THE DAY'S CATCH HAS BEEN HUNG IN THE SMOKING SHED, THE FISHERFOLK LIGHT THEIR PIPES AND GATHER CLOSE ROUND THE FIRE, WHISPERING TALES OF THE WITCH WHO DWELLS IN THE FLOODED SEA CAVE. "SHE'LL CALL UP STORMS AND DASH YOUR BOAT TO SPLINTERS 'GAINST THE ROCKS," ONE OLD-TIMER TELLS A YOUNG MAN JUST BACK FROM HIS FIRST OUTING. "AYE, AND SHE'LL DRAG YE DOWN 'NEATH THE WAVES AND HAVE HER WAY WITH YE BEFORE YE DROWN," ANOTHER ADDS. A WOMAN MENDING HER HUSBAND'S NETS TELLS HER CHILD TO BE GOOD, "OR THE WITCH'LL COME IN THE NIGHT AND TAKE YE FROM YOUR BED, THROW YE INTO HER STEW AND MAKE A SHAWL FROM YOUR SKIN," LEAVING THE POOR GIRL AWAKE LONG INTO THE NIGHT, STARING WIDE-EYED AND FEARFUL INTO THE DARK. AND FOR GOOD REASON—FOR IN CHILDREN'S STORIES LIE TRUTHS THAT ADULT MINDS DARE NOT ACKNOWLEDGE.

—FROM *FOLK TALES OF THE LOST COAST*

If dryads, nymphs, and sprites represent the grace and beauty of unspoiled nature, then surely the annis hag, green hag, and sea hag embody its savage, destructive side. Though not fey themselves, hags appear to be somehow tied to nature, even if no more than as a distorted reflection of it. Hags are foul, wicked creatures, warped with cruelty and evil. Uniformly female and invariably repulsive, these misshapen crones plot dark deeds over bubbling cauldrons, either singly or in sinister triads known as covens.

Hags have appeared in tales dating back to the earliest ages of history, leading many sages to speculate that hags may have come from the First World long ago. The famed Taldan scholar Nikephoros of Oppara even went so far as to claim that hags were once beautiful, benevolent fey themselves, who were cursed for their vanity and fell from grace, becoming the twisted crones they are today, but his claims are widely discredited. Although the actual specifics of their origin are unknown, no one can deny that some hags are ancient beyond reckoning. Cunning and devious, they are the remnants of an earlier age, possessed of powers that few now understand and that most people fear. Bitter and resentful that the world has passed them by, hags seek revenge on all living things, but focus their rage especially on those of great beauty or purity.

Annis hags, also known as black hags or iron hags, are the most physically powerful of their kind. Annis tend to disdain the malevolent machinations of their sister hags, preferring to revel in more visceral pleasures such as torture and murder. Their warty skin proves resistant to damage and their iron claws are capable of shredding those unfortunate enough to fall into their clutches. Annis are able to cloak themselves in cloying mists or illusion, appearing as harmless children, damsels in distress, or delicate fey creatures to lure their unsuspecting prey to their dooms.

Although weaker than their annis sisters, green hags command a variety of magic powers. They are stealthy and deceptive, preferring to manipulate from the shadows, their insidious whispers and uncanny mimicry driving men to madness and the pure of heart to blasphemy. More than any of the hags, green hags hate things of beauty and work tirelessly to destroy or despoil them. While they prefer to strike from hiding, green hags are capable of holding their own in combat, and their claws sap the strength of anyone they touch.

Sea hags are the most hideous members of the hag sisterhood—just gazing upon their horrific appearance can bring a strong man to his knees. While they don't have the spell-like abilities of the other hags, the evil eye of a sea hag is powerful enough to kill. Sea hags are aquatic, and are known to destroy ships and drown sailors, causing suffering to those poor folk living near the water's edge.

ECOLOGY

The fact that hags possess some tie to the natural world is indisputable, although poorly understood. Similar in some

ways to that of fey creatures (perhaps reflecting a First World origin for these crones as well), this connection is also strikingly different, for hags have no interest in preserving or protecting nature, only in possessing it for its own sake and twisting it to their own ends. Practitioners of ancient, esoteric witchcraft, hags are holdovers from a world of untamed savagery and ferocity that is long gone (and perhaps the loss of that feral time and place is what drove them to their madness and hate).

Physically, hags display great differences among themselves. Annis hags are almost giantesses, standing over 8 feet tall and weighing 300 pounds or more. Annis have warty, toad-like skin that ranges in color from deep blue to purple and black, as well as long, tangled hair. Their jagged black teeth can crunch through bone, and their claws resemble rusty knives, though they are as sharp as any honed blade. Green hags are similar in size to human women, appearing sickly and emaciated, with dark, knotted hair and sagging skin tinged green with a variety of clinging molds and fungi. Sea hags are of human size as well, though many weigh more than their annis sisters as a result of their insatiable gluttony. Their hair resembles rotting seaweed, and rank algae grow on their flesh, exuding the foul stink of waterlogged corruption and decay.

Hags are all female, requiring males from other races to propagate their own. Hags can breed with virtually any human-like creature, including some monstrous humanoids and debased fey. Because of their repulsive appearance, however, hags must often use trickery or force to seduce or coerce men to impregnate them, although some degenerate races and tribes have been known to willingly mate with hags.

Upon giving birth, a hag secretly exchanges her child for one of its father's species. After finding a suitable family with a newborn, the hag creeps into the house in the dead of night, steals the family's baby, and leaves the hag-child in its crib. These changelings are known as killcrops, or wisselkind, and appear as perfectly normal specimens of the father's race. Most families don't even realize that a switch has been made, and raise the killcrops as their own children, relieving the hag birth mother of all responsibility for rearing the child, and freeing her to pursue her own dark plots. The unfortunate babies stolen from their homes usually end up in the hag's stew-pot, never to be heard from again.

While outwardly identical to other children, killcrops tend to grow more slowly than normal. They are likely to develop unusual physical traits and strange behaviors, such as oddly colored eyes, pointy ears, or tangled, fast-growing hair, as well as voracious appetites, vicious tempers, and a casual cruelty that sets them apart from other children (though in some primitive humanoid tribes these qualities are not that unusual). These are the children who like to experiment on small animals, and accidents and bad luck seem to happen more frequently around them. These qualities become more noticeable as the child matures, until the killcrop reaches

THE THREE SISTERS OF SIMARRON

One of the oldest fables of the fey tells of three alluring faerie princesses who lived in three magnificent palaces in the idyllic forest of Simarron, a fabled location in the First World. The three sisters, Caillea, Jurissa, and Neithrope, lived a carefree, idyllic life, full of poetry, song, and games. They were renowned for their beauty and grace, and wealthy and charming princes from faerie courts throughout the First World flocked to Simarron to seek the sisters' hands in marriage.

At first, the princesses accepted their suitors graciously, and competed good-naturedly with one another for the most handsome prince, the most lyrical compliments, and the finest gifts. But as more and more suitors vied for the sisters' hands, they became ever more vain and self-important, and their friendly rivalry turned wicked and bitter.

The three princesses became jealous of one another, but even more so of any other living thing that dared to overshadow their beauty, and in time the sickness within them turned outward. The ancient, verdant forest of Simarron was reduced to a nightmarish place of twisted, blackened trees and wilted flowers, and the few animals who escaped the sisters' wrath fled to more hospitable regions. The three girls, once so beautiful and elegant, became repulsive and grotesque mockeries of their former selves.

Eventually, the blight that was Simarron threatened to expand further into the First World, and a council of faerie courts was called to deal with the sisters once and for all. Powerful fey sorcerers cursed the sisters for their vanity and wickedness, and banished them to Golarion, where Caillea became the first annis, Jurissa the first green hag, and Neithrope the first sea hag. The forest of Simarron and the princesses' palaces were razed to the ground, wiping away any trace of the sisters' existence forever.

adulthood and finally discovers its hag heritage. At this time, the killcrop's birth mother might even return to reclaim her child and initiate it into hag society.

Hag births are overwhelmingly female; hags usually kill and devour any rare male children. Any male hag-children that survive look like their father's race, but are often sterile and display no trace of their mother's powers, only a certain "wrongness" to their appearance and behavior.

HABITAT & SOCIETY

Hags usually dwell in wild, untamed locales far enough from civilization to offer isolation and security, but close enough to settled areas that they provide ample opportunities for hunting or the corruption of innocents. They prefer to lair in sites that were once beautiful or picturesque, but have now fallen to the ravages of time and decay, such as diseased forest thickets or crumbling ruins. Annis prefer colder climes,

inhabiting dank caves or cursed ruins in gloomy fens and dark forests. Green hags are most often found lurking in the fetid marshes and tangled woods of more temperate regions, while the amphibious sea hags haunt deep, stagnant lakes or the stormy, windswept coastlines of salt seas.

Solitary by nature, hags do not usually tolerate others of their kind for very long. An established hag who discovers another hag in her territory will attempt to drive away the intruder with shouted insults and curses. If the interloper does not get the message, the conflict can turn violent, and hags squabbling over territory have no scruples about killing their own kind. Some scholars of hag lore believe such territorial aggression to be an archaic form of ritual combat that serves some forgotten purpose. Others theorize that the presence of one of her sisters reminds a hag of her own twisted, corrupt form, a reflection of her own base nature she can't bear to face.

When hags put aside these petty differences, they can become a powerful force of discord and malevolence, forming fell trios known as covens. Hag covens always contain three hags—no more, no less—but can include hags of any type. Green hags are the most amenable to forming such groups. Annis are more solitary and tend to prefer direct action to the subtle trickeries of their sisters, so they rarely join covens unless coerced. More so than any other hag, annis hate their own kind, and almost never join a coven that already includes another black hag. Sea hags rarely join mixed covens, mainly due to their aquatic nature, but two sea hags may form a coven under the leadership of a green hag who lives in a coastal salt marsh. Even the terrifying, plane-traveling night hags occasionally join covens of their world-bound sisters, for hidden reasons of their own.

Hag covens frequently employ ogres and giants as bodyguards and minions, and hags with access to illusion magic often cloak these guards in disguises to help them act as spies. Marsh giants (see *Pathfinder Adventure Path* volume #5) are especially favored, but brutish hill giants and even degenerate ogrekin (see *Pathfinder Adventure Path* volume #3) can be found serving hag covens.

When hags deign to revere beings greater than themselves, they most often follow Mestama, the Mother of Witches, demon lord of hags and deception. Others worship Gyronna, the Angry Hag, particularly in the River Kingdoms, with hags taking positions of leadership in many cults. Individual hags or covens might also venerate Calistria, Lamashtu, or Zon-Kuthon, or even the female aspect of the ogre god Haggakal.

NIGHT HAGS

Of all the breeds of hags, the depraved night hags are perhaps the most terrifying. Mercantile and greedy, night hags are also consummate predators in search of very particular prey—mortal souls. Using periapts known as *heartstones*,

night hags infiltrate the dreams of mortals and pervert them into nightmares. The hag rides her chosen victim's back all night, tormenting the person over time and slowly draining his health and sanity, giving rise to the description "hag-ridden." Eventually, the hag steals the unfortunate mortal's soul to sell in corrupt planar markets.

Like all hags, night hags tend to be solitary creatures, but they do join covens, either of their own kind or in mixed covens with their mortal sisters. Night hags often ally with nightmares, which carry the evil crones on their plane-spanning hunts for fresh souls. Although native to the mist-shrouded expanses of the Ethereal Plane, night hags can be found virtually anywhere, collecting or trading their dreadful wares.

Most night hags pay homage to a being known as Alazhra the Dream Eater, possibly one of their own who achieved some semblance of godhood, though others might worship Zon-Kuthon or Lamashtu. Night hags hate Desna, goddess of dreams, and take great pleasure in corrupting and stealing the carefree souls of her followers.

Exactly where night hags come from is a hotly contested topic among planar scholars. It is not known whether night hags are an offshoot of worldly hags who ventured forth into the outer planes, or whether these extraplanar soul-traffickers spawned mortal hags on the Material Plane. Night hags themselves claim to be the favored daughters of their patron Alazhra, but they are hardly a credible source as to their origin.

HAG MAGIC

Hags are the witches of the wild places, sorceresses of lost lore, and mystics of the moon, wind, and water. Their rituals and enchantments are of a primeval tradition long forgotten or ignored by modern spellcasters. Although their magic superficially resembles the most ancient elven spellcraft, these powers come to hags innately, without long years of study and practice, and are devoid of wonder and beauty.

Individually, hags possess only minor magics of illusion, deception, and transformation. But when gathered into covens, hags can command truly formidable supernatural powers. Working together, hags can control the weather, create powerful illusions, and divine the future. They can make people their willing slaves, curse them with hexes, turn men into mice, or enter their dreams. Hag covens can speak with the deceased, animate corpses, and even bring the dead back to life.

Depending upon a coven's specific members, they can call upon other spell-like abilities as well. Green hag covens

sometimes possess powers that warp and twist the natural world, such as *creeping doom*, *entangle*, *insect plague*, *spike growth*, and *wall of thorns*. Annis covens favor abilities that increase their physical prowess, such as *mass bull's strength*, *rage*, *giant form*, and *iron body*, and can cast enhanced mist spells such as *acid fog*, *solid fog*, and *cloudkill*. Sea hag covens can call up powerful storms with *call lightning storm* and *whirlwind*, and

disable or slay opponents with *eyebite*, *finger of death*, and *power word blind* and *stun*. Particularly powerful

mixed hag covens exhibit a wide variety of additional abilities. Reports of *circle of*

death, *contagion*, *insanity*, and *nightmare*

are common, and some tales speak of even greater powers such as *dominate monster*, *power word kill*, and *storm of vengeance*.

One talent that all hag covens possess is the ability to create magical gems called *hag eyes*. Often mounted in rings or brooches carried by a coven's servants, *hag eyes* appear to be normal semiprecious stones worth no more than 20 gp, but are actually disembodied eyes (visible as such with a *gem of seeing* or spells such as *true seeing*) that enable the hags of the coven to look through the gem as a free action, so long as it is on the same plane. Some

covens have even learned how to channel their cooperative spellcasting through their *hag eyes*, allowing them to wreak havoc at great distances from the safety of their lairs. Destroying a *hag eye* can have detrimental effects on the coven that created it, inflicting damage and temporary blindness on the unlucky hags.

CAMPAIGN ROLE

With the possible exception of the annis (who may be encountered alone, with a coven, or leading a gang of ogres, trolls, or giants), hags are best used as behind-the-scenes manipulators rather than face-to-face combat encounters. Their strengths lie in stealth, deception, and trickery, not physical battle. A nervous mother could approach the PCs, worried that something has happened to her child. Upon investigation, the PCs discover the child is a killcrop, and must track down the hag responsible (and perhaps rescue the swapped baby before the hag consumes it, assuming the swap was recent). A series of attacks by goblins, ogres, and giants might be traced back to a hag coven seeking to destroy the town. A hag could become jealous of a beautiful PC, cursing the unfortunate character and throwing obstacles in the party's way, or could trick and seduce a male PC into siring her child. Alternatively, the PCs might

FACETS OF FEAR

The village wise woman who spends all her time in the woods, gathering strange herbs and fungi for her remedies and tonics; the aged midwife who seems to know more than the university-trained doctor; the eccentric old woman who lives alone in the dilapidated cottage on the outskirts of town, said to know all the old superstitions, wards, and curses—are these just normal women, with no children of their own, no husbands, and no family, or are they something more—something worse? Is your own family safe? Is your husband faithful? Is that *your* baby asleep in its crib?

Hags are the embodiment of man's fear of women, and a reflection of women's jealousy for each other. In many medieval societies, women are poorly educated and fulfill a very traditional role: that of wife and mother. Women who exclude themselves from that role, either through knowledge and education, or by exclusion from the reproductive cycle, are easily marginalized and become natural targets for intolerance. Men are intimidated by what they see as a threat to their own dominant position in the social order, and women resent other women who have escaped the traditional role imposed on them by society.

Finally, tales of hags are used to frighten children. Ancient, withered crones are the antithesis of lively youth, and having no children of their own, provide the basis for horrible stories of wickedness and depravity to scare children into behaving well or avoiding certain areas.

need information that can only be gleaned through the divinatory powers of a hag coven. The party must decide whether to trust the wicked crones, who might twist the threads of fate for their own fell purposes.

KNOWN HAGS

The following are some of the known hags of Golarion.

Peg o' Ness: Also known as Peg Fowler, this obese sea hag inhabits a seaweed-choked sea cave off of Hag's Plummet on Varisia's Lost Coast. She haunts the coastline between Sandpoint and the Foxglove River, alternately extorting tribute from the fisherfolk with false promises of good weather and bountiful catches or sinking their boats for the perverse pleasure of it. Said to be responsible for most of the shipwrecks off Grubber's Hermitage, Peg occasionally swims inland along Cougar Creek and the Soggy River in search of innocent children, her favorite delicacy. In recent years, Peg has become more domestic, breeding with local fishermen and leaving no less than half a dozen killcrops to be raised by unsuspecting villagers up and down the coast.

The Stroud Sisters: This coven of green hags inhabits a dank swamp known as the Ditches in the central River Kingdoms. The three ogre-born Stroud Sisters are Demelza,

Elspeth, and Mairghread—triplets who miraculously recovered after stillborn births, which mysteriously granted them sorcerous powers over the undead. The sisters are disturbingly fertile, and have no compunctions about breeding with any male that happens by, whether an unfortunate explorer, a wandering ogre, or their own brothers and sons. Demelza Stroud is the clan matriarch and leader of the coven, presiding over an incestuous brood of over a dozen deformed and degenerate ogrekin, along with one exceptionally dull-witted marsh giant called Brother Grunt. The Stroud clan preys on unsuspecting travelers and marsh dwellers, and the Sisters take particular pleasure in tormenting the desperate exiled Galtan nobles of Gralton.

Ulla Jarnrygg: This powerful annis makes her home in an enormous, ice-rimed hollow tree in the depths of the Grungir Forest in the Lands of the Linnorm Kings. Said to be an exile from Irrisen, Ulla is a winter witch of some power, feared as much for her wintry magic as for her iron claws. Known to consort with frost giants and ice trolls, Ulla is often accompanied by a flock of undead crows on her hunts. While she normally prowls the dark woodlands, she sometimes ventures into the frozen marshes surrounding the forest to raid isolated farms and steadings. Ulla takes pernicious delight in terrorizing poor peasants by night, then stealing their livestock, or even better, their children, before vanishing back into the woods before morning.

SAMPLE ANNIS HAG

The iron hag Ulla Jarnrygg claims to be the daughter of a mighty frost giant jarl, and certainly her sorcerer powers reflect an icy heritage well suited to the frigid Lands of the Linnorm Kings. Once a member of a formidable coven of winter witches in Irrisen, Ulla had a falling-out with her sisters and was exiled to the west.

From her lair deep within the Grungir Forest, Ulla stalks lone hunters who brave the winter woods in search of game. When in the mood for deception, Ulla disguises herself as a tall, beautiful Ulfen huntress seeking companionship on a cold night, a sight most hunters find hard to resist. Otherwise, she uses *dancing lights* and *ventriloquism* to lure her prey to an isolated spot where she can ambush them at her leisure. When traveling or meeting with others to barter, bargain, or plot, she uses *alter self* to appear as a pale-haired human woman, a green hag, or even as a common hobgoblin or orc.

Although she is a sorcerer, Ulla relishes the savage struggle of physical combat. When her blood is up, she often forgoes her magical powers completely and tears into her victims with tooth and claw until she is drenched in the blood of her enemies.

Once her prey has been caught, Ulla spikes them to an ancient, gnarled oak tree where she can stretch out their torture for days to relish their screams. Only when her hunger

has grown into a gnawing fire in her belly does she grant her victims release, though even that can take some time, as Ulla much prefers the taste of still-living flesh.

Ulla's thick skin is the deep blue of a starless winter's night, and her hair is the yellow-white of dirty snow. Ulla is almost 9 feet tall, and her long, clawed arms hang to her knees. Dressed in smelly, uncured furs, she wears a cloak woven from human hair and a girdle made from the skin of slain babies round her waist.

The Ecology of the

ANNIS HAG

Not all tales of lurking monsters and hungry witches are mere fantasies to terrify children. In the lonely, rotten places of the world, where few tread out of instinctual fear, rule undisputed queens of bitterness and savagery. Witches, ogresses, hags—these cursed crones give form to hatreds as old as the world and no story of their cruelty has ever exaggerated the truth.

This examination marks the second in a three-part series exploring the twisted minds, warped powers, and bizarre lifecycles of the most feared and deadly subspecies of hags. The first in this series, “The Ecology of the Green Hag,” appeared in *DRAGON* #331.

HISTORY OF THE ANNIS HAG

While most of the civilized races discount the self-aggrandizing boasts and blatant lies hags claim as their heritages, a myth long held by ogres and hill giants corroborates one legend and possibly hints at the true origins of hags.

In the dark of a young world the fearful races sought protection from the terrors that haunted the night. In response to the multitude's unheeded prayers the moon came into being and brought with it a queen who ruled over its light—Cegilune.

*"Vast talons, foul with human flesh, there grew
In place of hands, and her features livid blue,
Glared in her visage; whilst her obscene waist
Warm skins of human victims embraced."*

—John Heyrick, Leicestershire poet

Cegilune's worship quickly spread across lands and through numerous races. A silver-haired beauty, she was said to be as fickle as the nighted orb over which she held sway, and thus her followers constantly courted her favor. Those who pleased her best, pious priestesses whose comely forms reminded her most of herself, Cegilune adopted as her daughters and granted them powers with which to further her worship. The so-called songs of Cegilune were granted beautiful voices to entice others to her service, Cegilune's prophets were given the power to tread across water as easily as land so to spread her word, and the protectors of Cegilune were granted great strength with which to defend the goddess's followers.

For an age, Cegilune garnered the fear and love of her worshipers, but eventually she grew complacent, indulging in her followers' adoration but rarely intervening on their behalves. At the same time, the deities of distant lands began to encroach upon her disciples' hearts. Only when a wrinkle first marred the moon goddess's

KNOWLEDGE OF ANNIS HAGS

The following table shows the result of a Knowledge (nature) check as it relates to annis hags. Those who live near lonely moors or marshes, particularly in frigid climes, or who have dealings with lesser giants such as trolls or ogres might possess this information, even if only in the form of colloquial legends.

Knowledge (nature)

DC Result

- | | |
|----|--|
| 10 | Annis hags are hideous, blue-skinned ogresses who lurk in marshes and other dark, rotting places. |
| 15 | An annis hag's claws are made of rusted metal and, along with her great strength, can rend an armored knight to bits. |
| 20 | Annis hags are incredibly resilient to all attacks but the blows of blunted weapons. These defenses can also turn away less powerful magics. |
| 25 | An annis hag often uses her magical abilities to disguise herself as a large human or comely giant. They can also summon dense clouds of cold fog to cloak their approach. |
| 30 | Annis hags are, even among hags, especially egotistical and seek to dominate the lands and creatures around them. This vanity can often be exploited through gifts of magic and live food. |

supposedly eternal beauty did she realize her error. Appearing before her remaining followers, the goddess found that only her daughters had remained devout, but that they too had aged as she weakened. Others who had left her fold bitterly mocked the moon goddess, flaunting the powers of their

new divine patrons. Enraged, Cegilune slaughtered hundreds of her former worshipers, sending her remaining daughters on a bloody crusade.

The moon goddess's holy war was terrible but brief. Cegilune's willsome acts offended numerous younger deities and her outnumbered devotees were

CEGILUNE

Lesser Deity (Neutral Evil)

Once a beautiful and powerful goddess of the moon, spurned Cegilune tenaciously retains her divinity seemingly only to take revenge against the countless mortal races she believes betrayed her. Collecting larvae, the soul currency of the Lower Planes, Cegilune uses their profane magic to empower her hag servants and create new nightmarish monstrosities to infest the Material Plane. Cegilune's symbol is an overflowing black cauldron.

Portfolio: Hags, larvae, the moon

Domains: Evil, Knowledge, Moon*

Favored Weapon: Quarterstaff

Worship: Cegilune's only places of worship are small grisly shrines kept near the cauldrons and meal places of her devotees. Every night worshipers offer lengthy praises of their goddess's virtues and curses on all who betrayed her. These profanities escalate on the night of the full moon nearest the winter solstice when Cegilune's follower's perform torturous sacrifices, each seeking to dedicate the greatest suffering to her name.

Herald and Allies: Cegilune's herald is a gigantic larvae with the same statistics as a 20 HD fiendish purple worm. Mindless and bred only to exact its mistresses' wrath, the monstrosity is a bloated, trashing thing of sickly yellow flesh, with a corpulent humanoid face nearly lost amid its titanic rolls. The horror has no other name than that which Cegilune calls it—Ambrosial.

Clerics of Cegilune most often contact night hags with their *planar ally* spells.

*See the *Spell Compendium*.

cut down and driven into the shadowed reaches of the world. In addition, her divine tantrums had expended much of her remaining power, devastating her failing beauty and leaving her a weakened, monstrous crone, who too fled to the darkest, loneliest pits of existence.

With the departure of their goddess, the surviving daughters of Cegilune found their divine blessings corrupted and their hearts infused with their patroness's hatred. Thus, the voices, prophets, and protectors of Cegilune

became the first green hags, sea hags, and annis hags.

Today, the daughters of Cegilune, hags of all types, still strive to wreak their mother's dark will and bring suffering to all the treacherous mortal races. As for Cegilune, from her desolate home at the bottom of the multiverse, a pit in the Gray Wastes known as Hag's End, she fosters her remaining powers while seeking ways to bring ruin upon all mortal races and the imposter deities of the night.

PHYSIOLOGY OF THE ANNIS HAG

While most perceive hags as nothing more than vicious wart-skinned beldames, merely one disgusted glance at an annis hag forces reconsideration. Easily the most physically menacing subspecies of hag, annis hags loom more than 8 feet tall, their scabbed and blemished blue skins stretched over obscenely powerful frames of jutting bone and knotty muscle. The flesh of these withered forms holds more akin to leather armor than the supple skins of most humanoid races, being capable of turning aside blades with ease. Only blunted weapons, capable of smashing down an annis hag's tenacious frame, are assured to do any harm. Such implies, however, that one can bypass these monstrosities' potent and unnatural offenses.

Often measuring upward of 3 inches long, an annis hag's nails are formed of actual iron that magically extends from their bodies just as keratin nails develop from a normal humanoid's fingertips. As an annis hag ages, her nails continue to grow, often replacing bits that have been filed away by battle, rough use, and rust. Many annis hags—in a typical showing of vanity—take great pride in their nails, cultivating them into lengthy spirals that gradually become like rusted corkscrews. While such gross luxuriance neither aids nor hinders hags in combat, the sight of the creatures' sword-length nails and the cyclical wounds they gouge can prove most disconcerting.

Also marking annis hags apart from their hag sisters are these creatures' vestigial horns. Little longer than a human's thumbs, these curved,

blackened nubs arch upward from the forehead and possess neither the length nor durability to serve as weapons. Although these horns' purposes are unknown, some scholars suggest these protrusions—along with their blue skin—mark a link between annis hags and the planes-hunting night hag or, alternatively, cunning ogre mages. Whether these similarities imply that annis hags are progenitors or scions of such terrifying beings, though, remains widely contested.

PSYCHOLOGY OF THE ANNIS HAG

All hags possess powerful egos, but even among hags none prove more vainglorious than annis. Holding their size and strength as proof of their superiority, annis hags are quick to subjugate weaker creatures, especially other hags. Eager to have their perverse virtues acknowledged, they delight in manipulating bands of savage humanoids—the stronger the race, the greater their delight in subjugating them.

Annis hags show no more generosity toward their sisters than they do their minions. Ever eager to increase their powers, dominant annis hags physically subjugate weaker hags to form coveys, maintaining such groups through intimidation and violence. Their characteristic vanity and natural bitterness make groups with two or more annis hags exceedingly rare. Those that do exist often survive only through the extreme canniness or deception of another hag or as temporary arrangements. In the end, most alliances between annis hags end in bloody betrayal.

Exploring every imagined avenue to increase their power and fearsomeness, annis hags frequently augment themselves, either magically or physically. Deep scarification, bodily modification, magical enhancement, and grafting are all commonalities among these crones. One annis, known as Smiling Rut, was known for having gnawed through her own cheeks to give herself an obscene, gangrenous grin. Some go on to say that Smiling Rut was in fact an entire covey,

with the powerful annis hag having stitched her ever-flailing, semiconscious sisters upon her back.

Despite their self-superiority, annis hags prove most likely to acknowledge greater powers than themselves, especially when doing so promises to benefit them. As such, these hags are quick to appeal to potentially sympathetic powers such as bitter Cegilune, ancient Baba Yaga, the archdevil known as the Hag Countess, or any number of other dark deities.

While just as intelligent as green hags, annis hags' obsessions with physical strength and personal power lead many to perceive them as mere savages. In battle, such assumptions often prove fatal as these hags use their innate abilities to disguise their forms and create clouds of fog to disorient opponents who might otherwise be able to defeat them. Their need to possess undisputed strength within the territories they claim—usually an entire bog or forest surrounding their ruin or cavernous lairs—often leads them to perform feats of blatant savagery other hags would never dare. The annis hag called the Welt Mother once rampaged through three settlements bordering her moor, killing all the female young merely on the suspicion that another hag had seeded her changeling—potentially a future threat—among the villagers.

THE CHANGE: ABERRANT ADOLESCENCE

With no male members of their species, hags prey upon males of other humanoid races to propagate. Upon giving birth, a hag mother seeks out suitable parents of the father's race and replaces their child with her seemingly normal seed.

A hag's spawn—often called a changeling in folktales—appears beautiful, healthy, and strong, the kind of infant parents pray for. As the child ages, though, her true nature begins to impose upon her personality. Yet even these selfish and bullying tendencies never seem so outlandish as to mark the young hag as anything other than a brutish member of her foster parent's race. In fact, even the changeling herself has no inkling of her true nature.

For the first forty years of her life, a juvenile hag blends in with her adopted culture. Most live unextraordinary lives, marked only by predilections toward the traits and habits of the hags they'll one day become. Swarthy, physically powerful, and aggressive, young annis typically seek out work as warriors, even adventurers. Juvenile green hags often become graceful beauties, but their attractiveness is marred by their prima donna vanities. Young sea hags tend to be hale, plain women with poisoned tongues.

As these unsuspecting hags age their hateful personalities grow worse, beginning to manifest in their mid-forties as terrible physical alterations. This transformation, known to hags as "the change," culminates in the young hag's rebirth as a true hag of the same subspecies as her true mother.

Hags frequently use such tactics of spreading suffering by targeting the weakest members of a community, both the eldest and youngest, as such losses often prove the most painful. For example, the tragedy at Hobb's End is widely thought to have been orchestrated by a sorcerous hag haunting the nearby swamp. That grim morning the townsfolk woke to find their children replaced by crudely carved, child-sized manikins, each

missing a limb, several digits, or other vital part. Despite much searching and the villager's many prayers, though, the children were never seen again.

POWERS OF THE COVEY: HAG BREWS

As much a part of hag mythology as cruel coveys and grotesque hag eyes are these creatures' terrible cauldrons and the foul concoctions that bubble and writhe within. Part dark ritual, part cannibalistic feast, what screams and

ferments within these grotesque pools is more than just mad alchemy, but a form of magical creation that only hags are depraved enough to exploit. The corrupt hag brews that spill forth from these crones' cauldrons can wreak powerful magical effects, but often do so at a terrible price.

Formulating a hag brew is a process much like creating a hag eye. Instead of creating such a gem, a covey that meets the proper requirements (noted with each individual brew) can produce one hag brew a month on the night of the full moon. Every hag brew requires the sacrifice of a sentient creature, a number of other grotesque ingredients, and a two-hour-long ritual taking place in the hours before and after midnight. The hags creating the brew must remain

within 10 feet of each other and can perform no other action for the duration of the rite. Leaving the area or being distracted from the ceremony ruins the brew, the creation of which cannot be attempted for another month. A covey also cannot use their covey-related spell-like abilities the day after creating a brew, as this magic is expended by the brew's creation. Coveys that create a hag brew cannot create a hag eye in the same month.

An example hag brew is presented here, but more can be found online at paizo.com/dragon as part of the preview for this issue.

BREW OF BLACK EYES

Infused with a sliver of hag tongue, a creature that drinks of this thick black brew gains the effects of *arcane*

sight, *darkvision*, and *see invisibility* for 1 week. For the duration of the brew, however, the drinker is afflicted by terrible nightmares of the hags that created the concoction, preventing him from getting a restful sleep, thus leaving him fatigued and unable to regain arcane spells. During these nightmares the hags and the drinker can communicate as per the spell *Rary's telepathic bond*, although the drinker has no choice but to participate in the communication. The effects of this brew can be ended early by *remove curse*. Hags most often bestow this brew upon minions tasked to hunt down specific enemies or magic items.

Moderate divination; a covey consisting of hags of three different types; Weight —. ■

ADVANCED ANNIS HAG

All hags advance by taking class levels. Advanced annis hags regularly take levels of barbarian or fighter, but they are also likely to take levels as clerics of evil and savage deities.

Within the chill depths of the Frostrot Marsh, the annis hag Black Agga has usurped control of the unorganized trolls of the Gut Gnaw tribe. Half-crazed with savagery, the hag claimed the oversized claw of the trolls' gigantic former king and grafted it onto her own. She now rules as a cannibal queen, leading her eager minions to raid the surrounding lands, dragging live prey screaming back into their dark bog.

THE ECOLOGY OF THE

Green Hag

Foul beyond reasoning and old beyond reckoning, half-crazed shadows cackle madly in the mist-shrouded night. Lurking in the rank, wild places even the bravest fear to tread, nightmare crones haunt the legends of every culture and hint at the corruption that festers deep within each mortal soul. Cunning predators, vengeful adversaries, and warped reflections of the civilized races, these are the monstrosities known as hags.

This treatise marks the first of a three-part series detailing the foul powers, cruel plots, and preternatural lifecycle of the mostly frequently encountered and arguably most deadly breeds of hags.

HISTORY OF GREEN HAGS

For as long as there have been tales to tell, there have been whispered warnings of hags. From legends of cruel yet wise seers prowling the fringes of civilization to cau-

tionary tales of cursed, hate-filled women, hags haunt the mythology and folk-stories of nearly every race.

One legend stands out among the countless others, told among dozens of races with little variation. Known as Kiersana the Unfaithful to elves and to orcs as Grigga Toegnawer, the fable of the creature most commonly called Green Mary terrorizes the dreams of countless children, regardless of race.

In a time long ago Green Mary lived as a protector of the woodlands and its creatures, a beautiful druid with a forest domain encompassing hundreds of miles. Making her home at her forest's heart, protected and served by the creatures that she in turn watched over, Green Mary worshiped and obeyed the spirits of nature and their timeless laws. On the day the winds whispered of danger and the crows squawked of death, she investigated their reports. Her search led her to a powerful and skilled hunter who stalked her animal wards

out of sport and felled the trees to make his weapons. Although the voices of the forest cried out for revenge against the careless hunter, Green Mary found him as comely as he was dangerous. Moved to speak with him, she became entranced by his silken words and he compelled by her beauty. That night, Green Mary defied the timeless whispers of the forest and lay with the source of their wrath.

The next morning, the hunter awoke to find his lover horrifically transformed. The forest had reclaimed its servant's willful body, changing her milky skin into gnarled bark, her raven hair into vines, and her soft hands into twisted claws. Realizing the extent of her sin, Green Mary obeyed her spirit masters' orders with a fearful and repentant fervor. When it was done, not even a drop of the hunter's blood remained to stain the verdant ground.

Yet nature knows no mercy, and, despite Green Mary's atonement, her form did not return to its one-time alluring shape. Disgusted by her actions and new form, she fled the beautiful groves and glens through which she once danced and took up residence among the rotting vines

and festering pools of her forest's most putrid swamp. Thus rose the first green hag, a creature of nature enslaved to passion but fated to destroy all after which she lusts.

PHYSIOLOGY OF GREEN HAGS

Green hags possess fearsome powers, horrible diseased features, and cruel natural weaponry, but despite all of this, perhaps their most disturbing trait is how closely they resemble normal humans. Ranging the same heights and weights as human females, only their withered, swampy appearances mark green hags as anything more than particularly misshapen crones, and even these tell-tale deformities might be hidden behind myriad magical disguises. Monstrous yet strangely familiar, green hags prove the least physically terrifying of all hags, marking them as the best examples of all hags' aberrant crossbred ancestry.

Although their proportions mimic those of withered human women, their bent backs and hunched postures make some appear far shorter. Their weight also runs to far greater extremes, with some green hags appearing as emaciated, skeletal things while others can

barely support their own obese bulk. Regardless of appearance, one must never assume that a green hag is frail or sickly, as all of their race possess physical powers outstripping nearly any humanoid of similar size.

Aside from seemingly unnatural strength, a green hag's twisted form affords it a host of extraordinary and deadly powers. A green hag's physical similarity to human women is only superficial, as any who nears swiftly sees. Their mold-colored hair forms a wild viny tangle that rings their exaggerated, wart-covered features like a swampy mane. Their bent bodies possess a similar algae-green coloring as their hair but appear scarred and thick like bark, often marked with cancerous, knobby protrusions. This calloused hide makes green hags particularly resistant to physical attacks and often aids them in hiding amid the decaying overgrown areas in which they lair. This warped, hard physiology becomes most deadly as it extends to green hags' hands, which twist into yellow-nailed, filth-encrusted talons as deadly as any wild beast's.

Perhaps it's their physical heartiness, or their similarity to gnarled trees, but

GREEN HAG KNOWLEDGE

The following table shows the results of a Knowledge (nature) check as it relates to green hags. Inhabitants of rural and frontier communities most often know this information, as it passes on through folktales and local legends. Due to widespread fictitious stories involving green hags, some of the information provided at low DCs (15 and lower) is mere superstition and has no basis in truth. Higher DC results (20 or greater) contradict such fables with legitimate facts.

Knowledge (nature)

DC Result

10	Green hags are sadistic cronelike monstrosities who lurk only in swamps and marshes. No plant, stone, or water way hinders them within their fetid domain and they hold mastery over all natural creatures.
15	Green hags know much of magic and the natural world, and can mimic the sounds of any animal that lives near their lair. Hags can magically swap their foul spawn with the unborn babes of other races. Children suspected of having been swapped by a hag are called calibans or changelings*.
20	Green hags can drain an enemy's strength with the slightest touch and possess significant resistance to magic. Although absolutely evil, green hags are very intelligent and might barter or be reasoned with.
25	Green hags are the least xenophobic of all hags and might appear in nearly any environment. They frequently infiltrate urban settings using their innate abilities to change shape, speak any language, turn invisible, or create any number of other distractions.
30	Green hags operate just as well above water as below. They often foster their children to humanoid families, but cannot switch children before birth. There is no such thing as a caliban or changeling*.

*This is merely a colloquial term and has no relation to the changelings of the Eberron campaign setting.

green hags never seem to age or suffer the ravages of time. As such, a green hag might terrorize a region for untold centuries, commonly becoming a famous monstrosity that haunts local legends for generations.

Already so like the uncaring natural predators of the swamps, it's little surprise that green hags can naturally mimic the sounds of the creatures that live within their domains. This ability does not extend to speech or the noises of manufactured items, but the sounds of wounded animals often prove sufficient enough to cause potential prey—whether other beasts or passing travelers—to investigate. Green hags are known for slaying and dragging away the bodies of pets and animals owned by those who live on the edge of swamps and forests, then coaxing their owners into the wilderness with the creature's mimicked cries. As such, local wisdom commonly holds that anything lost to the swamp remains there.

With all their deadly natural powers, the fact that green hags also possess an arsenal of supernatural and magic abilities merely compounds their horrific nature. Aside from their ability to see in total darkness, resist magic, and perform a wide range of deceitful and misleading magic, a green hag's most deadly weapon is her slightest touch. With a mere brush of her misshapen claw a green hag might sap the strength from even the strongest warrior. Although some might resist, few can hope to overpower a green hag's already formidable strength with their own leeches away.

Frequently using this ability to their advantage, green hags favor draining an enemy's strength until he's totally unable to move, then either drowning him in their boggy homes or dragging him back to their lairs, usually for some unspeakable magical or—even worse—amorous purpose.

PSYCHOLOGY AND SOCIETY

Hatred and dreams of ruin dominate the minds of green hags. They seek the destruction of all things civilized and beautiful,

POWERS OF THE COVEY: HAG EYES

One of the most potent and versatile abilities of a hag covey is the unique power to create magic gems known as *hag eyes*. While these gems superficially appear as nothing more than semiprecious stones, spells such as *true seeing* reveal them as monstrous disembodied eyes. As long as a *hag eye* remains on the same plane as its makers, any of the hags who created it can see through it whenever they please.

The creation of a *hag eye* requires a gem of any size worth no less than 50 gp, the cooperative efforts of an entire covey of hags, and three days. During these three days a covey spends much of its time in deep concentration and meditation, preventing its members from performing any action besides eating, drinking, and sleeping. Any disruption of this meditative state foils the creation of the *hag eye*, and while it does not destroy the gem, it forces the covey to begin the ritual anew. At the end of this period, the life essences of all the covey's members are bound to the *hag eye*, allowing any of them to use its powers at any time, but also causing all of them to suffer should the gem ever be destroyed (see page 144 of the *Monster Manual*). There is no limit to the number of *hag eyes* a covey might create, although only one can be created in any three-day period.

Hag coveys make use of their *hag eyes* in an insidious variety of ways.

Aberrant Accessories: Often setting *hag eyes* into jewelry, a hag with the ability to change her shape might distribute these gems to potential victims or powerful opponents as innocuous gifts, keepsakes, or forget-me-nots. Once in place, a hag knows the wearer's every step.

Watchful Masters: Hags frequently equip their servants with *hag eyes*, allowing them to keep aware of all of their minions' dealings and encounters. Combined with spells such as *clairaudience/clairvoyance*, *sending*, or *whispering wind*, hags might effectively communicate through even their weakest servitors.

Natural Spies: Hags with animal companions or familiars often send such nondescript creatures (especially those with wings) on reconnaissance and patrol duties bearing *hag eyes*. Setting the gems in tree branches, hallows, and rocky crevices scattered throughout their territories also allow hags to keep constant vigil over their claimed territories.

Treasure Trap: *Hag eyes* are frequently worked into magic items or otherwise attached to a hag covey's most powerful or valuable treasures. Should a thief steal such an item, its hag owners murderously seek out and punish the culprit, swiftly retrieving their possession.

themselves under layers of their inherent magic, green hags sometimes lair in the slums or sewers of cities, stalking their prey within their own

homes. In such cases, green hags frequently disguise themselves as beautiful women and tempt men to secluded locales with libidinous promises and appealing disguises. Although green hags do not seek out male victims exclusively, they find that men quite easily, almost willingly, fall to their

temptations. Once alone, they take sadistic pleasure in revealing their true forms to their would-be lovers before savagely slaughtering them. However, even worse is when a green hag's victims are more than mere would-be lovers. Insanity often follows those that survive such a traumatizing rendezvous.

With thoughts of feeding and reproduction aside, green hags ultimately seek the corruption and downfall of all things civil and pure. Intelligent and cunning in the extreme, green hags seduce and beguile their way into positions of power, installing themselves as consorts of community leaders or even false goddesses to tribes of savage humanoids. Daring those under their influence to more and more profane and degenerate acts, the greatest plots of green hags seek to recreate civilization into the brutal, decaying morasses they naturally favor.

Green hags prove far more willing to cooperate with other creatures harboring similar goals—both of their own race and others—than other breeds of hags. While all hags gain great benefits from forming coveys, green hags most frequently form such alliances and triunes of green hags form far more frequently than ones consisting exclusively of annis or sea hags. Besides their own sisters, green hags frequently ally with other evil swamp dwelling creatures, finding particular affinity with the alien cruelty of will-o-wisps, and sometimes putting

but whether out of some forgotten offense or hereditary spite is unknown. Yet while these cruel aspirations and the seemingly innate need to torment and kill inspire the foul deeds of all hags, green hags act with a malevolence and deceitfulness in excess of even their most savage brethren.

Far more glib and persuasive than any of their sister hags, green hags excel at manipulation and temptation. Their simplest plots involve using their natural and magical abilities to lure trespassers into their swampy home to

face some horrible end, but green hags commonly favor far more grandiose plots. Frequently, green hags disguise themselves and walk among the very races they terrorize. Spreading rumors of wise women or beautiful fey who live in the nearby wilderness, they eagerly make themselves into local legends. Such rumors often lead the foolish and desperate to seek the source of the tales, only to fall into the green hag's clutches.

Besides luring victims to their homes, more so than any other types of hags, green hags actively seek out and invade humanoid settlements. Disguising

THE CHANGE: MONSTROUS MOTHERHOOD

Being a race exclusively consisting of females, hags must look outside of their own species to propagate. Once every century a hag feels the compulsion to reproduce. Using kidnapping and magical disguises, hags seek out nearly any humanoid male (seemingly preferring humans and half-elves). The resulting tryst is swift and brutal, often—as an unintentional mercy—culminating in the death of the male.

Hags innately know the moment they are with child and enter a nine-month period of decreased activity. During this time, hags largely rely on their covey sisters or guardians to protect them. However, this lethargy makes them no less deadly if they are roused to action. At the end of this period the hag gives birth to a female child that looks like a perfectly normal member of the father's race.

Despite their compulsion to bear children, hags possess no maternal instincts and rarely raise their own spawn. Instead, hags frequently seek out female newborns in nearby humanoid settlements, kidnapping and murdering a suitable child, and replacing it with their own. In this way, hags perpetuate their foul species, leaving their daughters to grow as parasites within the same cultures they despise. Often the young hags know nothing of their nature, at least until they reach maturity and undergo the Change, when they take on the form and mannerisms of a true hag.

should seek out magic items like *dust of appearance* or *gems of seeing*, which provide more versatile, longer-lasting, and more reliable effects.

Unexpectedly Underwater: Adventurers cannot afford to forget that green hags can move just as nimbly underwater as on land. Possessing both a swim speed and the spell-like ability to breathe water, every stagnant pool and placid pond becomes a potential ambush site. Taking advantage of their weakness supernatural ability and their target's vulnerable state, green hags take special pleasure in grappling those who pass by their hunting waters and dragging them underwater, where the victim's surprise and terror swiftly brings a particularly horrific death by drowning.

Classed Crones and Local Legends: Perhaps more than any other hag, green hags are likely to take levels in a variety of character classes (see "Root of Evil" in *DUNGEON* #122 for an example). Well suited to the various spellcasting classes, as well as those that thrive in natural settings, green hags frequently add the abilities of barbarians, druids, or sorcerers to their already potent arsenal of abilities. Thus, adventurers should always research their prey and listen well to the stories of locals. The tale of Gnarled Jan controlling the beasts of the swamps might suggest a green hag druid more powerful than her ordinary kin. ■

aside their hatred of humanoids to ally with evil druids. However, like all hags, green hags feel a natural—although sometimes unwarranted—sense of superiority over all creatures and know nothing of true trust or partnership. Although a green hag might ally with or even pose as a servant to another creature, such an alliance lasts only as long as it is convenient or until she sees an opportunity to supplant her supposed master.

VS. GREEN HAGS

Cunning and duplicitous in ways that far outstrip even their hag sisters, only adventurers armed with the best equipment and information can hope to stand against a green hag and survive.

Second Your Senses: Green hags possess a host of spell-like abilities that allow them to trick the senses. When pursuing one of these monstrosities, adventurers should rely on multiple senses before taking anything at face value. For example, a green hag under the effect of her *disguise self* ability might be revealed simply by interacting with her physically (as creatures that touch such a glamor receive a save

to disbelieve the illusion). In addition, adventurers should be wary of distracting and misleading spell-like and extraordinary abilities, such as *dancing lights*, *ghost sound*, or the hag's mimicry ability, and should only investigate unexplained sights and sounds with extreme caution.

Steel Your Strength: A green hag can sap the vigor from even the strongest warrior with the merest touch. To defend against her weakening touch, adventurers should consider casting spells like *bull's strength*, *heroism*, *protection from evil*, *lesser restoration*, or even make use of a bard's inspire courage ability to boost their Fortitude saving throws or regain lost Strength.

Dispel Disguises: Green hags may use any of their spell-like abilities at will, and thus use them frequently. While adventurers might seek to cast spells like *dispel magic* or *glitterdust* to reveal a magically masked green hag, these crones can replace their dispelled disguises in moments. Instead, hag hunters should cast spells that continually reveal or bypass illusions, such as *detect thoughts*, *invisibility purge*, or *true seeing*. Better funded adventurers

The Ecology

One of a broad and

by Nigel D. Findley

"And," said Baylock with great relish, "thus ends the tale of Nex the Archer. Somehow, he escaped the will-o'-wisp with his life; how, we'll never know — at least, not from him." The guide nodded sagely. "Aye, he escaped with his life. But his mind is another story. Nex will never speak again, I hear." He glanced at his employer — Araman, that was his name — huddled nervously on the other side of the fire. "It happened near here, they say," Baylock continued innocently, with an airy gesture at the mangroves pressing close around them. Araman looked about him, licking his lips nervously. Baylock grinned to himself.

Then he decided to let the other man off the hook. Araman wasn't such a bad sort, not like many of the rich dimwits Baylock had wet-nursed through the marshes in the past. Certainly, he was a soft city dweller, not tempered to hardship like Baylock and his lads. But he'd come to Baylock with a fair price — and without the rankling disdain that most city dwellers had for the mist-eaters who lived and worked along the marshes. Araman also kept up and pulled his weight — that, moreso than most.

"But no worries," Baylock finished. "That was five years ago — or more — and nobody's seen a will-o'-wisp around here since. Don't concern yourself with it, sir,"

Across the fire, Araman glanced up with surprise at the guide's "sir." Since they'd struck the deal for guided passage through the marsh, Baylock had addressed him as nothing but "you." What had mellowed the grizzled mist-eater, Araman couldn't guess. But he wasn't going to question it.

Still, Araman was uncomfortable. He looked again at the gnarled mangroves and saw that they seemed to move in the flickering firelight. Baylock's three "boys" — actually men of Araman's age — lay wrapped in their sleeping rolls, well away from the fire. Their backs were turned to the warmth as if to scorn the city man's weak need for a fire. But Baylock himself sat near the blaze. Was he trying to be companionly? Whatever the reason, if the guide was suddenly willing to talk, Araman wanted to take advantage of the

chance.

of the Greenhag

evil family of hags

"So," Araman said, his voice weaker than he liked. "No will-o'-wisps. Then what does live around here? The most dangerous creature?"

Baylock smiled. "Apart from the vultures and the giant lizards and the occasional mist dragon, you mean?" He thought for a moment, and his smile faded. "Well," he went on slowly, "there are tales of a shellycoat."

Araman glanced at the three backs turned to the fire. Had they stiffened slightly? "What's a shellycoat?" the city dweller asked. He wasn't sure that he should have inquired.

Baylock looked for another stick to add to the fire. "Maybe you know it as a greenhag."

No doubt about it this time. Baylock's men were listening. One stirred briefly as if turning in his sleep, but he merely positioned himself to hear the discussion better. Araman leaned forward, fascinated but nervous. Anything that could scare these mist-eaters was worth knowing of. "Tell me about it."

Baylock shrugged and waved a hand. "Not much to tell," he said. "The shellycoat — the greenhag — well, it's like the annis, but even more dangerous."

"It's like the . . . ?"

Baylock sighed. "The annis," he repeated patiently. "A blue giantess. As vicious and cruel a creature as you'd ever be sorry enough to meet. You find them in wilderness mountains, swamps, forests — any climate but the warmest. Just about anywhere well away from civilization. Same with the greenhag. Both are relatives of the night hag." He leaned forward. "You do know of the night hag?"

"Of course. But how — how are they related?"

"Simple. What do you get when you cross a night hag with a human or a demi-human, eh? You get a greenhag."¹ Baylock chuckled. "You think that every time a night hag goes out hunting, it's only to drag some poor soul off to Hades? Oh, no; sometimes it's not a man's *life* she wants. Enough to make your blood run cold, it is."

Baylock stopped suddenly and cocked his head, listening. "Hear that?" he asked quietly.

Araman strained his ears. Nothing: just the constant background murmur of the swamp insects. Suddenly, a chilling howl

broke above the subtle murmur. "What was that?" Araman gasped. Baylock's men got to their feet in remarkable time, short swords and daggers free in their hands. They seemed quite awake.

"A wolf, I think," Baylock called some instructions, and his three men sheathed blades, unlimbered short bows, and melted into the darkness out of the firelight. "Don't worry," he said, turning back to Araman. "My boys'll take care of it, whatever it is. If they can't stab it, shaft it, or slice it, they'll salute it. Now, where were we?"

"The greenhag," Araman reminded him. "And the shellycoat, if there's any difference."

Baylock shook his head. "No, no difference. 'Shellycoat' is just what we call her when she lives in a swamp or river. That's when she's most dangerous, to my mind. Sometimes she'll lie in wait underwater to rend fishermen — aye, and mist-eaters, too — as they pass by."²

Araman shivered. "You say 'she.' Are there no male greenhags?"

"Never," Baylock said flatly. "Some say it's because the female hag's blood is dominant; some say it's because the night hag mother eats the male babes at birth. Whichever. No male greenhags." A thin smile wrinkled his face. "Though that's not to say the greenhag doesn't get a yen for male companionship, if you take my meaning. She just has to look for it outside her own species, like her mother, though the greenhag prefers the big boys like ogres and giants. And that's where you get the annis.³ Now, the annis—"

Both men stiffened as a bowstring sang in the darkness. Another twang was followed by a hoarse call of "Over here!" Through the clatter of underbrush, a high-pitched cry assaulted the evening air. The cry ended abruptly in silence.

Baylock started to get to his feet, then slowly sat down again and forced a smile. "Whatever that is, my boys are giving it what for." He nervously eyed the treeline. "Anyway, the annis follows her mother's attitude towards ogres and giants. She deals with them for the same things: information, provender, and companionship. On occasion, you even find an annis living with an ogre or giant tribe as the wife of the tribal chieftain." Baylock smiled briefly. "If that isn't a case of the power behind

the throne, I don't know what is."⁴

The sound of combat again stirred the night. A commotion in the undergrowth was followed quickly by another twanging bowstring — then by a cry hoarse with agony: "Help me, Baylock!"

The guide was on his feet in a moment, his blade drawn. "Stay put," he said grimly. "I'll be back." Rushing off into the brush, Baylock disappeared into the blackness.

Araman wrapped his cloak closer around him. He glanced down at his hands; they shook as though with the palsy. He clenched them, and the shaking stopped. The night grew quiet and long.

Araman didn't see the figure until she had stepped into the clearing, squinting her orange eyes against the light of the fire. Her rags were tattered, and dark blood — not hers — fell from her black claws and splotted her green skin. Withered lips drew back from needle-pointed fangs in a mockery of a smile. When she spoke, it was in the same pain-roughened voice Araman had just heard, but black with irony. "Help me, Araman!"

Araman knew it would do no good to scream.

But he screamed anyway.

Notes

1. After mating with a human or demi-human male, a pregnant night hag remains in Hades throughout the 13-month gestation period. Following this time, she returns to the Prime Material Plane to give birth. From the moment of delivery, the newborn greenhag is able to fend for herself (which is just as well, since the night hag mother abandons the infant immediately). The greenhag, which is always female, is similar in appearance to a human infant; only her long black fingernails and the greenish tinge of her skin give away her true nature.

At birth, the greenhag has only 2 HD, and does limited damage (1-2/1-2; no strength bonus). She maintains her characteristic armor class of -2, however. The greenhag originally has no spell-like powers or mimicry ability, and so depends on cunning and stealth to catch her food — generally, anything that moves, with humans and demi-humans preferred. The greenhag grows rapidly, reaching her full size, strength, and powers at the age of 18 months.

The greenhag's alignment is always that of the mother: neutral evil. Her intelligence, which ranges from low to very, is equal to the father's intelligence score minus 1d6 (as long as this figure does not put it out of the allowable range: 5-12). The language of the night hag, which is wrongly reputed to be a dialect of annis, is actually a degenerate form of the tongue spoken by night hags. The greenhag's knowledge of her own language is innate; other languages (and sounds she can mimic) must be learned.

The greenhag's spell-like abilities and her inhuman strength are also degenerate gifts of the monster's mother. Dilution with human or demi-human blood has weakened the night hag's extraplanar powers, making some abilities mere shadows of the original powers (*invisibility* instead of *etherealness*, *change self* instead of *polymorph self*, *weakness* instead of *enfeeblement*). Some of these powers are removed altogether (e.g., the night hag's ability to *gate* in demons or devils and her resistance to nonmagical weapons). As if in recompense for this, some new powers, which are more in tune with the Prime Material Plane, have been given to the greenhag (e.g., *pass without trace*, *speak with monsters*, etc.). A greenhag's lifespan is usually around 500 years (less than her mother's 1,000-year span because of the diluting effect of human or demi-human

blood).

2. A greenhag often makes her lair in an underwater cave, using her *water breathing* ability (which lasts for 27 turns, or 4½ hours) to dwell therein. If no suitable body of water is available, the lair is usually concealed (for example, screened by overhanging plants or shielded from view by a large boulder). Being a cowardly creature at heart, a greenhag will go to great lengths to prevent her lair from being found, often going so far as to enter and leave it only while *invisible*.

This innate cowardice also dictates the greenhag's favored methods of hunting: lying in wait while *invisible* or otherwise concealed, or using her mimicry — which is often coupled with her *change self* ability — to lure prey into an indefensible position (for example, into quicksand) or away from comrades. Although physically very powerful, the greenhag is a bully who often shuns a fair fight. If confronted by strong, determined opposition, she will flee. Conversely, if her prey is much weaker than she, a greenhag will cruelly "play" with it (in the same manner that a cat plays with a bird or mouse) before killing and eating it.

3. Although basically solitary creatures, greenhags sometimes deal with ogres and hill giants (usually those of lower intelligence who are easily dominated), trading baubles looted from their victims for infor-

mation, food, and protection as necessary. Quite frequently, greenhags also mate with smaller members of ogre or hill-giant tribes. Any male ogre or giant may father the greenhag's child.

After a seven-month gestation period, the greenhag gives birth to an annis. Like the greenhag, the newborn annis (which is always female) is similar in appearance to a large human infant, again except for skin color. At birth, the annis has 1 HD and can attack by bite only, doing 1d4 hp damage (no strength bonus). Her armor class from birth is 0. Like the greenhag, the annis infant has no spell-like powers, but can sometimes depend on her ogriish or giantish father to feed her for a brief while. The greenhag provides nothing for the baby annis, which the mother abandons at birth. The annis grows even more rapidly than the greenhag, reaching full maturity at the age of 12 months.

As the night hag's characteristics are diluted by breeding with a human or demi-human, so are the greenhag's characteristics weakened by the addition of ogriish or giantish blood. The annis's innate knowledge of language is even more imperfect, so her tongue becomes a further degeneration of the original night hag speech. The annis's resistance to punishment is decreased, and more of the night hag's powers have vanished. The annis's lifespan, too, is lessened, dropping to approximately double the lifespan of her father's race. Even the annis's alignment is changed from neutral evil to a more selfish, chaotic bent.

Apart from size, the only boon the annis receives from her father is increased strength. The annis's enhanced range of intelligence (to a maximum of exceptional) is a special case, resulting more from the recessive inheritance of night hag intelligence; the higher range of intelligence has skipped a generation. This throwback situation also explains the annis's return to the night hag's purity of complexion.

4. The annis shares her mother's bullying nature — although she is not as much of a coward — and will often be found amongst a tribe of non-humans if she can dominate them (usually by dominating the leader). An ogre or giant clan that includes an annis is generally more cunning and cruel in nature than the norm.

An annis will mate with an ogre or hill giant, if one can be found. Such a mating rarely (10%) results in live offspring. Although not strictly a mule, the annis is not a very fertile strain. When the annis does produce offspring, the infant is always the same race as the father, and always female. The only legacies of the mother are increased resilience (i.e., the offspring always has the maximum hit points for the species in question) and a bluish tinge to her complexion. All other characteristics are derived from the father. Unlike the night hag and greenhag, the annis usually succors the infant as would a female of the father's species. Ω

PSI WORLD™

ROLE PLAYING GAME OF PSIONIC POWERS

An exciting new role playing game in which characters use or deal with awesome psionic powers in a near future setting. PSI WORLD offers over seventy-five different skills, twenty-five psionic disciplines, and over ninety specific psionic abilities.

The Gamemaster chooses the nature of the near future society, and with the input of the players, selects the style for their campaign. There are two options:

- The Government has attempted to gain dictatorial powers and uses the Psis as scapegoats to distract public attention from the Government's illegal grab for power.
- The Psis are a true threat to democratic rule as they use their powers to gain unfair advantages in business, politics, and all aspects of daily life. Players take the roles of members of the Psi Police to protect the public from this psionic menace

Be a Psi and control awesome powers of the mind! Protect the innocent from those with great powers as a member of the Psi Police! The choice is yours. Seek adventure in this fast paced game of action and excitement in a near future setting. The only limits are your own imagination!

PSI WORLD includes complete and easily understandable rules, the PSI WORLD ADVENTURE with introductory adventures to get your campaign started, Gamemaster's Screen, and master character sheet suitable for photocopying. Everything needed to begin your PSI WORLD campaign is included in the boxed set. All of this is yours for only \$12.00.

Available from better shops or direct from Fantasy Games Unlimited at P.O. Box 182, Roslyn, New York 11576.

Please add \$2 for postage and handling. N.Y. residents please add sales tax.

THE ECOLOGY OF NIGHT HAGS

Begone, you hag who lurks in dreams, who drains our life through cries and screams. Gods bless this ward to keep me whole, and keep the night hag from my soul.

—Van Richter's Guide to Witches

Innumerable fears plague mortals, but among them fear of the dark, the intangible, and the unknown rank as some of the greatest. Hailing from the bleakest hells of the Outer Planes' endless infinities, countless creatures embody these most potent of fears. Among these extraplanar terrors, no one cruel breed so seeks to wreak horror and spread suffering as the nightmare queens of Hades, the sinister and hateful night hags. With a lust for power that rivals even the most ambitious devils combined with the hungry bloodlust of demons, night hags insatiably crave that which only the living provide. Commoner or prince, human or elf, all have reason to fear, as night hags hunger equally for the souls of all mortals.

Having preyed upon the living for countless centuries, warnings of night hags and their powers have become the stuff of superstitions and old wives' tales. Although little truth

remains in such country advice, many such tales find their basis in actual practices capable of warding off a night hag's predatory wrath. This article examines the nature of night hags, collecting an assortment of such rumors, legends, and advice, to best prepare those who would face these otherworldly horrors.

HISTORY OF NIGHT HAGS

For many extraplanar creatures, it is enough to say that they always were, and thus they are now. However, night hags are as ancient as any fiend, and their similarities to the hags of the Material Plane raises the peculiar question of their origins.

Many scholars speculate that night hags are merely planar relatives of normal hags; another breed, native to the Outer Planes, and different only in the same ways that annis hags differ from green hags or sea hags. However, the fearful abilities and cruel cunning of night hags make them seem like ideals of the hag race. Regardless of their origins, most of those who investigate the specifics of night hags are interested in a much different history: the countless stories and towering records of terrorized countries and lifeless villages that owe their ruin to these hag queens.

PHYSIOLOGY OF NIGHT HAGS

Even when compared to other hags, night hags appear as grotesque crones. Said to look like extraordinarily ugly human women, such a statement does an irreparable disservice to the gender of that species. Thus, a more apt description might compare them to small, female trolls; their skin ranging from a light purple-blue all the way to near black and blistered with the foul planar diseases they carry.

Nearly all night hags wear wild manes of coarse black hair with bones, severed fingers, and small trinkets woven into it in whatever manner they believe makes them appear most threatening. This grotesque coif often dangles over a night hag's face and much of her body, possibly hiding her rows of awkwardly protruding pointed teeth dripping with diseased saliva. Above, a pair of deep hollows veil hellish red pupils, little more than maddened pinpricks looking out over a sharply pointed nose.

To augment their fearsome appearances, night hags often cover their grotesquely emaciated bodies in self-inflicted tattoo-like scars. This sickly, tormented facade belies a night hag's significant strength and the threat of her wicked claws. However, many of a night hag's joints seem to bend in awkward ways, disturbing to mortal witnesses, which make them relatively slow and ungainly creatures.

NIGHT HAG KNOWLEDGE

A character might know something about night hags from stories or prior studies. The following table shows the results of a Knowledge (the planes) check as it relates to night hags.

Knowledge

(the planes)

DC	Result
10	Some foul creatures haunt the dreams of mortals, wearing them down with increasingly horrible nightmares that eventually kill.
15	Night hags are fearful beings from the Outer Planes, more powerful than other hags, that take the forms of mortals and hunger for the flesh and souls of innocent creatures.
20	Night hags are mistresses of nightmares that put their enemies to sleep and strangle them while unconscious. They are immune to many forces that affect mortals, such as fire and cold, and they never sleep.
25	Night hags are far different creatures from normal hags, with vast knowledge of forbidden secrets and the power to become ethereal. Fortunately, night hags are vulnerable to weapons of magic cold iron.
30	Night hags form alliances with a multitude of evil extraplanar creatures, know much of their ways, and afflict their enemies with the diseases of the lower planes. All night hags carry <i>heartstones</i> , which they need to become ethereal and which hold the power to cure any disease.

Night hags reproduce in a manner exceedingly foul to mortal minds, creating young to serve in their coveys or as servants. Using their *polymorph* spell-like ability to disguise themselves as mortal women, night hags seduce men into a meeting that as likely as not culminates in the males' deaths. After such a coupling, a night hag becomes pregnant for a length of time normal for women of her mate's species. At the end of this period, the night hag gives birth to a dark-haired female child otherwise indistinguishable from others of her mate's species. Having no concept of

maternal instincts, night hags always foster their children, usually to unsuspecting good-aligned creatures and even with the child's father if he still lives.

At any time between the child's first birthday and puberty, a night hag might return to perform a series of despoiling rites that culminates in the child's transformation into a normal night hag. The process begins with an initial visitation during which the night hag must engage her child in a foul ceremony for an uninterrupted hour. After this initial ritual, the night hag must return three times, each visit thirteen days after the

last. On these visits, the night hag must suckle the child and feed it the flesh of a living larva, a process that takes an hour. If any of these feedings are interrupted, or if the night hag can't access the child by the end of the proper day, the child cannot be transformed into a night hag. Otherwise, the end of the final feeding initiates a rapid and irreversible transformation, and within an hour the child becomes a full-grown night hag. Uncaring of their daughters but covetous of their uses, night hags often foster more children than they have any intention of transforming into full-blooded night hags, essentially keeping spare children littered across the planes should their plans require more servants or their current broods dwindle.

PSYCHOLOGY AND SOCIETY OF NIGHT HAGS

Naturally cruel beings, night hags obsess over dreams of power and endless feasts of mortal souls. They think nothing of other creatures except in how they relate to the night hags' desires. This leads night hags to relegate any creature less powerful than them to the position of either slave or meal, with slaves often merely serving as future meals. Night hags manipulate and bargain with creatures they don't believe they can defeat, in the hopes of extorting as much use as possible and perhaps leaving them vulnerable.

Night hags pay little respect to the concept of racial privilege and contend with others of their race in the same manner they deal with all other creatures, with strong night hags subjugating their weaker sisters. Night hags sometimes deal with the hags of the Material Plane but never as equals and always as masters. These extraplanar hags maintain a deeply rooted sense of superiority when it comes to normal hags and cruelly dominate either an individual or whole covey. Selfish and supercilious in the extreme, night hags rarely form coveys with their own kind and most assuredly never with lesser hags of the Material Plane. When a covey of night hags does form, it most often consists of a dominant night hag and two weaker night hags or even three night hags forced by a more powerful night hag to do her bidding.

These weaker night hags might be hags the leader subjugated or, more often, the dominant hag's own daughters. A covey of night hags has the same abilities of a covey of normal hags, as noted on page 144 of the *Monster Manual*.

NIGHT HAG LAIRS

Night hags most commonly inhabit the grim plane known as the Gray Waste of Hades, but their cruel ambitions cause them to roam far. Using portals, powerful magic items, and other planar connections, night hags often travel quite extensively and know much of the planes.

Only the most powerful night hags make lairs on their native planes, using legions of lesser fiends, extraplanar horrors, and their own daughters to carve out small personal empires. Weaker hags prefer nomadic existences in such infernal realms but more often haunt wooded ruins and lonely crags near secluded towns and villages on the Material Plane. A night hag's lair often consists of two lairs, one on the Material Plane and another on the Ethereal Plane. Using their *etherealness* ability to drag materials with them from the Material Plane, they construct simplistic towers of stone and iron—grim, hard edifices among the ghostly vapors. These terrible lairs are little more than planar prisons, holding captives a night hag particularly values or protecting her uncorrupted children during their crucial transformation period. Although these lairs might leave hostages victim to unpredictable planar dangers, night hags often delight in trapping their captives in the dual prisons of their grisly lair and the ghostly Ethereal Plane.

With the ability to shift from lair to lair using her *etherealness* spell-like ability, a night hag spends much of her time on the Ethereal Plane scheming and performing all manner of foul rites. A night hag would probably lair solely on the Ethereal Plane, rendering herself nearly undetectable to most hunters, if not for that plane's numerous threats. Between sporadic ether cyclones and the countless powerful creatures that lurk in that misty realm, the Material Plane sometimes offers a safer place to store possessions and captives.

NIGHT HAGS AND LARVAE

Night hags engage in a strange connection to the rare petitioners of Hades known as larva (see page 108 of the *Manual of the Planes*). The manifested souls of unquestionably evil creatures reborn as bloated, yellow, wormlike beings, the existence of these creatures presents one of the great mysteries of the planes. With distorted faces reminiscent of those they had in life, larvae ooze a sickening, bilious fluid and constantly writhe like giant, squirming maggots. Although the specifics of their use remain vague, night hags require these abominations to reproduce. Some night hags even gather and trade larvae to other powerful evil creatures, which use them as food, currency, and as "soul stuff" for unspeakable projects.

Night hags possess an uncanny ability to determine which mortals become larva upon their deaths and perhaps even know what foul deeds a soul must commit to damn it to eternity as a larva. Knowing that these irredeemably corrupt souls hold value among the most depraved creatures of the planes, night hags often seek out powerful evil individuals, either to slay them and claim the newly spawned larva or to corrupt their immortal beings into the abominations they covet. As creatures with more Hit Dice spawn more powerful larvae, night hags are an incessant threat to powerful evil creatures, especially to spellcasters who bargain with infernal powers.

From her strategically chosen lair, a night hag ventures into the homes of her victims nightly and with ease, afflicting one creature at a time, savoring its torment as its body weakens and dies. As a night hag's dream haunting can only affect chaotic or evil creatures, a night hag often preys first upon the outcasts of a settlement. Few become concerned when the criminals and rabble-rousers of their community die in their sleep—many even consider it a blessing—until the night hag's nocturnal assaults kill a notable person or someone considered innocent. Often, a community with a night hag lairing nearby believes some kind of plague resistant to all forms of natural and magical healing afflicts them. Such a belief might even cause a country to quarantine an area, effectively dooming it to a slow death at the claws of a voracious night hag. As some of the populace sickens and dies from the hag's dream haunting, even those who suspect

an otherworldly force can rarely hope to survive a combat against a night hag.

On the rare occasions a night hag is suspected or discovered, actually finding her lair presents a formidable challenge. Night hags prefer small, secluded caves, hollows, or ruins, choosing a lair both difficult to reach and that elicits fear from those who come near. Riddling the areas near their homes with magic traps and their servants, and with no need to sleep, night hags are rarely caught unaware. Night hags take great offense to intruders and often possess a variety of unique magic traps and weapons to deal with interlopers (see "By the Hands of Hags" in *DRAGON* #300).

VS. NIGHT HAGS

When facing a night hag, be prepared to face what might be the most dangerous and unrepentantly evil threat you could ever encounter. A night hag employs every advantage she commands and gladly makes even the most dire sacrifices to save her own life. Thus, extreme caution, devotion to your cause, and the blessings of whatever gods you pray to are the only things that might see you through.

Revealing Nightmares: Beings suffering from dream haunting gradually lose Constitution and often appear physically weaker. Although many diseases cause similar effects, night hags only haunt the dreams of chaotic and evil creatures, thus spells like *detect chaos* and *detect evil* might reveal a hag's potential victims. *True seeing* most definitively reveals the presence of a dream haunting night hag, however, as she lurks on the Ethereal Plane while terrorizing her victim.

Locate the Lair: Although a night hag most likely travels ethereally, the tracks of her allies or those she's captured might offer a hint about the creature's whereabouts. Once you locate it, a night hag's lair might be guarded by almost any threat culled from the mortal world or from the outer planes. Thus, divination spells and high Listen, Spot, and Search bonuses help protect you from any manner of attack.

Prepare for Etherealness: Upon encountering a night hag, you must

prepare to defend yourself from a creature capable of becoming ethereal. *Shield* spells and items like a *broach of shielding* defend against her ability to cast *magic missile* at will. *True seeing* helps immensely, both to locate the night hag on the Ethereal Plane and to detect her attempts to *polymorph* herself into another form and hide. Spells and magic items capable of ensnaring even ethereal creatures, such as *forcecage*, prove exceptionally useful.

However, the best way to face an ethereal night hag is confronting her on equal footing. This makes the ability to become ethereal, as per the *ethereal jaunt* or *etherealness* spell, exceptionally useful, although trapping a hag on the Material Plane, via *dimensional anchor* or *dimensional lock* spells or with *dimensional shackles*, could be an even more potent tactic.

The best way to deal with a night hag's *etherealness* is to take or destroy her *heartstone*. Without it a night hag loses her ability to become ethereal and bonuses to her saves.

Face Your Fears: Many novice hunters turn to the *dismissal* spell as a swift way of dispatching outsider threats—a method fraught with potential for failure when used against a night hag. The primary danger is that *dismissal* forces its target to make a Will save, which the night hag holds the highest chance of succeeding at. Also, even if the spell does work, it only returns the night hag to the Gray Wastes of Hades. Being immortal creatures with a penchant for hatred, cruelty, and revenge, a banished night hag often remembers those who slighted her and might spend the rest of eternity searching for whomever banished her to repay the slight.

Stay Grounded: Although night hags often use it to spy upon and retreat from hunters, their *etherealness* ability provides one of their most threatening attacks. Upon grappling a target, a night hag that shifts to the Ethereal Plane might trap an opponent there, potentially cutting him off from his allies. Knowing that sorcerers and wizards have the highest likelihood of detecting and harming them while ethereal, as well as having the least chance of resisting a full-on assault,

night hags watch for chances to ambush and slaughter spellcasters in this manner. Protect your spellcasters from this strategy by giving them a better chance at avoiding and resisting grapple attempts. Spells such as *blur*, *bull's strength*, *displacement*, and *grease* might help. Also, keep *scrolls of ethereal jaunt* or *scrolls of etherealness* on hand to allow other characters to come to the trapped character's rescue. You might even cast *dimensional anchor* on yourself and party members if you anticipate an encounter with a night hag.

Strike While the Iron is Cold: Only magic cold iron weapons ignore a night hag's damage reduction. Consider owning such a weapon or using the *magic weapon* spell on mundane cold iron.

Protect Hostages: Night hags often hold captives on the Ethereal Plane and use them as bargaining chips to manipulate hunters or others who care about the hostage's safety. Ruthless crones, night hags brook no insolence, and they swiftly shift to the Ethereal Plane to dispatch their prisoners, often taking several captives to allow them to easily make a gory example of one or more. In such cases, your primary concern should be keeping the night hag away from her hostages. The *dimensional anchor* and *forcecage* spells again prove useful, allowing the party to combat the hag without fearing for the safety of innocents.

Beware Waking Nightmares: Night hags often enlist the aid of the fiendish steeds known as nightmares, especially prizing half-fiend cauchemars. With the aid of a creature that is both a plane-shifting mount and a powerful ally in combat, night hags gain all the benefits of mounted combat and the ability to hide not just on the Ethereal Plane, but on any plane connected to the Astral Plane. Your best hopes rely on swiftly dispatching the night hag's nightmare or casting *dimensional anchor* upon either the mount or the rider to limit their planar mobility.

Deal with the Disease: Upon dispatching a night hag, liberally applied *Heal* checks and *cure disease* spells ward off the effects of demon fever. You should also watch for multiple afflictions contracted from the night hag's allies or traps, as they favor poisoned and diseased guardians. ■

The ecology of the Harpy

Songs of beauty. . .

by Barbara E. Curtis

"So . . . you seek something from me." The silver-haired sage chuckled to himself as he poured a cup of mulled wine for his guest. "It must be quite important, for I have very few visitors."

I don't doubt that, Colin thought, recall-

ing the long miles of barren wasteland he had crossed to reach the sage's dwelling. It had been hard going even for a ranger. "People from the Northlands say that you've studied animals and their behavior. I need some advice. Some strange creatures have made the main road into my village their home, and for the past three

months they've been attacking innocent travelers."

"Do you know what these creatures are called?" D'driand asked, his tone a bit more businesslike as he handed Colin the cup of wine and sat in the carved chair across from him.

"I think someone told me they were called harpies," the ranger said. "I've never actually seen one myself, but those few who have seen them and lived to tell of it after have said that a harpy has the face and upper body of a hideous woman, and the lower body and wings of a vulture."

"Those indeed sound like harpies, my friend," D'driand said. "Three months, you say? You might have more of a problem

than you've bargained for — they probably have claimed that area as their tribal land."

"Tribal land?"

"I had not heard that there were any harpies in the Northlands, but it's possible that they've moved north because their old hunting lands have become depleted," D'driand said, intertwining his fingers thoughtfully. "If the entire tribe has settled there, you have a definite cause for worry. An average tribe consists of fifty to two hundred members. They aren't very bright, but they're smart enough to realize there's safety in numbers."

"Not very encouraging," Colin grunted, staring into his cup. "How do you get rid of harpies?"

"Drive them away," D'driand replied. "It's not easy, but far easier than trying to kill them all off. At this point, you have one of two choices: move your village to a safer location, or show enough power that the harpies will flee. They aren't known for their bravery."

"But I think we're dealing with a very small tribe. I haven't heard of any group larger than a dozen."

"Tribes are rare," D'driand said, "but not unknown. Harpies usually exist in smaller packs, or 'screams,' and almost never hunt in groups larger than twelve. In cases of extreme necessity, however, harpies have been known to band together in small tribes. In fact, unless you had spent as much time as I have studying the harpies, you wouldn't even know they were tribal at all. Since their hunting grounds usually spread over a five- to ten-mile radius, no more than a dozen will ever be seen at one time. Their lairs are grouped together, but that's all."

"Would the village be part of their hunting grounds as well?" Colin asked.

"I'm not sure. Have any of the farmers in your area lost grazing animals?"

"Jarlath, a farmer right on the edge of the village, said that he lost about ten sheep last week."

D'driand nodded. "Just as I thought. Be careful of grazing animals as well. Harpies have voracious appetites and will eat just about anything. The road into your village probably has a lot of travelers on it daily, so it presents an almost constant supply of food. Men, women, children, beasts of burden — nothing is safe." D'driand stretched his feet out in front of him, sighed, and continued. "Harpies are strictly carnivores. Oh, I have heard that in times of famine harpies will eat vegetation, but only when meat has been unavailable for some time. They prefer fresh meat, especially that of humans, humanoids, and demi-humans. Elf is a particularly rare treat, for reasons I shall explain later. However, harpies could hardly be termed fussy eaters and will eat just about anything, including carrion."

"If they have such ravenous appetites and will attack anything to eat it, why don't they attack large groups?" Colin

asked. "We have caravans passing through on their way to Rhelmar by that road, but I've never heard of even one harpy attack on them."

"As I mentioned before, harpies are generally quite cowardly and won't get into a fight they don't believe they can win."

"But there are so many females," Colin said. "I've never heard of even *one* male harpy. Do harpies live forever and never need to reproduce?"

"The males look like females; the only difference between them are the actual biological functions of reproduction," D'driand explained, taking Colin's empty cup to refill it. "Despite the fact that all harpies have the appearance of breasts on their upper bodies, that is all it is: an appearance. Harpies do not nurse their young. Instead, young are fed in the same manner as are bird fledglings. Actual roles of males and females in the tribe are identical. Both hunt and both care for the fledglings. And harpies hardly live forever — perhaps twenty-five or thirty years at the most."

"How much bigger will a tribe become?"

"A healthy female becomes fertile by the age of two and may lay as many as twenty eggs in her lifetime, though only an average of three may live to maturity. Many of the eggs simply won't hatch. If a harpy is born with any obvious deformities, its parents kill it shortly after hatching. If there are more than one fledgling in the nest, the stronger of them always kills the weaker ones. The harpies see this as completely natural; the weak have no right to live. This works in the opposite way as well: when a harpy grows too old and feeble to hunt on its own, becomes crippled or sickly, or is in any other way incapable of taking care of itself for any period of time, other tribe members kill it, for it is a burden to the tribe." D'driand handed Colin the refilled cup. "If left to nature, a harpy tribe won't become significantly larger," he added as he sat down again.

"Well, I have a pretty good idea of what they are and why they have been attacking," Colin said, pushing aside a stray wisp of dark hair. "Here's the real question: *how* do they attack?"

"If they had been forced to rely on their teeth, claws, and wits, they never would have survived very long. Whatever evil caused the harpies to be created also saw to it that they were given a unique and terrible attack. A harpy has a song that would put all the birds of the world to shame — a song that makes listeners risk life and limb to find the creature that produces such a beautiful sound. Some do resist the charm, but not many. Once they are under the effect of the harpy's song, the victim seeks out the harpy that charmed him and stays under the effect even when he sees how ugly the harpy actually is. The victim won't actually engage in combat since he does not realize

what has happened, but he may try to persuade his companions that the harpy means them no harm."

"Can the charm be broken?"

"Yes; but there are only three ways I know of doing so," D'driand told him.

"First, if one of the victim's companions is unaffected by the spell, he might call out to the victim and try to convince him of the harpy's intent, though there is no guarantee that this will work. The second way is for a sorcerer or holy man to cast a spell to rid the victim of the charm or the magic that caused it. The last way is to kill the harpy itself."

"In case the song didn't work, or if the person has broken the song's charm, there is another way that a harpy can charm its victim. More powerful than the song, this way makes the victim see the harpy as a beloved friend worthy of his protection. It is a magical touch that sends a powerful charm through the victim."

"Can you use the same ways to break this type of charm as with the song-charm?"

"The only way to remove this type is to kill the harpy responsible, for this charm puts a stronger hold on the victim than the song does." D'driand picked up a fireplace poker and began to stir the glowing embers. "In this case, the person will physically try to defend the harpy and thwart any attempts to kill it, so this can be a major problem. If you plan on taking a group of people to defeat them, it would be to your benefit to take those with elven blood, for they have a natural resistance to the powers of the harpy. This is why harpies find them to be such a delicacy, for elves are difficult to charm and are therefore a rare treat."

"If a person is under the effect of the song-charm and is touched by a harpy, does this strengthen the spell it has over its victim?"

"No. The power isn't cumulative. The only way for a harpy to strengthen it to that point is to break the song-charm and then touch its victim. Harpies can break the charm immediately — all it takes is for it to physically attack its victim. However, it likes to wait until there is no one around to help its victim and no chance for the victim to escape once the charm has been released. It disarm its prey first, and once its victim is completely vulnerable, it attacks and gains an early advantage."

"If people have broken the charm once, can they do it again later?"

"Not exactly." D'driand replaced the poker and carefully placed another log on the fire. "However, those who have been taken by harpy charm and have broken it themselves seem to be more resistant to it in the future. People cannot be charmed by the same type of charm twice in one battle."

Colin nodded. "Good. I think I have a good idea of how to defeat them." The ranger suddenly looked sad and stared into his cup. "Would that it was not sooner."

More travelers' lives could have been saved. One thing was very odd. A few of us ventured to find some of the missing people; we found a few remains, but apparently none of their belongings were touched."

"That's very typical," D'driand said. "Harpies do not care for treasure for treasure's sake. What use is it to them? They take only one item from each victim back to their lairs as a memento of the kill, for having many items from victims is a sort of status symbol in harpy society."

"If you went to a lair of a harpy, you probably wouldn't find much of value. Most of their victims are wayward travelers and pilgrims — people who would not have much of value in the first place, perhaps a ring or a pouch of coins. Never would you find gold, platinum, jewels, and magical items of any worth or great power. There is no reason for a harpy to prefer a large gem over a tinderbox. A harpy might have dragged in for one reason or another. They aren't the cleanest of creatures."

The old man's gray eyes lit up as he rose to unlock an ornate wooden chest next to him. "I have something that might help you on your most laudable quest. It will help you far more than it will ever help me." He opened the lid and fumbled inside the chest, taking out curious objects that Colin longed to inspect but was polite

enough not to touch. D'driand stood and handed the young ranger a bone scroll case. Colin began to work the stopper from the top of the case, but the sage stopped him.

"Not yet," he warned. "Reading the scroll inside will protect you and your companions from the charms of the harpies — but take care! Time your reading well, for the scroll's power does not last forever."

"I'll do that," Colin said with a grin, stuffing the case into his pack. "I cannot tell you how much I appreciate your help, and how much my people will appreciate it. But I can't stay any longer — every minute I am away is another minute for the harpies to gain their hold." He slung the pack over one broad shoulder and handed the sage a small pouch of coins. D'driand walked with him in silence to the door. As the ranger disappeared into the light fog that had settled, he waved and called back, "I'll tell everyone what you've done for them. Good-bye, and thank you!"

The sage waved back, but his expression darkened as he turned back into his home. and walked to the parlor. Next to the hearth, a winged humanoid warmed its hands by the fire. It turned and eyed the sage suspiciously, and began to speak in a garbled tongue that was filled with bird cries and twisted human speech. "What did you tell the human about my people?" she asked.

"Doesn't matter," D'driand replied, answering pleasantly in the same odd language. "I gave him a scroll that will make him completely open to your charm, Thanata. Your feathered folk will be able to finish settling in as planned."

in the clearing looking about, swords out and uncertain. Then a soft, feminine call came from the tree above him, startling Melazzar to no end. He stood immobile as several of his fellows came towards the tree, peering about and calling wary greetings. Then the branches above danced as something large spread wings and glided out into the clearing; and Melazzar saw other things launch themselves from the trees about, angling down towards his comrades.

"Look out!" he yelled, then. "An attack! Brorim! Helmar! They attack from the air!" and he drew the knife from his belt. From the air above came shrieks of anger and a strange snarling, spitting speech — and hurled daggers that flashed in the moonlight as they struck down the luckless Brorim before Melazzar's eyes. Helmar was more fortunate; he got his blade up and got under a tree, and his attackers circled away. Across the clearing, however, one of the merchants — a fat man called Yhelger — was dragged into the air in the grip of two of the flying creatures; Melazzar saw with a shock that he seemed not to want to resist them. Further, he saw that these monsters had the faces and forms of women, with the wings, claws, and tails of birds!

There was a flash of light in the air above the clearing, and another, and Melazzar saw that the senior merchant in the caravan, Crommor the Theurgist, had arrived. The *pyrotechnics* was of his making, and before it the creatures shrieked and flapped away. Yhelger was carried aloft with them, although Crommor was gesturing and muttering like a madman. Before the merchant disappeared above the trees, a globe of radiance grew about him from nothingness to a calm, steady glow. "Follow that light!" Crommor roared. "Head for high ground!" Helmar, Melazzar, and all the others plunged into the trees, crashing through branches and waving their blades and staves.

They soon lost sight of Yhelger, and Crommor rather grimly called off the search. They buried Brorim and returned to the camp to find the fire low. Crommor said only, "You stay up until morning, boy. Helmar, stay with him and see he stays awake. If you hear those calls again, play on your harp loud, and sing, too — anything loud, mind; just make a noise!"

The calls did not come again that night, and in the morning Crommor said, "Now we seek their lair — we faced harpies last night, and Yhelger is a dead man by now. If we do not find the harpies now — and *beware* their touch! — they will follow us and attack by night, taking us a few at a time. Come on!"

The entire band left mounts and wagons and set off into the woods. Crommor directed them towards a row of rocky crags some miles away — for that, he said, is where their lair must be. And he was right; in a rift between Dark Crag and the next one, they found ten of the grotesque

... Songs of death

by Ed Greenwood

"A foul creature, the harp," Elminster said, drawing on his pipe, and made flapping motions with his hands to underline the pun. I groaned obediently (the things I do for the money!) and made sure the tape recorder was on. "It's also called the siren, you know," he added grandly.

"Oh, really?" I replied with feigned astonishment, and passed him the cookies. He took one, bit into it, and thus heartened, covered me with a fine spray of tiny chocolate chip cookie particles (thank goodness it wasn't chip dip) as he began the tale of the bard Melazzar and the harpies of Dark Crag. Here's an edited version (without the cookie spray):

Melazzar of Waterdeep, now old and respected, was once a young wanderer learning his minstrelry about the inns and taverns of the North. One fall, he was

traveling with a small caravan in the deep woods betwixt Silverymoon and Triboar, and during a late night around the campfire, he drank far too much and wandered off into the trees by himself, feeling very ill. He was leaning against a tree, sweating and feeling as if he might die, when he heard a soft, unearthly maiden's call from the darkness beyond. Melazaar was astonished and listened intently; it came again, and from the fire he heard some of his companions get up and come to investigate. He crouched very still behind a tree and watched four of his fellows go right past him — and was then very sick.

When he had recovered somewhat, he followed, for the curious, haunting calls continued — from farther off in the forest, it seemed. At length, the moonlight grew stronger ahead, and Melazzar saw that there was a small clearing. About it large creatures seemed to be perched in the trees — it was hard to see exactly what in the darkness — and his companions stood

creatures, and what was left of Yhelger. The creatures rose into the air with shrieks, but Crommor's magic and the hurled weapons of the caravaners felled six harpies, and the rest fled. So Melazzar first met harpies, and composed his first ballad, which is generally considered pretty bad — but this is not surprising, considering the difficulty of finding pretty rhymes for "Crommor" and "Yhelger."

When his tale was done, I questioned Elminster closely about harpies in hopes of passing on what I could to you, and this is the result.

Notes

1. Harpy songs draw prey as follows: All creatures who hear a single call are alerted to further calls; they strain to hear more, even if asleep. Such calls are typically audible up to 190' distant; wind and storm lessens or ends their effectiveness. Upon hearing a second such call, creatures must save vs. spells or proceed toward the origin of the call. Creatures who are prevented or restrained seek to win past such restrictions, though they are not "entranced." Any fighting that occurs angers an allured victim, but he listens to warnings; if he manages to investigate the calls further, he will be normally alert. Only one person can be affected by one harpy at any one time, for this is a bond that requires some concentration on the part of the harpy. If the victim breaks the *charm*, the harpy is free to *charm* another victim. Saving throws against the lure of harpy calls are made as follows:

- +6 if the allured character is a bard;
 - +5 if the character is affected by magical *fear* when the call is heard;
 - +4 if the character is experienced with harpies — having heard such calls before and found out the source;
 - +1 if the character has, within the last year, made a successful saving throw against a harpy-touch *charm*;
 - 1 if character has, within the last year, failed to save against a harpy-touch *charm*;
 - 3 if character is asleep or drowsy;
- and,
- 3 if character is warned about or has never heard of harpies.

All saving throw modifiers are cumulative. Note also that creatures under the influences of *feeblemind*, *stun*, *charm*, and *confusion* spells are immune to the effects of harpy calls. This is true also of some forms of insanity; although a kleptomaniac is affected by harpy calls as normal, a catatonic is immune to them. It is up to the DM to decide which forms of insanity and mental disorder are applicable.

If the save vs. spells is unsuccessful against the song-charm, the victim falls under the influence of the *charm* as described above. The victim won't directly aid the harpy, for the spell cannot create that strong a bond. A second save vs. spells at -4 may be given if one of the victim's companions, not affected by the

charm, tries to convince the victim of the harpy's intent. This can only be done once per individual affected. A *remove charm* or *dispel magic* also work.

Bards instantly realize a harpy call for what it is. A bard may have some suspicions if he has never heard the call before, since it is easy for the bard to distinguish it from human singing or calling. As a result, the bard still maintains his resistance to the call. The musical playing and singing of a bard of any level negates the charming powers of a harpy call for all who are within hearing range of the bard. Any skilled singer can vocally negate harpy calls with a 25% chance of success, since sheer volume is often enough to negate these effects. Such chances of success increase by 5% for each previous occasion upon which the singer has successfully offset the effects of a harpy's call.

In a like manner, the playing of a *lyre of building*, the legendary *Heward's mystical organ*, or any instrument of the bards offsets harpy calls (the player need not be a bard in such instances). Thunderclaps or sounds of battle similarly disrupt the lure of harpy calls, as does the deliberate use of items such as a *chime of opening*, any magical *biwa* or bell, a *ring of human influence*, *staff of command*, *rod of beguiling*, or *rod of rulership*. None of these items, however, prevent *charm* effects from a harpy's touch. A *ring of contrari-*

ness prevents both the lure and the *charm* of a harpy's call from taking effect; a *wand of enemy detection* reveals calling harpies or harpies attempting to *charm* characters by touch. *Oil of disenchantment* breaks a harpy *charm*, but it won't prevent the lure of harpy calls.

Beings who are deafened, comatose, or in a deep sleep or trance are immune to the lure of harpy calls; as previously mentioned, beings already under a *charm* or hypnotic *suggestion* are similarly unaffected. A harpy touch *charm* breaks such existing *charms* or suggestions, but won't be useful in charming the character after that point. Nevertheless, a harpy is allowed a subsequent *charm* attempt in such cases. Use of a *ventriloquism* spell or a *potion of ventriloquism* gives a character capable of imitating a harpy call a 70% chance per round to offset harpy calls by making counter-calls in the opposite direction. This tactic always brings bewildered and furious harpies to investigate. A *silence* spell also prevents the effects of a harpy song-*charm*. Note: harpies are themselves immune to bardic or other magical, musical *charms* or *suggestions*, and their own ability to *charm* gives them a 90% magic resistance to *charm* spells cast upon them.

2. Harpies can cast *charm monster* by touch; this is an act of will and of limited natural magic, and is usable without limi-

SOME REFUSE TO DIE in the AFTERMATH!

AFTERMATH! is a role playing excursion into a post holocaust world for 2 to 6 players and a referee in search of a different kind of adventure.

- Basic Rules book with multiple examples of play
- Players Handbook detailing character generation, equipment, and life after the Ruin
- Referee's Handbook detailing construction of the environment and running the game

AFTERMATH! provides for modern firearms, NBC weapons and protections, mutations, survival, high technology and more. The game is structured to allow the referee to decide the nature of the holocaust that destroyed civilization in the world in which play will occur. The boxed set also includes an introductory adventure, character sheet, and judge's screen with the three volumes of rules. AFTERMATH! is a step forward in the art of role playing games.

tation. Touch-charm is more powerful than a song-charm, and is therefore much more difficult to accomplish. For a touch-charm to be successful, the harpy must get a firm hold on the intended victim — in other words, it must score a hit on the victim two points over the required “to hit” number. No damage is taken when the intent is to use a touch-charm, and a harpy may make no other attacks or actions while the *charm* is being attempted. All target creatures are allowed a save vs. spells to avoid *charm* effects by touch, and any creature that saves against or throws off a harpy’s *charm* becomes immune to all subsequent *charm* attempts (whether by the same harpy or another) for 6-9 turns, as a harpy’s *charm* cannot affect an aware, excited, and opposed will.

Harpies typically *charm* prey and get such prey to freely allow the harpies to carry them off to the harpy lair — typically along a circuitous route, involving short “hops” made at low altitudes, so that observers won’t be able to follow the harpies to their lair. Once a *charmed* victim is in the lair, the harpy disarm him of all obvious weapons, and there is a 50% chance that it also searches for concealed weapons or other items and removes them as well. Other *charmed* victims, if any are around while this is going on, remain oblivious to the situation. Remember that the *charm* is broken once any harpy makes a physical attack upon the victim. If a person under the touch-charm of a harpy is carried bodily away by his companions before the *charm* is broken, he attempts to escape at the first opportunity to find the harpy again. The only way to remove this type of *charm* is by killing the harpy that touched the victim. If the spell is not broken, it wears off after one week.

Favorite prey among harpies include shepherds or herdsmen: once the handlers are taken care of, the livestock become easy, plentiful prey. Such disappearances are often blamed on bandits or raiding brigands; as a result, searchers and posses never expect to find the harpies actually responsible. Only when the prey is safely in the lair will a harpy attack and torture it, thus breaking the *charm*. Harpies are exceedingly cruel and enjoy inflicting pain, but many activities described as torture by survivors and observers are actually used as training lessons for harpy chicks. Under the guidance of their elders, chicks are taught the various attacks and hunting techniques employed by their species. For example, a favorite tactic demonstrated to chicks to teach them cooperation is the slaying of prey between two harpies, lifting it into midair and pulling it apart by flying in opposite directions. Other tactics include dropping rocks from above while flying and raking prey with weapons captured from earlier prey as they pass over the victim. Large or especially powerful prey is often carried to the lair under the effects of the *charm* and dropped onto the rocks below, to disable the creature

before the harpy moves to close combat for its final attacks.

3. In battle, harpies often plummet and rake with their claws, but prefer to drop rocks or hurl weapons at their victims from a safe distance. A harpy lights upon its prey and bites only when the prey appears disabled or weak. A harpy bite does 1-6 hp damage; if a wound causes 2 + hp damage, it has a 3% chance of passing on a blood, cardiovascular-renal, or connective-tissue disease of an acute, severe nature (see the *DMG*, pages 13-14). Contact with harpy filth carries a 6% chance of contracting a parasitic infestation (see the *DMG*, pages 13-14). Harpies befool only what they cannot take back to their lair; they are sloppy, filthy creatures, but they do not deliberately foul their own lairs.

Harpies always try to cripple the wings of flying prey before making other attacks (they have no desire to fight an aerial creature on equal terms), and usually screech warnings and instructions to each other during battle, secure in the knowledge that their language is obscure and difficult to translate. Harpies are dangerous carnivores, but they are essentially cowards. Many potential victims have escaped their clutches by scaring the harpies with displays of magic or a show of superior force. Harpies overcome this innate cowardice by hunting in packs known as “screams,” which number from 2-12 harpies. From this hunting pack, the phrase “a scream of harpies” has been derived. Harpies have poor infravision (4”) and only slightly better ultravision (6”); in daylight, their sight is equal to that of a man, although they notice movements on the ground much more keenly when aloft.

4. Within a scream, female harpies lay eggs if their numbers ever fall to four or less. Within larger tribes, harpies pair off normally, laying eggs when the tribe decreases to fifty or less. If too many young result during hatching, the weaker harpies are slain by the other members of the scream or tribe. When strengthening the numbers of the scream or tribe, harpies lay 1-3 eggs each, once every 40 days. Only 30% of the freshly laid eggs are fertile; these eggs must be sat on to keep them warm (a task shared in rotation by all of the adult members of the scream) for 11-20 days before they hatch. Eggs that do not hatch after a month are devoured by the members of the scream. Young harpies are born with 1+1 HD, no ability to *charm*, attacks of 1/1/1-2 hp damage; and are unable to fly. The young are defended with great ferocity by their parents and are seldom molested by the rest of the scream unless they appear deformed. When harpy young are present, the scream hunts almost endlessly so that the chicks can grow rapidly and assist the scream in hunting. A chick grows to its full size and capacity of attacks, and develops skill in its use of song and power to hold prey under the influence of its

charm, in 1d4 + 14 days. A month after its birth, the harpy gains the ability to *charm* by touch. When the young harpy finally learns to fly (a process that takes an additional week or so and is characterized by a comical series of hops and tumbles about the lair), it makes its first venture out of the lair. A harpy can always make at least a few short flying hops before it ever leaves the safety of the lair. Harpies are clumsy fliers at best, since their flight is often a matter of heavy flapping, short swoops, and quick exhaustion if forced to fly long distances. Harpies possess maneuverability class C. Young female harpies are able to lay eggs of their own after they are two years of age, and are known to live up to 60 winters in extreme cases, although their dangerous lifestyle usually warrants a longevity of 12 to 20 years. If a scream grows to more than a dozen, the group breaks into two or more units. In these circumstances, the newly formed scream only remains within the territory of the former scream if both are a part of a larger tribe. Otherwise, the weaker scream is driven from the territory to establish its own lair.

5. A harpy lair is frequently found in a chasm, in a series of caves, or in a set of ruins. When establishing a lair, harpies seek a large, sheltered area that is safe from the molestation of men, yet within range of a well-stocked supply of food. The area is usually situated so that it is nearly impossible for prey to escape from it on foot. Also, the lair is usually large enough to allow harpies to fly about inside it and has rock ledges, projections, or tree limbs to provide a perch for each member of a scream or tribe. Harpies tend to stay in the same general area (a circle approximately 30 miles in diameter or a coastal strip approximately 60 miles in length) and learn the lay of the region and its natural features so they can utilize the structure of the land to ambush prey and to escape and hide within in case of trouble.

A harpy lair is strewn with the bones of harpy prey — all sorts of creatures ranging from livestock down to large rats, although smaller prey is uncommon due to the harpy’s poor sight and limited dexterity. Medium-sized creatures are a harpy’s favorite prey because they are easy enough to *charm* and carry, and because they provide a reasonably filling meal. The discarded treasure of such prey (excluding weapons) are often strewn about the floor of the lair, for harpies have no use for what they cannot eat. Some harpies, however, have come to realize that the presence of large quantities of shiny metals draw more humans and demi-humans to their lairs, and thus use the materials as bait with which to trap the victim. Harpies cannot easily grasp or carry individual coins, or anything smaller than a chest, staff, or statuette. They are fairly adept at plucking at and snagging leather purses, straps, baldrics, and-the like as they flap past.

THE ECOLOGY OF THE HIPPOCAMPUS

Kidnapped!

Captivity can form
bonds the captors
never anticipate.

on't dance with the mop, you lame dog!"

The knotted end of the colt lashed across Melchoir's back as he bent harder into his work. He wondered again what had happened to his treasure map, the precious map that was to have changed his life. It didn't matter now. Instead of finding safe passage on a reputable ship, he had fallen prey to Captain Baccar and his hard ruffians, kidnapped to serve for the voyage, ultimately to be sold into slavery in the Delta Towns. His map, his freedom, and his future were lost forever.

by
Margaret S. Lundock
& Ramsey Lundock

Melchoir didn't look up from his work as the whistle sounded from the crow's nest. He didn't stop the steady stroke of his mop as the sails were furled and the ship hove to. He didn't think beyond the swish-plop of his mop as the crew pulled out the nets and threw them out into the dark green sea. Already he was sinking into slave mentality. He did what he was told, and he kept doing it until ordered otherwise.

"You! Leave off there. Spread this overboard."

Melchoir dropped his mop and took the basket of mixed greens and corn.¹ His stomach growled as he threw the succulent vegetables onto the rolling swells of the bottomless ocean. At last the basket was empty. Melchoir turned it over and sat down. They'd find

something for him to do soon enough, but no one yelled at him to return to work, and no colt lashed his back.

The ship fell quiet as the crew peered overboard. For over half an hour there was no activity aboard as the ship rocked quietly on the vast ocean. Gradually, Melchoir lapsed into sleep.

A collective gasp from the crew awoke him. Hushed footsteps hurried across the deck. With an ear-splitting screech, the ropes of the nets were hauled up through the pulleys as the entire crew heaved with all their might.

"Grab a rope, boy, and pull!" an old salt yelled as Melchoir bolted to his feet.

Melchoir grabbed a rope and heaved.

A cheer rose from the crew, and Melchoir saw their catch. Two powerful tails whipped and thrashed against the net.

1. Hippocampi are herbivores. Their natural diet consists of various types of seaweed and kelp. Obtaining salt in their diet is not a problem, as they can draw on the sea water. Other minerals are ingested by chewing on coral reefs and underwater limestone formations. Fresh water hippocampi eat

water hyacinths, reeds, and water grasses. Hippocampi have epicurean tastes and are always tempted by new and different foods. They enjoy corn, alfalfa, lush greens, apples, carrots, and most grains.

illustrated by
Scott & Teresa Fischer

They were not the rubbery smooth tails of dolphins or sharks, but scaled tails like those of a bony fish, with delicate, almost transparent tail fins.² The dorsal fin was the same way: rainbowed like a silken veil in the sunlight. Round about the dorsal fin, the scales gave way to fine hair, strong shoulders, and a long neck crested with another lacy fin, held erect by thin spines. The neck tapered to the finely chiseled head of a horse. There before Melchoir, thrashing in the net, was a hippocampus mare and her foal.³ They shimmered in the afternoon sun, the mare pale as foam, the foal dark green.⁴

"Haul 'em over the deck—hurry before she breaks loose! Assemble the tank!" Baccar ordered. The old Captain's gravelly voice matched his grizzled chin and weather-worn face. "Do you see any scouts or other mares?"⁵ he yelled up at the crow's nest.

"All clear!" came the answer.

"Keep your eyes peeled. If you see any, we'll set sail before they mass. If you see any sign of tritons, sound the alarm!"⁶

The crew swung the net over the rail and dropped it unceremoniously onto the deck. Already the mare had chewed a large hole in the netting. As the net fell away, the hippocampi struggled, their tails whipping frantically. But it was no good; the delicate fins at the ends of their front legs were much too fragile to support them on dry land.⁷ At last, exhausted and defeated, the mare

stopped her battle. Her sides heaved with the unfamiliar task of breathing air.⁸ Sweat mixed with sea water dripped from her hair and scales. She curled her long tail about her foal and glared with sullen rage at her captors.

"Get the winch rigged. How's the tank coming?" Baccar barked.

"We're almost ready to start pumping," one of the crew yelled as he fought to jam the top plank into the iron corner support. Beside him another sailor caulked the tight seams between the dovetailed planks.

The crew rigged a winch on a yardarm and manned the pumps, filling the tank. Now came the task of easing the rope around the mare so she could be hoisted over the tank.

"Boy! Get these straps around her flanks!" rang the soprano voice of Vanan, the ship's

second-in-command. Few people made the mistake of making fun of the slender man's voice. No one survived to do it a second time.

Vanan threw the strapping at Melchoir to the chortles of the men. As the sailors sat back to enjoy the fun, Melchoir gathered them up. Talking softly and moving slowly, he eased toward the mare's chest. He had heard that hippocampi could bite and butt viciously.⁹ The mare certainly wasn't going to ram him as she floundered on the deck, but her teeth were bared and her ears flattened. Melchoir tried to stay well back from the head as he eased toward the mare's side. Suddenly, a lightning-quick tail slap sent him flying to the deck in front of the mare.

2. Hippocampi are a hybrid species combining elements of mammals and fish. Their scales, tails, and fins are fishlike, not dolphinlike. Hippocampi regulate their body temperatures to a large degree but not entirely. They lay eggs but suckle their young. They can breathe air or water.

3. Hippocampi live in pods that usually contain one to three mature stallions, eight to twenty mares, and unweaned foals numbering about three-quarters the number of mares. The pod generally stays together, though there are exceptions, such as mares that stay in one place to protect eggs or hippocampi that are lured away from the pod by curiosity or tempting morsels of food.

The mares are in charge of caring for the young, and they lay one egg at a time. Twins are extremely rare, occurring about 1% of the time. If twins are hatched, either from two eggs or from a double-yolked egg, there is only a 10% chance of both surviving unless there is another nursing mare available to care for one of the foals. Hippocampi young are called foals in general, though males are called colts and females fillies.

A mare will lay her egg in a protected grotto and stay in the vicinity to guard the egg, much like a mother alligator. When the egg hatches after a five-month incubation period, the mare cares for the foal

for twelve months, slightly longer than a horse.

4. The colors of the hippocampi are as varied as the hues of the ocean, ranging from the sea-foam white of waves to the azure blue of reefs to the midnight green of the open sea.

5. Hippocampi are intelligent and therefore have a social structure that is more complex than a herd of horses. The stallions in a pod come to an understanding through custom and ritual as to who is the leader. The other stallions perform ancillary tasks such as scouting for food or enemies. Each stallion has a harem, though lead stallions generally have the largest harem. Once a mare chooses to enter a harem, she will usually stay with that stallion for life. If she wishes to leave the harem, she must go through certain formalities and rituals.

6. Hippocampi are often domesticated by tritons, though domesticated is perhaps the wrong word. Their relationship is more one of mutual cooperation and alliance. Hippocampi allied with tritons usually lay their eggs in the lower chambers of the tritons' castle. The eggs are guarded by the tritons and their minions vigilantly.

7. Hippocampi are strictly water animals. The delicate fins on the ends of their front legs, unlike the leathery fins of seals and sea turtles, cannot support their weight. The fragile membranes of the fins are

easily torn on dry land.

8. Breathing air is laborious for hippocampi because they are used to filtering water for their oxygen, but they can breathe air for extended periods. A hippocampus's biggest problems on land are dehydration and overheating. For every hour a hippocampus spends on land, add a +1 penalty to its Armor Class. After 5 hours out of the water, they are defenseless and can be hit automatically. Once they are back in enough water to cover them and allow them to regain buoyancy, their Armor Class returns to 5.

9. In the wild, a hippocampus's first instinct is to flee danger. They are extremely fast and can outswim all their natural enemies, which include sharks, killer whales, and squid. If they must fight, their main weapons are their teeth and their ramming attack. A hippocampus bite inflicts 1d4 points of damage, and they are strong enough to break bones or sever fingers.

Ramming attacks inflict 1d8 points of damage and are capable of stunning victims or breaking bones.

Hippocampi have two attacks per round, which can consist of bites, ramming attacks, or a combination of both. A victim of a successful head butt must make a successful saving throw vs. paralysis at a +2 bonus or be stunned for 1d3 rounds.

Her head snaked out, teeth flashing. Melchoir scrambled away, but not before the mare's teeth sank into his calf, crushing the muscle before he kicked himself free.

Melchoir grabbed his leg in agony. Released from the drag of the water, the mare's tail whipped and lashed as she glared at him.¹⁰

The crew hooted, well pleased with their entertainment.

"Help him out, men!" Vanan sneered.

With gleeful brutality the crew jumped on the mare and wrestled the straps under her girth and flanks. Each time her tail sent a hapless victim flying across the deck, jeering laughter erupted from the crew.

As the mare was hoisted toward the now-filled tank, a pair of sailors laid hold of the foal and dragged him to join his mother.

Melchoir hobbled back as best he could on his sore leg. He gazed in wonder at the beautiful creatures.

"Quit gawkin', you lame dog," Baccar barked, cuffing Melchoir on the back of the head with a calloused hand. "They're your charge now, and you'd best take damned good care of 'em."

From that moment, Melchoir's every waking minute was devoted to the hippocampi. The tank was cramped and shallow, barely twelve feet square and five feet deep, and the two animals dirtied it quickly. In the heat of the day, the water grew uncomfortably hot for them, so Melchoir was almost constantly pumping water into or out of the tank. He found some sail canvas to shade them from the afternoon sun, which burned their skin and dried their scales. Instead of the delicacies used to lure them into the net, he was allowed to feed them only dried seaweed. While he tended them, the mare watched him—and she watched as the crew kicked and beat him.

For what seemed the hundredth time that day, Melchoir attached the pump to

release the soiled water before pumping fresh, cool water in.

"Can't you keep that tank cleaner? It has the entire aft deck smelling like rotten kelp." Vanan shoved him against the tank.

"Maybe if you gave them a decent sized tank, I could." Melchoir spoke before thinking and immediately regretted it.

Vanana grabbed him and slammed him against the tank. His watery blue eyes blazed. "You sorry little maggot! You just made your last mistake, you..."

There was a whistling splash as the mare's tail smacked against Vanan's face, sending him flying to the deck. He rose, red-faced and screaming. Drawing his dagger, he charged at Melchoir. The mare wrapped her tail around the lad and barred her teeth at the attacking man.

Baccar stormed between Vanan and his victim, his own dagger shining in the sun. "You harm one scale on that mare, and I'll take it out of your hide!"

"But the boy... Let me kill the boy!" Vanan sputtered in hysterical rage.

"Go ahead," Baccar shrugged. "But if you kill him, you'll have to tend our catch."

Vanana hesitated. Tremors ran through his body as he fought to control his anger.

A cruel smile curled his lips. "All right then, but when we make port, sell him to Quando."

"Suit yourself. Quando pays as good as any dealer."

"And you!" Vanan pointed his dagger at the mare, while he rubbed his red, swollen cheek. "I'll see you go to some rich idiot who'll dye you purple and put you in a bubble bath to amuse his mistress!"

"Don't waste your breath. She can't understand you."

"Oh yes she can," Melchoir thought, this time remembering to keep his thoughts to himself. He stroked the

mare's face. She stared back at him, her eyes mirroring his own hopelessness.¹¹

Suddenly the foal popped his head out of the water and lobbed a glob of seaweed at Melchoir.

"Oh no you don't, you little snip!" Melchoir laughed as he pulled the seaweed out of his limp, brown hair and lobbed it back at the colt.

As with all children, even in the worst circumstances, the foal managed to find ways to play with his new friend, splashing Melchoir with his tail and flinging wads of seaweed back and forth to him.¹²

For several more days the crew set out the nets and spread the delicacies in the water, but there were no more bites. Finally, Baccar announced that the next day they would set sail for the Delta Towns.

Melchoir lay awake in his hammock that night, unable to sleep as he thought of the fate of the hippocampi. His own slavery was nothing compared to the lives of confined suffering that lay ahead for the mare and foal. He could do nothing to free the mare. Even if he could muscle her out of the tank, he couldn't heave her to the railing and overboard. The pulleys and winches were much too noisy to use. He could not save the mare, but he might be able to save the foal. At least, he had to try.

It was a moonless night, and Melchoir slipped easily past the dozing sailors on watch to the tank on the aft deck. Quietly he reached into the tank and stroked the mare gently to wake her. She did not start but rather lifted her head silently above the surface. Her eyes, used to the dark depths of the ocean, focused easily on Melchoir.¹³ He pointed to the sleeping foal and pretended to pick something up, then pantomimed as it plopped on the deck and he started dragging it toward the rail. The mare cocked her head in confusion. Melchoir pointed to himself, then to the foal and repeated his pantomime. The

10. On dry land a hippocampus's tail becomes a deadly weapon, inflicting 1d8 points of damage. Land-bound hippocampi have two attacks per round, which can include bites, tail swings, or one of each. A victim of a tail slap must make a successful saving throw vs. paralyzation or be stunned for 1d3 rounds.

11. Wild hippocampi have little contact with terrestrial species, so few of them speak terrestrial

languages. They have a distinct language of their own and might also understand the languages of tritons, mermen, locathah, and sea elves. Hippocampi that have prolonged contact with terrestrial beings, either willingly or forcibly, learn to understand and speak those languages.

12. Hippocampi develop quickly in the first two years. Four- to five-month old hippocampi have the mentality of ten-year-old children. By the time they

are ten to eleven months old, hippocampi have matured physically and mentally to the equivalent of sixteen-year-old humans. At the age of two, they are equivalent to twenty- or twenty-five-year-old humans. Hippocampi live to be approximately fifty years old. From the age of two onward, they have the mentality of adults.

13. Hippocampi have infravision to a range of 90 yards.

mare nodded in understanding. The contradictory emotions of fear and hope for her foal clouded her face. At length she nodded with resolve.

Gently the mare nuzzled her foal to waken him. As she talked to him quietly in their language of murmured nickers and squeaks,¹⁴ the foal's eyes filled with terror. He wrapped his tail about his mother, clinging to her side. Melchoir rubbed the foal's back and tail as the mare continued to nicker in low reassuring tones. They all realized the young foal's chances of making it back to his home pod were slim. The ocean was filled with sharks, squids, and serpents, always on the prowl for young untended hippocampi.¹⁵ Still, it was his only chance at freedom.

Slowly the foal's fear diminished and his determination grew. With a final squeeze and nuzzle, the foal turned away from its mother and floated to the side of the tank. The mare swam beneath him, lifting the foal out of the water to the edge of the tank. As gently and quietly as possible, Melchoir rolled the foal out onto the deck. He staggered under the weight, and the foal landed with a thud on the deck.¹⁶

Melchoir heard some movement and a few grumbles on the foredeck. With renewed urgency he grabbed the foal's tail and began to drag him toward the rail. The foal pushed and heaved with his front legs, ripping and bloodying his delicate fins on the rough deck.

Angry shouts erupted from the sailors on watch as they leapt to their feet and ran toward the aft deck. Melchoir redoubled his efforts, frantically pulling the colt to the edge of the deck. He dropped

the tail over the side, then repositioned himself against the foal's chest, pushing with all his might.

The first sailor came charging by the tank

toward the escaping foal. With a mighty smack the mare's tail whipped through the night air, slamming into the sailor, sending him flying back onto the deck where he lay still, not to rise again.

Melchoir gathered the last of his strength, gave a final heave, and sent the foal overboard just beyond the grabbing hands of the crew. Water splashed up onto the deck as the foal gave a triumphant call of freedom. The grasping hands of the crew became pummeling

fists on Melchoir's head, beating him into dark unconsciousness.

When Melchoir came to, he found himself chained to the mainmast. Sweat rolled off him as he lay baking in the afternoon sun. His dry throat burned with each attempt to swallow, and his bruised body ached from his beating.

"So you're awake, you scurvy little bilge rat!" Baccar spat, as he heaved his boot into Melchoir's side with brutal force. "Do you know how much you cost me?!"

"Take it out of the treasure you stole from me," Melchoir said sullenly.

Baccar let loose a jeering laugh that rained down on Melchoir with a wave of stale grog and rotten teeth. "There was never any treasure you fool. I knew that the moment I saw the map."

"But I got it off an old sailor who was dying. He said it wouldn't do him any good. He traded it for the price of a hot meal and a few nights in a..."

"A comfortable inn where he could rest his old bones and die in peace. That was old One-Eyed Willy. He's been hoodwinking landlubbers for ten years. The old sea dog will probably outlive us all!"

"If you knew it was fake, why did you steal it from me?"

"I didn't know it was one of Willy's until I saw it. There are a few real treasures out there, you know. But it was a fake! You're too scrawny to be worth the food to keep you alive until we reach port, and now you turned our prize catch loose!" Baccar punctuated his sentence with another kick.

"That foal was worth twice what the mare'll bring, fifty times more than you'd be worth on your best day." Baccar shook his head. "The old fortune

14. The hippocampus language is designed to be intelligible under or above water. It combines whale-like squeaks with horselike nickers and whinnies.

15. The wild hippocampus's natural enemies are all large aquatic carnivores. Young hippocampi are protected by the pod. If the predator can't be outrun,

the pod forms a ring around the immature hippocampi to protect them.

16. Hippocampi have a hatching weight of approximately 90 pounds, slightly smaller than the birth weights of horses. They have 1 Hit Die at birth. They grow quickly, reaching 800 pounds at a year

old, when they gain a second Hit Die. At two years of age, hippocampi average about 1,000 pounds and have 3 HD. By the time they reach 3-4 years of age, hippocampi reach mature weight. Stallions average 1,400 pounds and mares average 1,200 pounds. Adult hippocampi in their prime have 4 Hit Dice.

teller at the Fiddling Crab was right. We must have set sail under a bad star. Best to be done with this voyage and start fresh. And you know what else the old hag said?" Baccar leaned close to Melchoir, staring at him with hateful, blood-shot eyes.

Melchoir shook his head meekly.

"She said to be done with whatever I brought on board this voyage, to cast it off and not try to make port with it. Have you ever heard of keel-hauling?"

Despite the hot afternoon sun, Melchoir shivered at the words. He had indeed heard of keel-hauling. He could already imagine the water covering his head as he was dragged around the barnacle-covered hull of the ship, trying not to gasp from pain as the razor sharp shells shredded his back.

Crewmen gleefully threw two ropes overboard and worked them around the hull of the ship. With a cheer, the crew unchained Melchoir and dragged him from the mainmast to the railing. They grabbed his wrists and tied them with the ropes that ran around the hull of the ship. His ankles were tied to two more ropes coiled on deck. Members of the crew argued over who would get to heave at the wrist ropes and who'd hold snug the ankle ropes until the keel-hauling sounded more like a tug of war.

Melchoir shuddered, unable to stand, unable to move, unable to resist. His eyes darted about in desperation until they caught sight of the mare. She had raised herself as high as she could in her tank. She met his gaze with one that mirrored his own horror, but which also thanked him again for saving her child. In that moment he realized that what he had done the night before was worth more than all the treasure he had hoped to find. He had wanted to be recognized, remembered as someone special. Now he would be remembered, if only by a hippocampus and her foal.

Melchoir straightened, prepared to take his last few breaths in this life. As the crew heaved him over the side, the mare gave an ear splitting, trumpeting call.

Melchoir dangled upside-down against the ship, the ropes on his wrists were jerked with such force that his joints popped and ached. He heard the cheers and laughter on deck as the men on the ankle ropes slowly fed them out, holding him tight against the ship as he started the torturous trip around the hull.

There came another call from the mare on board ship. Melchoir took one final gasp of air as he was pulled under the water. The sea bubbled and churned around him, he felt tugging at the ropes binding his wrists and ankles, and they went limp. A strong back rose up underneath him, carrying him up toward the surface. As the water parted from his face, Melchoir took a deep, grateful breath. Above him on board he heard the voices of the crew rising in confusion and panic. He heard the mare call once more. The ocean's surface erupted as all about him scores of hippocampi breached, answering her call in a thunderous chorus.¹⁷

The enraged beasts circled the ship, slapping it with their tails, ramming it with their heads.

Off by himself, a hippocampus in deep concentration rode the rising swells. He raised his head and called to the sky. It answered with a great peel of thunder as storm clouds built over the ship. With a wave of his foreleg he commanded the lightning, sending a crackling bolt into the main mast. The wood split and creaked. The mast swayed, snapping the riggings and ripping the sails as it crashed over the side of the ship. The hippocampus then raised his tail in a circling motion. In concert, a huge wave smashed against the side of the ship.¹⁸

Melchoir could hear the voices of the crew. They rose in a crescendo from shouts to frantic screams as the crew felt the ship shaking and grinding beneath them, breaking apart under the sustained attack. Echoes of insane rage fringed the shrieks of the doomed crew. Melchoir thought of the mare still trapped in the tank, helpless and alone, vulnerable to the crew's hysteria. He fought through the foaming water to the

side of the ship. Grabbing a rope left dangling over the side, he hauled himself up, spurred on by his fear for the mare.

Melchoir pulled himself over the side in time to see the crew picking up bludgeons as they turned toward the tank. The ship was lost, already lugging in the water, the hull breached by the the ramming hippocampi and crashing waves. Nothing could save the crew now, and all they wanted to do was take something down with them, hurt one more thing. Melchoir hesitated, not knowing what he could do against such a mob. The resounding thud of another wave crashed against the port side of the ship. The vessel listed, tilting at a crazy angle as she rode ever lower in the water.

Melchoir saw his opportunity. He grabbed a belaying pin from the pin rail. He then leapt up into the rigging, grabbed a loose stay rope, and swung out over the deck, above the heads of the crew. He dropped down on the aft deck next to the tank and began swinging the pin, whacking the corner angle iron, loosening it from the planks. The ship was listing badly. If he could loose the mare from the tank, she'd practically slide overboard across the tilted deck.

The crew charged. Vanan, in the lead, let out a banshee scream as he leaped at Melchoir. The mare swung her head full into his chest. Bones cracked and crunched as she knocked his lifeless body aside like a rag doll.

Melchoir broke the last clamp and motioned to the mare. She slammed the side of the tank with her head. The sides split apart, pouring water and the mare out upon the deck. She slid half way to the rail as hapless sailors were washed overboard past her. Like a great sea lion she gathered herself and began to lumber the last few feet to freedom, ripping and shredding her fragile forefins in her struggle. Behind her, Melchoir swung the belaying pin wildly at the remaining crew.

An insane roar rose, and Melchoir turned to see Baccar, legs spread, eyes wild, blocking the mare's path. He raised an evil, wickedly sharp dagger and

17. In times of crisis or battle, several pods often band together in a coordinated effort. Hippocampi tales speak of times when a "Great Herd"

of thousands of hippocampi massed.

18. Hippocampi are not intrinsically magical. However, since they are intelligent beings, they can

study magic and become mages or clerics. Hippocampi spellcasters generally specialize in water- and weather-based spells.

roared again. The mare answered with her own bellowed challenge and charged into Baccar. The dagger cut deeply into her shoulder as she rammed into the old pirate. Another wave crashed over the listing deck, throwing Baccar, the mare, and Melchoir from the ship.

Melchoir floundered in a sea filled with thrashing, screaming men and the lashing teeth and crushing heads of hippocampi. He saw the mare ram Baccar one more time, driving him down into the water. Melchoir did not see that wretched soul again.

The ship lugged in the water, rolling on her side, never again to steal a hippocampus from its home. As the ship began to disappear under the waves Melchoir could feel her dragging him down with her. He heard the shrieks of the crew caught in the deadly suction. Melchoir struggled against the pull, but he was too weak. Underneath him there was a reassuring nudge, then a strong back as the mare surfaced beneath him. He stroked her shoulder. The vicious gash of Baccar's dagger was already scabbed over.¹⁹ The mare's powerful tail pushed them away from the doomed ship and the nightmare that they had endured together.

Beside them the foal rose, giddy with excitement and joy. He swam around and around his mother, squeezing her again and again with his tail. With a huge leap he landed on top of the mare, squeezing Melchoir with such enthusiasm he almost knocked out the lad. A strong, powerful, azure head rose in the water next to Melchoir. The stallion nuzzled the mare gently, then laid his front fin on Melchoir's thigh and bowed his head in respectful gratitude.

As the pod swam away from the hateful spot, Melchoir settled onto the smooth soft back of the mare and dozed in a secure, restful sleep.

"Hey! Ahoy there! Are you all right?"

The voice roused Melchoir from his sleep. He felt wet sand on his back and the gentle lapping of water on his feet.

"Are you all right, young man?" the sailor asked again as strong concerned hands helped Melchoir to his feet.

"Yes, I'm fine, I guess. Where am I?"

"You're on one of the Outer Islands. You look like you've been through hell," the sailor said, surveying Melchoir's beaten body and ragged clothes.

"I guess I have, and I'd still be there if it weren't for the hippocampi."

"Well blow me down! The Captain said 'twas the hippocampi that led him to this island. He said he knew we'd find some poor soul they'd helped out. You see, the Captain says they saved him once, and he's forever indebted."²⁰

"They sure saved me, in more ways than one."

"Well gather your things. The Captain will want to talk to you straight away."

"My things?"

"Your sea chest over there."

Melchoir looked around. The tide was low on the wide sandy beach, and a sea chest lay exposed just at water's edge. Melchoir stumbled to it and opened it in disbelief. Gems, gold, and silver glittered in the morning sun.²¹

"Great jumping sea greets! You're a rich man, my boy. You must have some tale to tell. You'll be able to buy anything you want when we reach port. I'd heard there was treasure in these islands, but I never thought I'd see any of it. Why, people will come from miles just to hear ..."

But Melchoir didn't hear him. His eyes were searching the ocean beyond the waiting ship.

Margaret and Ramsey have persistently and patiently worked toward publication in DRAGON® Magazine for the past two years ... as Margaret was sure to remind us each GEN CON® Game Fair. We look forward to more from them soon.

19. The blood of hippocampi coagulates very quickly, to protect them from shark attacks. Sharks have only a 20% chance of going into a feeding frenzy from a wounded hippocampus.

20. People saved by hippocampi tend to retain a strong bond of gratitude toward them. They remain respectful of the creatures and become protective of

them. These people might attack ships trying to capture hippocampi and their eggs or merchants trying to sell such products, seeing such practices as a form of slavery. Hippocampi are good judges of character, and they do not assist evil beings or those who mean them harm.

21. Hippocampi have no use for treasure. They do not adorn themselves with jewelry and have no currency. They do, however, understand its importance to humans. Hippocampi will rarely, if ever, treasure hunt for humans, but they will present their friends with gifts.

Hobgoblin

“On first glance, they appear as an order of chivalrous knights on parade, making their way through the countryside. The truth, though, is revealed by the swath of destruction left in their path—the fires in the distance and the smoke in the air. For miles around, the air is silent, as if even the hiding beasts and lowly brush feared to move. And when the wind blows just right, the stench of their rotting victims and the pleas of those wretched souls in their hopeless slave train carry on the breeze. They are hobgoblins, and they march to war.”

—Unknown, excerpted from **Accounts of the Goblinblood War**

While their goblinoid kin seek only to cause pain and suffering as some sort of perverted sport, hobgoblins possess a greater ambition. They dream of a great hobgoblin empire spanning hundreds, if not thousands, of miles. Fortunately for the rest of the civilized races, no two hobgoblin ideals are the same, and their own bickering and fighting over position keeps them from bringing their dream to fruition.

Overview

Hobgoblins are a race of soldiers and slavers living on the fringes of other civilizations, just beneath the surface. Like parasites, hobgoblins largely depend on taking many of the essentials of society from their neighbors, but whereas goblins sneak and steal what they need, hobgoblins take it by force. They drag captives back to their lairs and work their slaves to death.

Hobgoblins are something of a paradox. As a race, they are powerful, organized, and dangerous; individually they are extremely ambitious, paranoid, and deceitful. While they produce some of the finest soldiers in the

world, the rest of their society barely hangs together and is largely dependent on the skills and abilities of the slaves they capture. On the whole, hobgoblins are incredibly ambitious, and they do not hesitate to use any means at their disposal to advance their positions. For this reason, it is unusual to find hobgoblins in subordinate positions when part of a group of other humanoids. Almost invariably, they either take control of the group or are killed or driven off in the attempt.

Hobgoblins are renowned slavers. To most other races, this is the most terrifying thing about hobgoblins. Their appetite for slaves is almost unquenchable, and they treat their slaves with appalling cruelty. When hobgoblins successfully raid a town, survivors who cannot walk are killed and the rest are taken as slaves.

Ecology

Hobgoblins were created from goblins, and physically, they still strongly resemble their lesser kin. They have the same gray skin, the same orange eyes, and the same broad heads, wide mouths, and sharply pointed ears. Unfortunately for their enemies, though, the similarities end there. For while goblins are voracious, bloodthirsty killers, in the end they are little more than vermin, crawling through the dregs of civilization and snatching whatever they can get away with. Hobgoblins, on the other hand, not only possess the size, strength, and tenacity necessary to build civilizations of their own, they also have an instinctive need to find their own place within society (preferably one as high as possible). This continual drive for advancement leads them to prove themselves on the field of battle while acquiring as many spoils (and slaves) as possible.

Hobgoblins generally raid in groups of at least 20. While they are capable of campaigning in the field for long periods, they seldom travel more than a few days' journey from their settlements, as they tend to worry about conditions at home in their absence. They relish combat, but what they enjoy best is a sneaky surprise attack that allows them to massacre the guards before the defenders can retaliate. Not known for their patience, hobgoblins nevertheless generally take the time to survey a potential target before they strike. Hobgoblins aren't picky about who they kill, and they nearly always assault poorly defended settlements. In combat, they are bloodthirsty and fanatic, at least where their superiors can see them. They have little stomach for pitched battles, however, and they generally retreat in the face of determined opposition—especially if their leaders are slain.

When it comes to defending their settlements, hobgoblins are extremely tenacious. While most of a settlement tends to be sloppy and patchwork, hobgoblins never cut corners when it comes to their defenses. Assaulting a hobgoblin

HOBGOBLIN SCIENCE

As a whole, hobgoblins are extremely distrustful of magic. Much of this distrust can likely be traced to the long association between elves and magic, and the elves' continual use of magic to persecute the hobgoblins during their long wars. One of the few personality traits they share with their goblin progenitors, however, is a love of fire, smoke, and explosions. The combination of nimble fingers, abundant mineral resources, and a healthy dose of pyromania has turned hobgoblins into fairly credible alchemists and engineers. Exactly how much of this flavor you want to introduce into your campaign is left up to you, but it could entail anything from burning oil and rigged mineshafts to explosives strapped to slaves and goblin allies.

stronghold is a very dangerous proposition—even for a superior force—especially when placed underground. Once a hobgoblin tribe settles down in an area, it proves very difficult to dislodge.

Mating among hobgoblins generally occurs between two willing hobgoblins of the same rank. Any hobgoblin of any rank might freely mate with a hobgoblin of lower rank, regardless of the willingness of the prospective partner. Despite this, mixed-rank couplings are infrequent, as hobgoblins consider mating with their inferiors to be somewhat distasteful, and those who engage in such activities risk becoming the subject of scorn among their peers. Hobgoblins mate frequently, and monogamy of any type is basically unknown in their society.

While hobgoblins do not breed as quickly as goblins, they nevertheless reproduce at a prodigious rate compared to humans. They also mature much faster: a hobgoblin child is weaned after about 3 weeks and can walk, talk, and generally take care of itself after a mere 6 months. All hobgoblin children, from the scions of officers to the offspring of slaves, are taken from their mothers as soon as they are weaned. From that point on, they are raised communally to produce the finest soldiers possible. This training, notoriously ruthless and cutthroat, starts before the children can even walk. It typically lasts 4 years (but can be shortened if the community is in desperate need of soldiers). During this time, the children are pitted against each other in mock military formations as they learn to fight, plan, march, and forage together. Roughly one hobgoblin in five dies during childhood training, but the rest emerge with sharply honed battle skills and a keen sense of self-preservation. While this upbringing is nearly universal, sometimes a hobgoblin general circumvents the process for his own offspring. Occasionally, this can produce a dynasty, but it's unusual even for this arrangement to last more than a few generations.

Habitat and Society

The military is the backbone of hobgoblin society, and every free member of every hobgoblin community is effectively part of the army. Most hobgoblins take their places in the army upon reaching physical maturity. For the next year, these raw recruits go on a series of ceaseless raids. This is generally known among hobgoblins as the “year of hell.” During this time, each hobgoblin recruit must prove to his superior officer that he is a fearless, cunning, and ruthless warrior. Those deemed too weak, cowardly, or unfit to be soldiers are reassigned out of the military and must choose to take up some sort of alternative—and therefore socially inferior—profession. Generally, this fate befalls about two-thirds of the hobgoblin recruits. While they are technically not dismissed from the army, hobgoblin craftsmen and laborers can never rise beyond the rank of common soldier, and so they are destined to spend the rest of their lives serving at the whim of nearly every other hobgoblin in their community. Only through very unusual circumstances is a hobgoblin ever promoted out of the general labor pool and back into the army, and this generally occurs only when that hobgoblin demonstrates incredible skill in battle. Since the common hobgoblin only gets the chance to fight when its settlement is under attack, this means that many hobgoblins actually relish sieges and assaults on their strongholds, as these rare opportunities allow them to prove themselves fit for the army and escape their otherwise dreary existences. Every hobgoblin receives basic military training and most remain eager for the chance at proving themselves, making their settlements dangerous to assault.

Within the military, hobgoblins are obsessed with advancement. Since promotion generally occurs at the whim of a superior officer, most hobgoblins do their best to ingratiate themselves to their betters, hoping to be noticed and remembered when the time comes to make promotions. Another common means to promotion is a duel, known as a *kalech-mar*, in which a junior officer challenges his direct superior with the charge of weakness or incompetence. While the superior is allowed to refuse, this refusal carries with it a loss of respect in the eyes of other hobgoblins and might reduce the officer’s favor in the eyes of his superiors. Thus, the duels are rarely refused.

For this reason, high-ranking hobgoblins are generally the survivors and victors of dozens of duels (in addition to countless battles), a process that serves both to hone their combat skills and discourage future challengers. Duels are very common among low-ranking officers, but as a hobgoblin advances through the ranks, he becomes less willing to sacrifice an already comfortable position in a battle against a capable superior, so duels between high-ranking officers remain rare.

Hobgoblins pride themselves on order, and although they are perfectly willing to steal or kill for personal gain if they think they can get away with it, they are also eager to dispense justice on those foolish enough to get caught. The general in any settlement is responsible for dispensing justice to all other hobgoblins (although in extremely large settlements, the general often appoints magistrates to take care of the smaller crimes). Hobgoblins practice only four punishments: demotion, exile, slavery, and death. The severity of the punishment is entirely left to the whim of the general. Since hobgoblins always need slaves, enslavement is therefore by far the most common punishment, especially for minor crimes committed by non-soldiers.

Hobgoblins don’t usually use typical descriptions like “towns” or “cities” to describe their communities, preferring military designations such as “regiment,” “division,” “army,” or even “horde” (for particularly large settlements). Each settlement, regardless of its size, is under the command of a general, who has absolute authority over everything that happens within the community and answers to no one. Beneath the general are a number of officers, each in command of various subordinates, and like any other military organization, the ranks descend to the lowly grunts, who make up the majority of the population. While the top rank is universal and remains the same for each hobgoblin settlement, the number and titles of the other ranks varies by settlement, so that the ruling general of a small hobgoblin village (or “company”) might not have any subordinate officers, while a general who commands a vast horde might also command six colonels, 18 majors, 227 captains, and 1564 lieutenants.

While it is theoretically possible for one ruler to control a vast stretch of territory under this system, in practice, the native ambition present in every hobgoblin prevents such empires from forming. While every hobgoblin understands the concepts of “duty” and “chain of command,” the idea of “loyalty” is a foreign concept.

As a result, any powerful hobgoblin out of his superior's immediate view is probably planning to either usurp the superior's position or run off somewhere to make himself general of another settlement. For this reason, even areas with high population densities tend to fall into a collection of separate city-states. These areas often have smaller, satellite communities that—while nominally independent—in practice must follow the commands of their larger neighbors. It also means that while hobgoblins excel at going on raids, it can be impractical for them to undertake extended military campaigns, as a general faces a difficult choice: travel with the army and find his city ruled by someone else upon his return, or send one of his subordinates into the field (who might then turn the army to rebellion or conquer their enemies and found a new, independent nation).

On the other hand, such a campaign can be an excellent way for a general to dispose of a powerful, ambitious subordinate. A successful officer likely takes his followers and leaves to form a new community or perish.

Within their own settlements, hobgoblins have very little to do with other races. With very few exceptions, any non-hobgoblin present within a hobgoblin settlement is a slave. Hobgoblins generally don't trade with outsiders, preferring to take what they need by force rather than barter for it. Trade is rare (and raiding is common) even among different hobgoblin communities. As a race, hobgoblins tend to be an insular bunch, and they generally treat everyone else as lesser beings worthy only of serving as slaves.

While hobgoblins have no place for other humanoids in their own society, exiled hobgoblins occasionally find a place within human societies. Such hobgoblins are usually exiled from their communities for committing crimes. More rarely, a hobgoblin who knows his superiors saw him commit a cowardly act (like fleeing from combat) chooses not to return to face almost-certain slavery. These outcasts generally turn to banditry in an effort to survive, and they occasionally even sneak into human cities to live off the scraps of human society like their goblin cousins. Eventually, these hobgoblins begin to recreate their society in their new surroundings, recruiting other races to serve them and forming outlaw bands and gangs. Over time, these organizations can grow extremely powerful, and it's not uncommon to find a hobgoblin warlord at the heart of a criminal enterprise in a large city, leading a vicious pack of bandits across the countryside, or even commanding a crew of bloodthirsty pirates on the high seas.

Campaign Role

Hobgoblins make terrific villains, whether you are talking about a low-level band of slavers, a sinister drug lord, or a massive invasion force poised to rip through an entire kingdom. While hobgoblins are not exactly subtle, they are

SLAVES

For a hobgoblin, slaves are the single greatest measure of personal wealth. In a prosperous hobgoblin tribe, all but the poorest laborers have at least one personal slave, and most possess several. Slaves are generally taken as a result of raids, and hobgoblins undertake most raids specifically to acquire slaves, with any other loot recovered being seen as a bonus. Hobgoblins use slaves to perform almost every task imaginable, and they are very good at organizing and motivating slaves. While slaves have basically no personal rights, each has rights as property of its owner. The severity of any crime committed against a slave is determined by how powerful the slave's owner is and how much he values that particular slave. Hobgoblins don't bother to breed their slaves, mainly because most of them don't last long enough to make it worth the trouble. There are exceptions, however, especially among settlements that don't have ready access to other humanoid populations.

For the most part, hobgoblins aren't picky about which humanoid races they take as slaves, but they particularly prize dwarves. The stoutfolk are well suited to underground life, make excellent miners, and tend to stand up well to harsh treatment. While hobgoblins do occasionally enslave halflings, they generally hold the small people in great contempt and don't value them much. For that reason, halfling slaves tend not to last very long. Elves and half-elves are never taken as slaves, and captives of those races are always killed.

crafty. Defenders can't always see the hobgoblins coming, but they can always tell where the hobgoblins were. Hobgoblins they are utterly ruthless in the face of weakness.

Of course, hobgoblins can fill other roles too, and it's quite easy to conceive of a situation where the PCs are forced to deal with a hobgoblin as potentially the lesser of two evils. While hobgoblin generals are resistant to offers of alliances, they are not complete fools, and with enough persuasion they do negotiate when the stakes are high. Any such agreement lasts only as long as it is in the general's best interest, and his subordinates don't always see things the same way.

Every dozen generations or so, a leader comes along with the vision, power, and charisma necessary to unite several hobgoblin tribes under one banner. Whenever this happens, it is inevitably the precursor to a bloody invasion, as a unified hobgoblin nation represents a powerhouse of military might equivalent to the combined armed forces of several human kingdoms. Elves generally fare poorly during these invasions. Inevitably though, the leader of the horde perishes and the generals once again fall back into infighting and paranoia.

Treasure

Hobgoblins are practical creatures, and although as greedy as other humanoids, items they treasure tend to favor

function over form and directly apply to what they do best: fighting. The vast majority of hobgoblin officers carry masterwork gear at the very least, and magic weapons and armor are not uncommon. Plain hobgoblin soldiers carry magic as well, when available, but officers tend to confiscate such fineries if revealed. On the other hand, officers attempting to relieve their subordinates of magic items is one of the leading causes of challenges for higher ranks.

Hobgoblins consider anything not directly related to eating, sleeping, or fighting to be something of a waste of time. Thus, such luxuries always come from the raids they make against neighboring humanoid settlements. Since hobgoblins don't trade with outsiders, all of this "useless indolence" is turned over to the general when brought back to their settlements. What happens at that point depends on the general. Some officers view decadence as the province of the hated elves and destroy everything without practical value. Others enjoy demonstrating the power of their rank and position and dress themselves and their concubines in the finery of other civilizations.

Variant Hobgoblins

To outsiders, the hobgoblin race often appears as a single, undifferentiated horde. The reality is that hobgoblins are as diverse as any humanoid species, although they are united by the two things they all share: their ambition and their hatred of elves. The military structure of their society encourages conformity, but occasionally even hobgoblins run into a problem they can't solve with brute force. When that happens, they call on their elite troops—small groups of specially trained hobgoblins tasked to carry out unusual assignments. A couple of common examples are presented here.

Hobgoblin Engineers: While the vast military might of a hobgoblin army is feared by all its neighbors, the most dangerous part of any hobgoblin society are its engineers. Of course, they tend to be just as dangerous to the hobgoblins as to their enemies. Obsessed with fire, engines, and explosions, hobgoblin engineers are tireless tinkerers and love nothing more than testing out their creations on slaves. Engineering tends to attract the smartest (if not necessarily the wisest) hobgoblins, and most engineers possess Intelligence scores at the higher limits of normal humanoids (around 18 to 20).

Hobgoblin Infiltrators: These hobgoblins excel at sneaking into places they are not wanted. When a hobgoblin tribe needs to steal a well-guarded treasure or pursue a criminal, it calls on infiltrators to get the job done. Most raiding parties have at least one infiltrator among them, to scout out the target's defenses and sow chaos behind enemy lines. Infiltrators possess high Dexterity scores. Their commanders typically possess a number of levels in assassin or shadowdancer.

Hobgoblins in Golarion

Long ago, before the Age of Darkness and the rise of humanity, elven civilization flourished across Golarion. In those days, powerful magic flowed through the land, and some of the greatest nations the world has ever seen strove to unlock the secrets of creation. It was a time of great wonders, yet not all of the wondrous magic wrought in this age was benign, for among these works was the creation of the hobgoblin race.

Exactly who was responsible for taking the simple, ferocious vermin known as goblins and enhancing their size, physical strength, and intelligence has been lost to time, yet the hobgoblin race certainly has not. The elves certainly had no shortage of enemies capable of engineering an entire new race, and the fact that the hobgoblins have outlived their forgotten creators points to their tremendous skill in this arena.

These forgotten puppeteers bred armies of their new creations at several key locations. Before they could unleash the hobgoblin legions on the unsuspecting elven cities, however, their plans were discovered by a group of elven adventurers. These adventurers discovered a powerful artifact used to create the first hobgoblins, the *Cantorian Spring*, and stole it, freeing hobgoblins from breeding facilities scattered across the world. Before the artifact could be destroyed, though, the creators confronted the band of adventurers. In the resulting battle, the artifact was lost, leaving the hobgoblins free of outside influence but retaining an all-consuming hatred of elvenkind.

Ever since then, hobgoblins have fought elves. While the initial onslaught of the hobgoblins caught the elves unawares and unprepared, elven civilization was at its zenith and the hobgoblins were inexperienced. The wars that followed transformed hobgoblin civilization into what it is today. In order to combat the entrenched and powerful enemy, the hobgoblins based their entire civilization on war. Unable to resist the constant elven attacks, hobgoblins were eventually driven underground to evade their pursuers. Today, hobgoblins barely remember those earliest wars, and only the terrifying legends of the evil elven oppressors survive from that distant past. The elves, for their part, consider the entire episode to be a minor event, a mere footnote in the history of their once-glorious civilization.

Names

Hobgoblin names tend toward short, hard sounds, quick to shout in commands and easily understood over the din of battle.

Male: Arark, Bekri, Cenk, Doga, Doruk, Fethi, Haluk, Kurat, Lemi, Mert, Mevlut, Oktar, Rafet, Saltuk, Turgut

Female: Afet, Ceyda, Ela, Esma, Huri, Kumru, Maral, Masal, Melda, Nisa, Nural, Seda, Sena, Tansu, Vesile

HOBGOBLIN

This powerful humanoid stands slightly shorter than a human. Its muscular arms and stout legs give it a somewhat ape-like appearance, a trait further reinforced by its compact, powerful build. It has a broad head with large, sharply pointed ears, a wide nose, and a gaping mouth full of crude, yellow teeth. Its greenish-gray skin is exactly the color of old phlegm. Its eyes, however, glow with a sinister orange light.

A hobgoblin is never alone. Where you see one, you can bet there's a dozen more, and a dozen dozen more behind them. If you spot one, run, 'cause a whole army of hurt is sure to follow.

TACTICS

Before Combat Hobgoblins prefer not to give their opponents a fair fight, and they do their best to sneak up on their enemies, attack them while they are sleeping, or use overwhelming force. If none of these are possible, they generally retreat to a defensible position and attempt to hold the line.

During Combat Hobgoblins fight dirty and are quick to take advantage of any perceived weakness. Skilled at fighting in groups, hobgoblins often have well-laid tactics planned in advance. Even if not, the goblinoids excel at creating clever, impromptu battle plans and simply cooperating in battle.

Morale Hobgoblins have a strong sense of self-preservation and do not hesitate to retreat if they see no hope of victory. Their fierce hatred of elves, however, means they seldom retreat if presented with the opportunity to kill pointy-eared foes. Intimidating hobgoblin veterans also often inspire more fear in their troops than any foe, and can terrify their weaker kin into standing against much greater odds.

PARAGONS

The Ecology of the Hobgoblin

by Terry Edwards · illustrated by Sam Wood

*Goblins flee the world of light, cursed
and wretched in their plight.
Dark dank caves the goblins live in, gob-
lins pray to him who begat them:
Help us take back what's lost to day.
Maglubiyet guide us on the way,
Make a race whose power can end the
reign of elves, and dwarves, and men.
Hobgoblin, hobgoblin!*

*Gather now by standards, by swords;
come unite the scattered hordes!
By order hobgoblins will reclaim the
world that goblins fled in shame.
Bring war, bring strife upon the land!
One tribe in victory will stand!
Guide to war the lesser kin and lend
them strength the day to win.
Hobgoblin, hobgoblin!*

*Don the armor of fallen foes and pick
the flesh clean from their bones,
Hobgoblin tribes grow strong through
war; if they know peace they grow
no more.
Shielded lands defended with might will
never, never flee from light.
Vengeful conquest now begin. All gob-
linkind, come join your kin.
Hobgoblin, hobgoblin!*

—Verses from hobgoblin creation myth, author unknown

There is a tendency among civilized peoples to classify all the evil humanoid races that populate untamed lands as lawless, savage, and disorganized barbarian hordes. But anyone laboring under such a misconception has obviously never been unfortunate enough to share territory with a hobgoblin tribe.

Hobgoblins represent the antithesis of the common goblinoid stereotype. Highly organized, well trained for battle, and strictly obedient to their military code, they function with a focused efficiency that army commanders of any race would envy. Driven by a simple ethos based on survival through continuous conquest, hobgoblin tribes have spread systematically throughout the inhabited regions of most campaign worlds. To state that these remarkable humanoids are merely survivalists, however, downplays the incredible depth of their culture.

Most players and even many DMs view the evil humanoid races as little more than substitute orcs, but in fact each fills a special niche within the campaign world. In particular, the unique psychology of hobgoblins on both the individual and the societal level serves to distance them from the rest of the humanoid pack. Hobgoblins are definitely not substitute orcs, and they are far more than just big goblins.

PHYSIOLOGY

Hobgoblins are born predators, and this heritage is apparent in their physical shape. A typical hobgoblin is lean and tall, averaging 6 1/2 feet in height and 200 pounds in weight. The muscles of his lithe frame are designed more for agility than strength, enabling him to move with an almost feline grace. Like a tiger, a hobgoblin excels at moving

unheard, and his keen yellow eyes can see even in the darkest conditions.

Tattoos often accentuate a hobgoblin's crimson-orange skin, but they are far different from the ink pinprick designs that are sometimes sported by other races. Hobgoblin tattoos are deep scars branded into the flesh to demonstrate the bearer's tolerance for pain. For much the same reason, body piercing—the deeper and more painful the better—is a popular form of adornment among hobgoblins. But while his body might be run through with metal in several places, a hobgoblin always keeps his red (or in some cases, blue) nose unobstructed.

Coarse hair, usually gray or brown in color, covers the hobgoblin's thick hide. The hair on his head is generally worn long in several braids, which are adorned with bone jewelry crafted from the remains of slain foes. In like manner, any other adornments a hobgoblin wears are designed to call attention to either his battle prowess or his high tolerance for physical hardship.

PSYCHOLOGY

To ensure that each hobgoblin's mind remains continually focused on the survival of the tribe, the young are taught the life metaphor of the personal perimeter (see below) as soon as they are old enough to understand spoken words. This concept embodies the central philosophy behind hobgoblin behavior, and its principles influence all aspects of a hobgoblin's life. The personal perimeter means everything to a hobgoblin, and each is proud of the disciplined lifestyle required to maintain it.

The Personal Perimeter

Each hobgoblin learns early in life to establish a personal perimeter of defense. This perimeter represents not

the chaotic creature's need for personal space, but a highly lawful creature's portion of the greater tribal perimeter. In the hobgoblin mindset, one hobgoblin controls his own immediate area, two control still more, and so forth. Thus, a whole tribe jointly controls a significant area that it claims for its own use.

The first step in learning to maintain a personal perimeter is rigid mental conditioning designed to expunge the potential weaknesses of debilitating emotion and extraneous thought. A mind free from distraction can give its full attention to maintaining a perimeter.

The methods used to achieve the required mental conditioning process are harsh, to say the least. Abuse, both physical and mental, is a common tool for developing the desired mental state. Combat training is the only emotional outlet allowed to hobgoblins, and learning to defend a space is the most integral part of maintaining a personal perimeter. Years of such extreme programming yield an unquestioningly loyal soldier who desires nothing more than to serve the tribe.

Always on the defensive, hobgoblins constantly evaluate their surroundings for tactical advantages. This tendency is most noticeable when they are outside the protective confines of their own tribal lands. No hobgoblin can be found overimbibing ale in a tavern while seated in front of a window or with his back to a crowd. More likely, he sits in a dark corner of the tavern that provides him with an unobstructed view of the room, nursing one drink throughout his stay.

Morality

The narrow focus of the hobgoblin mind leaves no room for moral questions. Mercy and compassion can only weaken the perimeter and cloud thinking.

371 B.C.E.: The Oblique Order Formation

Arguably the greatest general in the ancient world to date, Epaminondas leads the Theban army against the Spartans. But instead of lining up his phalanx and charging it headlong into the Spartan phalanx, as the Spartans themselves would do, Epaminondas masses his troops heavily to one side and staggers the rest of his line.

When the two phalanxes clash, the heavy side of the Theban phalanx massively overpowers its side of the Spartan phalanx. The weaker, staggered side of the Theban force rotates back slightly, just enough to defend. The broken phalanx of the Spartans is then flanked by the overpowering force of the Theban's heavy end.

This arrangement allows the Thebans to assault the Spartan phalanx from its most vulnerable position—the side—while the rest of the Theban line fights defensively. Unable to protect themselves, the Spartans are slaughtered—not through superior training or weaponry but through superior tactics.

Philip II of Macedonia, trained by Epaminondas himself in all manner of warfare (including logistics, tactics, drilling, and the use of multiple field units in addition to infantry), further refines his mentor's so-called "oblique order." Generals throughout the ages will replicate the tactics of Epaminondas, and Philip's son Alexander will master them.

359 B.C.E.: The Complete Army

Philip II of Macedonia conquers Greece with the most tactically advanced army in the world. His force, predictably centered on the Greek phalanx, consists primarily of heavy infantry. Using tactics he learned from Epaminondas, Philip compensates for the inherent weakness of the phalanx by doubling its size and providing auxiliary cavalry, light infantry, skirmishers, and archers to protect its vulnerable flanks. He also extends the length of the lances used by the infantry to more than 12 feet.

Philip II's army is the first to use artillery routinely on the battlefield. His forces employ large dart-throwers capable of killing enemy soldiers at more than 200 yards. (The Greeks never

Individual freedom is meaningless and has no place in hobgoblin society, and respect for the freedom of others never enters a hobgoblin's thoughts.

The hobgoblin survival ethos drives every individual in the tribe and forms the basic rationale for the perimeter concept. Among hobgoblins, survival and security means constant preemptive domination of their surroundings. The land must be tamed to serve the tribe's needs, and enemies must be vanquished before they can become threats.

Other Cultures

Hobgoblins tend not to be social creatures. In fact, creatures of other races usually find them paranoid, insulting, and dismissive. At first meeting and for some time thereafter, hobgoblins usually exhibit all those traits, but only because they consider any creature not of their tribe to be a threat. Then too, a hobgoblin's rude behavior is often an expression of the paranoia that keeps him on his toes, as well as his disdain for the soft lifestyles of others.

Death and Dying

Although hobgoblins are born for combat, most do not actually intend to end their lives on the battlefield. Unlike many warmongering humanoids, hobgoblins do not view death in combat as honorable or glorious. Rather, it is viewed as evidence of failure to maintain a strong enough personal perimeter. Nevertheless, comrades felled in battle are respected and honored for their sacrifices.

A time to die is chosen by (or for) any individual who can no longer contribute anything to the tribe. The choice is a matter of pride, and the method invariably benefits the tribe. Many hobgoblins choose a form of ritual suicide designed to supply adepts with sacrifices.

SOCIETY

The primary concern of a hobgoblin tribe is survival. Survival means effective defense, and effective defense means eradication of all enemies and successful subjugation of all other creatures within the tribal perimeter. Hunting is a preemptive measure that serves both to remove threats from the tribe's ever-expanding area of control and to strengthen its individual members.

Like many humanoid races, hobgoblins maintain a parasitic relationship with the world around them, systematically stripping the land of its resources with no thought for conservation or renewal. Since few ecosystems can long tolerate such a disruptive presence, the tribe must move frequently. Agrarian civilizations are prime targets for hobgoblin raiding, since they boast ready supplies of food and populations unaccustomed to conflict. A hobgoblin incursion on such a territory can be likened to a locust swarm ravaging crops—a swift, overwhelming invasion that leaves nothing behind. Each successful conquest brings food, weapons, and materials into the tribe, which in turn provide the resources to fuel future campaigns.

Social Hierarchy

Unlike their chaotic goblinoid cousins, hobgoblins maintain a highly organized social order that operates with military efficiency. Hobgoblin society is loosely divided into three castes, each of which is further separated into two subcastes. The divisions are: military (command/warrior), religious (priest/instructor), and labor (crafter/worker). Caste assignment is based on both individual affinity for a given task and the tribe's current needs; gender has no bearing on placement.

Once given, a caste assignment changes only when an individual is no longer capable of performing the required duties (such as a warrior who has taken a debilitating wound) or when the tribe's needs shift dramatically.

All castes are vital for the continued existence of the tribe, and as such their members receive equal treatment and honor. Although status within the tribe is most often linked with victory in battle, a heroic warrior always recognizes that victory would not be possible without the aid of the other castes. Failure to acknowledge the contributions of others within the tribe is a serious indiscretion. Repeated incidents of such neglect can result in the offender being formally ostracized from the tribe.

Military: The largest of a tribe's three social divisions, the military caste consists mostly of warriors and fighters. These individuals receive the best military training and are responsible for the protection of the tribe and the expansion of its perimeter. Ascension to command requires adaptability, cunning, and a keen mind—values often found among rogues. A tribe's leader is almost always a seasoned fighter/rogue from the military caste who is venerated as a hero by the tribe.

Labor: The crafters and workers of the labor caste are respected as the heart of a hobgoblin tribe. Composed primarily of experts and warriors, this caste makes up roughly one-third of the tribe's total adult population. Members of the labor caste are responsible for meeting the tribe's mundane needs. Most specialize in resource management, turning goods seized during conquest into food, arms and armor, housing, clothing, and other needed items. Members of the labor caste often receive military training as

widely adopt the use of artillery, but Philip's son Alexander does in years to come.)

Philip's army is the most flexible and versatile to date. It is capable of fighting in any terrain against any known force of his era. The adaptability of his armed forces allows Philip to conquer all the Greek city-states except Sparta.

350 B.C.E.: The Roman Legion

The Romans, now a rising power on the Italian peninsula, abandon the use of the Greek phalanx. The Italian countryside is ill-suited for the tightly packed formation, and it proves too cumbersome against the more mobile forces of the Gauls.

To replace it, the Romans develop a new formation that becomes known as the legion. Based

on small groups of soldiers called maniples (Latin for "handfuls") that are arrayed in three lines, the Roman legion is far more maneuverable than the old Greek phalanx. It can adapt quickly to changes in the tide of battle by switching out its ranks so that fresh troops are always at the forefront. The legion evolves into an extremely fluid and versatile unit. Its long-term use builds the Roman army into the most disciplined and effective fighting force of the ancient world.

334 B.C.E.: The Triumph of Cavalry

In his first battle against the overwhelming forces of the Persians, Alexander the Great achieves the first victory in history to be decided by cavalry. The Persians, whose cavalry

forces outnumber Alexander's two to one, are arrayed atop a steep riverbank. Alexander is forced to cross the river to engage. He opens with a feint, ordering a small band of cavalry uphill into the left wing of the Persian force. As Alexander's forces charge, taking horrendous damage from Persian arrows and javelins, the Persian left wing breaks formation and rides forward. Alexander then leads the rest of his right wing into the center of the disorganized Persian line. With speed and ferocity, his cavalry riders punch through and take the riverbank. They are joined by the Thessalian cavalry force of Alexander's left wing, which has outmaneuvered, outfought, and annihilated the numerically superior Persian right wing. Alexander's heavy

well, in case their help is needed to defend the tribe.

Religious: By far the smallest of the three castes, the religious caste is made up of truly outstanding individuals who were chosen for their minds. Most are trained as adepts, although sorcerers, clerics, and even assassins can be found within this caste. The religious caste serves as the tribe's connection to the divine and provides instruction for the youth, but in a very real sense, it is also the tribe's governing body. Although a member of the military caste typically functions as ruler, it is the religious caste that guides the tribe's fate. Tumultuous internal politics are rare in hobgoblin tribes, but if need be, the church can exercise the power of executive veto over a leader's decision.

Upbringing

Life within a hobgoblin tribe is strictly regimented. From the moment of birth, hobgoblin youths are molded, body and mind, in accordance with tribal ideals. Instructors from the religious caste oversee the youngsters' initial development and guide them in building their personal perimeters. Throughout the training process, the instructors assess their charges and choose future roles for them within the tribe. By the time the young hobgoblins reach adolescence, their instructor-based training is finished, and their personal perimeters have been firmly established. After a stint of mandatory military service, each takes up his or her preassigned role within the tribe.

Military Tactics

When a hobgoblin tribe moves into a new area, its first priority is to establish an entrenched base camp and defensive perimeter. Since raids against

other humanoid settlements are the most efficient means of supplying the tribe with the resources necessary for survival, the location of the base camp is usually chosen to provide proximity to such a target. The base camp is often built around or within an existing structure, such as a dungeon, natural cavern, or building.

Once a secure camp has been established, expansion can begin. While stealthy scouts venture beyond the perimeter on reconnaissance missions, the hobgoblins in camp transform the landscape into a defensible battle plain. The earth is molded into trenches and ramparts, trees are felled for building material, and streams are rerouted to serve as moats. The outer perimeter of a completed base camp usually consists of a ring of outposts placed a few miles from the center. Depending on its proximity to trade routes and its relative importance, an outpost might be defended by anywhere from four to nine hobgoblin warriors and fighters.

The tribe's perimeter—outposts, moats, and fortifications—is a cooperative extension of each individual's personal perimeter, and it is maintained with the same degree of dedication. Once a hobgoblin tribe digs in, reaching the heart of its base camp requires a long and difficult fight.

Diet

Although hobgoblins are omnivorous, meat is their food of choice. Because of their mobile lifestyle, they have never mastered the techniques of agriculture, but most tribes maintain small herds of livestock. The bulk of a tribe's food, however, is obtained through raids and conquest. Hobgoblins consume the flesh of nearly every farm animal employed by humans and other civilized races, and

large hobgoblin tribes and nations often seek to enslave or capture others who are capable of farming.

Reproduction

Hobgoblins reproduce through a selective breeding program that pairs the tribe's elite warriors, crafters, and priests in the hopes of producing superior offspring. Peers generally arrange such couplings during seasonal celebrations, religious holidays, or post-victory feasts. Marriage and monogamous relationships are unheard of in hobgoblin culture, since the emotion evoked by such close ties would only serve to weaken an individual's personal perimeter. Although parents maintain roles of authority in their children's lives, religious instructors raise the young hobgoblins in a communal environment, and their only true family is the tribe.

Industry

Hobgoblin conquests bring a steady supply of weapons and armor into the tribe. Since they rarely work from raw materials, hobgoblin crafters have become masters of repair and recycling. A typical suit of hobgoblin armor usually consists of several pieces of salvaged armor blended by hobgoblin experts into a work of functional art (usually the equivalent of studded leather). Any metal item that cannot be salvaged is melted down and forged anew. A hobgoblin always treats her equipment with respect, ceaselessly polishing and maintaining it, regardless of its origin. Unlike other goblinoids, hobgoblins never wear shoddy armor or wield rusty weapons.

While hobgoblin craftsmanship is at its peak in the reclaiming and manufacture of arms and armor, weaponsmithing is not the race's only creative outlet. The deep, resonant thunder of hobgoblin war

infantry is now in position to engage the Persian forces. History repeats itself, and the Greek heavy infantry destroys the Persian infantry and light cavalry.

Through his feinting maneuver combined with the mobility and skill of his cavalry, Alexander earns a bloody victory. From there, he moves on to conquer the rest of the Persian Empire. In years to come, Alexander conquers lands beyond the borders of the known world, extending the Macedonian Empire from India in the east all the way to Europe in the west.

304 B.C.E.: Multifunction Siege Towers

The Greek engineer Epimachus creates the first multifunctional siege tower, which he calls

helepolis, or "city-taker." At 140 feet tall and 150 tons, helepolis is the largest siege tower to date. Just rolling it forward on its eight massive wheels requires the combined might of 3,000 men. Iron scales protect its wooden frame from fire, and its front face has twenty artillery ports, each of which is fitted with wooden shutters covered in leather and stuffed with wool to protect the artillerymen from attacks.

The tower sees its first use at the siege of Rhodes. After a prolonged battle, several of the iron scales are dislodged, leaving the tower vulnerable to attacks by fire. Rather than risk losing it, the Greeks pull back.

Despite its mediocre performance, the great tower profoundly changes the way siege warfare is waged. In later periods, the Romans and other cultures will improve upon the design of helepolis, adding hoisted battering rams and more powerful artillery, as well as boarding planks that allow infantry to storm walls.

221 B.C.E.: The Great Wall of China

The Great Wall is erected across northern China by the Qin Dynasty. This immense barrier eventually spans more than 4,000 miles and serves as the primary defense against marauding Huns from the north. Its effectiveness forces the Huns' migrations westward, into Asia and eastern Europe.

drums, called hrundoums, is well known far beyond tribal lands, and hobgoblin crafters take great pride in building these instruments. They also craft many smaller percussion instruments, including steel drums, kintalas, and unique "talking" drums called p'doums. Hobgoblin drums are often enchanted for use on the battlefield, and many can produce rolling sonic attacks, doleful fear effects, and frenzied activity in their listeners. When a tribe actually needs to trade with another culture, drums and mercenary service are the typical offerings.

Race Relations

While most creatures sharing territory with hobgoblins can expect constant conflict with the tribe, a few cultures actually find hobgoblins to be good neighbors. Perhaps the greatest strength of the hobgoblin race is its ability to unite otherwise scattered goblinoid tribes into cohesive units. Weaker creatures such as goblins are easily conscripted into the fighting ranks of a hobgoblin tribe. Such creatures are typically used either to test enemy defenses or to overwhelm opponents with large numbers. Bugbears, ogres, and trolls that join hobgoblin tribes can occasionally claim leadership roles, but they usually end up serving as frontline muscle in perimeter outposts. Occasionally, hobgoblins can even form mutually beneficial relationships with human settlements. Many a warring king has discovered that a hobgoblin tribe can provide a ready supply of highly skilled mercenaries—for the right price.

While hobgoblins are open to guarded alliances with many other races, they do not tolerate proximity to rival hobgoblin tribes. Other humanoids in hobgoblin lands are seen as resources for the tribe, but another tribe of hobgoblins

represents competition for the same resources and thus threatens the tribe's survival. Encounters between tribes always result in fierce battles and the destruction or routing of the weaker tribe. Only an exceptionally powerful hobgoblin leader can end such hostilities and unite multiple tribes.

KILLER CREATURE COMBOS

Hobgoblins recognize the value of allies in strengthening their perimeters, both tribal and personal. If the perceived benefit is sufficiently high, other intelligent creatures might even be accepted into the tribe to ensure the long-term success of joint ventures. The following combinations demonstrate the benefits of common hobgoblin alliances.

Hobgoblin and Worg

Worgs are frequently found within goblinoid societies, and hobgoblin tribes are no exception. In fact, many tribes even breed the foul beasts. Animal handlers within the labor caste often train worgs to serve as sentinels along the perimeter of a tribe's base camp, where their scent ability and racial skill bonuses can be invaluable assets to tribal security. Selective breeding programs can yield large worgs suitable as mounts, and even exotic (fiendish) breeding is not unheard of in larger tribes. Because worgs are respected and well treated in hobgoblin society, they tend to be quite loyal to the tribes they serve.

A single 2nd-level hobgoblin fighter mounted on an 8-HD advanced worg is an EL 5 encounter.

Hobgoblin and Barghest

Although they are outsiders, barghests blend seamlessly into hobgoblin society, both mentally and physically. A barghest's change shape ability allows it to

pose as a goblin or wolf when necessary, although it does not usually bother to disguise its true nature from the tribe. A barghest that joins a hobgoblin tribe typically assumes a leadership role within it and uses its position to push the tribe toward ever more evil behavior. As far as hobgoblins are concerned, the only drawback to allowing a barghest into the tribe is its tendency to eat more than its allotted ration.

When a barghest joins a warband, its spell-like abilities add a new dimension to traditional tactics. *Crushing despair* demoralizes foes, and *dimension door* allows for either a quick retreat or delivery of the barghest to a key battlefield location.

A barghest coupled with a gang of four 1st-level hobgoblin fighters is an EL 6 encounter.

REVISION ALERT

Crushing despair is a new spell available to bards and wizards. The revised barghest can use the spell once per day as a spell-like ability.

Hobgoblin and Bladeling

The infernal battlefield of Acheron is home to a warlike race of outsiders known as bladelings (see *Monster Manual II*). Although these beings dwell in virtual isolation on Ocanthus (Acheron's fourth layer), their warbands sometimes venture elsewhere within the planes, occasionally even joining the eternal war among the cubes. Bladeling mercenaries are welcome additions to Maglubiyet's armies on Avalas and are eagerly recruited.

The goblin deity also occasionally finds use for bladelings on the Material Plane, assigning them to serve as elite warriors within favored hobgoblin tribes.

216 B.C.E.: Double Envelopment Maneuver

The Carthaginian general Hannibal launches a campaign to destroy Rome. His army consists of nearly 45,000 troops, including 11,000 Numidian and Celtic cavalry riders supported by additional Spanish and Celt infantry. On his left wing are the Spanish/Celtic heavy cavalry forces under the leadership of his brother Hasdrubal; on his right wing are the Numidian light cavalry riders. Across from Hannibal, eight legions of Roman soldiers—80,000 troops and 6,000 cavalry—await in a deep Roman battle formation, hoping to crush Hannibal's center with their superior numbers.

Hannibal's heavy cavalry units begin the battle with a charge from the left into the

Roman cavalry in front of them. The Roman cavalry force begins to crumble immediately under the onslaught of Hasdrubal's numerically superior and more skillful forces. The Roman legions charge headlong into Hannibal's infantry, which is forced to give ground to the superior numbers of the Romans.

As Hannibal's army is pushed back, its line becomes bowed, so that its outer sections flank the advancing Romans on either side. Rather than pursuing the fleeing Roman cavalry, Hasdrubal's riders swing left and come in behind the Roman legions. Nearly 60,000 Romans are slaughtered at Cannae, but Hannibal loses only 8,000 men.

The Battle of Cannae comes to be regarded as one of the most decisive victories and one of the bloodiest massacres in history. Hannibal's brilliant double envelopment maneuver remains in active use for thousands of years.

200 B.C.E.: The Roman Ballista

The Romans design a new weapon called the ballista. Essentially a massive crossbow mounted on a rolling frame, it launches large stone balls or deadly, iron-tipped spears that are capable of impaling multiple targets. The design is highly adaptable, and many types of ballistae quickly appear, varying greatly in size and purpose. Some fling missiles at enemy soldiers, while

A bladeling's damage reduction, resistances, immunities, and razor storm ability make it an excellent melee fighter and an ideal addition to a warband. While the bladeling takes on opponents in melee, its hobgoblin companions are free to focus on ranged support. Then, after the bladeling has used its razor storm ability, the hobgoblins can join the melee and finish off the enemy.

Two bladelings with four 1st-level hobgoblin warriors constitute an EL 4 encounter.

Hobgoblin and Formian

When the expansionist formians encounter hobgoblins in search of new territory, the typical result is an explosive war that ends only when one side or the other has been utterly destroyed. Nevertheless, examination of each race's social structure reveals many parallels that could be exploited in joint ventures.

Although formians would never accept the rule of a hobgoblin leader, the opposite is possible. A hobgoblin tribe in dire need might allow its members to be conscripted as workers or warriors under the command of formian taskmasters. The taskmasters' telepathic abilities allow them to issue precise yet silent orders, which would prove invaluable to a warband engaged in a covert assault on a nearby area.

A single formian taskmaster with three 2nd-level hobgoblin fighters is an EL 8 encounter.

TACTICS

Because of the hobgoblins' military bent, tactics are an important part of any encounter with them. The following sections examine the tactics that hobgoblins commonly use against their enemies and provide tips for PCs to use in overcoming a hobgoblin threat.

Hobgoblins vs. PCs

The tactics described below are typical for a group of hobgoblins facing a PC party. DMs can adapt these as they see fit or use them as springboards to develop customized tactics for a particular tribe.

Tactical Terrain Advantage:

Hobgoblins are always aware of their surroundings and tend to take advantage of terrain benefits, especially high ground, cover, and concealment. Cover and concealment are most useful for ranged attacks, and the +1 bonus on attack rolls granted by higher ground provides a significant asset during melee. If combat occurs on the hobgoblins' home turf, terrain enhancements designed to convey such advantages should already be in place.

Ready the Reserves: While the main tribal force engages the PCs in melee, one or two hobgoblins armed with bows remain in reserve. Their main purpose is to use readied actions to disrupt spellcasters with ranged attacks. The reserves might lose an action or two in this way, but the potential benefit is worth the trade, since a single successfully cast spell can leave a warband asleep, dazed, or just plain dead. Reserves can also help to defend allies during a strategic retreat or hold PCs at bay while their comrades fall back and set up a trap to catch pursuers.

Adept and Overcome: Adepts and other spellcasters from the religious caste often travel with hobgoblin warbands. Although adepts lack the focus and power of wizards and have only a handful of spells to choose from, their effectiveness should not be underestimated. The adept has access to classic arcane spell effects such as *burning hands*, *invisibility*, and even *lightning*

bolt at higher levels. On the divine side, adepts can cast *cure* spells and enhance their comrades' effectiveness on the field via *bless*, *bull's strength*, and assorted protection effects. Furthermore, adepts can wear armor without fear of spell failure. Even though they are not proficient with its use, armor allows them to blend in with the fighters and gain a substantial degree of protection.

PCs vs. Hobgoblins

Hobgoblins are militant creatures geared toward combat. When your party encounters them, you can expect tactics to play a key role in the outcome of the battle. Below are some tips that might help to turn the tide in your party's favor.

Level the Field: A party balanced with a mix of character classes probably can't trade blow for blow with a hobgoblin gang composed primarily of fighters. Thus, it pays to upgrade your party's combat capability ahead of time if you can. Cast spells such as *bless*, *bane*, *aid*, and *protection from evil* to improve the attacks, Armor Class, and other combat capabilities of your allies. *Shield* or *protection from arrows* should also be cast early to foil enemy archers.

Concealment can give you a significant edge. While it won't help you hit, it does reduce the effectiveness of hobgoblin archers. Smokesticks and spells such as *blur*, *darkness*, *fog cloud*, and *obscuring mist* are all good sources of concealment.

Hit the Dirt: If hobgoblin archers are giving you a hard time, try kneeling or even lying prone. Such positioning imposes a -2 or -4 penalty, respectively, on ranged attacks against you. While this tactic significantly reduces your melee effectiveness and makes your ranged

others are designed for siege warfare. Like the artillery of modern armies, ballistae are fired from the rear, over the heads of allied soldiers.

104 B.C.E.: The Professional Soldier

Amid great controversy in the Roman Senate, Marius, Consul of Rome, opens up recruitment to commoners. For the first time, a commoner can receive training and gain an actual profession by taking up arms with the standing army. In this manner, he can earn land and a pension for his family. Under this new program, commoners swell the ranks of the legions. With mandatory training for all, the army becomes a streamlined, uniform order of disciplined soldiers.

53 B.C.E.: Mobile Cavalry Defeats Infantry

Seeking to push the Roman border into Armenia, Marcus Crassus leads more than 30,000 soldiers into Selucia. There they encounter the main force of native Parthians, who are arguably the best cavalry soldiers of their era. The Parthians surround and harass the Romans, forcing them into a defensive square. Relying on their better bows and vastly superior mobility to keep away from the Roman infantry, the Parthians force the invaders to retreat over the course of three days, leaving their wounded behind. The Parthians butcher the stragglers, including Crassus's own son, whose head they place on a pike to taunt the Roman general.

Once the Romans are down to a few thousand men, the Parthians offer to parley with Crassus. In no position to retreat further and unable to engage the Parthians because of their deadly harassing tactics, Crassus agrees. But when he and his command staff enter the enemy command tent, the Parthians slaughter them and then rout the now-leaderless Romans. More than 20,000 Roman soldiers die, and 10,000 more are captured.

300 C.E.: The Catapult

The Romans invent a torsion-based siege device to replace the ballista. Named the onager, or "wild ass," for its kicking recoil, the contraption resembles a classic Hollywood-style catapult

Language: Hobgoblins speak the guttural goblin tongue, which uses the dwarven script, and most also speak Common.

Names: The religious caste names each hobgoblin at birth. The suffix 'ken' is added to the given name of a female, and the suffix 'kon' to that of a male. This construction is then followed by the mother's and/or father's name, the tribe's name, and the individual's position (for example, a male hobgoblin warrior might be named Maelegym Uluk'kon of Aeltan's Shield, Guard of the First Perimeter). In human lands, a hobgoblin separated

from his tribe might use a name that contains references to his past but still identifies himself based on his new role and homeland (for example, Hemelion of Alsheim Merchant Praikos, Caravan Guard).

Adventurers: Finding little acceptance outside their own society, outcast hobgoblins are often attracted to the adventuring life, where they can put their militaristic skills to good use.

Hobgoblin Traits

Hobgoblin characters have the following racial traits.

- **+2 Dexterity, +2 Constitution:**

Hobgoblins are naturally agile, and they are capable of enduring great physical hardship.

- **Medium:** As a Medium creature, a hobgoblin has no special bonuses or penalties due to his size.

- **Base Land Speed:** A hobgoblin's base land speed is 30 feet.

- **Darkvision:** A hobgoblin can see in the dark up to 60 feet. Darkvision is black and white only, but it is otherwise like normal sight, and a hobgoblin can function just fine with no light at all.

- **Racial Skill Bonus:** A hobgoblin has a +4 racial bonus on Move Silently checks.

combined assault, featuring rapid fire from mounted archers combined with shock attacks from mounted lancers. The military wisdom of the *Strategicon* rivals that of Sun Tzu's *The Art of War* from a millennium earlier, and numerous parallels exist between the two works.

600 C.E.: The Iron Stirrup

Greatly impressed by the precision and military prowess that the Huns to the north display on horseback, the Chinese develop the iron stirrup. This device gives cavalry riders unprecedented control and stability, which in turn allows them to fight effectively from horseback with all manner of weapons.

Over the course of several centuries, the stirrup migrates slowly to Europe, where it helps to establish the dominance of cavalry over infantry on the battlefield during the Middle Ages. Its use by mounted knights also serves to reinforce the feudal system. Many military scholars consider the stirrup to be the most significant military invention of the period.

919 C.E.: The Military Use of Gunpowder

The Song Dynasty in China puts gunpowder (invented in 3 C.E.) into military use against the invading barbarians from the Asian steppes. Chinese soldiers drive back the invaders by shooting gunpowder from bamboo-tube flamethrowers. Although it receives

little notice at the time, this use of gunpowder sets a precedent that will eventually change the face of warfare.

1,000 C.E.: The Crossbow in Europe

Invented almost 1,500 years before by the Chinese, the crossbow now comes into regular use in medieval armies. Operating a crossbow requires considerably less skill than firing a longbow does, and a crossbow bolt retains enough penetrating power to kill a warrior even after passing through both his shield and the mail armor behind it. And unlike the bow, the crossbow is easy to mass-produce. The wholesale adoption of this weapon by European military forces means that, for the first time, relatively

- **Automatic Languages:** Common, Goblin. Bonus Languages: Draconic, Dwarven, Infernal, Giant, Orc.

- **Level Adjustment:** +1. A hobgoblin has an effective character level (ECL) of 1 + his class levels, so a 6th-level hobgoblin fighter would have an ECL of 7.

- **Favored Class:** Fighter. A multiclass hobgoblin's fighter class does not count when determining whether he takes an experience point penalty.

NPC Hobgoblins

NPC hobgoblins are often attracted to classes that focus on evil activities, particularly rogue, assassin, and blackguard.

Rogue: Within the military caste of hobgoblin society, intelligence separates the commanders from the common warriors. Commanders are experts at utilizing their surroundings and typically incorporate stealth into their defense of their personal perimeters. With their impressive array of skills and abilities, hobgoblin commanders are extremely adaptable and very dangerous.

A hobgoblin's naturally high Dexterity score coupled with his racial bonus on Move Silently checks makes him an excellent candidate for the rogue class. Because of the militaristic social structure of a hobgoblin tribe, however, the typical hobgoblin picks up some levels as a fighter before switching to rogue. The leader of a hobgoblin warband is usually a fighter/rogue.

Assassin: Hobgoblin tribes often need special operatives to manage their dealings with difficult enemies or allies. Such agents must be able to function as diplomats or simply remove inconvenient enemies, as the need presents itself. Thus, they are often trained as assassins. Candidates for assassin training are selected at an early age by the religious caste, which directly oversees

even the portions of their education supplied by mentors from other castes.

All hobgoblin assassins are operatives of the church, and the leaders of the religious caste take great pains to ensure their loyalty. Rarely does an assassin ever look beyond her station or question the motives and orders of her religious superiors. Any hobgoblin assassin encountered outside a tribe is likely to be on a mission of "diplomacy" and is always alone.

Blackguard: The presence of a barghest leader within a tribe often leads to the rise of a champion of evil within the hobgoblin ranks. When the barghest relinquishes control of the tribe, through either death or choice, its evil disciple is ready to take over the reins of leadership. The new leader's agenda is frequently even more horrific than that of the barghest.

A blackguard within a hobgoblin tribe is always its leader, unless a barghest is also present. In the latter case, the blackguard might function as the tribe's high priest instead. Charismatic hobgoblin blackguards are often capable of uniting rival hobgoblin tribes and drawing huge armies to their causes.

Blackguard leaders usually command from the front line, inspiring troops with their heroic acts of evil. The momentum of their dark armies builds with each conquest, until only the death of the blackguard himself can stop them.

LAIR OF THE HOBGOBLIN

The map presents a sample hobgoblin lair. This outpost could function as the main launching point for a planned conquest of a nearby human village or serve as the base camp of a small tribe.

1. The Site

The hobgoblins of the Phalanx tribe have

converted an abandoned flour mill into a watchtower and fortified the surrounding area. The camp is manned by a standard hobgoblin garrison consisting of twelve 1st-level warriors, eight 1st-level fighters, one 3rd-level fighter sergeant, and one 6th-level fighter/rogue leader (Kehelahna Pegn'Ken of Phalanx, Perimeter Commander).

2. Rock Wall and Ramparts

The hobgoblins have built earthen ramparts averaging 10 to 15 feet in height (Climb DC 15) around the site. Along the tops of the ramparts are several 4-foot-high walls that can provide cover for Medium creatures. These walls can also be collapsed onto anyone attempting to climb the rampart as a standard action, dealing 1d6 points of bludgeoning damage to each climber (DC 15 Reflex save for half).

During any attack from the outside, the sergeant and nine of the warriors defend the ramparts.

3. Trapped Rock Wall (EL 2)

Two 4-foot-tall rock walls stand roughly 30 feet from the first earthen ramparts. Just behind each wall is a spiked pit trap covered with canvas and hidden under bracken and small stones. If anyone falls into the pit, the rock wall collapses into the hole as well, dealing additional damage. These two structures are designed to trap invaders who try to take cover.

Rock Wall Pit Trap: CR 2; mechanical; location trigger; no reset; DC 20 Reflex save avoids; 10 ft. deep (1d6, fall and 1d6, falling stones); pit spikes (Atk +10 melee, 1d4 spikes for 1d4+2 each); Search DC 20; Disable Device DC 20.

4. Loading Deck

A 7-foot-tall wooden wall set with iron spikes now stands in front of what was

poorly trained soldiers can produce ranged fire with excellent killing power.

The widespread use of the crossbow spurs the development of plate armor, but the crossbow evolves right alongside it, maintaining such a level of lethality that the Pope eventually and unsuccessfully bans its use.

1,066 C.E.: Cavalry at the Battle of Hastings

The Battle of Hastings marks the beginning of the cavalry's ascendancy on the battlefields of Europe. The defender is Harold Godwinson, backed by his fierce Huscarles—an elite cadre of Anglo-Saxon infantry clad in heavy chainmail, bearing large shields, and wielding axes. A mounted infantry corps of Huscarles is also

present, but its soldiers are not trained to work cohesively and are not, strictly speaking, a cavalry force. The attacker is William the Conqueror, who fields a Norman army that includes infantry, cavalry, archers, and spearmen. Although more diverse than Harold's force in both composition and discipline, William's army is inferior in actual prowess.

After a full day, the battle is a stalemate. The phalanx shield wall of the Huscarles remains impenetrable until a feint from William's left cavalry wing tempts Harold's line into breaking. The charging Norman cavalry riders turn away at the last moment as if to flee, and the main body of Harold's army gives chase without orders. The remaining Norman cavalry units then flood

into the gap, and Harold is slain. A few bloody minutes later, his army is in full rout.

William's victory in this battle establishes Norman rule in England. Within a century, the Norman Empire is the most powerful nation in Europe.

On the field of battle, cavalry rises to prominence over infantry and becomes the army's primary assault arm. While the infantry remains the backbone of the classical army, the cavalry maintains its place as the army's most tactically powerful unit for centuries to come.

1,100 C.E.: The Trebuchet

The Europeans improve upon an earlier Chinese device that allowed a single soldier to

once the loading deck of the flour mill. Six hobgoblin defenders, each armed with a longspear or halberd, stand on a raised platform affixed to the inside of the wall, ready to defend it. Twenty extra weapons of each type lie on the platform beside them, ready for use. A barred gate in the center of the wall gives access to the outpost.

Each hobgoblin attacking from the wall gains a +1 bonus on melee attack rolls because of high ground. During an attack on the camp, the hobgoblin leader joins the six warriors stationed here.

Wooden Wall: 6 in. thick; hardness 5; hp 60; Break DC 20; Climb DC 21.

5. Barracks

The area that once served as the storage and milling rooms of the flour mill now functions as quarters for the hobgoblin garrison. This portion of the building is set into the hillside and accessible only through the front door or the tower above. Arrow slits have been added to the walls and doors, granting improved cover to the five archers that can man each of the walls. Food and water supplies for the outpost are stored in this area, along with several longbows and a large reserve of arrows.

6. Watchtower

The windmill's blades have been removed to allow construction of an archer loft on top of the mill. This loft can be reached either by ladder from the barracks or through a trapdoor in the ceiling that is accessible via a ladder at the back of the mill. The loft area can provide cover for up to five hobgoblin archers.

During an outside attack, two hobgoblin elite fighters and three hobgoblin warriors man the loft.

7. Tent Sites

Atop the hill are two large holes covered with tents. These makeshift structures are designed to house the outpost's excess population until raiding allows comfortable expansion. The tents are not visible from lower elevations.

Kehelahna Pegn'Ken of Phalanx,

Perimeter Commander: Female hobgoblin Fighter 4/Rogue 2; CR 6; Medium humanoid (goblinoid); HD 4d10+16 plus 2d6+8; hp 53; Init +3; Spd 20 ft. in hobgoblin armor; base 30 ft.; AC 18, touch 13, flat-footed 15; Base Atk +5; Grp +6; Atk +9 melee (1d8+5/19-20, +2 *defending longsword*); Full Atk +9 melee (1d8+5/19-20, +2 *defending longsword*) or +6 melee (1d6+1/19-20, short sword) or +8 ranged (1d8/x3, longbow); SA sneak attack +1d6; SQ darkvision 60 ft., evasion, trapfinding; AL LE; SV Fort +8, Ref +7, Will +1; Str 13, Dex 16, Con 18, Int 14, Wis 10, Cha 10.

Skills and Feats: Climb +3, Escape Artist +5, Handle Animal +7, Hide +5, Jump +3, Move Silently +8, Ride +12; Dodge, Expertise, Mobility, Spring Attack, Weapon Focus (longsword), Weapon Specialization (longsword).

Evasion (Ex): If exposed to any effect that normally allows a character to attempt a Reflex saving throw for half damage, Kehelahna takes no damage on a successful saving throw.

Trapfinding (Ex): Kehelahna can use Search to find any trap with a Search DC higher than 20. She can also use Disable Device to disarm magic traps and can bypass a trap without disabling it by beating its Disable Device DC by 10 or more.

Possessions: hobgoblin armor (scale mail), small spiked steel shield, +2 *defending longsword*, short sword, longbow, quiver, 20 arrows, *potion*

of cure moderate wounds, 2 tanglefoot bags.

Hobgoblin Sergeant: Male hobgoblin Ftr 3; CR 3; Medium humanoid (goblinoid); HD 3d10+9; hp 25; Init +4; Spd 30 ft.; AC 17, touch 14, flat-footed 13; Base Atk +3; Grp +4; Atk +4 melee (1d6+1/18-20, scimitar); Full Atk +4 melee (1d6+1/18-20, scimitar) or +8 ranged (1d8+1/x3, composite longbow [+1 Str bonus]); SQ darkvision 60 ft.; AL LE; SV Fort +6, Ref +5, Will +1; Str 12, Dex 18, Con 17, Int 11, Wis 10, Cha 12.

Skills and Feats: Climb +6, Move Silently +7, Ride +10; Point Blank Shot, Precise Shot, Rapid Shot, Weapon Focus (composite longbow).

Possessions: hobgoblin armor (studded leather), scimitar, composite longbow (+1 Str bonus), quiver, 20 arrows, 2 *sleep arrows*, *potion of cat's grace*, tanglefoot bag.

Hobgoblin Elite (8): Male and female hobgoblin Ftr 1; CR 1; Medium humanoid (goblinoid); HD 1d10+2; hp 12; Init +2; Spd 30 ft.; AC 16, touch 12, flat-footed 14; Base Atk +1; Grp +1; Atk +2 melee (1d8/19-20, longsword); Full Atk +3 melee (1d8/19-20, longsword) or +1 melee (1d4/19-20, dagger), or +4 ranged (1d8/x3, longbow); SQ darkvision 60 ft.; AL LE; SV Fort +4, Ref +2, Will +0; Str 10, Dex 14, Con 15, Int 10, Wis 11, Cha 10.

Skills and Feats: Climb +2, Move Silently +4, Ride +6; Dodge, Weapon Focus (longsword).

Possessions: hobgoblin armor (studded leather), small steel shield, masterwork longsword, dagger, masterwork longbow, quiver, 20 arrows.

Hobgoblin Warriors (12): Male and female hobgoblin War 1; see the *Monster Manual*. 

launch small stones great distances. The European version of this trebuchet becomes the ultimate siege weapon, a device of deadly power that can propel a 300-pound boulder more than 300 yards.

Edward "Longshanks" I of England is credited with the creation of a monstrous trebuchet known as the Warwolf. This device, which can blast a hole through a 5-foot-thick wall with a single impact, becomes known in later eras as "the atomic bomb of the medieval age."

The advent of the trebuchet spurs the development of improved fortifications. Many stories of the new weapon's capabilities filter home from the Crusades.

1,196 C.E.: Gunpowder Weaponry

The Chinese develop additional military uses for gunpowder. The first of these is a new weapon—a multichambered bamboo tube that is filled with gunpowder and shrapnel and affixed to an arrow. In mid-flight, the arrow becomes propelled by repeated gunpowder blasts (the first staged rockets). Eventually the missile explodes, sending deadly shrapnel into enemy ranks.

Shortly thereafter, the Chinese also learn to launch ignited casks of gunpowder at their enemies with siege engines.

1,200 C.E.: Plate Armor

The proliferation of deadly piercing weapons spurs the creation of armor that can better

resist penetration. The addition of iron plates to common chain armor improves its protective qualities without significantly reducing mobility.

Initially, the chain hauberk of an elite soldier is covered with a gambeson, or quilted coat, that has iron plates sewn into it. The eventual addition of armored sleeves, leggings, and joints produces a full suit of plate armor, which slowly evolves into the famous full plate armor used centuries later.

Because of its weight and expense, few footsoldiers use full plate armor. Such protection becomes the province of mounted warriors, whose steeds can bear the brunt of the armor's weight.

ECOLOGY OF THE Homunculus

Creatures Born of Alchemy and Hubris

By Joshua Stevens

Art by Pat Loboyko

"I have never given him reason to think me unfaithful. Alas, Jharun's jealousy knows no bounds. I loved him once, until he created that thing to watch over me. They have some dark rapport, him and his precious spy. It makes my skin crawl!"

"Naming it 'Chaste' was the worst insult. It is my constant jailer. I dream sometimes that I will run away, but as the candle burns low at night, I know it watches me even in the dark, with its inhuman eyes."

"It goes outside my room and waits in the garden like some wild animal. But it is no animal, for the flowers bend away from it, while it lays in wait for me."

*—Diary of
Alesa Dain,
shortly before her death*

Poets say the eyes are the windows to the soul, windows that reveal the spark of humanity. Life recognizes life. Peering into the eyes of a homunculus is like searching for a reflection in a pool of tar; nothing is reflected. These soulless creatures feel no emotion, yet they move and react with such seeming ease; it is only natural to interact with them as if they were living beings.

These abominations are a defiant rejection of the natural order, born of man's arrogance and desire to master the divine. Neither living, dead, nor undead, homunculi are uniquely animated by a shadowy essence that makes them considerably more than mindless constructs but decidedly less than men. Through wondrous alchemy, they are

instilled with a burgeoning sense of identity that serves as a cheap pantomime to the human psyche. A homunculus' blossoming self-awareness, unfettered by the shackles of a soul, can become a great danger to its master.

Myths and Origins

Nearly 800 years ago, the court magician Seb-Gesiret served as a confidant to the Duke of Ismaen. Indeed, Seb-Gesiret had served in that capacity for many years and served the Duke's father before him. To such a powerful man, many things seemed possible that, perhaps, were best left undone.

In his early 60s, Seb-Gesiret fell in love with a local tanner's daughter, a maiden more than 40 years his junior. Forced into marriage by the Duke and her father, the girl and Seb-Gesiret quickly wed. The young bride became pregnant within weeks of marriage, and Seb-Gesiret was overjoyed.

His joy lasted just eight months. Seb-Gesiret's heart broke on the day the couple's daughter was born, her hair and eyes the mirror of the young, philandering Duke. Destroyed by this betrayal, Seb-Gesiret drove the harlot and bastard child from his tower into the street. Determined to have the child that was denied him, Seb-Gesiret stormed into the Duke's private chambers and demanded an apology from the Duke. Having been cuckolded made him dare much more, and he demanded strange changes at the palace.

Fearing the raving but powerful old man at the foot of his bed, the Duke agreed to Seb-Gesiret's odd demands. He granted the court magician complete privacy and a small share of the duchy's annual taxes to fund his secret research. Seb-Gesiret returned to his tower, where he remained for several years.

Servants glimpsed dark shapes moving about Seb-Gesiret's marble tower. Bubbling masses and noxious fumes wafted from its uppermost reaches. Strange minerals, flesh, and hide sculptures were sometimes found at the tower's base, pitched from above and usually smoking in the dawn light.

Obsessed, Seb-Gesiret continued his peculiar work until he mastered black alchemy. He made an alchemical distillation of the soul, fused with purest chaos-stuff, and he funneled it into a small statue of queer design. The lifeless clay doll mewled and coughed up an afterbirth of stinging, acrid chemicals and flailed its limbs spastically. Its ooze-encrusted eyes opened, and it beheld the world. Using an alembic as a surrogate womb, Seb-Gesiret had made an artificial man.

The tiny creature was weaned on Seb-Gesiret's blood, and it matured far faster than any natural child. It learned to read and write and even to fly clumsily with its grafted wings, all within days. Seb-Gesiret discovered that he and his manufactured child could also peer into each other's thoughts as easily as one stares through a clear glass window. In the first few weeks, the oddity aped his every movement and perched itself on his shoulder. Seb-Gesiret was delighted in what he had fabricated, until he realized that the strange little creature, for all its rapid maturation, stopped growing at a mere 18 inches tall. For all his sweat and heartbreak, Seb-Gesiret had crafted only a curious pygmy, not a true heir.

Seb-Gesiret lost interest and kept the thing locked in a birdcage for days on end. He spent long hours staring at the damned thing and often found himself thinking of the Duke's illegitimate daughter, wishing it were more like her. He let it out to fly, to get it out of his sight for a time when he could no longer bear to see it. This gave the homunculus more freedoms than one; it discovered that at a certain distance from the tower, Seb-Gesiret could not access its mind.

In time, the homunculus began to wonder about the world at large. It read Seb-Gesiret's tomes in secret and captured small creatures in traps. It dissected them in a grotesque quest for knowledge. Seb-Gesiret was often annoyed with the bloody messes his homunculus' curiosity wrought, but he did nothing to stop the creature as it left him be. Filled with an insatiable

curiosity, the homunculus turned its attention to the one thing that Seb-Gesiret thought of most often—the Duke's illegitimate daughter. It wanted to know why Seb-Gesiret hated it so much and compared it to this girl so often, so it flew to the girl's window and found her sleeping.

The homunculus set about dissecting her in search of the piece that made her so special to Seb-Gesiret. The entire keep was awakened by the girl's screams, and when her chamber door was battered down, the guards saw a coal-eyed, horrific looking creature, fishing around inside the girl's intestines. The homunculus escaped to Seb-Gesiret's tower.

The Duke ordered his guards to burn Seb-Gesiret's tower to the ground, and the court magician barely escaped. He fled the duchy with the clothes on his back and the vile creature clinging to his flapping cloak. The Duke's riders were soon in pursuit. Hunted and desperate, Seb-Gesiret made his way to a small fishing village and hid in an abandoned hut. Daily, he cursed the creature for its wickedness, and finally, attacked it with a fiery poker from the hovel's hearth. To his surprise, when he stabbed the creature and burned it, a searing brand appeared on his own chest. Seb-Gesiret fell back in pain, and the creature quickly fled the hut.

When the Duke's guards cornered Seb-Gesiret several weeks later, his body was rigid in his flea-infested cot, and a taut lute string had cut across his throat. Neither the magician's homunculus nor murderer was ever found. The Duke was told that Seb-Gesiret's hut seemed strangely undisturbed, save for a stinking pool of ichor beneath his bed and corpse.

Seb-Gesiret's journals survived the destruction of his tower. His original formula has been altered over the centuries, and many purported variations exist though most of these lead to hideous failure. A true recipe for creating a homunculus is always difficult to obtain and is usually found as part of a collection of occult oddities. Mages wishing to recreate Seb-Gesiret's design

Table 1: Knowledge of the Homunculus

Characters with ranks in Knowledge (arcana) can learn more about homunculi. When a character makes a successful skill check, reveal the following lore, including the information from lower DCs.

Knowledge (arcana)

DC Result

- | | |
|----|---|
| 10 | A homunculus is a small statuette animated by wizards and sorcerers to serve them. A homunculus is crafted from its master's own blood, and its master can see everything the homunculus sees. |
| 14 | Homunculi are unique constructs with the ability to reason and are animated by a chaotic essence. When homunculi bite creatures with a soul, a bit of this chaos-matter is transferred to the victim, putting it to sleep for a short time. |
| 18 | Because a homunculus and its master are inextricably intertwined, the death of the master usually causes the immediate destruction of the homunculus, which slowly melts into a puddle of muddy ichor. A homunculus' destruction also causes grievous injury to its master. |
| 22 | Some homunculi may conspire to destroy their masters if they are mistreated. Some have discovered a ritual that frees them of their master's control. |
| 26 | A ritual called the Rite of Thirds allows a homunculus to turn against its master. |

must learn directly from one who has created such an aberration or must chase a long trail of lore and notebook ownership to track down a true recipe.

Physiology

Homunculi are crafted, never born. As such, they vary wildly in appearance, and their hair, skin, and form are influenced by the whims of their creators and the particular alchemical recipe used.

Homunculi can be created from stone, wood, pottery, bone, or even assembled pieces of dead creatures. The only constants for homunculi are that they must be between 1 and 2 feet tall and weigh between 1 and 8 pounds. Anything more and the alchemical recipe fails because there is too much gross matter to animate. Anything less and the homunculus simply cannot hold enough chaos-essence to arise abiogenetically.

Additionally, homunculi eyes never have pupils. Many commoners believe this is because homunculi are made without souls, and their inky black eyes

are the proof of this. Lastly, homunculi can never speak, although they can make a host of guttural sounds.

Homunculi are constructs and share many basic traits with golems and the like. They lack internal organs but, unlike golems, bleed when injured, seeping viscous, black liquid from wounds. Homunculi cannot be healed with healing spells, but spells that mend objects or repair constructs erase their injuries. Homunculi do not regenerate lost limbs, but severed limbs can be reconnected with a mending spell. Any harm done to a homunculus is exacted simultaneously upon its master with the same type and location of injury (the maximum damage to the creator is equal to the homunculus' total HD).

When created, a homunculus must be fed a few drops of its master's blood every day for one week. Thereafter, a homunculus may eat anything it wishes or nothing at all without any effect, but the only foodstuff that sates its strange hunger is its master's blood. If weaned from its master's blood, a homunculus will "live" for exactly 6 years,

6 months, and 6 days from the time of their last blood-nursing. In the final six days of its life, a homunculus ages rapidly, while its master likewise ages 1 year for each of these final six days. On the sixth day, the homunculus' body deflates, leaving only a shriveled husk with no further ill effects for its creator.

The entropic essence that gives a semblance of life to a homunculus has an odd effect if injected into a creature with a soul. This entropic essence wells up within all homunculi, and it forms a dark, viscous liquid akin to saliva in their mouths. They can transmit it to a victim with their bite, at which time the essence momentarily suppresses the bitten creature's soul, dampening its humors and fire. This suppression causes a catatonic state akin to sleep for several minutes.

Psychology and Society

At creation, a homunculus' personality is a cross between a housecat and a chimpanzee: they are clever and prone to mischief and killing, and they possess a fondness for stalking mice and rats. A homunculus always retains these mannerisms, but this is where any comparison to natural creatures ends.

Within mere days of its "birth," a homunculus can walk, fly, think, and reason. It learns at a preternatural rate and masters skills like reading, writing, and menial tasks seemingly overnight. In these formative days, a homunculus watches its creator very closely and mimics nearly everything he does. After one week, a homunculus turns its single-minded focus from its creator to the world at large and asks an endless string of questions. The telepathic bond between a homunculus and its master cuts both ways, and their constant mental probing is not limited to their master's waking hours. While its master sleeps, a homunculus is fond of delving into its master's subconscious and inspecting long-forgotten memories.

After a few weeks, a homunculus establishes an identity apart from its master's, a mishmash of childlike wonderment and devious cunning. While

a homunculus shares the same basic alignment as its creator, the transparent nature of its identity is always clear. Homunculi never develop morals, and they only come to separate what is right from wrong in a cold and purely logical fashion.

After many trial and error experiences, a homunculus will learn that something is wrong, but it never feels any guilt for its actions. Many will perform indecent acts to sate their curiosity. Lacking true emotions, a homunculus learns roughly how to interact with others, but it is prone to asking its master about inappropriate and sensitive matters through its mental link.

Homunculi by their nature are solitary creatures, save for their symbiotic relationship with their creator, and they never develop any sense of community. These creatures are unnatural in virtually every sense, and most beings feel intensely uneasy around them. Animals find them off-putting and often either attack a homunculus or flee from it.

Conversely, homunculi are quite interested in living creatures and study them closely whenever an opportunity presents itself. On the rare occasion when one homunculus meets another, something very peculiar occurs—the two abominations completely ignore one another. No amount of manipulation changes this strange relationship, for they simply cannot see, hear, or feel one another.

Homunculus Feats

Not all homunculi are the same; each recipe yields variation. Witch's Mark is a feat for homunculus creators, the others are for their creations.

Witch's Mark [General]

You regularly feed your homunculus your own blood, and you have developed an incredibly strong bond with it. You grow a scar on a part of your body of your choosing, which resembles an extra nipple. This scar is known as a "witch's mark," and it is where your homunculus nurses from.

Prerequisites: Must have created a homunculus

Benefit: Your homunculus now stays in contact with you to a range of 3,000 feet. It cannot be dominated (see below), will never turn against you, and gains 10 bonus hit points.

Physical Variant [Monster]

Your homunculus has unusual characteristics.

Prerequisites: Homunculus, can only be taken when created

Benefit: Choose one characteristic from the following list:

Cyclopean: The creature has a large central eye that grants superior low-light vision and can see three times as far as a human can in dim light. Poor depth perception means attack rolls suffer a -1 penalty.

Flightless: The homunculus cannot fly but gains both a climb speed of 40 ft. and a +2 bonus to Strength.

Gaping Maw: An oversized mouth grants the Swallow Whole ability and allows the homunculus to swallow creatures of the same size or smaller. A swallowed creature takes 1d4-1 damage per round. A swallowed creature can cut its way out by dealing 5 points of damage (against same AC). If the creature swallowed is the same size as the homunculus, it cannot fly until the creature has escaped or been devoured.

If the creature is one size smaller, the homunculus can only fly at half speed. A homunculus may swallow a maximum of one creature its size, two creatures one size smaller, or 4 creatures two sizes smaller, before it must regurgitate the waste. This process takes 1d6+2 rounds. During this time, the homunculus is denied its Dexterity bonus to its AC.

Multiple Arms: With four arms, the homunculus gains +4 to grapple checks, but its wings are smaller and thinner, and it can glide but not fly. Its wings negate any falling damage, and it can glide 25 horizontal feet for every 5 feet of falling, at a speed of 50 ft.

Oversized Arms: Long arms increase its reach to 5 ft., but its body is spindly, and the homunculus' attack rolls suffer a -1 penalty.

Scorpion's Tail: A large stinger

injects poison (instead of the bite) for 1d4 damage, DC 15. However, the large tail reduces fly speed to 30 ft.

Special: Taking the Physical Variant feat replaces Lightning Reflexes for the homunculus; the DC for Craft (pottery) or Craft (sculpting) checks is raised to 13.

Alchemical Variant [Monster]

The variant recipe used in construction has granted your homunculus unusual abilities.

Prerequisites: Homunculus, at least 4 HD, can only be taken when created.

Benefit: Choose one ability from the following list:

Acidic Spittle: The homunculus can spit acid (3/day) in a 20 ft. line against a single target as a ranged touch attack, causing 1d4 acid damage the first round and 2 points of acid damage the following round unless neutralized. The spell *acid arrow* must be cast during the creation.

Ashen Lung: The homunculus can breathe a cloud of thick coal dust (3/day). The effects are identical to *obscuring mist* at a CL equal to the homunculus's HD.

Blind Eye: The homunculus gains *invisibility* at will for 10 rounds +1 round per HD per day.

Dense Hide: The homunculus gains a +2 natural armor bonus to AC. This requires the creator to cast *barkskin* during creation.

Dire Growth: The homunculus grows to Medium size for 10 rounds +1 round per HD, gained from casting *enlarge* during creation.

Screech: The homunculus can emit a piercing scream in a 15 ft. cone (3/day) that causes 1d4 sonic damage (2d4 damage to crystal, glass, ceramic, or porcelain) and deafens for 1d4 rounds. Gained from casting *shatter* during creation.

Special: This feat adds 2,000 gp to the homunculus' creation costs, and the ability is treated as a spell-like ability. In addition, the DC for Craft (pottery) or (sculpting) checks made at creation is raised to 15.

Flaws in the Design

Fabricating a homunculus is never easy. Even with a true recipe and a well-equipped laboratory, the products of this magecraft are never more than a handbreadth from ruin. The smallest impurity in the occult materials required—clay, ashes, mandrake root, spring water, and blood—can destroy the entire effort. Moreover, the statuette used as the frame for the alchemical bindings must be free of flaws, cracks, and abrasions. Any break in the surface of the figure allows the chaos-essence to gush out violently, destroying the model with a torrent of inhuman screams.

Not all flawed homunculi are destroyed at creation. If the DC check fails but is within 2 points of success, the homunculus awakens and appears normal, but it soon attempts to murder its master. Flawed homunculi and those that have been mistreated or neglected often conspire against their masters.

The bond shared between them often makes it impossible for them to emancipate themselves. The Rite of Thirds allows a homunculus to either achieve independence or be bound by another.

The Rite of Thirds is based on the principal that a homunculus comprises three parts: man, earth, and chaos-matter. By subverting these forces, a homunculus may become independent or dominated by another.

Regardless, the Rite of Thirds requires at least three days to complete. The homunculus must convince its master to consume a pint of its entropic essence over three days. On the fourth day, the homunculus must choose a name for itself, scrawl this name in its master's blood on parchment, and consume it. Finally, someone must cast the spell *false life* on the homunculus, at which time it becomes independent of its master.

A freed homunculus lives until destroyed, without fear of its former master's death. Due to the nature of its creation, though, the mental link between a homunculus and its former master remains whenever they are close. Only

after a homunculus becomes independent may it attain class levels.

To bind a homunculus, the binder must separate the homunculus and its master for three days. On the fourth day, the homunculus must consume three drops of the binder's blood. The binder must then carve his or her name into an area of the Homunculus that does not usually see daylight, using alchemical reagents worth half of the homunculus' creation costs. The armpit, inside the mouth, and bottoms of feet are all popular areas. Finally, the binder must cast *mirror image* and have his image pass through the homunculus.

When the rite is complete, the homunculus makes a Will save opposed by the binder's Will save. If it fails its save, the binder is treated in all ways as its master. If the original master reestablishes a mental link with the homunculus before the rite is completed, the homunculus uses its original master's Will save. The homunculus retains its telepathic link with its original master, but the binder is secretly privy to this shared bond when all three parties are within telepathic range. The original master can discover this eavesdropping by the same means as discovering scrying through a crystal ball.

History of the Homunculus

"I saw the pale student of unhallowed arts kneeling beside the thing he had put together. I saw the hideous phantasm of a man stretched out, and then, on the working of some powerful engine, show signs of life and stir with an uneasy, half-vital motion."

—FRANKENSTEIN, Mary Shelley

The term *homunculus* is derived from Latin, meaning "little man." The concept of a homunculus was first attributed to the famed Swiss alchemist Paracelsus, who in the early 16th century claimed that he had created an artificial human being that he referred to as "the Homunculus." The creature reputedly stood a mere 12 inches tall and was created to serve Paracelsus. As myth has it however, the homunculus soon turned on Paracelsus and ran

Good-Aligned Homunculi

Though the ecology presented here assumes that most homunculi are trouble-making and even dangerous creatures, the creature may have any alignment. This is largely determined by its maker, though Good-aligned alchemists and wizards are perhaps less likely to create such a servant than evil ones.

The tricks and wiles of such homunculi are more gentle, restricted to teasing cats or painting dogs with ink, but a degree of independence and mischief seems to be a part of all homunculi, perhaps owing to the chaos-matter that animates them.

away. Tales of the homunculus also occasionally appear in Eastern European folklore, described as a construct made from natural materials such as dirt, roots, insects, feces, blood, and any number of other fetishes.

According to legend, there are three ways to create a homunculus. The first method used a bag of bones, sperm, skin fragments, and hair from any animal for which the homunculus was to be a hybrid. These materials were sealed hermetically in a jar or animal bladder, magnetized, and laid in the ground near horse manure for 40 days, at which point a tiny homunculus would emerge, transparent and without a body. The homunculus then fed daily on human blood and maintained a constant temperature for a period of 40 weeks, after which it grew into a childlike creature (though never larger than 18 inches tall). The homunculus, reputedly, could then be raised and educated like any other child, until it matured and could take care of itself.

A second method says that the fabled mandrake root grows only from the semen ejaculated by hanged men during their final convulsive spasms before death. The root should be picked before dawn on a Friday morning by a black dog, then washed and nourished with milk and honey (or, in some prescriptions, blood), where it would slowly grow into a miniature creature that would resemble the mandrake and protect its creator.

Building on the work of Paracelsus, Dr. David Christianus taught at the University of Giessen in the 18th century. He wrote that a homunculus could be created by taking an egg laid by a black hen, making a small hole in its shell, and removing a bean-sized portion of the egg white and substituting human sperm. The egg thereafter had to be sealed with virgin parchment, buried in manure on the first day of the March lunar cycle, and in 30 days, a homunculus would be born. This homunculus would protect its creator in exchange for a steady diet of lavender seeds and earthworms.

Interestingly, the German alchemist Johann Konrad Dippel, who lived in Castle Frankenstein and who is widely reputed to be the inspiration for Mary Shelley's Dr. Frankenstein, was a student of Dr. Christianus at the University of Giessen. Additionally, the character Dr. Septimus Pretorius in the movie *The Bride of Frankenstein* grew small homunculi from "seeds" and kept them trapped in jars.

The Murderous Homunculus: Qesh

Qesh was constructed by Father Craedus after a bloody battle at Trager's Pass had left many dead, and the rotting bodies had spread the plague to the nearby town. Father Craedus was to be sent there to erect a temple and to aid

the villagers. Shortly before leaving, Father Craedus' order confiscated a bag of devouring and Father Craedus was tasked with destroying it.

Rather than destroy an implement with obvious practical uses, Father Craedus put the item to use helping the people of Trager's Pass with the many diseased corpses. To this end, he created a homunculus and hid the *bag of devouring* in the thing's stomach. Craedus' homunculus resembled a small cherub, so as not to scare anyone with its intended gruesome purpose. Its mouth was specially constructed to appear two sizes too small, in a tiny "o" shape, but the inside of its mouth was lined with hundreds of razor-sharp monkfish teeth. Its entire chest cavity, chin, and throat formed a set of interlocking flaps that opened into an overlarge mouth to help the creature devour the many unburied corpses.

The homunculus set to devouring the dead at Craedus' command, and the villagers were overjoyed as the plague began to subside. Knowing nothing about the *bag of devouring*, Craedus had no idea of the danger he courted. The constant influx of rotting bodies awakened the slumbering beast connected to the other side of the bag in the cherub's stomach, and the beast took interest in this orifice that was suddenly providing it more sustenance than all of its other bag mouths combined. Probing outward, the devourer discovered Craedus' homunculus and dominated it using the Rite of Thirds. Soon, Craedus' cherub began exhibiting strange and violent behaviors and adopted the alien moniker, "Qesh."

After several weeks of increasingly deviant behavior, Father Craedus was awakened one night to a rending pain in his leg and saw Qesh, mouth agape, swallowing his leg. All went black a few moments later as Qesh's poison went to work in his veins. By daybreak, not a scrap remained of Father Craedus.

Qesh is now frequently forced to devour creatures to sate its new master's hunger, leaving a trail of mysterious disappearances in his wake. Recently, after devouring a loving farming family

that had taken him in, Qesh lost his left hand to the desperate flailing of a farmer's cleaver. Seizing a rusty meat hook from the barn and jamming it into the oozing stump, Qesh fled into the night.

Qesh can be encountered almost anywhere, and few suspect something that stands 2 feet in height, with straw blonde hair, rosey cheeks, porcelain skin and the wings of a swan, to be as devious as it is. Qesh communicates in pleasant coos and whistles, and if its rusty hook-hand is inspected, it pretends sadness and embarrassment. Qesh prefers to surprise creatures, and usually waits to use dire growth and devour them until they are alone and defenseless.

The Care and Feeding of Homonculi

by Lloyd Brown III

illustrated by Susan Van Camp

WIZARDS ARE LONERS BY NATURE. Whether young or old, they spend their time studying to become more powerful, learning better spells, and enchanting potent items. They rarely have time for making close friends.

Wizards, as always, have learned to compensate. Many of them keep pets. A dog or cat keeps the tower from being so empty and gives its owner years of devotion and affection. Some wizards go one step further and conjure a familiar with whom they share a special bond. Fear of harm—or even death—in the event of the familiar’s death causes many wizards to reconsider this option.

A homonculous is better than a familiar in that the physical trauma inflicted on the master when the creature dies is not as terrible. The homonculous has other advantages, as well. For many wizards, the homonculous is a superior companion.

What is a Homonculous?

A homonculous, often called simply a “companion” by those who have one, is a tiny creature created by a wizard and an alchemist together. A homonculous is vaguely humanoid, with small bat-like wings, greenish scaly skin, and a mouthful of pointy teeth. It stands 18 inches tall and has a lithe, agile body. A full description appears on page 192 of the *MONSTROUS MANUAL*® tome.

The homonculous is most often employed as a spy. Its wings enable it to travel quickly and to escape dangerous situations. If one is caught, its bite can deliver a potent sleep venom that can incapacitate an enemy long enough to allow escape.

Tiny hands allow the companion to serve as a lab assistant, to clean up, or to perform miscellaneous chores around the tower. Although they cannot speak, homonculi can serve as messengers by carrying scrolls or items enchanted with *magic mouth* spells. Aside from these common uses, the tasks to which homonculi are set are as diverse as the wizards who create them.

Creating a Homonculous

Usually a homonculous is created by a wizard and alchemist working together. The wizard first provides a pint of his own blood, which the alchemist uses to form the creature’s base. The donated blood must be used within six weeks, usually long enough for the procedure to be completed. The alchemist’s services cost 500 gp per week for 1d4 weeks. After the alchemist has finished, the base is brought back to the wizard, who must cast certain spells on the formula within one week of finishing the base formula. *Wizard eye* establishes the bond between the creator and companion, *mirror image* creates a single image that superimposes itself over the base, giving it its roughly humanoid shape, and mending attempts to “repair” the creator’s blood, which has since been replaced by natural means, resulting in the creation of an entirely new form—the homonculous.

If the creator (always the wizard who provides the blood and casts the spells, never another character who might provide help) is also an alchemist, he may perform all the steps alone. In this case, the cost is reduced by 25%. The formula for creating homonculi is not widely known, so the creator might need to find another alchemist to teach it to him.

If the creator (or novice alchemist) attempts to learn the procedure on his own, he must have the alchemy non-weapon proficiency and can discover the technique on a successful proficiency check at -4. If his research is successful, the wizard learns the formula after spending 2d4 weeks at a cost of 200 gp per week. An unsuccessful check means that, after 1d4 weeks, the would-be creator realizes that he is on the wrong path and may start over with another check.

Once this knowledge is learned, the process can be repeated as often as desired or taught to others. Once the creator (or alchemist) knows how to make a homonculous, he can research a formula for any of the different companions described later in only 1d6 weeks at the same cost as the original formula (200 gp

The Bond

The mental link between the wizard and his companion is both the most valuable and the most dangerous aspect of having a homonculus. The link allows the creator to control and learn information from the companion. The same link is also the source of great physical and psychic trauma should the homonculus be killed.

When the homonculus is first created, both creator and companion feel or hear a slight tingling, like the almost imperceptible hum of distant machinery. A few individuals report having difficulty sleeping for the first night or two while they become accustomed to this feeling but it soon becomes natural, even welcome. For the companion, this feeling is much more intense, causing great discomfort if the hum is removed, which happens when the link is extended beyond range or when the creator and companion are separated by dimensional or planar barriers. The homonculus will do anything to have the link restored.

Most commonly, the creator and companion share this bond in a passive mode. This establishes the link that damages the creator if the homonculus is killed (and destroys the homonculus upon the creator's death), forces the homonculus to obey any orders, and gives the homonculus the Intelligence, knowledge, and saving throws of its creator.

At will, the creator can call upon the active mode of the link, which allows him to control the movement of the companion, as well as see through its eyes and hear through its ears. The companion never wishes to refuse an active link and has no power to do so, even if charmed. A creator who utilizes the active link must concentrate as if casting a spell. The creator cannot move his own body while controlling the homonculus, nor can he dodge attacks, use magical items, or perform any action not normally available to a character who is casting a spell. Any successful attack on the creator forces the link to become passive, and the creator must re-establish an active link if he wishes to use it again.

In either case—active or passive—the effects of the death of one affects the other normally. If the homonculus dies, the creator suffers 2d10 hp damage. If the DM allows this damage

The bite of the axonan causes hideous dreams.

to be reduced by any form of magic (which is not recommended), the damage should be considered necromantic in nature. The death of the wizard usually results in the immediate dissolution of the homonculus.

Multiple Homonculi

Undoubtedly, some wizard (probably a wild mage) will conclude that if one is good, two are better. Creating more than one homonculus can have disastrous effects. The first to come to mind is the danger to the creator should more than one be killed at the same time or over a brief period of time. Suffering 2d10 hp damage can hurt even high-level creators. Twice or three times as much damage can be fatal to any wizard.

The companions themselves also feel the blow of another homonculus

linked to the same creator. In the event that one is killed, each companion linked to the creator suffers damage equal to half that suffered by the creator (1d10 hp), so it is entirely possible, if not probable, that the death of one could very well cause the death of everyone sharing the same bond.

Although some strong wizards have taken this chance, they report that the homonculi work poorly together. Each companion tries to be the center of attention. Pranks must be tolerated, fights arbitrated, and territories clearly marked if one wishes to house more than one companion.

Other Spellcasters and Homonculi

Because the homonculus link connects the life force of the creator and his companion, wizards without a

The bolan is the nearest cousin of the "standard" homonculous.

living spirit—specifically undead—are unable to create a homonculous, even if they are somehow capable of providing the blood for the creature's base. Undead might have many other special servants, including slaves of their own kind, but they may not have homonculi. The one exception to this rule is a lich who, while living, has a homonculous. The process of becoming a lich, while it technically "kills" the wizard, allows the homonculous a chance to survive. The percentage chance that the homonculous lives is equal to four times the wizard's level. Thus, the homonculous of an 18th-level wizard who undergoes the process of becoming a lich has a 72 percent chance of surviving the ordeal.

Bards and other characters who can cast the necessary spells are unable to make a homonculous. The

prevailing theory is that the ability to create and control a homonculous is a class-related ability, similar to the use of certain magical items. There have been attempts by bards and others, but these attempts invariably fail, although some few such homonculi have lived for several minutes before collapsing into a vile gel. Dual-classed and multi-classed wizards can make and use a homonculous, although dual-classed characters might suffer an experience point setback (see Dual-Classed Characters in Chapter 3 of the *Player's Handbook*).

While other creatures and character classes can use wizard spells or share some of the abilities of a wizard, the creation and use of a homonculous seems to be truly unique to them. No documented cases of non-wizards with a homonculous companion have

been discovered. No restrictions according to race, however, seem to exist. A githyanki mage, for example, is capable of having a homonculous.

Free-Willed Homonculi

The mystery of the free-willed homonculous has been debated for years. When a companion's creator dies of old age, the homonculous does not liquefy immediately but returns to the creator's body for 1d3 turns, presumably to mourn. The creature is not actually free-willed at this point, as it is still devoted to its creator. No homonculous ever seen in this state has ever acted otherwise.

If a creator is placed into any form of suspended animation but is not dead, the homonculous stays alive, as nearby as possible. These conditions include petrification and the wizard spells *feign death*, *sequester*, *temporal stasis*, and *imprisonment*. In the case of intentional use of these spells, the companion is intelligent enough to aid in the deception by staying out of sight so as not to give away the ruse (an enemy who sees a live homonculous would know that the wizard using *feign death* is not really dead).

If the creator is petrified, his end of the mental link is blocked off. From the companion's viewpoint, the effect is the same as if the creator were on another plane. The homonculous, no matter how near, feels that the link is broken and wishes it restored. It sits at the feet of the creator, rests on a shoulder, or climbs into a crook of an arm until the creator is restored to flesh.

In any case where the bond between creator and companion is severed for more than a week, the effects begin to show on the creature. Since its life force is dependent on the creator, it suffers reductions in life force when it cannot be renewed regularly. For every week the creator is on another plane or petrified, the companion must make a System Shock roll or have its maximum hit points reduced by 1d4. These hit points are restored instantly when the creator returns and the bond is restored.

Otherwise, the homonculous can take this slow ebbing of his energy for only a short while. After eight weeks, if the homonculous is still alive, the bond is permanently broken and the homonculous is free to act as it wishes. Its hit points begin to return one per day as the homonculous develops its

own life force, free from the creator's yoke. Depending on the companion's alignment and general treatment by its creator, it might attempt to restore or find the creator.

A free-willed homonculous still retains its existing knowledge and proficiencies. By preference and long association, the homonculous often seeks out a wizard, to whom it acts as an assistant and helper, although without the comforting bond. The new wizard does not gain the ability to use the homonculous' senses and does not suffer damage if it dies, but he still gains a valuable, trusted companion.

Other homonculi become thieves, join sprite tribes, explore the world, or tend crops and orchards, or anything else, according to their alignment and personality. The free-willed homonculous could even be played by the creator's player until his character has recovered from whatever unpleasant plight cancelled the bond.

Ability Scores

The homonculous is a small creature, and some of its physical abilities suffer accordingly, especially Strength. The homonculous' Strength is determined by rolling 1d3+3. Its Dexterity is excellent, however, as with many creatures its size (1d8+10). Its Constitution is rolled with 3d6, with bonuses or penalties determined normally. In cases where the homonculous cannot travel as long as the creator, it normally rests on a shoulder or saddle somewhere.

The homonculous' strong point is its Intelligence. The creature's Intelligence is equal to that of its creator, but the creature's Wisdom is often that of a child, determined randomly on 3d4 but never higher than the creator's score. Fortunately, the homonculous learns rapidly from experience.

For some reason, it seems difficult to create an aesthetically pleasing homonculous. Perhaps no alchemist so far has also possessed any artistic skill. Maybe the mix of vile components can only be refined so far. Their lack of speech keeps them from swaying others to favor with eloquence. These traits, along with a magical bond that makes their creator the most important thing in the world, give the homonculous a low Charisma rating. For these creatures, Charisma is determined on 2d4.

The wingless carian is both dextrous and curious.

Proficiencies

The companion has all of the knowledge of the creator, including proficiencies, although the Strength-based proficiencies suffer from the homonculous' weakness. Academic skills such as reading ancient history, or herbalism are more appropriate for homonculi and can be used immediately to full effect.

This duplication of proficiencies is one of the companion's main benefits for the wizard. The spy can identify cast spells or detect the presence of magic in an item if the creator has the spellcraft proficiency. If the creator can read and write, the companion can freely trade notes, minimizing the disadvantage of being mute.

Other knowledge includes general class knowledge available to the creator. The companion can recognize a

glitterdust spell, is able to gather material components, and easily fetches (small) research books from the library. Multi-classed creators might ask their companions to search a door for traps, identify a holy symbol, or judge the condition of a suit of armor, as their other class skills allow.

Tool Use

Using human-sized tools gives these small creatures a penalty to their chance of success. A -15% penalty should apply to any chance of success or a -3 proficiency check per size difference. Since homonculi are Tiny, using human tools gives them a -6 penalty on whatever task they are attempting.

If capable of performing the task, certain jobs take longer to complete. An 18"-tall person laying bricks, for

The chorasmian has eyesight three times keener than that of a human being.

example, takes a very long time to make a house. If the task is dependent on Dexterity but size helps expedite the chore, time needed should be doubled. If the task requires strength and stamina, the time needed should be trebled or quadrupled.

On the other hand, especially fine sewing work, writing, or engraving might be performed better by a homonculous than by a human. Companions engaged in these tasks might use the appropriate proficiency even more skillfully than their creator, possibly using their skill at +1 or +2.

Other Skills

Where necessary, the DM should use its creator's standard for miscellaneous abilities that a homonculous might call upon. Its chance to climb walls, for example should be 40%, the

same as an untrained human. Its chance to hear noise, surprise, and find secret doors, should all be the same as the creator's. Some specific variations have bonuses or penalties to these abilities, and these exceptions are clearly noted.

Care of a Companion

Although the *Monstrous Manual* book states that homonculi perch wherever they can, this treatment is not seemly for a creature of such intelligence. The homonculous has the same tastes as the creator, including standards of living. A creator's treatment of its companion is a matter of self respect. Instead of treating a homonculous as a pet, the creator should treat it as it is: a companion.

While an evil or uncaring creator might order the homonculous to sleep

on the floor and give it no space to call its own, even the most insensitive of creators generally give the companion its own place to sleep. At the bare minimum, a comfortable bed and shelter are required. A generous creator gives his companion its own room, complete with scaled-down furniture, some toys or games, and a private door.

A separate housing of some sort serves another purpose as well. While a spot on the floor might be protected somehow, the wizard can easily cast *wizard lock* on the companion's 2'-high door, *fire trap* the secret door that allows for easy exit, and place a *permanent illusion* (about which the companion naturally knows) over the whole thing. Keeping the companion safe from any harm also protects the wizard.

Similarly, throwing scraps to a dog is one matter, but giving leftovers to a companion who shares your deepest secrets is demeaning, to say the least. The homonculous should have its own food prepared for it, which is simply a matter of preparing slightly more than the creator himself normally eats. The companion needs only a small amount of food; a couple of coppers a day should make the difference in price, and the extra time consumed is negligible.

Clothing is another matter of which some wizards are indifferent. Since the companion is a creation, many argue that clothing is unnecessary. The homonculous, the argument goes, is just a tool, and nobody bothers to clothe a hammer or a pick.

Again, the companion's high Intelligence and similarities to its creator should be considered. The homonculous might very well make its own clothes out of materials at hand if none are offered. Rather than let it walk around in a pair of sewn leaves or a giant ratskin cloak, the creator should make some attempt to provide suitable clothing. PC homonculous owners can become quite creative if they wish, making tiny outfits that mimic their own clothing. They might also dress the homonculous up in a jester's suit, deck him out to mock a buffoonish noble, or put him in clothes that look like an enemy's garb to deceive a third party. Care should be taken that any clothes allow for the creature's wings and don't impair movement.

The companion should also be allowed reasonable time for rest and sleep. Since it can't use magic of its own, the homonculus could be allowed to sleep in during the mornings, when wizards generally memorize their spells. Also, when traveling, the homonculus might need to fly occasionally to keep up with the rest of the party, since their walking movement rate is less than a human's. Rest breaks should be planned, or the homonculus should be allowed to ride a pack animal or sit with a mounted character. Most can even sit on someone's shoulder.

Familiar vs. Homonculus

Debates rage about the relative merits of familiars and homonculi. While a wizard may have both, few actually do. In combat, the homonculus is undoubtedly superior. Although hit points and armor class are comparable for most levels, the companion's sleep venom can affect enemies of any level and for a substantial amount of time.

Defensively, the homonculus always gains the creator's saving throws; the familiar receives this benefit only when in direct contact. Although the cost of losing a homonculus might be as little as 2 hp (which can be healed easily), losing a familiar always costs a point of Constitution, which is extremely difficult to replace—and no wizard has Constitution to spare.

At the other extreme, the loss of a homonculus can cost the creator 20 hp, which is admittedly high, but wizards 8th level or higher are likely to have that much when at full health. Statistically, wizards as low as 4th level could survive maximum damage if they have a bonus to hit points for high constitution, are dual-classed or multiclassed, or have their hit points enhanced through priestly magic (like an *aid* spell). The death of a familiar can kill a wizard, regardless of level, hit points, or protection.

The familiar can be slightly more effective at covert observation of enemies, because it looks like a normal animal and might be ignored. The homonculus, on the other hand, with the creator's Intelligence makes far better deductions about what it sees and hears. The familiar's ability to relay information to the wizard is also seriously inferior to that of a

A water breathing spell gives the gendrasian both gills and a love of swimming.

homonculus, lessening its overall usefulness as a spy.

Those who prefer familiars point out that control range is a mile, while the homonculus can only be controlled up to 480 yards, or about a quarter of a mile. Advocates of homonculi point out that at anything over about 200 yards, the companion is out of an adventuring party's protective umbrella of missile fire and spells anyway. Underground or indoors, the companion is rarely more than a few yards away from the creator.

While the wizards themselves might argue bitterly about which is better, those who both create a homonculus and conjure a familiar sometimes find that the homonculus does not regard the familiar with any animosity at all. In fact, it often takes on the responsibility of taking care of

the familiar, adopting it as its own pet. A wizard's companion, moreover, is likely to be the only person other than the wizard himself who can gain the complete trust of the familiar. As for each other, the familiar knows instinctively and the homonculus knows through reason that the death of either one can kill the wizard on whom they are both dependent.

The Other Homonculi

In addition to the standard homonculus, different varieties have been created by wizards who experimented with nonstandard alchemical bases. These changes in materials may include teeth or bones from the creator (which, ideally, are regenerated with magic), the blood of other creatures, or rare and dangerous acids and poisons. A slight addition or variation to the

New Spell: Chameleon

(Illusion/Phantasm)

Level: 1

Range: Touch

Components: V, S, M

Duration: 2 rounds/level

Casting Time: 1 round

Area of Effect: Creature touched

Saving Throw: None

This spell alters the coloration of the recipient to match that of the surrounding background. When moving through areas where the background changes gradually (such as stepping from the edge of a forest to a green field), the coloration changes automatically. When the background changes abruptly (from forest to gray stone wall), one round is required to effect the change in coloration. The coloration allows the character to blend in with his surroundings, making him difficult to stop and attack. At ranges greater than 100 yards, the affected character cannot be spotted (although he can be seen if pointed out by another standing closer). At closer ranges, the character is treated as if he had a 20% chance to hide in shadows, although he is not required to remain still. In addition, characters who can hide in shadows gain a bonus of 20% to their normal chance of success if they remain still. Missile weapons suffer a -4 penalty on their chances to hit a character affected by a chameleon spell.

The material component for this spell is the shed skin of a small lizard.

standard spell requirements is also necessary, usually something as subtle as the addition of a single spell. Neither of these elements works without the other—alchemy and magic are both required.

Most of the skills of the different homonculi seem to come at the expense of the potent sleep venom possessed by the common version. These variations have other abilities, however, which make them just as useful. Although each individual has the major personality traits of their creator, a homonculus has its own quirks and tendencies. While they can certainly be commanded to act differently, their natural behavior sometimes manifests on embarrassing or untimely occasions.

Axonan

The axonan arose thanks to the spell *ESP*. Their skin is smooth, unscaled, and can appear mauve, ecru, or milky white. Their eyes are flat and black, their heads round, and their mouths set low on their skulls. The loose skin on either side of the mouth segues into a fold that looks like a short tentacle, making their appearance nearly as bizarre as the mervan. Their wings are eerily silent and fold nearly perfectly into their back.

Combat: The venom of the axonan causes sleep but for a much shorter duration than normal—only 1d6 rounds. While the target is asleep, however, it is subjected to horrifying dreams that have been likened to the attack of a *phantasmal killer* or *nightmare* spell. Anyone bitten awakens instantly when the sleep is fought off but believes himself wounded of 25% of his maximum hit points from the imaginary ordeal. If the enemy is wounded for real (either before or after the bite venom takes effect) and believes himself reduced to 0 hit points (and actually has hit points remaining), he falls unconscious for a full hour. After one hour has passed, the victim has had a chance to review the dream sequence mentally and realize its nature, thereby “recovering” the lost hit points.

Personality: The axonan shares the closest mental link with its creator. For short periods of time (1d6 turns) it is willing to move beyond the normal range of telepathy, extending the link with which it and its creator can communicate. It does not (or can not) go beyond telepathic range more than once per day. During this period of time, should the homonculus be killed, the creator takes an additional 1d6 hp damage because he is more closely attuned to the axonan. Conversely, the axonan seems to be the least unnerved by having its link severed. Although it follows the same habits as other homonculi in seeking to restore the link, its behavior is much less frantic and desperate.

Bolan

The most common of the variant companion is made by including the spell *chameleon* (from the *Oriental Adventures* rules, see sidebar) to the basic formula. PCs who wish to use

this formula must research it or physically search for a copy of the spell. This close cousin to the standard homonculus is naturally a light brown in color but can camouflage itself almost perfectly in any natural surroundings, whether forest, desert, or underground. The bolan is otherwise similar in appearance and abilities to those described in the *Monstrous Manual* tome.

Combat: When concealed, they have a 7 in 10 chance of surprising opponents and are themselves surprised only on a 1. Their sense of sight is normal for those of its kind, but their hearing is exceptional. Bolans have a 75% chance to hear noises others would miss. When possible, they initiate combat by surprise, using their camouflage cleverly. Like most ambushers, they do not remain in close contact with an enemy. The Bolans' sleep bite venom is weaker than normal, causing the victim to be slowed for normal duration (5d6 rounds).

Personality: With the ability to eavesdrop unseen, bolans make superb spies. They have been called the most playful of the homonculi and have a child-like affinity for simple games, especially physical games. Hide-and-seek, of course, is their favorite.

Carian

A simple *spider climb* added to the formula created a companion that turned out to be one of the most versatile. Carians lack the wings of other homonculi but sport a prehensile tail almost as long as their body, which is about one third smaller than others of its kind. They are unable to fly but compensate by being nearly perfect climbers—they have a 95% chance to climb walls. Should they fail this roll (possibly due to penalties caused by high winds, slippery surfaces, etc.), they suffer only half damage from any fall due to their light build and supple body. They can also jump up to 15 feet forward, or half that upward or backward—truly tremendous jumps, considering their own size. The carians are more agile than any other companion. They determine Dexterity by rolling 1d4+14. Their Strength scores, however, are rolled with 1d3+1, and their Wisdom suffers a -1 penalty.

Combat: Carians alone of the many known variations maintain the

normal bite attack. In combat, they jump or climb to a vantage point, then wait to pounce when a victim's back is turned. They bite once, then scamper away for another surprise attack on a different enemy. When fighting single creatures smaller than themselves, they sometimes attempt to hold on with both hands and tail, then make repeated bite attacks with a bonus (+1 to +3, one bonus point per limb grasping).

Honest wizards usually use the carian's small size and natural dexterity, as well as the added limb, to acquire hard to reach material components or as an aid in the laboratory. Larcenous wizards put them to use pilfering unwatched items, which they do very well. They are light-fingered and can pick pockets with a 50% chance of success.

Personality: The carian is the most eager to investigate new things and often has to be called back lest it set off a trap when a treasure chest or new area is discovered. They like to handle new tools and have been known to discover secret doors by triggering them inadvertently. They do not like to be around dead bodies. Crypts, catacombs, and graveyards make them nervous and irritable. If their creator allows it, they avoid these places no matter what interesting things might lie inside.

Chorasmian

Adding *feather fall* to the recipe creates a pinioned homonculous of different colors. By far the brightest hue of the homonculi, they are often red, orange, blue, green, or even the rare yellow. Their eyesight is superior, and they can see and identify objects at three times the distance of a human (see Chapter 13 in the *Player's Handbook*). They have a thick, sharp beak, thin but strong hands, spindly legs, and quick, jerky movements. Chorasmians often hop rather than walk, and they spend more time in the air than any other homonculi. Their Constitution score suffers a -1 penalty, but their brilliant coloring and affection give them a +1 bonus to their Charisma score.

Combat: Chorasmians can dive any distance and suddenly break their fall, but their hands are not sharp enough to serve as claws or talons. Instead, they usually attempt to grab an item out of an enemy's hands. If

Mervans prefer a vegetarian diet but eat meat when necessary.

they surprise an opponent, they can snatch a small item (10 pounds or less) out of an enemy's grasp if the target fails a save vs. petrification. They attempt to gain this surprise by flying out of sight above their enemy, then diving and snatching in a single round. If they can dive, they surprise as an invisible and silent monster (+4). If they do not achieve surprise, the grab is treated as an opposed roll, which the chorasmian usually fails. Often, they drop the item in a body of water or a chasm or take it to their creator. Chorasmians' venom quickly attacks the part of the victim's brain which controls the senses, causing both deafness and blindness for 5d6 rounds (the target may save vs. each effect separately).

Personality: Chorasmians have an affinity for shiny objects and might

take off with unclaimed coins or flashy crystals. They sullenly return items that do not belong to them and return other, possibly unnoticed, items after a few days. They love clean mirrors especially and treasure these fragile items far more than their gold piece value. They shy away from fire and become agitated around larger blazes.

Gendrasian

The only gilled companion, the gendrasian, can breathe water or air with equal ease. Fittingly, a *water breathing* spell is needed for its creation. They have a shiny green skin with blue, white, or gold flecks. Both hands and feet are webbed. Although scaly like most of the others, their scales are very fine and perfectly smooth. They can swim at a movement rate of 9

The largest of the homonculi, the mullan can be a bully among creatures its size.

and can swim up to 100 feet below the surface and back with ease. Gendrasian can travel deeper but no better than a human. Gendrasian prefer fresh water but can survive salt water just as well. Their ability to move in another medium gives the creator a considerable advantage, as underwater streams, stagnant pools and wide rivers often contain unknown perils or hidden treasures.

Combat: The gendrasian's bite paralyzes targets, causing fear for 5d6 rounds, but the bite causes only 1d2 hp damage because they have a smaller-than-average mouth. Otherwise, they fight normally, although they prefer underwater combat when facing creatures foreign to that element.

Personality: The gendrasian are not only capable of swimming, they truly enjoy it. Whenever they have no

other duties or contrary commands, they prefer to find a pond or pool to splash in. If otters or dolphins are known to be nearby, gendrasian seek them out for play. Although they suffer no ill effects from having being out of water, dry skin is uncomfortable for them. They often have to be pulled from cisterns or wells that humans use as a drinking source.

Mervan

The mervan is the most unique in appearance of any homonculous and requires a summon swarm spell during creation. They are most often white, but can be tan, steel gray, or even ochre. These companions have large, multi-faceted eyes, a hard carapace (AC 5) and thin, transparent wings. The mervan's three-fingered hands are quite similar to the claws of a

trilateral creature like a xorn but no less dextrous than others of its kind.

Combat: Mervans have a weak mouth but bite with a strong pair of mandibles, dribbling their venom on their target. The venom from this bite is a real poison that causes 1d6 hp damage (or none if a saving throw is made). This poison is separate from the bite damage itself, of course. This poison loses its potency quickly and cannot be used to coat weapons or poison food or drink. Their odd eyes can detect invisible or hidden objects 25% of the time.

Personality: Mervans are undoubtedly the least curious of their kind. They have an unnerving ability to sit still for hours on end. Their only habit that eases the alien personality they project is their vegetarian diet. They have been known to eat meat, and can survive on it, but given their preference, they leave it alone. Strangers seem to expect to see mervans sucking blood out of a helpless victim and are often visibly relieved to see the homonculous nibbling on an apple instead. Mervans have a Charisma of only 1d4+1, but they are stronger than most. They receive a Strength bonus of +2.

Mullan

This oversized creation was the surprising result of an enlarge spell added to the mix. The mullan is much larger than other companions, topping two feet, nearly as large as a small halfling. The skin, scaly like the standard homonculous, is rough and darker than normal.

Combat: The mullan's bite venom is too weak to inflict damage, but their fierce bite causes 1d4 hp damage and follows two effective claw attacks (for 1d2 hp damage each). They are immensely strong compared to their peers, which means they can use size S weapons without penalty. Whether using natural attacks or weapons, they have the THAC0 of a 4 HD monster (17). If armed with a magical dagger or other weapon, they can be (relatively) fearsome. Mullans are tough, having no fewer than 3 hp per die. Although less graceful than some in the air (movement reduced to 15, MC reduced to C), they are just as adept on the ground or a perch. As mentioned, mullans are stronger than other homonculi, having a Strength score of 1d6+8.

Personality: The mullan's ability to inflict measurable damage makes it ideal for seeking out other homonculi, familiars, gremlins, or sha'irs' gens for combat. The mullan might also be used to drive away certain fairy creatures if the creator is the subject of pranks and lacks a sense of humor. Mullans are terrors among the smaller creatures because of their aggressive personality. If left unchecked by their creator, they bully smaller animals and creatures. They seem to be especially brutal to homonculi who possess a bite venom. Jealousy is the suspected reason for this treatment. They are still not very strong for personal protection and are used sparingly as a guard by a wise wizard.

Thymban

Using a *chill touch* creates a homonculus known as a thymban. The thymban appears almost skeletally thin, with taut, ashen grey skin. The head seems out of proportion to the rest of the body, and the outline of a skull can be readily seen, surrounding two bulbous eyes. The thymban brings to mind the undead and often frightens those who first view it.

Combat: Their bite venom causes fever, sweating, and weakness. Those bitten suffer -1 to attacks and damage in monsters, or -1 to Strength (for characters) per bite. If potential damage or Strength is reduced to 0, the target falls unconscious for 1d6 turns. The thymban have the unique ability to use magical items as a wizard, although they cannot utter command words if that option is used, nor can they use scrolls or any other items that rely on the spoken word. They might, for example, spy on the creator's enemies in a *crystal ball*, or use one of the different devices meant to summon and control elementals. This ability to use magic includes any protective gear normally reserved for wizards, which is useful for keeping the homonculus (and thus its creator!) safe from harm. They can often find these items with their sensitive touch, which allows them to detect the presence of magic 25% of the time in an object if they can handle it for one full turn.

Personality: The thymban, despite the poor reactions of those it meets, tends to be gregarious and often seeks to be in the company of others, as long as it can stay within telepathic

Despite its frightening appearance, the thymban is a gregarious creature.

range of its creator. If not commanded otherwise, it usually seeks out the largest group of individuals of similar alignment to its creator and follows their conversation or tries to participate in whatever activities they might be undertaking.

Further Research

Rumors abound about other homonculi, some more successful, some less. A handful of these were predisposed to an evil nature and proved reluctant to follow commands. Some are short-lived and might have failed because of alchemical rather than magical or natural reasons. Tales tell of a vampiric example that drained a person's Intelligence, a charming and beautiful homonculus, a companion with a shape similar to the hybrid form of a werewolf that

sported a fearsome bite attack, and a protean variation that did not lend itself well to description. Subsequent investigation into these homonculi by very competent wizards has been unable to duplicate these versions.

This article has seen more incarnations than a Piers Anthony series. Heather deserves much credit and thanks for her help, Dan's suggestion provided the title, and Carol allowed me the time away from chores. Lloyd had the easy job of putting it together into more-or-less coherent words.

by **Michael Persinger**

From an address by the esteemed scholar Ferba to the assembled Guild of Naturalists of Quardolf City:

Understandably, little research has been done on the creature we know as the hook horror. I have spent the last few months laboring to learn all I can of this creature's habits and, as you can see, my colleagues have supplied me with a perfect, albeit dead, fully grown specimen. Take a good look, for few specimens exist in such an excellently preserved state.

The monster is bipedal and of ogre size, this specimen being 9'2" tall. Its head resembles a bony vulture's head with a crest of red feathers at its neck. At each wrist (where one would expect to find a hand) is a large metallic-gray talon and a tuft of red feathers. Its chest and back are protected by thick, natural plating. The beast's arms and legs are covered with a similar material, though of lesser strength.

I would like to call your attention to the armor plating that covers the creature's body. Constructed of chitinous material, these plates function as the hook horror's bones — an exoskeleton similar in many respects to those of the common grasshopper, crab, and most arthropods. This mail-like material becomes exceedingly strong with the buildup of calcium deposits from the creature's diet — deposits that rival dwarven steel for strength — and this armor has deflected many a sword. So powerful is this creature's exoskeleton that a few blacksmiths have experimentally crafted the plates into suits of armor¹, and a few ogres from the great caverns to the north have used crude forms of such suits in battle.

But forgive me; we are a guild of naturalists. Associating with my bodyguards — without them I would not be able to safely carry out my observances — has moved me to think in their perspective. Violence is not our way, and I shall refrain from further military references.

As you all know, the hook horror — also known over the lands as the vulture beak, hacker, cave dweller, and clacker — makes its abode in dark, isolated areas. The hook horror is found exclusively in subterranean surroundings, with natural cavern complexes and abandoned mines ranking as its most favored lairs. Many of these lairs are linked by the vast subterranean network of tunnels we call the Sunless Realm, where dwell the drow and other vile monstrosities. Though the hook horrors certainly migrate through this kingdom of eternal darkness, we may also speculate that the creature comes above-ground during opportune moments, most especially if the surroundings are a dense forest at nightfall. Yet to date, no specimens have been reported outside underground caverns. Whatever the case, the hook horror rarely associates with creatures other than its own kind.

The Ecology of the Hook Horror

The dwellers in the darkness

Illustration by Jim Holloway

Now, you may wonder how the hook horrors can see, let alone live, down in such dark abodes. Infravision probably comes to your minds. But unlike most other underground dwellers, hook horrors lack infravision completely. The hook horrors are born with very weak eyes and can only see a few feet in front of them. They are, if you will pardon the cliché, blind as bats. So how do they get around?

Fortunately for the hook horrors, nature has compensated for their limited sight by giving them excellent auditory and olfactory senses. They can hear many times better than a normal man, and even possess a limited form of echolocation, as is used by bats. Their scent-detection ability rivals that of certain bloodhounds. In other words, these senses enable the hook horrors to “see” at least as well as you or I would see with our eyes.² Actually, their senses are even better than that. During a recent experiment, one hook horror successfully sniffed out an invisible mage. Another one detected a silently moving thief that no one else could hear. Among other things, these senses make it very difficult for enemies to surprise the hook horror³ and make it easy for the hook horror to search out food.

As for their eating habits, the hook horrors are herbivores. Their diet is rather selective, consisting primarily of subterranean fungi. They have an abrasive tongue to help their feeding, and they commonly eat whatever lichens, moss, and mushrooms they can find. Hook horrors are very large creatures, and therefore (we initially assumed) eat vast quantities of food each day. But there is only so much fungus in any underground area; a hook horror’s food supply, as you no doubt guessed, becomes easily depleted. How does a 9'-tall biped sustain itself over prolonged periods of time?

Direct observation of the hook horror by means of scrying reveals it to be very sluggish — much like the giant sloths I lectured about three seasons ago. A hook horror sleeps roughly half the day and moves about little if not disturbed. Hence, it needs little food to keep it going. Its actual food consumption is shockingly low for a creature its size. A full-grown hook horror consumes roughly three-fourths the amount of food necessary to feed a full-grown man.

Despite this, a hook horror’s food supply can still dwindle rapidly. Most hook horrors migrate from cavern to cavern every few months to obtain a fresh food supply from new lairs while fungi regrow in the vacated areas. A few hook horrors have advanced intellectually to the point that they may grow and cultivate fungus within their lairs. These hook horrors usually have at least one garden chamber devoted to this “farming” activity.

If the usual foods cannot be found, the hook horror will turn to other sources, lest it starve. More exotic creatures, such as zygomys, violet fungi, phycomids, and

shriekers⁴ become the hook horror’s daily meal. This may strike you as odd, for common knowledge has it that these fungi are deadly to humans and other creatures. But several reliable accounts have emerged of hook horrors eating these queer plants. Apparently, hook horrors are immune to these plants’ powers.

Continuous study of these immunities has led me to suspect that this ability originates from the hook horror’s endocrine system. This system contains a gland, located here in the abdomen, that secretes a special hormone. This chemical somehow makes the creature immune to the effects of zygom glue, violet fungi rot, and phycomid infestation. My colleagues and I believe that this gland is 100% effective and have taken extra steps to examine it. Our hope is to tap this glands potential and manufacture a protection against the so-called “fatal fungi.” I’m sure you all realize the benefits that such a protection would give toward our study of that botanical area. Our best alchemists and wizards have made attempts to exploit the gland, though these have unfortunately ended in failure.⁵ Though we are still working with this project, future success appears uncertain.

The hook horror may be immune to harmful fungi, but it also has an uncanny weakness in health. Tests have shown the hook horror to be unusually susceptible to diseases and parasitic infestations from sources other than fungi,⁶ which are usually caught early in life and take a toll over the years. The specimen you see here died of tapeworm parasites. Between disease and the continuous problems of food availability, the hook horror rarely lives past the age of 40.

Hook horrors have very few natural enemies. Because of their infestations and great strength, most carnivores shun them. Only certain indiscriminate predators such as carrion crawlers are bold enough to challenge them. Of course, many hook horrors have been killed while attempting to find food — some by the hazards of underground life, and some by frightened or sword-happy adventurers who are fond of killing all in their path.

The hook horror is one of the few bipeds that reproduces through egg-laying, just as kobolds are known to do. Once every year, a female hook horror lays from one to four eggs in the lair, each about 3" in diameter. They are shaped and colored in mimicry of stones — a disguise against predators — and scattered across the hook horror’s lair among ordinary rocks.⁷ This camouflage is very effective, and most every egg laid will hatch after a six-month period.

The hook horror grows very quickly during its early years. Born a mere 1' in height, this creature doubles its size after three months and reaches 5' of height within one year. The hook horror’s growth levels off afterward, with a height of 6' reached during the next year. It then

grows another 1-2' over the next five years. The hook horror reaches its full growth of 9' by its 17th birthday.

The young hook horror becomes highly independent during its early years. It remains with its parents for only about one year. Its second year is one of transition, wherein the hook horror begins to set off on its own without straying too far from its home. By its third year of life, the hook horror is out on its own and is totally independent of its parents. The hook horror attains reproductive ability in its sixth year of life. At this point, it searches out a mate.

Like those of the arthropods it resembles, the hook horror’s hard shell does not grow with it. Thus, it must periodically molt. The molting process starts out gradually. Old plates begin to flake off in pieces, a process that accelerates over a two-day period with bigger and bigger plates falling off, until the hook horror’s entire exoskeleton is shed. Little conscious effort is used in this shedding; the shell simply falls off like an old scab.

Before the old shell falls off, a new exoskeleton has already begun to form. These new plates are just hard enough to support the hook horror’s body and allow for adequate movement. This new exoskeleton is much softer than the old plates, however — not developed enough to serve as full-strength armor — and it offers very little protection to the creature. The hook horror’s exoskeleton hardens relatively quickly and achieves its full strength after a couple of days. Until then, the hook horror is quite vulnerable to physical attack.⁸

Frequent references have likened hook horrors to humanoids. This is only in the loosest sense, however. Hook horrors are not mammalian, being invertebrate arthropods with a vaguely humanoid form. The behavior of a hook horror differs much from that of a humanoid, too; the creature relies on its instincts, very much like an animal does. For instance, the hook horror is afraid of fire and loud noises. It is not aggressive by nature, though like any animal, it will fight furiously if attacked.

Despite their animalistic intelligence, these monsters are capable of limited communication between each other. Just how much can be communicated, my colleagues and I have been unable to measure, but it is my guess that they convey only the most rudimentary knowledge.⁹ They don’t speak like you or I — no, the hook horror “talks” by making clacking noises, an action performed by flexing certain portions of its exoskeleton.

At first impression, these noises appear to be nothing more than bothersome gibberish; but repeated listenings show a definite pattern in these sounds. To the hook horror, these noises mean many different things, depending on the sounds’ tone and pitch. The location of food, for example, excites the creature, causing it to emit a steady, high-pitched clacking. The

location of an enemy, however, angers or alarms the creature, causing it to send low-pitched, unsteady noises. And, most importantly for us, signals of "friendship" are communicated in soft, steady tones. A language specialist is currently working to translate the hook horror's speech patterns; I will of course inform you on his progress.

The hook horror prefers the company of small groups, usually no greater than a dozen or so members. These tribes, if you will, do not go out of their way to associate with other subterranean creatures or even with other hook horrors, though hook horrors have been known to form huge "herds" at rare moments, and others have been briefly befriended by humans with gifts of food. However, the hook horror is more of an animal than a rational creature, and it has not yet been truly domesticated. Proper training and rewarding can — and have — brought hook horrors into short service as guards and sentries, but this is a risky business. The hook horror is a primitive creature and has no loyalty or causes to concern it. Past experience with trained hook horrors showed that they follow simple orders, assuming that owners have ways of communicating effectively with them, for proper treatment. But if a situation becomes threatening, hook horrors ignore orders and put self-preservation above all

else; a fitting reward for those, I might interject, who exploit the hook horror for making war.

A final note on a curious habit of the hook horror, much reported by adventurers in the Sunless Realms: Hook horrors take some pains to collect silver and electrum when such can be found. Why? Hook horrors eat such coins, which then grind up food in their stomachs much as pebbles in the stomachs of toothless fowl. Silver and electrum do not irritate the stomach linings of the hook horrors, and after passing through their digestive systems — no worse for the wear — are deposited in an area near the current lair of the hook-horror tribe. Adventurers have commented on the peculiar, sour odor of such coins, though this has hardly stopped the collection of the same!

And that, my friends, is a summation of the knowledge on the hook horror. Research continues, and new developments are making the study of the hook horror less a mystery. I am eager to inform you of further developments as they come along. Thank you.

Notes

1. To create this armor, a blacksmith or armorer must remove the shell from the hook horror's body. Success is automatic, but if any other person attempts it, the chance of success is only 10% per his

Don't Get Stuck Without a Worthy Opponent!

Flying Buffalo, Inc. is proud to announce the 21st title in their Tunnels & Trolls™ line of solo adventures. **Red Circle™** isn't kiddie lit — it's good, solid adventure that pits your characters against horrid monsters and evil people. It reads like a good fantasy novel, and doesn't shrink from good, old fashioned, hard-hitting action. If your characters elude the dragon, and somehow escape the *dhesiri*, they still have to deal with Baron Valdemar and live long enough to put an end to his evil plans. You will need the T&T™ rules to enjoy this solo. Now available at \$5.95.

New! New! New! New! New! New! New!

Still Available: Amulet of the Salkti (\$6.95), *Arena of Khaxan* (\$5.95), *Beyond the Silvered Pane* (\$5.95), *Beyond the Wall of Tears* (\$7.95), *Buffalo Castle* (\$3.00), *Captif d'Yvoire* (\$5.95), *Deathtrap Equalizer* (\$4.95), *Gamesmen of Kasar* (\$5.95), *Mistywood* (\$4.95), *Naked Doom* (\$4.95), *Sea of Mystery* (\$5.95), *Sewers of Oblivion* (\$5.95), *City of Terrors* (\$7.95). Tunnels and Trolls Rules (\$9.95), *Tunnels and Trolls Boxed Set* (\$15.95). Get them at your local hobby and game store, or add \$1 for shipping and handling and order from: Flying Buffalo Inc., Box 1467, Scottsdale, AZ 85252-1467

** 1 + 1 HD from 1-2 years, 2 HD from 2-3 years, and 2 + 2 HD from 3-5 years.

experience level. This removal is assumed to take one day. Afterward, it takes 30 days for the exoskeleton to be processed into a suit of armor. This armor is AC 3, making its saving throws as bone. Most smiths will buy these exoskeletons for about 100 gp (if still on the body) or 250 gp (if removed). A fully processed suit of armor will sell for about 450 gp. Because hook horrors are 9' tall, these armor suits are only usable by large creatures (i.e., ogres, large bugbears, verbeeg, etc.).

Note that only the exoskeleton of a full-grown, 5-HD hook horror may be manufactured into a suit of armor. The exoskeleton from a younger hook horror is too soft and weak to be crafted into any armor of worthwhile quality.

2. Because of the hook horror's altered senses, it has saving-throw modifications against certain attacks. Against spells causing blindness (i.e., *light*, *darkness*, *color spray*, *cause blindness*, and *glyph of blindness*), the hook horror receives a +2 saving throw, as its vision is not much used. This bonus is also given against illusions and phantasms that affect only the visual senses. If the hook horror is blinded but wishes to enter combat, it has a penalty of -2 to hit (whereas a normal person would have a -4 to hit). However, against spells that affect the olfactory or auditory senses (i.e., *audible glamor* and high-level phantasms), the hook horror has a -2 saving throw, as its major senses are being affected. A blinded hook horror moves at a maximum rate of 6" unless in familiar territory.

Using echolocation (emitting a high-pitched trill which is picked up by its batlike ears), a hook horror can sense its environment out to 120' in total darkness, and can detect *invisible* or hidden objects with ease. Anyone trying to silently past a hook horror without using magical *silence* has a -40 penalty to do so, as they hear so well.

3. The FIEND FOLIO® tome states that there is only a 10% chance of surprising a

hook horror.

4. Whenever a hook horror's lair is located (usually a temporary affair like a niche in a tunnel), the DM should allow a 50% chance that one of these fungi is located in the general area. There is a 10% chance that the actual lair contain these fungi, kept for nourishment. If a hook horror is met as a wandering monster, chances are that it is searching for food. Allow a 40% chance that one of these plants is within 200' of the hook horror when the latter is found.

5. Hook horrors are disease and parasite carriers. When encountered, there is a 10% chance that a hook horror has a disease, and another 10% chance that it has 2-5 diseases. The DM must take this into account when determining whether or not the character has caught a disease (as detailed on page 13 of the DMG). A hook horror has a +2% chance of catching a random disease or parasitic infestation. Against magical disease attacks (e.g., *cause disease*), it has a -1 saving throw.

6. Ferba's hypothesis is more or less correct: Once a hook horror dies, the gland stops producing this chemical. For game purposes, nothing short of a *wish* will allow PCs to exploit this chemical.

7. When a hook horror lair is discovered, there is a 25% chance that it contains 1-4 eggs, disguised as rocks; only close inspection reveals that they are eggs. Such a lair also contains at least two mated hook horrors.

A hook-horror egg takes six months to hatch, at which time the 1'-tall creature has the following statistics: AC 9; MV 3"; HD ½; #AT nil; AL N. The hook horror remains like this for three months. Afterward, the creature grows in a fairly rapid progression, with subsequent age category beginning with a molting period, as explained in note 8. See the table for details.

8. The hook horror sheds its exoskeleton each time it enters a new age category, as shown in the Hook Horror Statistics table.

Once the shell has been removed, the creature is hampered in movement and quite vulnerable to attack. Newly molted hook horrors have temporary penalties of -2 to armor class and -2" to movement rate, and a strong tendency to flee trouble when possible. The new exoskeleton hardens quickly, and the hook horror gains a +1 bonus on armor class and movement for every 12 hours that pass, until the new levels appropriate to its age are reached. Newly hatched hook horrors don't molt immediately after hatching, but are extremely vulnerable anyway and must be protected. Mortality rates for most young hook horrors are high.

9. An ESP spell or *telepathy* power gives the user a basic understanding of the hook horror's thoughts, though these only offer the most rudimentary information (usually about food or personal discomfort), and the creature understands only the simplest of data. Hook horrors have a listing of "low" intelligence because they have excellent retention of information, and learn to cope with their environment and neighbors quickly.

Due to the nature of the hook horror's language (only a hook horror can clack; a human's speech originates from his vocal cords), conventional translation spells such as *tongues* and *comprehend languages* will not decipher a hook horror's dialect. The best way to achieve a rudimentary understanding of the hook horror's language is to observe the creature over a long period of time (i.e., PCs won't be able to figure it out). The loudness of a hook horror's clacking is roughly the same as that of a man speaking normally.

Appendix

The hook horror's primary mode of attack is a set of two swordlike talons. Located at the ends of its 4'-long arms, these 1'-long hooks (equal to short swords, backed by 18 strength) are the creature's normal and preferred weapons. The hook horror may also utilize its sharp beak as a secondary weapon, but beak damage is weak, equaling a single claw attack -2 hp (1 hp damage minimum) and with a -2 to hit. A hook horror usually avoids biting, as a damaged beak means the creature's eventual death, as it cannot then eat.

The hook horror is a very sluggish creature by nature and too uncoordinated to successfully direct attacks against three separate opponents. It may try to attack two separate opponents, but it then has a -2 "to hit" penalty on its claws and -4 to hit with its beak. As a result, a double attack is only performed under the most desperate of situations.

If the hook horror is unable to use its claws (occurring only if its arms are broken or severed), it flees combat, biting with its beak in desperation. If only one arm is out of commission, the hook horror may attack with both its beak and free claw with only a -1 "to hit" penalty on the beak.

The Ecology of the Hydra Heads and Tales

The secrets of a classic monster, now updated for a sneak preview of the 3rd Edition game.

With a bump and a skid, the flying carpet came to a sudden stop at the top of the cliff embankment, sending the four passengers lurching forward to fall in a tangle of limbs. As the others struggled to their feet with poor grace, Dreelix reached into a pocket of his robes and produced his trusty gavel. Searching around for a reasonably flat rock, he spotted a suitable candidate nearby and snatched it up. Then, tapping the rock three times with his gavel, he announced: "This field session of the Monster Hunters' Association is hereby called to order."

"Hold on, let me get the others," said Grindle the Coin-Counter, reaching into a smoke-blackened pocket and pulling out a portable hole. While he spread it out flat on the ground, Zantoulios extended a bandaged hand to the Conjuror Ablasta, who was having difficulty getting up after Dreelix's rough landing. "I wish he'd learn to fly that blasted thing," she grumbled under her breath.

Dreelix tapped his foot impatiently as Grindle finally got the hole opened up and its passengers began disembarking. The first out was Buntleby, carrying Ozzie, his six-legged osquip familiar. He plopped the osquip down on the ground and griped, "How about a little more fresh air next time, Dreelix? It gets awful stuffy in there, you know!" Then, extending his arm back into the hole, he helped a young woman climb out of the extradimensional space.

The woman was quite a contrast to the bedraggled Monster Hunters. While they were all clad in wizards' robes, she wore a tight-fitting suit of black leather armor and had a large sword strapped to her back. Her auburn hair was tied back in a simple ponytail to keep it out of the way. She accepted Buntleby's extended arm and climbed up out of the portable hole. "Thanks, Bunt," she said with a smile. "So, this is where the hydra got the better of you guys, huh?"

"Down there, yeah," said Buntleby, pointing down the cliff to a cave opening several hundred feet below. "And don't call me 'Bunt.'"

"It did not 'get the better of us,'" corrected Dreelix testily. "We wisely performed a tactical retreat in the face of unexpected obstacles to our meticulous plans. I would think even a simple fighter such as yourself would understand the difference."

David Day

1. A hydra prefers to lair in dismal, out-of-the-way places far from civilization. Marshes, swamps,

remote mountains, and deep caverns are favored locales for a hydra den.

"Yeah, well, our planning wasn't really all that great this time, Rhionda," admitted Buntleby. "Usually, we have Willowquisp or Spontayne research whatever particular monster we're up against ahead of time. But they're both away at a sage's conference, so we had to wing it."

"Speak for yourself," snapped Dreelix. "I had everything all planned out—I mean, it's just a big, stupid reptile, isn't it? It shouldn't have caused us all the problems it did!"

"Maybe you should tell me just what exactly you guys did, and I can tell you where you went wrong," suggested the young woman. At that remark, the Ablasta's eyes narrowed in disdain.

Dreelix apparently wasn't too thrilled with explaining himself to a simple warrior, either. "You tell her, Buntleby," he said, turning his back on them.

"Well," began Buntleby, "we heard there was a hydra lairing in the gorge down there, so we rounded up a hunting party and went down after it."

"What type of hydra was it?" interrupted Rhionda.

"What do you mean?"

"There are four different kinds of hydras."²

"Oh, really? That's the kind of thing it would have been nice to know about beforehand," said Buntleby, frowning in Dreelix's direction. Dreelix, however, was looking out over the gorge, as if the conversation had nothing to do with him. "In any case, it was the fire-breathing kind, although we didn't know that at the time."

"Pyrohydra, then," said Rhionda. "One of the species some people believe

proves a common ancestry with the dragon races.³ Okay, Bunt, go on."

Buntleby almost chided her again for using the nickname, then noticed she was waiting for a reaction out of him and ignored it. "Well," Buntleby continued, "Dreelix took us down to the bottom of the gorge on his flying carpet, and while the others readied their hold monster spells, I polymorphed into a goat to lure the creature out of its cave."

"So far so good," Rhionda commented, smiling. "I'll bet you made a fine goat."

"Sure I did. I approached the cave entrance, gave a couple frightened bleats, and the thing came rushing out at me, snapping its jaws in attack.⁴ Dreelix and the others each threw a few hold monster spells at it, and it froze up.

Then—"

"Wait a minute, Bunt," interrupted Rhionda. "Why so many spells for just one monster?"

"As a mere warrior, I wouldn't expect you to understand the intricacies of the magical arts," responded Dreelix with his nose in the air. "But a hold monster spell affects only one entity. This creature had eight heads. Therefore, it takes eight hold monster spells just to get all of the heads, and a couple extra spells just in case some of the heads shrugged off the effects. It's as simple as that."

"As simple, and as wrong," Rhionda replied bluntly. "I don't care how many heads a hydra's got; it's still only got one brain. You only needed one spell to affect all of its heads."⁵

2. The four main types of hydra are the common hydra, Lernaean hydra, pyrohydra, and cryohydra. Interbreeding between the species accounts for the Lernaean pyrohydra and the Lernaean cryohydra.

3. If so, the two species diverged long ago, for the hydra lacks the wings of the dragon and is significantly smaller than all known dragon subspecies. Beyond an obvious reptilian ancestry, the greatest links between dragons and hydras are the breath weapons employed by pyrohydras and cryohydras.

4. A hydra has as many Hit Dice as it has heads and attacks once with each head each round. (Pyrohydras and cryohydras can use their breath weapons instead of biting.) The hydra's backward-jutting horns are not used in combat. A hydra can bring up to four heads to bear against a single man-sized opponent.

A hydra's bite damage is determined by the number of heads it has. Hydras with 5-6 heads bite for 1d6 points of damage, those with 7-10 heads bite for

1d8 points of damage, and hydras with 11-12 heads inflict 1d10 points of damage with each bite. (In 3rd Edition, hydras with 5-6 heads bite for 1d6+3 points of damage per head, those with 7-8 heads bite for 1d8+4 points of damage, hydras with 9-10 heads bite for 2d6+5 points of damage, and those with 11-12 heads bite for 2d8+6 points of damage.) Note that this number is fixed at birth and does not change: Even if the hydra loses one or more of its heads, those remaining still bite for regular damage.

5. A hydra can be killed by either slaying its body or severing all of its heads. To slay its body, a hydra's hit point total must be reduced to -10.

To sever a head, an opponent must use a slashing weapon and inflict damage equal to the hydra's original number of heads in a single blow. (Thus, it takes 8 points of damage in a single blow to sever one of an eight-headed hydra's heads.) Excess damage inflicted on an individual head is not carried over to other heads. When all of a hydra's heads

have been slain, the creature dies immediately. Some spells that involve slashing weapons—like *Mordenkainen's sword* and *blade barrier*—can also be used to sever a hydra's heads.

Despite having numerous heads, the hydra has but a single brain, located at the base of the necks. Thus, spells such as *charm monster*, *hold monster*, and *slow* affect the hydra as a whole. Similarly, instant-death spells (such as *disintegrate* or *slay living*) kill a hydra if it fails its saving throw.

Lernaean hydras, which regenerate two heads for every head severed, pose a more difficult problem. Flame or acid must be applied to the wound immediately after severing a head to prevent such regeneration (at least 5 points of fire or acid damage); otherwise, two heads form in 1d4 rounds. A Lernaean hydra's body is immune to all physical attacks, so the would-be slayer must sever and cauterize each of its heads in turn or employ instant-death magic.

"What?" sputtered Dreelix. "That's ridiculous! Nonsense!"

"Believe what you want. It's true, though. Okay, Bunt, sorry for interrupting. So the hydra freezes up ..."

"Right, so it's standing there like a statue, motionless. I resume my human form, and we move in for the kill. Grindle's got this long spear that he's going to stab into the beast's heart—"

Rhionda held up her hand to interrupt Buntleby again. "Another mistake," she said. "Always, always go for the heads. It's much easier chopping a hydra's heads off than it is trying to hack its body to pieces—the darn things are just too tough. And if you're close enough to stab at the creature, you might as well chop off its heads instead, since they're the part of the body that'll be doing you the most harm anyway."

"Who made you the hydra expert?" asked Zantoulios grumpily.

"Simple experience," replied the young woman. "I've fought these things before; killed both a common hydra and a Lernaean."

"What's a Lernaean?" asked the gangly wizard.

"The Lernaean hydra looks just like a common hydra: five to twelve heads, scales ranging from a grayish-brown to a darker brown, with light yellow or tan scales on the underbelly that reach from the bottom of each jaw to the tip of the tail, like a snake. The only real way to differentiate between the two is if you cut the head off a Lernaean hydra, two more grow back in its place."⁶

"Cute," commented Zantoulios, arching his eyebrows in disbelief that this

slim young girl could handle such a monster all by herself.

"Well, anyway," continued Buntleby, "Grindle moves in with his spear, and the rest of us move in as well—after all, the thing's immobilized and shouldn't present any danger, right? Then, all of a sudden, a stream of flame comes shooting out of one of the creature's heads, engulfing Grindle in a ball of fire." Grindle winced at the memory and looked down at his robe, now blackened and scorched by the pyrohydra's attack. "This was one of my better robes, too," he complained aloud to nobody in particular. He was right, too: This was his second-favorite robe, the one with only two food stains and armpit sweat-stains that were still imperceptible from distances greater than ten feet.

"So while Grindle's rolling around on the ground and the rest of us are trying to pat out the flames from his robes, Zantoulios stumbles into the range of another one of the creature's breath weapons, and he goes up in flames as well."

"Stupid monster," muttered the gangly wizard, looking down at his bandaged hands with a scowl.

"So anyway," recounted Buntleby, "by the time we manage to get the flames doused on these two, the time limit's expired on the hold monster spells, and the hydra comes waddling after us.⁸ Without any more hold monster spells available, we weren't ready to fight the thing off. I think we hit it with a magic missile or two while retreating, but nothing serious. All in all, we were lucky to make it to Dreelix's carpet in time and get out of there in one piece."

"Sounds like you were lucky, all right," agreed Rhionda, shaking her head in disbelief.

"Look! There it is!" cried Dreelix suddenly, pointing down at the gorge. The others crowded over to the ledge and peered down at the multiheaded monster as it emerged from the darkness of its cave, tails twitching behind it.⁹

"Okay, the scale coloration should have tipped you off right away," said Rhionda. "Notice how they've got a reddish tinge to them? The pyrohydra's the only one with scales that color. Kind of helpful to know stuff like that before you go wading into battle."

"You forget your audience," remarked Dreelix haughtily. "Monster Hunters do not 'wade into battle' like mere warriors—it would be undignified."

"Whatever," said Rhionda, unimpressed. "Still, if you ever come across a hydra with a purplish tinge to its scales, it might be helpful to know that it's a cryohydra, capable of blasting streams of frost from its heads like a white dragon.¹⁰ Of course, cryohydras usually live up in the arctic regions or sometimes high up in the mountains, and since they're the only kind of hydra living in those regions, if you meet up with one there you should already have a pretty good idea of what you're up against."

"Are they common?" Zantoulios wanted to know. "I've never heard of them."

"Not really," replied Rhionda. "Obviously, your 'common' hydra's the most common, followed by the pyrohydra, like your little friend down there. Lernaean hydras and cryohydras are the

6. If the Lernaean hydra has recently suffered such abuse, it can often be identified as such by its appearance. A neck severed near the base of the hydra's body grows two new full heads and necks, and appears the same as a common hydra. However, a neck severed near the jawline grows only two heads, each attached to the same neck. In any case, a Lernaean hydra has an "upper limit" of twice as many heads as it initially started with; after reaching that limit, a severed head grows back, but only singly. "Extra" heads shrivel up and fall off the hydra's body within a day after growth. Thus, 24 hours after combat, a Lernaean hydra (including Lernaean pyrohydras and Lernaean cryohydras) will only have as many heads as it originally started out with, or fewer if any of its stumps were cauterized in time.

7. Each of a pyrohydra's heads can breathe a jet of fire 10 feet high, 10 feet wide, and 20 feet long every 1d4 rounds. (Each round that a hydra can employ its

breath weapon, it does so with as many heads as it desires.) Each jet inflicts twice as many points of fire damage as the creature's original number of heads. A successful saving throw vs. breath weapon reduces damage by half. (In 3rd Edition, the character would roll a Reflex save. The Difficulty Class [DC] of the roll is 10 + half the pyrohydra's original number of heads [rounded up] + the creature's Constitution modifier. Thus, to avoid a seven-headed pyrohydra's breath weapon, the dodging character must roll 10 + 4 + 5, or 19, on a d20.)

Note that the activation of a breath weapon involves the same muscles used in breathing. Thus, even a magically held creature can use its breath weapon as long as its mouth (or mouths) is open.

8. A hydra has a low center of gravity. Its four short legs are spaced widely apart, a result of the hydra's wide body. Because of the hydra's build, it seldom uses its claws against enemies, preferring to attack only with its heads. On the rare occasion that a

hydra attacks with its claws (usually only against a prone enemy or as an act of desperation when most of its heads have been slain), it inflicts 1d8 points of damage with one set of front claws.

9. Most hydras sport but a single tail, but it isn't unusual for a hydra to have two or even three tails. The tails are not used in combat, and even Lernaean hydras do not grow back severed tails.

10. Every 1d4 rounds, each of a cryohydra's heads can breathe a jet of frost 10 feet high, 10 feet wide, and 20 feet long. Just as with a pyrohydra, a saving throw vs. breath weapon (or a Reflex save with 3rd Edition rules) halves the damage, which is cold-based in this case.

As arctic creatures, cryohydras are immune to cold-based attacks. Although reptilian, they have an insulating layer of fat below their thick, overlapping scales, and their scales magically deflect cold away from the creature. Touching a cryohydra's scales is like touching a sheet of ice.

Diagram 1: Hydra's neck and head growth patterns

least-frequently encountered of all. And sometimes you'll come across two different types at once; those are usually a mated pair."

"Different hydras can mate together?" asked Buntleby in amazement.

"Sure. All hydras, regardless of species, are about the same size: thirty feet long or so. They can interbreed at will, although cryohydras usually don't intermingle with the other species, because of their different habitats.¹¹ Then there's the thessalhydras, which sometimes breed with regular hydras, but they're not true hydras in any real sense of the word.¹² Hey, look at what she's doing!"

"She?" repeated Dreelix. "How could you possibly know that?"

"Notice the horns. Females have shorter horns than the males. Not that it matters in combat; the creatures don't use their horns as weapons. But look: She's emerging from the safety of her cave, so what's the first thing she does? Points her heads in all possible directions, that's what. See how she's got her heads situated? She can pretty much see all around her at once that way."

"Probably looking for food," suggested Buntleby.

"Believe it or not, she's mainly concerned with looking out for other predators. Even at thirty feet long, there

are plenty of other larger creatures that prey upon hydras—dragons, mostly."¹³

"Do you think it can see us up here?" asked Dreelix, suddenly concerned for his safety. It was obvious that their previous routing had made him jumpy where the hydra was concerned; he ducked his head behind a rock and peered out cautiously like a child peeking out from the covers at the imaginary monsters in his bedroom at night.

"Probably; a hydra's got pretty good eyesight.¹⁴ But so what if she can? We're in no danger all the way up here; we're well out of the range of her breath weapons, and hydras are terrible climbers."

11. Female hydras lay small clutches of 1d4 eggs. In instances of mixed parentage, hydra crossbreeds usually take on aspects of both parents, as shown in the chart below, where H = common hydra, L = Lernaean hydra, P = pyrohydra, and C = cryohydra.

H	H	L	P	C
H	H	L	P	C
L	L	L	LP	LC
P	P	LP	P	H
C	C	LC	H	C

Note that when a Lernaean hydra mates with either a pyrohydra or a cryohydra, the offspring have the characteristics of both parents; when a pyrohydra and a cryohydra mate, their "hot" and "cold" aspects cancel each other out, resulting in common hydra offspring.

12. The thessalhydra is a hybrid creature,

resulting from the union of a hydra and the genetically unstable thessalmonster. The thessalhydra has eight serpentine heads ringing a large, circular mouth like a lamprey's. Each head has a poisonous bite and can spit acid, and the beast also has a pair of pincers at the end of its long tail. Thessalhydras mate with all manner of other monsters, creating even stranger hybrids like the thessalgorgon, thessaltrice, and thessalmera. Details on all four races of thessalmonster are found in the *MONSTROUS COMPENDIUM® Annual Volume Three*.

13. Dragons find hydras delicious. To take advantage of this, wizards and alchemists have devised a potion of *dragon attraction* made primarily of hydra blood and crushed scales, as well as certain glands from the hydra's body (those involved in the production of subtle pheromones). A single hydra can

produce up to five such potions; when poured on the ground, a potion of *dragon attraction* brings any dragon within a mile in search of a tantalizing meal. The effects of this potion wear off in 20 minutes as the liquid evaporates.

If the potion is foolishly consumed, however, the hapless imbiber becomes the target of all dragon gourmands within a two-mile radius for a full hour. During this time, all dragons are convinced of the imbiber's tastiness and concentrate the majority of their attacks upon the delicious morsel before them.

Potions of *dragon attraction* carry a market value of 150 gold pieces. (In 3rd Edition, these potions can be created by a spellcaster of at least 2nd level with the Brew Potion feat.)

14. All hydra species have infravision (darkvision in 3rd Edition) to a range of 60 feet.

"Okay, so how do we kill it?" asked Dreelix, his desire to slay the hydra and gain its valuable body parts outweighing his general dislike for common fighters—even smarty-pants fighters who felt they could teach the mighty Monster Hunters a thing or two.

"That all depends. If you've got access to spells like disintegrate, then hey, go for it. Of course, that doesn't leave you with any body parts to play around with afterward. Personally, I'd rather go in with a sword: You always know where you stand with a sword. You throw a hold monster spell at a creature and it stops moving, but you never know if it's caught in your spell or just faking. But chop a hydra's head off with a sword—well, you know it's not faking that."¹⁵

"That would be excellent information to pass on to the Association of Hulking, Stupid Brutes With Melee Weapons," remarked Dreelix dryly. "We, however, are the prestigious Monster Hunters! Ours is the way of spell and finesse! Haven't you got anything else to suggest other than 'go stab it with a sword'?"

"Sword or spell, the strategy's pretty much the same," replied Rhionda. "If you'd rather use spells, I'd suggest magic missile, since it automatically strikes its target. Fireballs are good, too, if you've got the room; they're especially effective against Lernaean hydras, since the fire sears the wounds. Of course, multiple fireballs might severely damage the creature's body if you want to harvest it for useful components after slaying it; that's why I recommend magic missile. If you're using magic from a distance, it doesn't matter a whole lot, but if you're attacking with a sword, I'd recommend staying to one side of the hydra and picking off the

heads on that side, in order if possible. That way, there are fewer heads within reach to attack you."¹⁶

"Why not just sever one head, and then let blood loss take its toll?" asked Buntleby.

"Nice strategy, Bunt, but it doesn't work that way. Unfortunately, as soon as a head is severed—I'm talking about all hydras except Lernaean ones now, you understand—the blood vessels close off the entire neck from the rest of the body. This not only stops the bleeding, but it also makes it possible for the hydra to pull its own neck stump from its body. Kind of gruesome to think about, but I guess it's better than dragging a dangling, headless neck around from your body all day."¹⁷

"Fascinating," remarked Buntleby. "I imagine it's very similar to the process by which many lizards lose their tails—if attacked, the lizard's tail snaps off, distracting the predator with an easy meal while the lizard gets away."

"Yeah, funny you should mention that," said Rhionda. "These discarded neck stumps are often subsequently eaten by the hydra, so everything gets recycled." Lady Ablasta gave Rhionda a look of horror at the mention of such self-cannibalization; she held a perfumed handkerchief to her mouth and looked as if she were about to be sick.

"You know, I've always felt the Association could benefit by opening its membership to more than just wizards and sages," said Buntleby to Dreelix. "Look at how much we've learned about the hydra already. And that's not just something that Rhionda read out of a book; it's practical experience. I'd like to formally sponsor Rhionda for membership into the Monster Hunters!" At that,

Lady Ablasta's face clouded over as if she had just discovered half a worm in her cream puff.

"What?" squeaked Dreelix. "Are you insane? We don't want to open our ranks to mindless fighters!"

"Mindless fighters, no," agreed Buntleby. "But I think Rhionda's amply demonstrated that she's more than 'mindless.' Plus, I can vouch for her personally; we used to be part of the same adventuring band a few years ago. She's already provided detailed information on a monster useful to the Association; she's got me as a sponsor; all that remains is her membership fee and a vote by those members present at an Association meeting, and you yourself called this field session to order with that stupid gavel of yours."

"But—but—" sputtered Dreelix, desperately reaching out for a convenient excuse. "Her information remains unproven. All we have is the word of a fighter"—Dreelix managed to drip scorn at the word—"that her attack strategies are useful. Until her entrance fee is paid, the matter remains moot in any case."

"Just what do you plan on doing with that hydra if you kill it?" asked Rhionda suddenly.

"We're primarily interested in its blood," said Buntleby. "According to Old Gumphrey, our chief alchemist, it can be used in the production of healing potions of various strengths, hopefully without the wart-producing side-effects we get when using troll's blood."

"Yeah, well, a dead hydra's got lots of other uses," replied Rhionda. "Pyrohydra blood and scales are used in the production of fireball wands, and rings of fire resistance can be carved from pyrohydra bones or teeth. Likewise, you can

15. Obviously, *vorpals* and *swords of sharpness* are preferred weapons when going up against a hydra, due to their head-severing abilities. A *flametongue* has obvious uses against a Lernaean hydra, as it cauterizes the wound on any head it severs, thus preventing the growth of new heads; it also inflicts additional damage against cryohydras. Likewise, a *frostbrand* is a favored sword against pyrohydras.

16. Contrary to popular belief, a hydra's heads are not all lined up in a row at the front of the creature's body. Rather, they are staggered, as shown in Diagram 1. Note that the Lernaean hydra is an exception to this; while its original number of heads determines its beginning configuration, any additional heads grown (as a result of having a head severed without subsequent burning of the neck-stump)

sprout from the remaining neck. Thus, some necks might sport more than one head, or they might split into a "Y" halfway up their lengths.

Spellcasters would do well to put some thought into a hydra's neck configuration when using certain spells against it. Spells centered on a single point might not affect all of a hydra's heads. For example, if *darkness* is cast upon a central head it should keep all of the heads "in the dark." However, if it is targeted upon an "outer" head, it's possible for the hydra to stretch its heads out far enough for one or two heads on the other side of its body to emerge from the sphere of magical darkness. Pyrohydras and cryohydras can target their breath weapons from any head as long as at least one head (not necessarily the one using the breath weapon) can spot the intended victim.

Similarly, care must be taken when attempting to magically *blind* a hydra. *Blindness*, being an Alteration spell (a Transmutation spell in 3rd Edition), affects all of a hydra's heads if the creature fails its saving throw vs. spell (or Fortitude save in 3rd Edition). On the other hand, *glitterdust* affects all visual organs within a 10-foot radius, so some of a hydra's heads might be within the area of effect while others are not. If at least one head is available to guide the *blinded* heads, the creature bites (and uses its breath weapons, as appropriate) with no penalty to hit.

17. The bones of each of a hydra's necks connect to the spinal column in the torso via a ball-and-socket joint. Once a head is slain, autonomic muscles release the neck bones from the socket, making it easier for the beast to rip off damaged heads.

craft a ring of warmth or a cube of frost resistance from a cryohydra's teeth or bones, and the cryohydra's blood and scales can be used to make ice storm wands. Cured cryohydra skin can be used to create boots of the north, but you end up with garish purple boots.

"Also, with the Lernaean hydra's regeneration abilities, it should come as no surprise that the creature's blood is used in making periapts of wound closure, or that rings of regeneration can be carved from its bones and teeth.

"Finally, there are my favorite magical weapons, the swords. Hydra blood is often introduced to the metal of a magical sword as it's being crafted: pyrohydra blood for flametongues, Lernaean hydra blood for swords used against regenerating creatures, cryohydra blood for frostbrands.¹⁸ Of course, any hydra's blood will do for weapons specially crafted against reptiles."

"A particularly useful beast!" exclaimed Dreelix happily, rubbing his hands together in greed at the thought of so many magical items to be crafted from a slain hydra.¹⁹

"So, all in all, do you think the value of a hydra carcass would cover the entrance fee to your little organization?" asked Rhionda.

"Most certainly," admitted Grindle the Coin-Counter, who kept track of all monetary matters for the Monster Hunters.

"Good enough, then," said Rhionda and stepped off the edge of the cliff.

The Monster Hunters gasped as one—even Lady Ablasta—and watched in horror as the slim fighter plummeted, feet-first, to almost certain death on the rocks below. As they watched, though, Rhionda slowed her rate of descent and

THESSALHYDRA

drew the sword from her back as she neared the ground. "Boots of levitation, I'll bet," said Buntleby with a sigh of relief.

Rhionda landed softly on the balls of her feet and raced toward the pyrohydra. The beast caught sight of her approach and hissed like a steam kettle.²⁰ It swung several heads her way and let loose with a couple jets of flame. Rhionda swerved around the flamegouts without slowing her pace.

"We've got to help her!" cried Buntleby from the cliff-top. "Dreelix! To the carpet!" He jumped onto Dreelix's flying carpet and looked at the Monster Hunters President expectantly.

"I ... don't think that's a good idea," said Dreelix. "We barely made it out alive last time. And anyway, we don't have any hold monster spells available, and Zantoulios can't cast any spells with his hands all burned like that in any case. This was only supposed to be a reconnaissance mission, so your little

friend could point out what we should do the next time we attacked. I never expected her to—"

"Fine, fine, stay here then!" interrupted Buntleby. "Just give me the command words to the carpet, and I'll go down on my own!"

Dreelix crossed his arms and looked stubbornly down at his compatriot. "You know it's my policy never to lend out my personal magical items," he said. Buntleby ground his teeth and growled in frustration.

Meanwhile, down below, Rhionda had reached the pyrohydra and ran right up its left leg, putting her within sword-range of the creature's nearest head. A vicious swing buried the blade of her sword more than halfway through the beast's neck, and thick red blood spilled out from the gash. She pulled a dagger from her boot, slammed it deep into another neck, and used it as a handhold to steady herself as she swung her sword at the nearer of the creature's heads.

18. Rhionda is focusing just on swords; pyrohydra blood can also be used in the creation of any type of flaming weapon, just as cryohydra blood can be used to create any sort of frost weapon.

19. Hydra body parts can be used as alternate material components for several spells as well. The eyes of any hydra's head can be used for the

infravision spell (the *darkvision* spell in 3rd Edition), but it takes both eyes from a single head, and they are consumed during spellcasting. The finely-ground scales from a hydra's back can be substituted for the granite and diamond dust used in a *stoneskin* spell without any lessening of the spell's efficacy. Finally, because of the fast-growing properties

of Lernaean hydra head regeneration, flecks of dried blood from that creature can be used as an alternate material component for the *haste* spell.

20. The hydra's snakelike hisses are its only vocalizations; it cannot roar like dragons or other large reptiles. A hydra's tongues more closely resemble those of lizards than those of snakes.

An idea suddenly leapt into Buntleby's head: He snatched up the portable hole from the ground, held it in front of him with both hands, and took a flying leap over the edge of the cliff. Ozzie squealed in terror and almost leapt off the cliff after his master; only Zantoulios's sudden lunge onto the frantic osquip held him in place.

On the way down, Buntleby managed to scramble completely into the portable hole and pull it shut around him. Safe inside the extradimensional space, Buntleby didn't even feel it when the cloth landed on the stone floor of the hydra's gorge with a soft plop. He opened the portable hole and stepped out, a mere dozen feet from the pyrohydra. From this vantage point, the creature towered over the young wizard, amber eyes blazing with hatred like some fabled beast of legend.²¹

At first, he couldn't see Rhionda at all. Then he spotted her among the creature's writhing necks, weaving a bloody swath of death with her sword. Several of the creature's heads were already severed or dangling by little more than a thread; as he watched, the monster accidentally stepped on one of its drooping heads, and the neck ripped from the body to lie motionless on the ground.

Buntleby released the words to one of the few combat spells he had remaining: a stinking cloud that sent nauseous green vapors roiling toward the heads on the hydra's right side, while avoiding Rhionda, perched among the necks and stumps on the creature's left. That ought to slow it down, he thought.

No such luck; the pyrohydra seemed completely unaffected.²² "Back off, Bunt!" called Rhionda, slicing deep into another neck with her sword. "I've got everything under contr—UHHN!" Distracted by Buntleby's unexpected appearance, Rhionda took a blast of flame to the side; losing her grip, she

plummeted to the ground in front of the lumbering beast. With combat-honed instincts, she rolled quickly to the side, narrowly avoiding being trampled by the creature and extinguishing the flames at the same time. Her sword, dropped during the fall, clattered to the ground near the portable hole.

Buntleby pulled out his dagger, realized how useless it would be against the pyrohydra, and seriously considered turning tail and fleeing for his life now that Rhionda was out of harm's way. A gout of flame at his feet helped him decide: He turned and fled, wizard's robes flapping wildly behind him and the four remaining pairs of hydra jaws snapping at his own head.

Running full out and looking over his shoulder at the beast barreling down at him, Buntleby nearly tripped into the still-open portable hole but managed to dodge at the last moment with a great deal of arm-waving and dancing on tiptoes. The motion sent him off-balance, and he fell to his side with a whoof of expelled air. The hydra, less aware of the workings of magical items, failed to realize that the dark-colored fabric lying out flat like a rug between it and its prey wasn't really quite there; its front left leg fell into the extradimensional hole, and the weight of its body sent it sprawling to the ground.

Rhionda ran to Buntleby's side and pulled him to his feet, seconds before a blast of flame struck the spot where he had just been lying. "My sword!" she cried, pointing at the great beast. "It's pinned under her stupid body! How am I going to kill the silly thing without my sword?"

As if on cue, several magic missiles came screaming down from above, each striking the beast in a random location. Its four remaining mouths hissed in pain as wave after wave of magical energy pierced its body. Looking up, Buntleby

and Rhionda saw the other Monster Hunters floating down from the cliff-top on Dreelix's flying carpet like some aerial cavalry. "Observe the mastery of magic over muscle!" called Dreelix, bringing the carpet to a rough landing on the ground. As the hydra dropped lifelessly to the ground, Lady Ablasta replaced her wand of magic missiles in the special holster on her left forearm under her puffy sleeve.

"I shall have the price of recharging my wand added to your first dues payment," she said frostily to Rhionda. "Grindle, make a note of that."

"Then she's in?" asked Buntleby incredulously, as Ozzie bounded up to him and licked his master's ankles in relief.

"Three to two," muttered Dreelix unhappily. "It seems she's convinced Zantoulios and Grindle of her usefulness to the Association." He gave a weary sigh. "Rhionda, I officially welcome you to the Monster Hunters and blah blah blah," he said, waving his hand in the air as if shooing away a particularly irritating horsefly. "Now then, let's get down to the business of chopping up this nasty beast; I want to get the goodies back to Old Gumphrey as soon as possible!"

Buntleby looked at Rhionda and shrugged. Rhionda shrugged back, then turned to pry the yellowish teeth from one of its severed heads.²³

"It'll be nice working with you again, Bunt," she said with a smile.

"Likewise, replied Buntleby. And then, almost as an afterthought: "And don't call me 'Bunt.'" 

Johnathan M. Richards is a big fan of Ray Harryhausen's animation techniques, and he remembers with great fondness the legless hydra from the movie Jason and the Argonauts.

21. The hydra of Greek mythology was a nine-headed Lernaean hydra with poisonous breath and venomous blood whose middle head was immortal. Heracles slew the beast by searing each head with fire as he decapitated it and burying the immortal middle head under a rock.

In a PLANESCAPE® campaign, this archetypal hydra probably still lurks somewhere on the plane of Olympus. Details on this creature are left to the DM's imagination, but suggestions on such mythological archetypes appear in the PLANESCAPE MONSTROUS

COMPENDIUM Appendix II, under the "Monster of Legend" entry.

22. Though it has as many sets of nostrils as it has heads, a hydra has but a single set of lungs. As long as at least one head remains clear of breathing hazards at all times, it can ignore the effects of poisonous gases that must be inhaled to take effect. This ability also allows swamp-dwelling hydras to walk along the bottom of a lake or similar body of water if they keep at least one set of nostrils above the water line.

23. DMs might wish to allow hydra teeth to be enchanted so that, when planted in the ground and the command word spoken, they spring up as either armed and armored warriors (as in traditional Greek mythology) or skeletons (as in the movie *Jason and the Argonauts*). Several excellent ideas for the creation of such magical teeth appear in Gregg Chamberlain's "The Magic of Dragon Teeth," published in *DRAGON® Magazine* #98.

INEVITABLE

Implacable agents of law, the inevitables dispense justice without regard to race, creed, or station. If you have broken one of the natural laws of the multiverse there might be an inevitable on your trail right now.

HISTORY OF THE INEVITABLES

By the standards of the eons-old multiverse, the rise of the inevitables is a relatively recent occurrence. Some historical texts (most notably Ganthros the Elder's *Accounting of the Realms Beyond* and Hannak Lathar's *Verses of the Blood War*) trace their

emergence to 10,000 years ago. At that time, angelic creatures called aphanacts called the plane of Mechanus home. Ambitious and obsessed with justice, the aphanacts raised great armies that crusaded on other planes, bringing vast swaths of the multiverse under their rigid code of laws.

Ganthros's writing hints that the deities themselves ended the aphanact crusades, while Lathar posits an alliance of convenience among the fiends of the Lower Planes and the archons, angels, and eladrins of the Upper Planes. In any case, every last aphanact disappeared 10,000 years ago.

*"Let justice be done, though the heavens may fall."
— Roman maxim*

In their place rose the first inevitables. Massive, fortresslike crèche-forges appeared amid the spinning gears of Mechanus. For a decade they softly hummed, impervious to any effort to penetrate them or divine their purpose. Then maruts started to emerge from the crèche-forges, striding across the planes. Other sorts of inevitables followed in centuries to come.

Neither Ganthros the Elder nor Hannak Lathar can identify the creators of the crèche-forges (and consequently the inevitables) with any certainty. That doesn't stop them from speculating, of course. The inevitables have no larger society; their application of justice is absolutely an individual one. Each inevitable has a tightly defined purpose and no interest in matters beyond the next target brought to justice. Thus, planar historians speculate that whomever created the inevitables wanted to avoid a repeat of the aphanact crusades.

Without broad ambition or the inclination to organize in groups, the inevitables remain individually powerful, but collectively dormant.

Whether one god, many deities, or other powerful denizens of the outer planes created the inevitables remains a mystery. Because inevitables periodically return to their crèche-forge to have their memories removed, even the first inevitables don't remember who created them.

LIFE CYCLE OF THE INEVITABLE

When an inevitable first emerges from a crèche-forge on Mechanus, it seems to possess very little knowledge beyond the identity of its first target and a sense of how its powers work. It speaks little and generally refuses to interact with bystanders unless they directly aid or hinder its current mission of justice. Maruts, quaruts, and varakhuts *plane shift* to the appropriate plane to begin their mission, while

zelekhts and kolyaruts start seeking a natural portal to the relevant plane.

Because *plane shift* is imprecise and portals rarely emerge at a convenient spot, the inevitable often has a long journey ahead of it—even if the first target isn't on the move. During this journey, the inevitable observes its surroundings, recording its observations and soaking up information like a sponge. It starts to interact more with passersby in simple ways, asking for directions and questioning witnesses. An inevitable's first interactions are often awkward, as the inevitable struggles to make itself understood and tries to deal with creatures that don't share its single-minded purpose. Inevitables are reasonably intelligent, so they develop rudimentary conversation skills within a few weeks of travel in populated areas.

When an inevitable's first mission is complete, it uses what it's learned about its surroundings to identify

single-minded pursuit of enforcing a natural law of the universe.

Kolyarut: Both written and oral contracts are the purview of the kolyarut, which regards itself as an impartial "enforcement clause" for that contract. A kolyarut undertakes a mission only when it has a complete understanding of the contract. Sometimes these inevitables study an actual copy of the contract or is present when the oral bargain is made, but more often it acquires a mystical understanding of the terms of the contract in a flash of inspiration. This instinctive understanding of the terms is beyond the control of the kolyarut, but it seems to require a degree of proximity to one of the parties to the contract, oath, or bargain. Thus, a kolyarut in search of its next mission tends to gravitate to royal courts, magistrates' benches, temples, and other places where oaths are frequently sworn and contracts made.

Because it regards itself as part of the contract, a kolyarut is simultaneously the easiest and most difficult kind of inevitable to negotiate with. A kolyarut won't be swayed by an oathbreaker's claim of "extenuating circumstances." The kolyarut, if given to conversation, would reply: "The circumstances are indeed extenuating, but they aren't part of the contract. You are thus in breach." Avoiding a confrontation with a kolyarut is as simple as returning to compliance, or (if it's a two-party contract) providing convincing evidence that the other party has also broken its part of the deal. Kolyaruts simply walk away from situations where both sides have broken a bargain.

Kolyaruts rarely kill except in self-defense; their concept of what constitutes appropriate justice is usually spelled out in the oath, bargain, or contract. They use suggestion, mark of justice, and geas/quest to compel compliance, resorting to violence only if such measures fail.

or lethal force is part of the bargain to begin with (like an oath on one's life that is subsequently broken).

Marut: Maruts, almost always enforce their natural laws by killing transgressors. They hunt down those who would cheat death by extending their lifespans unnaturally. Some maruts also bring justice to those who engage in large-scale necromancy (raising undead armies, for example), because doing so cheats the inevitability of death for others.

The quarry of a marut is, by definition, powerful enough to keep the grave at bay. The marut's foe is also either immortal or very long-lived. So a marut must be patient itself, spending years or decades on a single foe such as a necromancer, lich, or cult leader seeking immortality.

The target of a marut is often set apart from society by the nature of the transgression, so maruts get little practice interacting

with other creatures. Thus, they develop distinctive personalities much more slowly than other inevitables.

Quarut: The target of a quarut is also a potent foe, capable of reordering time and space in dramatic, dangerous ways. A quarut's target list consists of creatures that can stop the flow of time itself or wish a new reality into existence, so it approaches its targets with patience and caution. A quarut is unlikely to stride into the archmage's floating tower, shackles in hand. Instead, the quarut interrogates former associates and minions, seeking out weaknesses. The quarut employs proxies to engage the archmage in battle, using the opportunity to assess the capabilities of its quarry.

While some transgressors are able to defeat the quarut in battle, others are able to reach accommodation with the inevitable by setting aright whatever dramatic change they made to space or time. Simply undoing the change in reality is rarely enough to satisfy a quarut, however. A transgressor eager to be free of a tenacious quarut must rework time itself so that the change in reality was never made in the first place.

Varakbhu: Those who seek mere immortality are the province of the maruts, but those who seek godhood are considered transgressors to

ORIGIN OF THE INEVITABLE

"When Jeff Grubb, Bruce Cordell, and I split up the writing duties for the 2001 *Manual of the Planes* sourcebook, I was lucky enough to get the monsters chapter. At the time, the only monsters anyone had were the ones in the *Monster Manual*, because the third edition of the D&D game was less than a year old.

"First, I wanted to check for gaps in the existing supply of monsters to make sure we had at least a starting point for adventures on every plane. Second, I pored through first- and second-edition sources looking for planar monsters that I could "promote" into the new rules set.

"I saw a gap in the available denizens of Mechanus. At the time, the formians were the sole denizens of the plane. They're great monsters, but it strained the imagination to have formians enforcing laws, chasing down criminals, and meting out punishment from within their hives. The same held true with second-edition's modrons.

"Eventually, as I was at my desk flipping through the *PLANESCAPE Monstrous Compendium Appendix*, looking for good monsters, I came across the marut.

"The marut entry included a bit of fiction that was a riff on Poe's "Masque of the Red Death," so it wasn't much of a stretch to imagine these guys as enforcers of a "don't try to cheat death" natural law. The marut thus became the first example of a class of creatures we eventually called the inevitables.

"The marut was on board, and his natural law was one that would make him a useful ally or a potential opponent. Because the inevitables are lawful neutral, I wanted them to function as enemies or allies. Thus their natural laws had to be laws that you could imagine PCs upholding or breaking, depending on the circumstance. Thus came the kolyarut (don't break a contract) and the zelekthut (don't escape justice), and with the *Fiend Folio* the quarut (don't mess with space and time) and the varakhut (don't mess with the gods)." —David Noonan

the varakhuts. A rare type of inevitable, varakhuts hunt down those who make a credible bid for godhood.

To attract the interest of a varakhut, the attempt at godhood must be legitimate. Not every two-bit cult leader and would-be demigod is subject to the justice of a varakhut, only those on the cusp of becoming true deities. In some cases, powerful outsiders or would-be godlings intentionally antagonize varakhuts in an attempt to legitimize their bids for godhood.

Once a varakhut identifies a credible attempt at godhood, it studies its enemies like a quarut does, learning as much as it can about its target before making a direct confrontation. The varakhut prefers to thwart would-be deities by eliminating them directly, but it isn't above destroying artifact-level power sources or wreaking havoc on minions and worshippers if doing so weakens the prospective godling.

Only two ways of forestalling a varakhut exist. The first is obvious: destroying it. The second way is to actually achieve deityhood. Once a creature becomes a demigod, varakhuts regard the new deity as part of the natural order they're charged with enforcing.

While most varakhuts search the cosmos for those trying to join the pantheon of deities, occasionally varakhuts target those attempting the reverse: deicide, the act of killing a deity.

Zelekthut: Because they're charged with hunting down fugitives, zelekthuts spend more time traveling and doing detective work. More so than the targets of other inevitables, the quarry of a zelekthut certainly doesn't want to be found. Zelekthuts thus interact with

ADVANCED INEVITABLE

Inevitables most often advance by Hit Dice, as they forget their classes upon returning to their crèche-forges. Occasionally, kolyaruts become fighters or clerics of deities of order, and zelekhts sometimes take levels of ranger, choosing humanoid favored enemies. Maruts most rarely take levels in specific classes, their already massive bulks added to with each return to the forge, eventually growing to truly epic proportions.

GANTRENACHT

Its right fist deals 3d6 points of electricity damage and blinds the target for 2d6 rounds (Fortitude DC 51 negates the blindness).

* Includes adjustment for 25-point Power Attack.

passersby more than other inevitables and develop distinctive personalities faster. A zelekht often brings a fugitive back to authorities alive, employing mark of justice and lesser geas to augment the mundane shackles and other restraints on the prisoner.

A zelekht often has to interrogate witnesses who might know something about the whereabouts of its quarry. A zelekht recently emerged from its crèche-forge asks direct questions and might resort

to physical violence if it thinks it'll gain better information that way. A more experienced zelekht is a subtler interrogator, using Sense Motive to ferret out witnesses who are withholding information important to the zelekht's search.

ORDER OF INEVITABLE JUSTICE

"Some seek to uphold the law or enforce the law. We want to become the law."

—Andrinn d'Vascou, Lord Knight of Serenity Fortress

The knightly Order of Inevitable Justice are mortals who seek to

emulate the single-minded tenacity of inevitables, undertaking the cause of enforcing the natural laws of the universe. Members of the order undertake quests to bring justice to places where neither spiritual nor temporal justice can reach.

The order has no ceremonial duties or leisure activities; such idleness has no place in a cosmos crying out for inevitable justice. The order is thus relatively free of internal politicking; even the hint of such things is unlike the constructs that members of the order emulate.

Fortresses: The Order of Inevitable Justice has one or more fortresses on each nonchaotic plane and two or three per continent on the Material Plane. Most are imposing structures, but a few are hidden in lands under the sway of rulers the order considers unjust.

Members of the order and those who can prove that they are devout servants of justice can find aid at any of the group's numerous fortresses. Each fortress is the functional equivalent of a small city for the purpose of buying and selling items, enlists a 13th-level cleric (of a god with the Law domain) who can perform needed spellcasting for 80% of the standard NPC price, and houses order sages and diviners who can provide members with information on known lawbreakers in the general area.

Missions: Each member of the order specializes in a type of justice that corresponds with a particular type of inevitable. Some members, for example, hunt undead as maruts do, while others seek out fugitives as zelekhts. Just as inevitables undertake missions without regard for how long they'll take to complete, so too do members of the Order of Inevitable Justice leave the fortress for months or even years without consequence. As long as members don't engage in lawbreaking themselves and attempt to uphold the same ideals as the inevitables, they remain members in good standing of the order. ■

The Mechanics of the IRON COBRA

A mechanical serpent has no ecology

by Spike Y. Jones

"As you can easily hear, Grainne, our own crwth is much gentler in tone than the quayteros of the worshipers of Ishtar the Dancer. Now, compare my telyn with this other harp called a kissar. It's made from the skull of a minotaur that has had strings attached to its horns by—"

"Look at Aidan! Look at Aidan!" cried Fiona, interrupting the bard in midleson.

"If you're trying to look like a fool, Aidan, you're doing a good job of it," muttered the children's older sister.

"I'm trying to get this horn to blow, Grainne, but it just won't work."

"That 'horn' is actually a very rare instrument in this country," said the bard, "for I found it in a land beyond the Imbran Mountains and, indeed, beyond the deserts on their nether side. It is a 'naganai.' "

"A what?" asked the red-headed boy.

"A 'snake-flute,' in the language of a man named Gawara Hawara."

"It doesn't look like a flute," observed Grainne.

"Or a snake," added Fiona.

"And it doesn't sound like either," added Aidan with a grin as he handed the tube of wood and metal to its owner, who took it in his right (and only) hand.

"That's a part of its special magic," said the bard.

"Magic? Like in the stories?"

"Yes, Fiona, magic like in the stories."

"And was there magic when you got the flute?"

"Yes, Aidan, there was magic in the 'nai, and there was magic all around it, and there is magic in it still."

"And will you please tell us about it, Mr. Farwanderer?"

"I wonder how it was that I knew what

the next question asked of me would be? Yes, Grainne, I will tell you this story, but only as I can see that otherwise our music lesson will go no farther this day. Fiona, bring me the other naganai, the polished wooden one, from my instrument satchel. Aidan, you get me a drink to wet my lips—but only water, mind you; it's hardly past dusk. And Grainne, you merely make yourself comfortable here while the others are about their tasks, for you shall have a task of your own—a musical task—to perform later."

There had been a sound, and from close by. It was not a proper command and had been nothing at all intelligible, but it was the first time in untold years and miles that there had been a sound. The listener hesitated in the near darkness—then moved in that direction. It was so close.

"Years ago when I was still earning the title 'Farwanderer,' for I had yet to see many of the faraway places that by now I have, I arrived in the city of Mangala on the banks of the Porah River. I was traveling in those eastern lands looking for an education of sorts and the means to support myself until the education was through. In Mangala I found what I thought was a way to combine the two.

"The average person of that place is much the same as those of Mardukan to our south, but their magicians are of a different sort entirely. While Mardukanian spell-casters use their elaborate rituals to ensure good harvests and to protect their people from barbarian and monster attacks, Mangalan wizards use their magicks to fabricate items of power for their personal profit. And I had heard of one such magical creation, rumored to be unique in

the world.

"This thing, called the Light of Surya, was a flawless diamond that had been magically engraved with the words to a number of spells of great power. Fortunately, those spells could be cast only by one strong of will and pure of heart, and the mage who possessed the diamond, Gawara Hawara, had neither, having gained the periapt by way of a poisonous snake, as he was both a coward and a scoundrel. While I myself had not the . . . magical aptitude to use such a device, I thought that retrieving and returning it to the rightful owners would be beneficial to all involved—including myself," he added hastily before Aidan could say the same. "I was younger then, and willing to lay aside my greatest talent for a bit of glory and a chance at being killed." He hefted the strange flute in his hand.

"Did you sneak in and grab it?" asked Fiona.

"Or did you break in and fight for it?" countered Aidan.

"Being not as rash as many another young adventurer," the bard continued blithely, "I did not present myself at the mage's door and demand the return of the periapt. Instead, remembering such sage phrases as 'ignorance breeds indigence' and 'over hurried, soon buried,' I decided to first learn as much as I could concerning Gawara Hawara's security measures.

"The first thing I was told by those I approached was that he guarded himself and his treasures with snakes—mind you, not just any snakes, but magical creatures with scales of steel and blood of oil.¹

"These 'iron cobras,' for such were they called, he constructed for himself in his apartments and released to prowl the courtyards and recesses of his mansion. It

was one such device as this that he sent to slay the mage-priest of Surya to gain the magical gemstone I sought, one of many such stolen articles said to litter his quarters. Many a prospective pilferer had died in the clutches of these cobras, and only one, Asman, called 'the Lucky' after his one encounter with the snakes, had survived their attacks to tell me of their effectiveness.

"But the theft and subsequent protection of his ill-gotten gains were not all for which Gawara Hawara used the cobras. He would sometimes hire them out as relentless assassins, even offering them to high officials for legitimate purposes if the price tendered was exorbitant enough. Whereas a man being hunted by another man could hope to use trickery or speed to escape his pursuer, or could hope to defeat him in combat if finally cornered, the same could not be said of the man chased by the iron cobras. The iron serpents were unceasing and never lost a trail once they'd found it.² I was told that they were invincible in combat. Worse still, they often struck at night or when their victim was unable to defend himself, making maximum use of their stealth and deadly poison.

"The cobras were not alive and did not think for themselves. Instead, they followed the commands given them by Gawara Hawara. To ensure that the commands could not be overheard and then spoken by other men, he constructed his serpents in such a way that they would respond only to commands issued by way of his flute, his naganai.³ No one I spoke with in Mangala knew the songs he played to command his snakes, as he refrained from playing where he could be overheard, unless the audience was not expected to survive to pass on the tune.

"So," said the bard, setting aside the wood and metal 'nai and taking the plain wooden one, "I first had to learn how to play this instrument. Luckily, it being one of the more popular of those played in Mangala, I had my choice of many capable tutors, and I quickly mastered its techniques of play. Aidan, you can try to play this 'nai."

Aidan took the proffered instrument and proceeded to produce two or three audible but painfully bad notes before passing it back to the bard.

"Now, give it to Grainne and we'll see what sort of impression my chwiбанogl lessons have made on your sister."

The older girl accepted the 'nai, took a few seconds to nervously adjust her finger-holds, then played a halting but recognizable scale on it.

"That's better, Grainne, especially as the 'nai can play notes quite different from the chwiбанogl you're used to. You will both get the chance to continue with your lessons while I continue with this story. You'll play the tunes I show you, as it is not easy for me," he said, raising his left arm but not letting the concealing folds of his

sleeve drop away from its stumped end. "Grainne shall play on the audible 'nai, while Aidan will follow along silently with the other."

Aidan's expression fell for a moment as he took the silent 'nai. Perhaps Mr. Farwanderer had given him the quiet instrument to keep him from playing badly again. But the barest hint of a smirk tickled the corners of the bard's mouth, and the boy realized that there might be other reasons for the choice of instruments. His usual smile resurfaced.

"Now, as I was saying," the bard resumed, his face regaining the serious expression he wore during instruction, "having learned to play the naganai, I next went to discover the tunes Gawara Hawara used. Mangala being a city of magicks, I visited a guild of magicians and asked if to borrow a scrying device."

"Scrying?" asked Fiona.

"That's like spying," replied Aidan, looking up from his fingering of the 'nai, "but it's magic."

"By paying them a fair price, leaving the rest of my instruments in their care as collateral, and promising them further payment if I was successful, I procured the loan of a pair of magical eyepieces known as 'eyes of the eagle.' Equipped with these crystals, I rented a room on a hill overlooking Gawara Hawara's house. Although it was some distance away, with the crystal eyepieces I could see the mage as if he were but feet away from me. Every time he came into my sight, I watched him in hopes that he would give some command to his cobras.

"A few times a day, he did make rounds of his yards, inquiring of his constructs if there had been any disturbances, then replaying their original orders or changing them if anything noteworthy had occurred.

"It took me a fortnight and more before I felt confident that I had learned all of the tunes I would need. I watched closely and mastered the fingerings for a half-dozen different commands." He reached for Grainne with his one hand. "This," he said, carefully raising and lowering her fingers over the holes of the wooden naganai to a simple beat, "was the command to attack intruders. And this," he said, moving her fingers through an identical pattern, "was the command to report to Gawara Hawara."

"But they're the same," Grainne complained.

"Ah, the fingerings are the same, but are the songs?"

"If they were loud or quiet . . ." said Grainne after a thoughtful pause.

"Or if they were notes with the same fingerings but different sounds . . ." pondered Aidan.

"... with different pitches, then the songs would differ," finished the bard. "Both good answers, and both correct. I watched Gawara Hawara even more closely for the next week to notice any signs of intonation changes or octave jumps. And by way of movements of his

cheeks and lips, the way he shifted his head, and the way the muscles of his throat and mouth tightened at certain points, I was sure I had been able to determine what all of the notes were and how the songs were to be played. Now, try blowing the tune the easiest way."

When Grainne played a passable version of the song, giggling erupted from Fiona.

"I couldn't help it, Mr. Farward'rer," the child protested before the bard could chastise her, "Aidan was blowin', too!"

"I thought you meant for both of us to try it," Aidan answered as his teacher turned toward him, a look of purest mischief belying his avowed innocence.

"Be that as it may, it would be to the advantage of all involved if you merely fingered along with your older sister and left the cheek puffing to another time. Now, Grainne," the bard continued, "if you were to blow doubly hard when you reach the third note, and only just whisper the last, you will find that you can play notes of different pitch at those two places, one an octave above, and one an octave below the normal pitch."

Grainne now played a tune quite similar to the first with only the two requested modifications.

"Very good! That first tune you played, that Aidan tried to echo, was 'attack,' and the second was 'report.' Of course, even if properly played on the naganai in Aidan's care, neither variation would be audible, but the method would be the same, and I assumed the result would be, too."

Once in a great while, the naganai's slave would pass some of its smaller brethren along its journey, lying damaged beyond repair in the wastes of the desert or at the bottom of mountain defiles, or even lying rusted beneath the surfaces of still lakes and slow rivers. All had tried to carry out their last orders, and all had failed in their attempts. But now the servant had a new order, an order that would last until canceled.⁴ It moved quickly to fulfill its command, iron fangs parting in anticipation.

"And then you got the thing?" asked Fiona, attempting to steer the story firmly away from the music lesson.

"Yes, dear, it was time to make my try for the Light of Surya. I had watched the mage until I had determined just these sorts of differences between the tunes he played regularly. There were slight variations to some tunes played on different days or in different places that apparently made the commands more precise, but I was confident that the general commands I'd learned were sufficient.

"I readied myself in my least conspicuous clothing, secured my all-important naganai and a few other tools of value, belted on my smallsword, and made my way through the dark of the night to his mansion's outer walls.

"As I began my ascent, I thought for a moment that I spotted movement farther

along the garden wall. But when I paused to look more intently, I saw nothing. I told myself that it was just nervousness and finished the climb. From the walls top, I looked for any sign of cobras in the yard but saw none. One of the reasons real cobras are dangerous is that they can disappear in the darkness and undergrowth as effectively as a skilled thief; apparently, this is one of the reasons cobras were chosen to model for these constructs.

"I crept toward the manse across the compound, headed for a small door that I'd seen Gawara Hawara use but rarely—and I was almost discovered. One of his mechanical minions approached me along the path, but apparently I saw it before it saw me. I immediately stopped and attempted to blend silently into the same shadows the cobras were using for concealment, as I did not want to betray my presence by playing my 'nai too soon. The silvery snake-stopped short of my concealment and spread its hood out about its head, turning in all directions as a human would turn with a hand cupped to his ear.⁵ Luckily, although it looked directly at me for a time that felt like hours, it finally refolded its hood and glided swiftly past. Evidently, it was intent on finding something or someone else.

"Shaken but not unnerved by this good fortune, I waited until the iron serpent was well gone, then made for the door. It had been locked, but the device was a simple one, the mage putting trust in the abilities of his iron guardians to protect him. I left the door ajar behind me, in case I had no time later for a leisurely exit, and I proceeded cautiously forward.

"It was not dark inside, for the mage had attached some small globes to the ceiling at intervals that cast magical light bright enough to allow navigation of the corridors without fear of bumping against walls or breaking crockery. I had no sure idea where the periapt was secured, but I assumed that it would be in the center of the building, away from entrances as vulnerable as the one I had come through, and that it would be close to the rooms Gawara Hawara occupied, mages and misers often surrounding themselves with their treasures. So, I made my way upward and inward.

"Stealing through the mage's apartments was a nerve-wracking experience, as I paused and hid at every imagined sound. Although everything was sized for humans, there were small holes cut into the walls and doors to allow easy access for the snakes, a fact demonstrated when another inattentive iron sentinel emerged from one of these channels a short distance ahead of me and departed across the hall.

"I eventually ascended a flight of stairs and arrived at a room that appeared to be Gawara Hawara's personal quarters, and hopefully of the Light of Surya. Gathering my courage, I opened the last door and entered the chamber. As I'd guessed, the

room contained a mass of treasure; silver, gold, gems, jewelled arms and armor, and beautiful works of art, all illuminated by the magical light-globes fixed in the doubly high ceiling. And nowhere could a cobra be seen. Made bold by this wealth of wealth and dearth of protection, I stepped in and made for an alabaster pedestal in the room's center, upon which shone the gem I sought.

"And it was at this moment I learned that it is never wise to assume the unlikely. For there I was in the most important room of the mage's lair, and it did not enter my mind that he would have guarded that room more effectively than the rest of his demesne. Before I could traverse half the distance to my goal, something that I had previously taken to be a rolled carpet⁶ unfurled, showing itself to be a shockingly huge iron cobra that raised its head more than my own height above the floor.⁷

"Guessing that it would not be wise to attempt to bluff this monster, I grabbed my naganai and played the command song for it to 'stand fast and report,' the tune I was most sure of. Now, Grainne, if you remember it . . ." he said expectantly. Grainne raised the 'nai to her lips and complied, and the bard returned to his narration when she had completed a halting rendition of the command. "To my chagrin, the monstrous snake failed to pause, continuing its measured advance. Thinking that I'd mistaken the tune, I played another song"—at which point Grainne played "return to patrols" unbidden—"but it did me no better. The cobra approached still.

"Realizing that there had somehow been an error in my preparations, I drew my smallsword and took a defensive stance. Much faster than its stately stalking of me, the automaton lashed out. Desperation more than skill enabled me to jump aside at the last possible moment. As I dodged, I stabbed my blade at the automation, only to have the weapon clang and shatter against a surface stronger than my swords cheap steel.⁸ That action was my last against the periapt's final warder. Before I could even think of another attack to make, it reared up once more and, with a lightning lunge, thrust its fangs into my shoulder and poisoned me."

Years of silence had been broken less than an hour before by meaningless noise, then again minutes later by an actual command: the command to attack all but the holder of the naganai. It should have made no difference to the serpent, but it seemed to move a trifle faster through the darkness than it had before, as if to fulfil this latest order before the holder of the naganai could pick up and move away. It was the greatest of its kind. It would not fail now.

"But you couldn't have been poisoned! You're still alive!"

"The sting of a bee needn't kill to frighten away a curious boy, Aidan, and not all poisons need be fatal in order to be effective.⁹ In this case, it was enough for the venom to leave me paralyzed, lying on the flagstones until Gawara Hawara could investigate the clamor we had made; after that, my death would be assured.

"I was too distraught to judge the interval, but I imagine Gawara Hawara was not long in coming. He was a tall man with a shaven pate, and he was wrapped entirely in many-layered green robes. A jewelled dagger hung at his hip, and he had in his hand the same silvered naganai that Aidan now holds. With a most evil look on his face, he approached to question me before having me disposed of. But before he could ask his first question, we both heard a clinking sound from somewhere across the room.

"Whirling about, Gawara Hawara saw nothing. Only momentarily puzzled, he lifted the naganai to his lips and began to play. At first I thought the poison of the cobra had deafened me, for I heard no sound from the 'nai, but I soon realized that it must be something else for I could still hear the rustling of his robes. Immediately after this realization, a normal-size iron cobra appeared from one of the perforations in the walls. Moments later, another appeared, then a third. When they'd halted before him, Gawara Hawara played another silent tune and they opened their fans, 'looking' for the unseen intruder. I discovered then that part of the magic of this naganai was that it could be heard only by his iron legions.

"Of a sudden, one of the snakes ceased its rotations and a whispering sound like wind through dry leaves came from it.¹⁰ Hearing this, Gawara Hawara played yet another soundless song. Immediately, all of his small charges made for the shadows behind one treasure pile.

"Realizing that he'd been found out, a man dressed all in black leapt from behind an urn of coins and landed beside the leading snake. Swinging downward with a glowing sword, he struck its head off with one blow, then grabbed its fallen body and slung it about him, spraying the floor between himself and the other snakes with its ichor. Then, with extraordinary calm, he took a handful of slim darts from his belt and dipped their tips in the venom dripping from the downed cobra's fangs.

"Not at all dismayed by this apparently senseless act, the other snakes continued forward, but once they arrived at the pool of fluid their progress stopped. Writhe and twitch as they might, they could neither move forward nor retreat from the blood of the fallen one.¹¹ That being the case, the brazen thief walked up to the plinth and plucked the Light of Surya that sat there.

"This I thought was the man's only mistake, for he'd apparently forgotten about the enraged Gawara Hawara. After the mage recovered from his shock at the scene, he uttered an oath in his foreign

tongue and desperately played the command to attack once more.

"At this last command, the immense serpent whose head had hung over me now started after the thief. Audacious and unafraid to the end, the man in black stood his ground, selected an envenomed dart, and calmly blew it through his dart-tube at the mage. Not being interested in watching his adversary fall dead to the floor, he turned to where I lay on the floor and removed the scarves he had worn to hide his face.

"To my surprise, the man was familiar, but it was not until he spoke that I recognized him. 'Thank you,' Asman the Lucky said, 'for showing me the way into Gawara Hawara's lair, and for showing me the Light that I have sought all these years.' Then he turned and ran down the stairs, barely eluding the monstrous cobra that followed in slow but determined pursuit.

"It took me some while to get up from where I lay. Surprisingly, I was not attacked in that time. The snakes that had been stranded in the oily puddle had evidently escaped and joined the pursuit of Asman, and unless they caught him, they're probably pursuing to this day. Only the gods know where they've all gone now."

On a chilly night like this, a human would call the light streaming from the windows of the two-storied building friendly. To the long, sinuous figure in the black street outside, the light was merely a signpost that its mission was coming to a close. With mechanical precision unhampered by the dents and scratches it had collected on its years-long journey, the serpentine machine advanced on the inn's front door to carry out the first order it had received since it had left the tower in Mangala. Its head lowered to serve as a ram. The door would not hold beyond the first blow.

"I was too weak from the lingering effects of the poison to make much use of the treasures piled around me, so I selected a few choice and expensive pieces to make up for the loss of the prime treasure and limped out of the room. As I passed the body that had been Gawara Hawara, a cautious thought struck me and I took from his hands the magical naganai with which he had commanded his crawling weapons. Then, knowing full well that the rest of the booty would be long pilaged before I could heal and return, I painfully made my way back to my room on the other side of Mangala. Through all the intervening years, I have kept the naganai here, just in case I should happen to meet one of his iron snakes, still intent on punishing the thief and I."

"Mr. Farwanderer, you can't play the 'nai anymore, so why do you still keep it around?"

"Ah, Aidan, while no one can play a song on it, nor can I play many of the cobra's

commands, it might still be useful." He took the instrument from the boy and quickly, almost carelessly, fingering a short flurry of soundless notes. "In an emergency, I need only remember that the tune to make the snakes resume their normal patrols, as if no enemy had been encountered, needs but a single hand to play."

The serpent paused, head drawn back and flattened for the blow. Yet another new command had been given: "Resume patrols in the compound in Mangala." Clockwork eyes gleamed in the moonlight as it appeared to considered the order and reach a decision. Then, in unhurried silence, the cobra turned its 18' of iron power from its target and began the return trip across the mountains, the deserts, and the rivers to home.

Footnotes

Iron cobras are described in the AD&D® 1st Edition FIEND FOLIO® tome, pages 52-53. It is assumed herein that these creations can be made by high-level wizards, and that they are more common than generally believed (they are certainly far less powerful than iron golems). Iron cobras have a 50% chance to hide in shadows (the FIEND FOLIO tome says they hide as well as 8th-level thieves, but this chance is 49%).

1. While they exhibit some signs of life, iron cobras are merely cunningly designed magical constructs. Rare and expensive materials, powerful spells, and secret crafting techniques are required to build them, with different combinations of these creating iron cobras with different capabilities. Still, many components are held in common by all such devices: mithral, adamantite, or meteoritic iron; a vial of oil of slipperiness; and many gemstones crafted into gears and bits of machinery. The cost of constructing even the smallest of these automatons is 2,000 gp.

A mage owning a manual describing the methods of constructing iron cobras will protect it dearly, as it can fetch a price in the hundreds of gold pieces—thousands if it contains special directions such as those for creating giant iron cobras.

As an aside, while these constructs are the sort of thing that the tinker gnomes of Krynn might manufacture, an iron cobra appearing in a DRAGONLANCE® setting would likely have come from some other universe, as the cost for tinkers to make an iron cobra would be well above 20,000 steel pieces. But if confronted with an iron cobra or the remains of one, a tinker would have to make a check vs. wisdom on 2d12 in order to tear himself away from the fascinating device.

2. Iron cobras are not alive, so they do not need food, water, or sleep, nor will they ever forget a command or be distracted from a task. Thus they make excellent servitors and, because of their combination of tracking and lethal combat capabilities, are sometimes used by bounty hunters or even

respectable legal authorities.

3. Iron cobras can be commanded in many ways, the means being decided upon during creation. While most iron cobras obey voice commands, some respond only to coded messages, hand signals, nonverbal sounds (such as musical instruments) or other exotic or long-range modes of communications. The manual used to create an iron cobra includes a list of possible command devices, so that a person possessing a deactivated iron cobra and the manual from which it was created could, through trial and error, determine the one method of controlling it.

The commands themselves can be of any sort the creator desires, from such simple things as "attack," to complicated orders such as "attack, targeting spell-casters first, followed by elves, then by all others." Whatever the commands, they must be selected at the time of the cobra's creation; it will answer to no commands not built into it after that.

Whatever the commands and command method decided upon, they must be individually programmed into each iron cobra created. Thus the creator could use similar but subtly different commands for each of his constructs, so that determining the commands for one might not help an attacker use them against others. This would also allow the controller greater subtlety in issuing commands.

4. Many iron cobras are created with a built-in "fail-safe" command that comes into effect if the cobra spends a considerable length of time without receiving orders. Typical fail-safes include commands to return to the cobra's creator, to its owner, or to a specific place after a period of time has elapsed (up to one year). Iron cobras designed to be left alone for unlimited periods of time, such as guardians of a tomb, sometimes use other fail-safes, such as commands to slay all intruders, to prevent the theft of the treasures in the lair, or to hide and await further instructions.

5. Every iron cobra can detect a single specific property by spreading its hood and orienting it on that quality. Typical properties detected for are covered by existing divination spells (e.g., good, evil, magic, undead, invisibility, etc.); the ranges and areas of effects are as if those spells were cast by a 12th-level human mage, with the divinatory ability being usable as many times each day as desired. Other divinatory properties can be used, but the mage must have cast on the near-completed construction a spell designed by him for this purpose (for example, a spell that detects those who worship a particular god, for one who plans to use his iron cobra against the worshippers of an opposed deity).

The iron cobra's construction manual will list specific materials that must be varied according to the detection spell bestowed on the serpent (e.g., an iron cobra designed to detect poison would include eyes glazed with celadon, pur-

ported to locate such substances, while one designed to detect magic might replace those eyes with eyes of magic-sensing star sapphires).

While an iron cobra is almost infallible at detecting the property for which it was constructed, it cannot serve every purpose. If a mage built an iron cobra to detect evil, for use as a guardian of his treasures, a neutral-good thief would elude his precautions. Thus, owners of more than one iron cobra often have them constructed to detect different properties such as evil, magic, and poison, in hopes that intruders and victims will be revealed by at least one of these traits.

Without its outspread hood, an iron cobra is incapable of sensing anything beyond that which is mundanely presented to it by way of sight, sound, or touch (unlike a real snake, it has no sense of taste or smell). The hood has the same armor class as the rest of the cobra, but attacks specifically aimed at the hood can damage it without destroying the cobra itself. The hood has the equivalent of one-fifth of the cobra's normal hit points (never less than one point), but these points are in addition to those listed for the iron cobra and are not calculated into its hit-point total for purposes of destroying the machine or for experience-point calculations.

6. The normal construction of an iron cobra is such that it obviously appears to be a machine. If its creator adds 10% to its cost and construction time, the cobra can be made to have some other outward appearance, the most common of these being the appearance of an actual cobra (or other type of snake, if the hood and its detection abilities are eliminated).

7. Most iron cobras are of the small and inexpensive sort, but some are giants as large as six times standard size. The cost of manufacturing huge cobras is considerably more than six times that needed to make normal iron cobras, running as high as 50,000 gp depending on what "special features" are included. Some mages would spend those thousands on having many normal iron cobras, but some consider it a fair price for a huge serpent's capabilities and its effect on enemy morale.

The giant iron cobra is identical in all ways with the smaller version of the same monster except as shown in the Iron Cobra Table and in other notes here. Both are unaffected by spells such as snake charm. Although some think that cold or lightning spells should have a special effect on them, they are insulated so that they suffer no more than any living creature caught in one of these spells. Thus, an *ice storm* cast on one would still do damage, but it would have no extra effects due to the nature of the target.

8. As iron cobras are made of exotic and strong metals, laced together by powerful enchantments, normal weapons used against them do only half damage on a hit. In the case of giant iron cobras, the metals

used are as much as six times as thick, and the enchantments similarly stronger. Because of this, the giant iron cobra's skin is much tougher than that of the small version and a nonmagical weapon (which will do the giant cobra no harm) has a possibility of breaking against it. If the attacker misses with a roll high enough to have hit armor class 10, his weapon has struck the snake's skin and, if it fails a saving throw vs. crushing blow, it will shatter. Additionally, for every bonus point of damage done due to the attacker's strength, the saving throw for the weapon will be one point worse because such forceful blows are more likely to break the weapon. Thus, if the sword of a character with a 16 strength was forced to make a save, it would have a worse chance of making its save than the weapon of a weaker character due to the stronger's +1 damage bonus.

9. Just as the iron cobra can have any sort of detection spell centered on its hood, it also can be equipped with any type of poison in its fangs. Poison can be changed by the controller of the cobra whenever desired by merely draining out the old poison and replacing it with a new one. Typical toxins include those that cause damage or death, those causing special effects such as paralysis, sleep, or various discomforts (disease, allergies, rashes, etc), and other, more exotic, substances that can incapacitate or cause insanity in victims.

Whatever the substance injected into the victim on a successful hit, an iron cobra is equipped with only 3-8 (1d6 +2) doses of it, and they cannot withhold poison at will; whenever they bite, if they still contain poison, it will be delivered into their victim.

While giant iron cobras would appear to have capacity for more poison than normal ones, they still carry only 3-8 doses of their poison, but have larger and more

potent doses. Thus, if the same poison is used by both small and giant iron cobras, that of the larger mechanism is 10% more effective (save vs. poison at -2 beyond any adjustments vs. the poison of the smaller machine).

10. While iron cobras are usually given instructions that preclude the need for return communication ("kill all intruders"), some mages consider it useful to allow their charges to communicate information as well as perform other tasks. The most common method of doing this is to program certain movements of the cobra's body to correspond to specific reports it is likely to make. If this is done, a reporting iron cobra will look very much like a live snake as it sways its body and bobs its head to convey a message to its master.

Although they are not normally constructed for it, iron cobras can also be built that have the capacity for rudimentary speech. Without lungs, lips, and other sound-generating devices, they can be made to "speak" by rasping together some of the gears in their mouths and the plates on their backs or hoods in code (so a short mouth rasp might mean "intruders have been detected," while a repeated scraping sound might mean something as mundane as "tea is being served in the library"). In no case can an untrained person interpret these noises or movements,

11. Most of the iron cobra's components are reduced to useless scrap if it is destroyed, making its resale value after destruction less than 10% of its intact value, but some substances within it retain their use if separated quickly from the rest to prevent contamination. These include the *oil of slipperiness* lubricating its gears, which acts as described in the *Dungeon Master's Guide* for 1-4 hours after being removed from the cobra; and its poison, which maintains its full effects for 1-4 turns after removal. DEMON FORESTS

THE ECOLOGY OF THE IRONMAW

By Skip Williams • illustrated by David Walhstrom

Adventurers and sages familiar with the denizens of the Outer Planes have long been aware of the deadly ironmaw, an insatiable predatory plant from the Infinite Layers of the Abyss. The creature gets its name from its most ghastly feature: a gaping maw capable of engulfing an ogre in one gulp and crushing the victim in an inexorable grip, like a massive iron vise.

The ironmaw remained virtually unknown on the Material Plane until recent decades, when it managed to establish itself in the forests of the Material Plane, probably from seeds unwittingly carried out of the Abyss by adventurers. Although it remains fairly rare, an ironmaw can turn the most idyllic-looking glade into a sinister and dangerous place.

An ironmaw has a certain low cunning and the ability to speak Abyssal, but it usually concerns itself with securing a steady supply of food and thinks of little else. It has no taste for vegetable matter or carrion but otherwise will eat virtually anything—and it is always hungry. Anyone who attempts to parley with an ironmaw had best stay alert. Although simple-minded, it is fully capable of lying to draw a potential meal within reach of its grasping tendrils.

IRONMAWS IN THE WORLD

Today, ironmaws can lurk in almost any locale on the Material Plane where trees grow. Although they can withstand arctic cold, they prefer temperate or tropical climes, where prey is more plentiful and where they can

pose innocuously as the broadleaf trees they resemble. Although primarily a forest dweller, the ironmaw can also be found in swamps, hills, and even mountain valleys, always in the company of tall trees.

Travelers returning from the Abyss relate tales of dense stands containing dozens or even hundreds of the monsters. Ironmaws living under these conditions stay on the move almost constantly, each one trying to shuffle to the edge of the stand, the only position from which it has any real hope of capturing prey. Thus they creep across the Abyssal landscape like great, dark amoebas flowing in ever-changing shapes and occasionally splitting into smaller masses. Any creature unfortunate enough to stumble into one of these awful groves usually dies within

seconds to sudden deadly strikes by the ironmaws' tendrils. The creatures then squabble over the corpse, literally tearing it to bits as each tries to obtain a morsel of flesh for itself.

On the Material Plane, ironmaws are largely solitary, although they can be found in pairs or small stands of up to half a dozen trees. They usually gather

ments seldom last long, since the dragon eventually grows tired of fetching live prey for its servant. Even if a dragon does not press an ironmaw into service, it often keeps close tabs on the creature. Ironmaws have little interest in treasure, and most dragons aren't above picking up any baubles left behind as the ravenous tree roams about the forest.

creature wields them like very long whips or flails. A full-grown ironmaw's tendrils can grow to 120 feet long (1d6 x 10 + 60 feet); however, the creature can only manage attacks with lengths of tendril up to 60 feet. The excess coils remain hidden in its upper branches, allowing the ironmaw to pay out extra length when making a melee attack, should a tendril be severed. This gives it a natural reach of 60 feet.

A tendril deals an average of 17 points of damage (2d6+10) on a hit, and that alone makes it dangerous to many creatures. Its many thorns and barbs deal piercing and bludgeoning damage, and it threatens a critical hit on an attack roll of 19 or 20. However, an ironmaw's tendril delivers more than mere damage. It also digs into the flesh, becoming attached like a burr in a dog's fur. Sticky sap adheres to clothing and equipment, anchoring the tendril all the more securely. Whenever an ironmaw begins its turn with a tendril attached to an opponent, it automatically deals tendril damage and drags that creature 10 feet closer to itself, possibly drawing the opponent into its crushing maw (see below).

The moment the tendril strikes and attaches, specialized spines inject virulent spores into the opponent's bloodstream. These spores have a powerful anticoagulant effect, causing the wound to bleed profusely and dealing an additional 3 points of damage each subsequent turn. This damage occurs at the beginning of the ironmaw's turn in the initiative order and continues each round until the wounded creature dies or the wound is treated. The bleeding can be stopped only by a Heal check (DC 10) or the application of any *cure* spell or other healing magic (*heal*, *healing circle*, or the like). Each hit by a tendril causes another wound. The ironmaw's blows also have a sickening effect on the victim, dealing 1d6 points of Constitution damage as the ironmaw feasts on its blood. Severing a blood-filled tendril releases a gory spray of crimson from the cut. This doesn't do any extra harm to the ironmaw, but it looks impressive.

Breaking free from a tendril is difficult. To do so, the opponent must make an Escape Artist check (DC 25) or a Strength check (DC 26), or deal 13 points of damage to the tendril with a single blow from a slashing weapon

THE IRONMAW DEVELOPED ITS TASTE FOR FLESH IN THE ABYSS, WHERE SUNLIGHT IS UNRELIABLE AT BEST AND SOILS ARE NOTORIOUSLY POOR.

to mate or to take advantage of a rich hunting area. Once a stand contains about six individuals, however, one or more shuffle off in search of better opportunities.

Because of its insatiable appetite and evil nature, an ironmaw is seldom a welcome addition to any sylvan neighborhood. Nearby elves who become aware of its presence quickly mount an expedition to eradicate it. Druids often react the same way, despite their live-and-let-live mindset—an ironmaw can quickly drive off or kill an area's game, thus disrupting the natural cycles of the forest. Centaurs, dryads, nymphs, and even the usually playful and carefree sprites are similarly hostile, although they often lack the magical power needed to defeat the creature. They usually keep a close watch on the ironmaw lest it approach a settlement, then either attempt to discourage it or seek help. One effective tactic is to throw a cordon around the slow-moving plant and drive off all the local animals, thus depriving the ironmaw of prey and encouraging it to move elsewhere.

Green dragons also resent the presence of such capable predators in their territories, but occasionally one forges an alliance of sorts with an ironmaw. Protected by its mobility, breath weapon, and magical power—not to mention its sheer size—the dragon can sometimes intimidate or bribe the creature into serving as a guardian for its lair. The ironmaw is content to serve so long as the dragon brings it food regularly (very few beings willingly approach a dragon's lair, and they are even less likely to do so with a voracious ironmaw around). Such arrange-

LIFE CYCLE

The ironmaw developed its taste for flesh in the Abyss, where sunlight is unreliable at best and soils are notoriously poor. Even when growing in a fertile zone on the Material Plane, an ironmaw craves flesh, bone, and blood for sustenance and reproduction. Although often able to survive on good soil and sun alone, it is insatiably hungry by nature and needs an extra energy boost to produce fruit and seeds.

Ironmaws produce hanging clusters of dark brown flowers that give off a stink like that of carrion. Every ironmaw has both male and female flowers and is capable of reproducing on its own, but stands often gather to cross-pollinate. An ironmaw transfers pollen from flower to flower using its tendrils. Once pollinated, the blooms develop into clusters of dark brown fruit resembling acorns, retaining their foul odor. The fruit tastes just as bad as it smells, and it is too acrid for humans to eat unless first cured in lye. Even then it tastes like rotten meat.

When cast on the ground and watered with blood, a fruit sprouts within a few weeks. An ironmaw seedling resembles an adult but is dangerous only to Fine and Diminutive creatures. A seedling can take anywhere from a few months to a few years to reach adult size, depending on how much food it gets.

NATURAL WEAPONRY

An ironmaw possesses a mighty arsenal of natural weaponry, which includes its tendrils and powerful maw.

Tendrils: An ironmaw's four thorny tendrils are formidable weapons. The

(AC 22). Use the procedure for sundering a weapon (see Chapter 8: Combat in the *Player's Handbook*) to resolve the attempt.

Maw: An ironmaw can use its namesake feature to deliver bite attacks. The creature's bite isn't nearly as formidable as its tendrils, but it deals a respectable 9 points of damage on average (1d8+5). The real danger comes when the ironmaw manages to drag a foe into bite range with a tendril. When it tries to bite a creature that has at least one tendril attached, it gets a +4 bonus on its attack roll.

If the ironmaw drags a Large or smaller foe into its own space, it attempts to engulf the creature. The foe is allowed a Reflex save (DC 15) to avoid the maw. If the save succeeds, the foe is pushed either back to where it began the turn or into any space adjacent to the ironmaw (the ironmaw chooses the space). Any tendrils attached to the foe remain attached. If it fails the save, the foe is deposited in the crushing maw, where it is forced into the ironmaw's hollow, fluid-filled trunk. The ironmaw detaches any tendrils attached to the engulfed foe.

The tree's digestive juices are too weak to cause any immediate harm to an engulfed foe, but the victim must hold its breath or begin to drown. The trunk, however, acts like an enormous gizzard, grinding up the ironmaw's food and dealing 2d6+10 points of bludgeoning damage each round to the creature within.

An ironmaw's trunk can hold one Large, two Medium, four Small, eight Tiny, sixteen Diminutive, or thirty-two Fine creatures. Creatures killed inside the trunk are completely consumed after about an hour, at which time the ironmaw expels any indigestible matter.

The ironmaw might also engulf creatures it has killed with its tendrils, storing them for several days until it can "plant" them around an ironmaw seed. About a week after planting, the seeds sprout into ironmaw saplings, which feed off the corpses planted with them and reach maturity within a month.

IRONMAWS IN COMBAT

Because it is virtually immobile, an ironmaw hunts by ambush. Despite being fairly stupid and always hungry, the creature exhibits considerable guile and patience. It first chooses a locale

where prey is likely to approach: Springs, fords, game trails, salt licks, and areas of young, tender growth all attract wildlife and make prime hunting grounds for ironmaws. More daring specimens lurk near roadsides, bridges, and campsites, hoping to ambush unwary people.

An ideal spot has many broadleaf trees of about the ironmaw's height (20 to 30 feet for a mature individual) and a clear area nearby. The ironmaw hides among the trees and uses its tendrils to attack anything that enters the clear area. The edge of a woodland meadow serves its purposes well.

Given its lack of mobility, an ironmaw would seem to have few options in combat. Its incredible reach, however, gives it flexibility. It threatens

opponent struck has to deal with a bleeding wound and an attached tendril. On subsequent rounds, with one or more foes so occupied, the creature uses its free tendrils against any who are still free, starting with those who are trying to assist their comrades.

If reduced to less than 25% of its original hit points, an ironmaw often switches tactics and directs all its free tendrils against the foe that has hurt it the most. This tactic works well, since the Constitution loss from multiple tendril hits can kill a single creature outright.

Whenever a foe succumbs to an ironmaw's tendril attack, its Great Cleave feat comes into play. It detaches the tendril to make another melee attack, usually against the

ALTHOUGH IT REMAINS FAIRLY RARE, AN IRONMAW CAN TURN THE MOST IDYLIC-LOOKING GLADE INTO A SINISTER AND DANGEROUS PLACE.

everything within 60 feet and can make attacks of opportunity within that area, and it can easily attack multiple foes even when they are scattered.

An inexperienced ironmaw lashes out whenever anything comes within range. An older, more crafty specimen usually waits until prey gets closer, usually about 40 feet away, especially when several opponents approach in a group. This ensures that the ironmaw can attack any of its foes and makes it more difficult for them to withdraw out of reach.

In either case, the ironmaw tries to attack before its opponents can spot it. If it manages to get surprise (quite likely given its excellent ability to hide among the trees) the ironmaw makes its single attack against the closest foe. This generally assures it of a clear line of sight and also forces the foe's companions (if any) to move closer if they want to help free their comrade from an attached tendril.

When using its first full attack action against a group, an ironmaw usually lashes at three or four different foes, starting with the creatures closest to itself. Although this tactic dilutes the ironmaw's offensive power, it also blunts any countermeasures, since each

closest foe who does not already have a tendril attached.

An ironmaw seldom tries to flee from combat, knowing that it cannot outrun anything with its land speed of 10 feet. But if it is being harried from beyond its reach by ranged weapons or spells, it has sense enough to withdraw or at least seek cover.

Ironmaw Group Tactics

When a pair or stand of ironmaws fight together, they usually do not bother to coordinate. Instead, they stand 5 to 10 feet apart in a circle with a diameter of 40 to 50 feet. The creatures usually hold their attacks until they are spotted or until opponents come within reach of at least two individuals. Once the battle commences, each ironmaw generally follows the tactics described above.

Frequently, tendrils from two or more ironmaws become attached to the same foe. When this occurs, all of them try to drag the creature toward themselves. To decide which one wins the resulting tug-of-war, first look for a space that is 10 feet closer to all the ironmaws involved. If no such space is available, find a space 10 feet closer to at least one of the competing ironmaws

and not farther away from any other. If there still is no such space, all the ironmaws make opposed Strength checks (if any individual has more than one tendril attached, it gains a +2 circumstance bonus on the check for each extra tendril). The loser must detach its tendrils, and the remaining ironmaws repeat the process until there is a legal space to move the creature or

splotches on the leaves. A druid can immediately recognize the ironmaw as an unnatural plant. A Knowledge (planes) (DC 20), Knowledge (nature) (DC 15), or bardic knowledge (DC 25) check confirms its true nature—and, of course, characters might recognize it from their own experience.

The wary might loose an arrow or other ranged attack at the odd-looking

lurking nearby. If you allow one ironmaw to occupy your attention, another just might creep into range unnoticed.

Going Toe to Root

Defeating an ironmaw with melee attacks usually takes much less time than a ranged assault, but it entails far more risk.

It doesn't pay to be timid in close combat with an ironmaw. Move in quickly so that it gets few chances to use its tendrils. Also, send in as many attackers as possible so that no one opponent faces all the creature's tendrils. Should the ironmaw manage to attach a tendril to a comrade, don't be in too great a hurry to free the character unless you intend to flee. Constitution damage occurs only when a tendril first hits and attaches. Breaking free only invites another tendril attack along with another bleeding wound and more Constitution damage. If a party member is snared within 15 feet of the ironmaw, however, try to sever every tendril as soon as it attaches. You don't want anyone engulfed.

Once you get close enough for melee, plan to stay there until you get the job done. Almost anyone can outrun an ironmaw, but there's no escaping those tendrils when you're within 60 feet of the monster.

Spellslinging

A typical party's ability to strike effectively at a distance usually rests with its spellcasters. However, an ironmaw's spell resistance of 30 makes it all but immune to most magical assaults, even from casters with the Spell Penetration feat. Spells that employ cold or electricity are a waste of time: Ironmaws are immune to these energy types. They are also resistant to acid and sonics, so use fire and force effects if you must cast spells against an ironmaw. It is best to stick with spells that enhance your party, such as *greater magic weapon*.

Spells that create or conjure allies, such as the various *summon monster* and *summon nature's ally* spells, and *animate objects*, get around an ironmaw's spell resistance. Such allies, however, often cannot overcome the creature's damage reduction and thus can only block or delay its movement. But sending in a first wave of summoned creatures floods the area with

IRONMAWS CAN BE DIFFICULT TO ERADICATE, BUT WITH SMART PRECAUTIONS AND CAREFUL TACTICS, A PARTY CAN DEAL WITH THEM EFFECTIVELY.

until only one ironmaw has tendrils attached to it.

FIGHTING AN IRONMAW

Often, the best way to deal with an ironmaw is to avoid the creature.

In theory, a trained observer can easily recognize an ironmaw's territory. This is true, to an extent. When an ironmaw has remained in one place for a while, the area becomes littered with indigestible bits from its previous victims, such as scraps of fur. If the ironmaw has battled intelligent creatures, it leaves behind pieces of their equipment, particularly metal and wooden items, coins, gems, cloth, and leather, which the ironmaw either cannot digest or does not care to eat. However, all this detritus is easily overlooked among the natural litter and brush that covers most forest floors.

The Spot DC to notice telltale debris in an ironmaw's vicinity is 20. Even if successful, the check merely reveals its presence, not its significance. A Survival check (DC 15) allows the observer not only to notice the refuse but also to realize that some predatory creature has fed and left it behind. A character who successfully spots the debris can attempt a Knowledge (nature) check (DC 15) to come to the same conclusion.

Even when scanning the area upon noting the debris, a party might overlook the ironmaw's presence. They must make Spot checks opposed by the ironmaw's Hide (which is excellent within a wooded area) to actually see the creature. Even then, it resembles an oak tree distinguished only by blood-red

tree. This usually motivates it to strike if there is a foe within reach, even if the ranged attack misses or fails to overcome the ironmaw's damage reduction. If no foes are within reach, the creature waits a round or two, hoping someone will move in for a closer look.

Stay Back If You Can

Given an ironmaw's extremely slow speed, an obvious combat tactic is simply to stay out of reach and hurl spells and ranged attacks. However, this is easier said than done.

An ironmaw has impressive damage reduction, rendering it all but immune to ranged weapons with less than +3 magical enhancement. Since most characters focus on melee combat, sufficiently powerful ranged weapons are seldom available. A *greater magic weapon* spell can make up for this lack nicely. Even so, expect to spend a long time pumping arrows into an ironmaw before it succumbs. If you are in a thickly overgrown area, chances are the ironmaw can gain cover from the surrounding trees, making the task of bringing it down with ranged attacks even more laborious. Also keep in mind that the creature is not completely immobile. It can cover 20 feet a round with a double move, or 40 feet if it runs, requiring a minimum distance of 105 feet to be entirely safe from an ironmaw's attacks. While it is difficult to run through a forest, an open space is much easier—ironmaws lurk near clearings and meadows for a reason.

When playing cat-and-mouse with an ironmaw, keep an eye out for others

more targets than the ironmaw can deal with, allowing the PCs to get within melee range without drawing tendrils attacks. Most ironmaws are cagey enough to redirect their tendrils against more dangerous opponents, but this tactic might still buy combatants a little time.

Being evil and extraplanar, an ironmaw is vulnerable to banishing spells such as *dispel evil* and *holy word* (even if it grew from a seed planted on the Material Plane). These spells still have to get through its formidable spell resistance, but the battle is over if they work—and the +4 deflection bonus to AC from *dispel evil* doesn't hurt either. Comrades who have been engulfed or who have tendrils attached stay behind when the ironmaw is banished back to the Abyss. The *banishment* spell, of course, is the most effective means of sending an ironmaw packing. Items repellent to an ironmaw include: a pound or more of salt, a pound or more of silver, hairs from a celestial creature or good outsider, fire, and an axe blade. Each extra element improves your ability to overcome the ironmaw's spell resistance by +1 and also raises the spell's save DC by 2, so try to use as many as you can.

ALTERNATE STATISTICS

The statistics below represent a juvenile ironmaw. The standard monster description can be found in the *Fiend Folio*.

Ironmaw Seedling: CR 10; Large plant (Extraplanar); HD 8d8+32; hp 68; Init -1; Spd 10 ft.; AC 21, touch 9, flat-footed 21; BAB +6; Grap +16; Atk +12 melee (1d8+6 4 tendrils/crit 19-20) and +7 bite (1d6+3); Face/Reach: 10 ft./10 ft. (40-foot reach with tendrils); SA Attach, engulf, illness, tendrils, wounding; SQ Acid resistance 10, cold immunity, DR 10/+2, electricity immunity, plant traits, sonic resistance 5, SR 20; SV Fort +10, Ref +1, Will +3; Str 22, Dex 9, Con 19, Int 4, Wis 13, Cha 14.

Skills: Hide +5*, Spot +12, Listen +12;
Feats: Alertness, Power Attack, Cleave.

Attach (Ex): If an ironmaw hits with a tendril attack, the tendril, in addition to dealing normal damage, attaches to the opponent's body. A tendril draws a stuck opponent 10 feet closer in each subsequent round (no attack of opportunity) unless the opponent breaks free, which requires an Escape Artist

check (DC 21) or a Strength check (DC 21). An ironmaw can draw in a creature within 10 feet of itself and bite with a +4 attack bonus in that round. An ironmaw can draw a creature into its space and attempt to engulf it as well. A tendril can be severed by a single attack with a slashing weapon (made as an attempt to sunder a weapon) dealing at least 7 points of damage. Severing a tendril does not shorten the ironmaw's reach; it simply plays out more tendril from its trunk.

Engulf (Ex): As a standard action, an ironmaw can attempt to engulf a Large or smaller creature that enters its space. The victim of the attack can make an attack of opportunity, but if it does, it is not entitled to a saving throw. A victim that does not attempt an attack of opportunity must make a Reflex save (DC 15) or be engulfed; on a success, the victim is pushed back or aside (but not freed from attached tendrils). An engulfed creature takes 1d8+6 points of bludgeoning damage within an ironmaw's trunk each round and must hold its breath or begin to suffocate.

Illness (Ex): An ironmaw's tendrils can sap an opponent's health. Anyone caught by a tendril must succeed on a Fortitude save (DC 18) or take 1d6 points of Constitution damage.

Tendrils (Ex): An ironmaw can attack with its four tendrils from up to 40 feet away. Anyone struck by a tendril can take damage, lose blood, suffer illness, and be drawn toward the ironmaw's trunk.

Wounding (Ex): A wound resulting from an ironmaw's tendril attack bleeds for an additional 3 points of damage per round thereafter. Multiple wounds from such attacks result in cumulative bleeding loss (two wounds for 6 points of damage per round, and so on). The bleeding can be stopped only by a Heal check (DC 10) or the application of any cure spell or other healing spell (*heal*, *healing circle*, or the like).

Plant Traits (Ex): An ironmaw is immune to poison, sleep, paralysis, stunning, and polymorphing. It is not subject to critical hits or mind-affecting effects. An ironmaw also has low-light vision.

Skills: Ironmaws receive skills as fey. An ironmaw has a +8 racial bonus on Listen and Spot checks. *In wooded areas, an ironmaw has a +15 racial bonus on Hide checks.

THE ECOLOGY OF THE ISLE OF DREAD

THE JOURNAL OF LARISSA VANDERBOREN

Today I leave the safety of the colony for the village of Tanarua. We've been here for several months on the Isle of Temute, establishing the Farshore colony and attempting relations with the local Olman villages. While these proceedings are important for our family's and, indeed, all of Sasserine's designs on these far-flung shores, I find them rather tiresome. Thus, I've convinced my husband Verik, who leads the expedition, of the value in exploring and documenting the mainland of this, the Isle of Dread. While obviously concerned for my safety, he knows that my magic and experience as an adventurer will keep me from harm.

Within the Fangs of Zotzilaha

6th of Wealsun, 593 CY

I have returned from a journey with the Tanaroan natives to the volcano Nextepeua, one of the twin volcanoes known as the Fangs of Zotzilaha. The Tanaroans make annual pilgrimages to offer appeasements to their bat-god Camazotz. I had agreed to the trip to display our good intentions to our Olman neighbors, hoping to help Verik's goal of establishing mutual trade with them.

The Fangs are an imposing sight, rising up to dizzying heights and dwarfing the scenery around them. From their heights billow pillars of black, acrid smoke visible for many miles, polluting the air with ash and debris. Muffled rumbles growl from deep beneath the peaks, suggesting the incredible activity of the world's bowels. The fields surrounding the Fangs steam with slag and knee-deep ash, while the grounds closer to the peaks are riddled with lava tubes. Some evidence of flowing magma colliding with

SAVAGE TIDE

Larissa Vanderboren's journal appears in the Vanderboren vault in the first adventure of the Savage Tide Adventure Path, "There is No Honor," from *DUNGEON* #139. This work contains her research notes on the Isle of Dread's ecosystem, along with maps and sketches of the creatures of the island. Presented here are selected entries and sketches from that research, translated from Sylvan. The player's map of the Isle of Dread, included with this issue, can also be employed as part of Larissa's observations.

underground water exists, as poisonous gas belches from deep vents and fissures. It's no wonder the natives fear this place—they live under constant threat of an explosive eruption.

The Tanaroans explained that we must wait until nightfall, when the volcanoes' sacred baboon guardians retreat to their caves. The baboons—omnivorous and dangerously ravenous—live out a pitiful existence, surviving off sparse vegetation and huddling together around the few pools of stagnant rainwater.

When twilight fell, hordes of great bats swept out from the lava tubes and fissures, blacking out the smoke-clouded sky. I was startled by the creatures' physical size, some with wingspans up to 15 feet. In spite of their mass, they exhibited surprising maneuverability, both in the air and on the ground. The sight of so many of them, a colony several thousand strong, instilled a primal fear within me. Although they drove the baboons hooting back to their caves, the bats

ignored us completely, enabling us to approach unchallenged—an event that, to the Tanaroans, was a sign Camazotz himself had granted safe passage.

Once inside Nextepeua, the shaman leading the pilgrimage began repeating a tribal, rhythmic chant. Whatever incantation he worked upon us proved sufficient, for we withstood the heat emanating from the walls and the occasional blasts of scorching air. The searing volcanic fumes made breathing difficult, even with the cloth masks we used, and the muffled rumbles heard outside were deafening this close to the volcanic core. The smoke and heat waves also made navigation nearly impossible. I would have surely been lost within those hellish depths forever had not the Tanaroans been so familiar with the way, seemingly capable of making the trek without the need for sight.

After what seemed an eternity, we arrived at the Shrine of Camazotz. We hurriedly placed our offerings at a soot-covered carving of a bat in the far wall. Within the shrine I placed a memento my daughter Lavinia had made for me when she was a child, offering something near to my heart as the Tanaroans suggested. I am hopeful that through my obeisance I have earned at least a marginal respect from the Olman natives.

Ecology of the Phanaton

24th of Wealsun, 593 CY

While wandering the central jungle, stubbornly classifying the island's endless varieties of flora, I caught sight of a strange, diminutive primate. Carrying a spear, it had a satchel slung across its shoulders and appeared to be rummaging for mushrooms on the spongy ground. It hadn't noticed me so I approached for a closer look.

Little more than 2 feet tall, the creature looked like a raccoon, with dark fur around its eyes and ringed stripes on its tail. It also had primate-distinguishing features, such as opposable thumbs and a prehensile tail, but displayed a thin membrane of skin stretched between its front and back legs (later I would observe its use for gliding between trees).

Its eyes suddenly met mine, and for a brief moment, I thought the creature looked inquisitive, but then it started shrieking in a shrill, warbling cry. Almost instantly, more of the creatures came rushing through the bushes and dropping from the trees—too many to count. Before I could act, a primitive net made from vines ensnared me, and the creatures began pummeling me with their clubs and the butt-ends of their spears until I lost consciousness.

I awoke with my hands tied behind my back, lying on a wooden platform supported by the boughs of an ancient deklo tree. I could sense that I was high up in the jungle canopy, and I noticed my provisions and research notes dumped out next to me. As I looked around, I could see more platforms in the surrounding trees, connected by treacherous-looking bridges made of knotted vines and strewn with simple wooden huts. These creatures had built an entire village among the trees. Scores of the small creatures watched from nearby platforms, through tiny hut windows, and from the foliage of branches above, spying on me curiously as I came to my senses.

As I composed myself, one of the tiny creatures, their leader by the look of his unique, brightly feathered adornments, approached me and untied my hands. He shocked me by speaking a crude sort of Sylvan—distinguishable phrases interspersed with soft hoots and odd clicks of the tongue. He apologized for the inconvenience and explained that I had surprised a group of his people while they gathered medicinal herbs from the forest floor below. He had looked through my journal, discovered my druidic beliefs, and was very apologetic for the misunderstanding. He invited me to a village feast and the following grooming session that evening as a token of their good will.

I stayed with the creatures—who I came to know as phanaton—for three days thereafter, learning of their society and culture. When I left, the one that I had spied on the jungle floor, named Hatoi, offered to join me as a guide—a sort of peace offering from these creatures. At first, Hatoi was shy, but with

*Cualoco zacatl or
"loco weed"*

his consumption of a toxic weed that grows in patches along the lake's eastern banks.

Several minutes after eating the weed, the ankylosaur begins taking short, shallow breaths, and seems a bit unsteady on his feet. Once the drug fully takes hold, he exhibits an increased blood flow—evidenced by his overall pinkish hue—and begins to drool. Other effects of the plant are rapid eye movement, loss of balance, occasional vomiting, and highly aggressive behavior.

The amount of weed consumed has a proportional effect on the ankylosaur's belligerence. On a normal day, he eats only a small quantity—enough to

only to run headlong into a tree trunk. He became so enraged that he smashed down nearly thirty trees before disappearing into the jungle.

After about two hours, the drug begins to wear off. The specimen exhibits loss of hunger, lethargy, and impotent irritability; usually collapsing wherever he finds himself after the plant's effects have run their course. Once he is fast asleep, the herd resumes its daily grazing.

The ankylosaur shows signs of physical addiction to the plant, refusing to let any members of his herd near a patch. When he can't find sources of the weed, he goes through stages of extreme depression, although social rejection might account for this behavior, as he is an outcast among the group.

When I asked the Panitube natives about the weed, they smiled and laughed to themselves as if privy to some private joke, which I take to mean that they are indeed familiar with it. I overheard one of them call it "cualoco zacatl," which roughly translates from Olman to "angry grass." The few natives who speak the trade tongue, however, have made a broken translation, calling it "loco weed."

Territorial Behavior of Terror Birds

10th of Reaping, 593 CY

Concerning the flock of terror birds that I have been studying near the isle's eastern peninsula, today I witnessed a pack of males force a dime-trodon away from its kill. The creature had wandered into the high grasses of the flock's territory and brought down a giant scorpion, an easy catch with little signs of struggle. This was soon to change, though, for the terror bird scavengers can be very persistent when it comes to robbing meals.

The tall birds slowly encircled the predator, assessing the situation. At first, the dime-trodon seemed indifferent to their presence, continuing to eat while only occasionally snapping at birds that got too close. As the flightless avians gained confidence, they began flaunting—rising up to their full

What could have made this?

time I began to connect with him by letting him look at my journal. He is fond of my sketches, particularly of the island's plant life, and he will no doubt prove invaluable in classifying the jungle flora.

The Effects of Loco Weed 7th of Richfest, 593 CY

For the past several days, I've been observing a herd of ankylosaurs that graze near an inland lake in the northwestern reaches of the isle. Within this group, one male in particular has been exhibiting very curious behavior, of hostile and unsocial bearing. I've come to blame this comportment on

become easily agitated. The rest of the herd has learned to avoid him during these episodes, as he swings his tail at anything that approaches. Even when docile and not under the influence of the plant, the herd and other local herbivores give him plenty of space, not wishing to incur his wrath. A bruised shin is apparently enough to make even the largest diplodocus wary of him.

Larger meals of the plant have a more powerful effect on the giant reptile, causing him to become extremely aggressive and attack anything he sees. His depth perception seems altered during these episodes, as yesterday I observed him charging into the jungle

*Terror birds of the
northern Peninsula*

height and fluffing their head plumes. They strutted back and forth, low resonating grunts emanating from deep within their chests. When their displays failed to intimidate the feeding predator, some of them began turning their hindquarters toward it and kicking dirt into its face. This immediately garnered the reptile's full attention.

Unwilling to give up its kill, the dimetrodon flushed the sail on its back, bared its teeth, and began belching at its attackers. This show of force came too late, though, as the birds had worked themselves into a frenzy. The flanking terror birds nipped at its tail, hitting and running, much to their target's frustration. While doing little harm, it made the dimetrodon spin around to snap at them. Taking advantage of this momentary distraction, the other birds rushed in for quick strikes, butting and quickly biting with their powerful beaks. At one point, the dimetrodon actually staggered to keep its balance. Finally having had enough, the giant lizard abandoned its meal and fled at a waddling gait. The birds gave pursuit, screeching as they drove the creature from their territory. Once the threat of the predator was gone, they dragged the half-eaten scorpion back to the waiting chicks and females of their flock.

In other parts of the Flanaess, these flightless birds are top predators of

their habitats, but here they are clearly bottom-feeding scavengers. If it were not for their strength of numbers, they would certainly be ill equipped at defending their nests and might have long ago disappeared from the island. They have adapted quite well to their situation and exhibit a remarkable ability to drive off most predators that threaten their nesting grounds.

Tyrannosaurus Rex!

22nd of Reaping, 593 CY

In gathering data for my documentation of the island's food chains, Hatoi and I witnessed a tyrannosaur consume a lesser theropod in the northeastern grasslands. The prey was too small to sate the giant beast's hunger, and once it caught our scent and spotted us, it charged—frighteningly fast for a creature of such size. Terrified, and against all instinct, I held my ground, knowing that fleeing would certainly be my last act.

I attempted to speak to it to try to calm the massive beast, but it ignored me, slowing its advance only slightly. My heart pounding, I redoubled my efforts and the rex came to a reluctant halt. I have heard tales of druids who consort with these beasts, but that seemed a dangerous proposition. Verik would surely scold me if he knew I had even attempted it.

The titan lowered its head to sniff me with one great nostril, its scimitar-sized teeth scant inches away. Fascinated, I

reached out a trembling hand to touch it, and just then, Hatoi jumped from his tree and landed squarely on the top of the tyrant's skull. I yelled at him to stop, but it was too late. The tyrannosaur raised its mighty head and let out a deafening roar. It began thrashing and spinning its body to shake off the small nuisance, snapping its great jaws in anticipation of the morsel. As Hatoi raised his spear, I cried out to prevent what was to occur, but too late. He plunged his spear deep into one of the tyrannosaur's eyes, blinding the giant and sending it into an uncontrollable rage. Between roars, it swung its tail wildly while clawing impotently at its face, unable to remove the tiny spear.

The last I saw of the rex, it was bullying its way into the jungle to the west, splintering the innocent trees as it ran. The sound of its flight turned to sounds of intense struggle, the trees began shaking violently and a shocked reptilian roar reverberated through the jungle. Reappearing from the undergrowth, Hatoi began frantically waving his hands as if warding off some perceived evil. When the tyrannosaur abruptly became quiet, choked off in mid-roar, and the tops of the trees stopped moving, wide-eyed Hatoi started making loud, agitated ticking sounds. He wanted very desperately to leave the area, pulling my hand to lead me away from the mysterious and disturbing sounds.

Not questioning my native guide's obvious urgency, we quickly journeyed back to the village. Later, when I asked, Hatoi refused to speak of his actions, becoming frightened and emotional. For the first time, I've come to realize the phanton is keeping certain truths pertaining to the isle a secret from me.

Ecology of the Masheri

5th of Goodmonth, 593 CY

My interactions with the natives are beginning to bear fruit, as they have begun trading with Farshore, eager to exchange pearls harvested from oysters that live around the coral reefs of the island. Following rumors of

*All creatures fear
the isle's terrible
thunder lizards*

huge pearls, we've bartered two canoes with the fishermen of Burowao, the easternmost peninsula village, in exchange for guides to lead a Far-shore expedition to a reef where they claim giant oysters make their homes. I went along with the explorers to investigate the reports of such giant mollusks and learn more about the isle's aquatic inhabitants.

We anchored at a reef off the northeastern shores of the island. Our guides spoke of monstrous, territorial eels that feed on the coral there—a trait that has since earned them the name "mashers." With the help of the fishermen, we devised a strategy for stealing the pearls from their homes.

Approaching the reef in outriggers, we maneuvered into the shallow water over the reef—less than 2 feet deep—and disembarked. Walking on the reef proved difficult—if you weren't careful, you could easily break an ankle. Our mission was to attract the attention of the mashers by dislodging chunks of the reef with long poles, hoping to provoke a feeding frenzy, giving our divers the necessary distraction to gather the pearl-bearing oysters.

Within moments of breaking off the first coral chunks the mashers responded. Several sets of the eels' wicked black spines broke from the water, serpentine in their movements as they approached. Some looked

Adult mashers can grow up to 30ft long.

to be in excess of 30 feet long, making them more than a match for the aquatic reptiles lurking in these foggy waters. As the monstrous eels gained speed, I realized their intentions and began yelling for my comrades to retreat. The mashers' skulls bear thick growths of bone, with which they began relentlessly ramming the reef, sending jarring shockwaves through it, knocking us from our feet. A great schism opened in the coral we stood on, and the solid surface beneath us was suddenly gone, sunk into the lower underwater mazes, leaving us treading water that was now deep enough for the mashers to navigate. Two of our men who chose to swim to the canoe are no longer with us. One moment they were there and the next they were simply gone, nothing marking their presence other than a cloud of turbulent bubbles of blood.

As we emerged onto the standing reef, I noticed one of the native's arms hanging limp at his side, quickly turning black—he had brushed against one of the poisonous spines on the mashers' backs. Cursing myself for lacking the vital spell, I tried to treat the poison but was unsuccessful—the black discoloration quickly spread to the rest of his body, coursing across his skin. He began shivering and babbling incoherently with dementia. Finally going into shock, fits of vomiting and convulsions took over. When his eyes bulged, I knew it was too late, for inflammation of the brain is fatal. The poison had killed him within moments.

We had suffered three fatalities and our divers managed to bring up only

four normal pearls from the depths. Appalled, Verik has decided that further risk outweighs the value of the still-rumored giant pearls and has forbidden all future diving expeditions.

Physiology of the Greenwise

19th of Goodmonth, 593 CY

Today I came upon a clearing where it seemed a herd of dinosaurs had recently stampeded. The footprints were massive and the devastation to the area immense—likely caused by a herd of diplodocuses or other large herbivores. There were no signs of an attacker's footprints, leading me to believe that the panic's source had come from the sky.

As I was studying the ruined landscape, I discovered a large plant, a

greenwise once nearly 15 feet tall, fatally trampled into the ground. Its still huge, flytraplike mouths twitched violently—seemingly hungry even in death—and spasms ran down the length of its main stalk, causing the plant's tendrils to flutter and make a sound like someone shaking a tree.

About halfway down the stalk that served as the greenwise's throat a pulsing bulge appeared to be the source of the plant's post-death contractions. Whatever was inside the carnivorous weed was still alive, struggling to escape. When I sliced open the stalk to try to free whatever was trapped within, I encountered some resistance—the greenwise's thick stem proving tougher to carve than a ripe melon. Viscous froth spewed from the incision and

Even the plants of the isle can prove deadly.

oozed its way to the ground, reminding me of the saliva of a fleshy creature—except that this reeked of sap.

Lining the inside of the stalk ran rows of dense thorns protruding down toward the plant's gut, arrayed in such a fashion as to prevent captured prey from escaping back up to the maw. I could see a sizable frog peering up at me through the thorns, desperately trying to push past the barbs to reach the opening I had created. I spoke to it in an attempt to calm it, but the traumatized thing was fully intent on escape. The frog must have kicked one of the rooty organs that once guided the greenwise's locomotion, for one of the plant's tendrils convulsed, knocking me off my feet and pinning me to the ground.

Struggling to free myself, I heard the flap of powerful wings and stilled myself at the sight of a pair of wyverns scouring the carnage. These creatures were likely the culprits behind the stampede, returning to pick over the devastation. Instinctively, I shifted myself into a small snake and slowly slithered away from the remains of the man-eating bush, seeking a hiding place where I could wait for the predators to depart. Behind me, I heard the lesser dragons tearing into the greenwise, not discriminating between frog and plant. At least the poor creature did not suffer long.

Aranea Habitat

15th of Harvester, 593 CY

I cannot put to words the sense of grief and guilt that consumes me. By now, Hatoi is surely dead, a victim of an unspeakable fate I unwittingly had a hand in weaving. If only I had heeded his warnings, he would still be here with me as I write this. For the thousandth time I ask why I ignored him, foolishly venturing into a darkened hollow in the eastern jungle where I noticed even the thunder lizards feared to tread. There, my curiosity cost me and my friend dearly.

As we entered the vale, made eternally dark by the dense jungle canopy, I immediately felt something was

*An unlucky victim
of the Aranea.*

watching us. At first, I shrugged it off as nerves, but it became increasingly difficult to keep Hatoi calm. When he suddenly stopped and started hissing, staring intently into the darkness, I halted in deference to his keener senses. It was then that I became aware that we had been walking beneath a floating maze of spider webs strung through the trees above. Disgusting corpse husks dangled from the rope-thick strands like macabre Midwinter ornaments. Yet, even more terrifyingly, something had purposefully positioned the carcasses, forming rotting shelters as sickening as they were crude.

All of the hairs on my body stood on end when I caught a glimpse of movement. Praying for my eyes to adjust to the darkness, I could barely see them: giant, horrifying spiders slowly descending from their webs, seemingly hovering in mid-air and gesturing with their front appendages—disgustingly elongated arms with multi-knuckled hands. Although I had never seen one,

I took these creatures for aranea—rare and rumored spiderlike beings storied to carry ill-mannered children off to their evil forest kingdom.

I didn't have the opportunity to look closer or attempt to speak to the creatures as the surrounding jungle suddenly came alive with indistinct, sinister shadows and the sounds of slinking things. Despite the activity, I could sense nothing other than Hatoi, the spider things, and myself. Even now, I don't know if something was actually there, or if those images and noises were mere figments meant to drive us to some deadlier trap.

Regardless, an overwhelming need to flee consumed me, and I prayed to Ehlonna to steel my nerve. I don't know what came over poor Hatoi, though, because he bolted, heading deeper into the hollow as if charging one of the spiders, a terrified but determined look on his face. I can't help but wonder if he was trying to defend me. I had scarcely a moment to call out before I saw his peril, each bound into the undergrowth covering him more and more in thick strands of webbing, ghostly ropes slipping around him like wet nooses. The sounds of him calling out to me as he was hefted into the silken nightmare above still ring in my ears, and through my own screams I thought I heard a chattering arachnid laughter that will ever torture my nightmares.

Conclusion

1st of Sunsebb, 593 CY

Some time has passed since I left Farshore and—in light of the recent tragedy—this is likely to be my last entry. When we return to Sasserine, I shall deposit the bulk of this work into the family vault for safekeeping until such a time that I can organize my notes and publish a full dissertation of the island's ecosystem. Whatever final form my observations take, though, I plan to dedicate the work to those souls who lost their lives in that unforgiving land. I hope their sacrifices might serve as a warning of the savage nature and primal ferocity that epitomizes the aptly named Isle of Dread. ☐

The ecology of the ixitxachitl

by Ed Greenwood

From the *Ramblings, Volume V*, of the sage Nenemith:

A curious creature indeed, the ixitxachitl. Found in colonies of sometimes as many as a hundred or more in shallow, tropical seas, ixitxachitl typically lair in well-concealed grottos or tunnels in the midst of coral reefs. They worship the Prince of Demons, Demogorgon, and from him gain the use of clerical spells, with some creatures rising in ability to the equal of a Patriarch.¹

Although they are very seldom encountered by humans and humanoids who travel in or on the seas, the ixitxachitl are a numerous race and rule large areas of the coastal salt waters of our world, relying on their aggressive nature and their magical powers to build an undersea empire of sorts.

Ixitxachitl are carnivorous and prey on all marine life that they can kill and devour, this even extending at times (when they attack in huge hunting packs) to giant octopi, whales, and — on at least one documented occasion — a dragon turtle. The creatures range far from their lairs in search of food, and often battle sahuagin, locathah, and especially tritons and mermen. The superior organization and tactics of these opponents have earned them victory over the ixitxachitl often enough to keep these magically endowed rays from destroying all resistance and mastering the oceans. But, at the same time, the ixitxachitl have certainly made their presence felt; in some areas of our world, they have all but eradicated aquatic elves in warm seas, and the tritons have largely found it easier to make their abodes in deeper waters, and only venture in armed bands into shallower areas as a result of ixitxachitl activities therein.

Because of the enmity between Orcus and Demogorgon, intelligent marine undead (lacedons, juju zombies, and so forth) will not aid — and sometimes will actively oppose — the rays. Ixitxachitl, for their part, devour such prey whenever it can be found, and so the undead largely avoid ixitxachitl. Those rays with especially powerful cleric abilities can raise additional "recruits" for their armies² by use of the *animate dead* spell, but are unable to magically control or influence undead because the influence of Orcus against them offers too much resistance.

In battle, ixitxachitl swoop rapidly at opponents from opposing directions and levels, seeking to confuse prey by striking at it from two or more sides at once. In this maneuver, they are often led by any ixitxachitl present of the so-called "vampire" variety, which are envied and personally powerful war leaders and influential individuals in ixitxachitl society.³ The most

powerfully endowed of the servants of Demogorgon (which are the social leaders of ixitxachtli society) hang back until the single most powerful opponents are identified, whereupon they attack with spells.⁴ These powerful spell-users typically swoop together with two or more other ixitxachtli, so that the target will find it difficult to escape their attacks.

Sometimes ixitxachtli burrow into bottom-sand, leaving only their eyes uncovered, to escape dangerous foes; but more often they do this to lie in wait for speedy prey, which they then ambush.

In a manner similar to the way that sharks do, ixitxachtli can sense vibrations for great distances underwater, by means of receptors on their backs and tails — the shock waves of explosions, for instance, they can “hear” from miles away.⁵ They have a form of speech by which they can communicate openly with one another, and with some sahuagin that have learned at least the rudiments of their strange tongue, and those ixitxachtli with access to the proper spells can also communicate magically with other creatures. Ixitxachtli have a second form of language that they use among themselves (and with some other marine creatures, such as sahuagin), which is best described as “touch-telepathy.” This is a form of limited mental exchange possible only between creatures the ixitxachtli are actually touching, usually with their tails. Groups of ixitxachtli sometimes swim in “stacks,” fins beating in unison, one atop another, belly to back. This is believed to be a form of this mental communication (transmitting emotions or general thoughts), and not mating or courting behavior.

The “devil rays” (as they are sometimes mistakenly called) all appear externally identical to other creatures, but ixitxachtli can apparently distinguish sexes and individuals readily at a distance. Each creature mates once a year, at varying times (there are no “seasons” as we know them beneath the surface of the tropical seas). The process is initiated by a female, which chooses — sometimes aggressively — a male partner. By this method, some sages argue, the females deliberately attempt to breed to improve the race.⁶

Certain ixitxachtli continue to grow in strength and power upon becoming adults. It is from this group that a colony’s leaders and decision-makers come — but only those that are accepted by their fellows are allowed to live long enough to attain this status. Potential leaders that are deemed unsatisfactory, by whatever standards the ixitxachtli use (perhaps disrespect or disloyalty for Demogorgon is a factor), are set upon by the group and slain before they have a chance to force themselves into positions of influence and power. This “weeding-out” process that destroys many of these special ixitxachtli helps to explain why the creatures have not risen to a position of absolute domination of the seas. At the same time, this process seems to help insure the unity of purpose that binds

the members of an ixitxachtli colony together and keeps them, as a group, strongly loyal to Demogorgon. In fact, it is said (by those who should know) that ixitxachtli as a species are more fervently attached to Demogorgon’s wishes and aims than any other species of creature on this plane of existence we occupy.⁷

Vampiric ixitxachtli are more feared by other creatures than even the most powerful of the non-vampiric ixitxachtli leaders, because of their lethal bite which saps a victim’s very life force, and because of their ability to heal wounds that they suffer. On very rare occasions, vampiric ixitxachtli become leaders or lieutenants of a colony, and such creatures are said by many to be the most dangerous undersea denizens of their size.⁸

Fiercely independent, ixitxachtli cannot be subdued and will fight to the death if not stunned or otherwise immobilized. They are fearless in behavior (but not reckless or imprudent), cunning in battle, and prone to collect treasure of all sorts, to bargain with and in hopes of finding items of magic, which the leaders take possession of. They value most highly those magic items which they can employ; ixitxachtli have been seen wearing rings on their tails and wielding rods, staves, and the like that they hold in their clenched jaws. If they come across items of magic that they cannot themselves use, they will hide them away, to keep them from the grasp of other creatures and possibly to use as a bargaining tool.

Sometimes ixitxachtli will cooperate with other aquatic creatures such as sea hags, or even sahuagin or locathah, for mutual gain, and have been known to hire or train creatures (such as sea lions) to work for them. Sharks can seldom be thus used by their cousins the ixitxachtli, for sahuagin have long employed sharks in their battles against the rays, and sharks seem to have acquired a dislike for the “dark rays” — or perhaps they merely recall ixitxachtli flesh as tasty.

More details of ixitxachtli life are few, not well documented, and understandably difficult to augment, but research on this subject, notably by my esteemed colleagues Ramazith, of Baldur’s Gate, and Alauthym, of the Moonshae Isles, continues.

Notes

1. Ixitxachtli gain spell bonuses for wisdom just as clerical spell-casters of other races do, and can use any magic items not specifically prohibited to clerics that can be worn and operated without hands. Most such items either have, or can be modified to operate through, mental commands rather than audible command words. An opponent using ESP could learn such commands from the mind of an ixitxachtli while the commands were actually being made, but not at any other time, since the commands would not then be part of the conscious surface thoughts of the creature. Note also that ixitxachtli can employ their clerical spell powers without components of

any sort (although verbal and/or somatic components may well be part of some rituals); these spell powers are considered innate once they are bestowed by Demogorgon, and do not need to be triggered by an external object or force. However, "innate" does not mean unlimited; as with normal clerics, ixitxachitl can use each of their spells no more frequently than once per day.

2. Any ixitxachitl with the spell ability of a 5th-level cleric (or higher) can use *animate dead* and will prefer to do so upon creatures of its own type. Ixitxachitl do not have skeletons like humans, humanoids, and other higher vertebrates do; their "bones" are unconnected pieces of cartilage that cannot be animated like a human skeleton can be. The bodies of dead ixitxachitl can be animated as zombies, however; these creatures have AC 7, MV 6", 2 HD, and the normal 3-12 bite damage. These zombies do not have cleric spell ability and cannot employ magic items or take independent action of any sort; their principal function is to add numbers to an ixitxachitl attacking force. As specified in the *animate dead* spell description, these zombies are subject to the commands of the ixitxachitl that cast the spell — but ixitxachitl do not have any other power over undead of any sort. Ixitxachitl zombies can be turned or destroyed by other clerics as usual, and any cleric attempting to affect them gets a +1 bonus to the die roll for turning.

3. Nenemith refers to them as "so-called" vampires because this variety of ixitxachitl does not have all the attributes commonly associated with vampires; for one thing, vampiric ixitxachitl are obviously not harmed by immersion in running water. Their only similarities to true vampires are the characteristics mentioned in the *Monster Manual*: level draining and regeneration. They do not assume gaseous (or any other) form, and they do not infect their victims with vampirism. In an environment that is already watery, it is reasonable to assume that they are not affected by holy water, since the holy water cannot be "splashed" on them; if an attacker releases holy water in the vicinity of a vampiric ixitxachitl, the fluid would disperse into the surrounding sea water and be diluted immediately anyway.

4. If an attacking ixitxachitl employs a touch-effect spell (such as *cause light wounds*), the spell will only take effect if a normal bite attack succeeds. If the bite attack does not hit, the *cause wounds* spell (or whatever) is not dissipated and remains "stored up" until a hit is scored. Once an ixitxachitl has decided to use such a spell, its effects will be felt by the first eligible victim; the creature cannot withhold the spell when it does score a hit, with the intent of using it against a different target in a later attack.

5. Ixitxachitl also have 9" infravision

and seem to be able to smell other creatures at a distance of 1" or less. They can smell blood, lamp oil, or other foreign substances released into the water at up to 4" distant from the source, depending upon water currents. The normal, color-sensitive vision of an ixitxachitl extends to the limit of comparable (average) human vision in the same circumstances, being governed by water conditions — in pitch darkness, or the murk of disturbed sediments, visibility can be reduced to zero, and it can range up to half a mile or more in clear, calm water lit by a bright sun.

6. The life cycle of ixitxachitl is still poorly understood, but can be summarized as follows: Six months after mating, a female gives birth to a single young, of 1-1 HD. It is born in full control of its physical faculties (including regeneration, if it is vampiric), but does not acquire spell ability (or level-draining ability, if vampiric) until reaching adult size in 1-3 months thereafter. The speed with which it grows to maturity depends upon available food; a young ixitxachitl in a relatively small colony with an adequate food supply will mature (1+1 or 2+2 HD and full powers) in 1 month. Increases in spell capability and hit dice, for those rare individuals able to attain them, come at the rate of 1 level of spell use every six months and/or 1 hit die every year thereafter, so that it takes an additional three years for a leader type (8th level spell ability, 4+4 HD) to reach full maturity. characteristics that produce vampiric or leader-type ixitxachitl are apparently not hereditary (else there would be a greater abundance of such creatures), but are passed on randomly and infrequently. Most ixitxachitl live for 30 years or so, but some are known to have lived for 10 times that long.

7. All ixitxachitl have an appreciation (partly inborn, partly learned) for their race's allegiance to Demogorgon. Each of them has at least the spell ability of a 1st-level cleric, and they give Demogorgon full credit for endowing them with this special power. Their actions will be governed by Demogorgon's wishes and orders — or what the ixitxachitl believe these to be. They are oblivious to fear (of the non-magical sort) and fanatical, but not personally foolhardy. Those that attain higher levels of spell ability prefer to let lesser ixitxachitl do the dirty work — and perish, should matters come to that — instead of themselves. These special types will always "run away to fight another day" rather than impetuously put their lives on the line, and they often pass grudges on to young members of a colony, so that certain individuals, heraldic devices, and types of creatures will be recognized and attacked with particular savagery, or pursued tirelessly, by encountered ixitxachitl.

8. Whenever a colony of ixitxachitl contains 100 or more individuals, one of them will be a leader type with vampiric powers

(8+8 HD, 8th-level cleric spell ability, and usually wearing or possessing at least one type U magic item, as per the Monster Manual). If a colony contains at least 80 individuals, one or two of them will be guard types with vampiric powers (6+6 HD, 6th-level cleric spell ability), but the leader of the group will still be "only" a normal (non-vampiric) ixitxachitl with 4+4 HD and 8th-level spell ability.

Appendix

A. The suggested experience point values for ixitxachitl, as given in Appendix E of the Dungeon Masters Guide, can be amended and expanded as follows if more detail is desired or needed. In these calculations, the use of minor spells (1st, 2nd, or 3rd level cleric ability) and the ability of regeneration are counted as *special abilities*. The use of major spells (5th, 6th, or 8th level cleric ability) and the ability of energy level drain are *exceptional abilities*.

HD	Max. cleric spell ability	XP value
Normal ixitxachitl:		
1+1	1st	28 + 2/hp
1+1	2nd	28 + 2/hp
1+1	3rd	28 + 2/hp
1+1	5th	65 + 2/hp
Leader types:		
3+3	6th	125 + 4/hp
4+4	8th	165 + 5/hp
Vampiric ixitxachitl:		
2+2	1st	105 + 3/hp
2+2	2nd	120 + 3/hp
2+2	3rd	120 + 3/hp
2+2	5th	160 + 3/hp
6+6	6th	700 + 8/hp
8+8	8th	1700 + 12/hp

B. As put forth in Note 1 above, ixitxachitl with exceptional wisdom are entitled to bonuses in the number of cleric spells they can acquire and use. Those members of a colony that have high intelligence will possess wisdom scores ranging from 4-16 (DMG, p.79), and any creature with wisdom of 13 or higher will get at least one bonus spell (PH, p. 11). Thus, a leader type with 8th level cleric spell ability and wisdom of 16 would have spells usable amounting to five 1st level, five 2nd level, three 3rd level, and two 4th level spells.

C. As noted in the Monster Manual, ixitxachitl use "evil clerical spells." Following is a suggested list of spells from which to choose, including some which are reversed forms of "good" spells:

1st level	2nd level
1 <i>Cause fear</i>	<i>Chant</i>
2 <i>Cause 1. w.</i>	<i>Find traps</i>
3 <i>Curse</i>	<i>Hold person</i>
4 <i>Darkness</i>	<i>Silence 15' r.</i>
5 <i>Detect good</i>	<i>Speak w/animals</i>
6 <i>Detect magic</i>	<i>Spiritual hammer</i>
7 <i>Prot. from good</i>	
8 <i>Putrefy food & drink</i>	
3rd level	4th level
1 <i>Animate dead</i>	<i>Cause s. w.</i>
2 <i>Bestow curse</i>	<i>Poison</i>
3 <i>Cause blindness</i>	<i>Prot. f. good 10' r.</i>
4 <i>Cause disease</i>	<i>Tongues</i>
5 <i>Continual darkness</i>	
6 <i>Dispel magic</i>	

D. In the vast majority of cases, ixitxachitl make saving throws as clerics. The only exceptions to this are for creatures of 4+4 HD or more, when a save vs. breath weapon is called for — and that doesn't happen very often underwater. In those instances, the creatures save as fighters, since the saving throw vs. that attack form at the level in question is lower for fighters than for clerics. The appropriate saving throws are as follows:

HD	Level for s.t.	Saving throws					
1+1	2nd	10	13	14	16	15	
2+2	3rd	10	13	14	16	15	
3+3	4th	9	12	13	15	14	
4+4	5th	9	12	13	13	14	
6+6	8th	7	10	11	12	12	
8+8	10th	6	9	10	9	11	

E. Ixitxachitl cannot function or survive in a waterless environment. As with other aquatic creatures, they can be effectively kept at bay by an *airy water* spell or similar magic. Except under the conditions outlined on page 75 of the DMG, they cannot hit characters or creatures able to be struck only by magic weapons.

F. The generally accepted pronunciation of the name is "ick- zit -sah-chittle."

THE ECOLOGY OF THE JERMLAINE

The Best Laid Plans

When in Rome ...
don't get caught
impersonating
a centurion.

WELL, IF THERE ARE NO OTHER STUPID QUESTIONS,"

said Dreelix with a look of scorn in Buntleby's direction, "I

hereby close this meeting of the Monster Hunters Association."

He gave a single bang on the table with his gavel to make it official.

The various wizards and sages of the exalted Association gathered their things and prepared to exit the meeting hall.

"Well, that was interesting," remarked Willowquisp.

"Yes, Dreelix was once again in fine form," agreed Buntleby with a sigh of exasperation. "You'd think we'd have learned to expect it by now."

"So, any plans for this weekend?" asked the elderly sage.

"As a matter of fact, yes," replied Buntleby. "Some field research on the jermlaine that live in the tunnels underneath my house.¹ Say, why don't you come with me?"

"I don't know ... I rather prefer to leave that wizardly stuff to the experts."

"No, no, I've worked out a way for you to come without having to be polymorphed. I guarantee it—there's no chance of you being stuck in jermlaine form."

"Really? How?"

"Remember Azurielle the nymph?"

"How could I not?"

"Well, I'll arrange to borrow her hat of disguise. You slap the hat on your head, I shrink you down to one foot tall, and presto! Off we go!"

"I don't know ... Any chance of my being stuck at one foot high?"

"None at all—the reduce spell isn't like polymorph other."

"What about you?"

"I'll use polymorph self. It's perfectly safe—I've done it dozens of times before. In fact, the jermlaine community know me as one of their own, a wandering traveler."²

"I don't know ..."

"Oh, c'mon, it'll be fun! A chance to broaden your horizons! An opportunity to study some of nature's creatures up close! How can you resist?"

1. Jermlaine communities are nearly always found underground. They lair in tiny caves connected by passageways scaled to their own 1'-tall frames, making entry into a jermlaine dwelling all but impossible for most adventurers without the aid of magic (usually by either shrinking, *polymorphing* into a small creature, or assuming gaseous form). Typically, jermlaine lairs connect to a large central cavern, which is often accessed by larger passageways allowing human-sized creatures to enter.

On rarer occasions, jermlaine lair in a human-made dwelling, but only after its former occupants have departed. Jermlaine don't mind living in abandoned houses, but they refuse to share their living space with the "giant races" (anyone taller than themselves).

2. Most jermlaine remain in their underground communities, seldom if ever straying far from the twisted tunnels and corridors that make up their homes. For this reason, the lone traveling jermlaine, or rover, is a beloved member of all jermlaine communities. The rover fills much the same niche as a human bard (without the singing—jermlaine detest music), passing on bits of news, gossip, and items of interest from one jermlaine community to another. Often, he is used to transport goods between jermlaine clans, lugging a coil of rope from Clan A to Clan B, then taking some stolen hard candy from Clan B to Clan A in return. Rovers are almost always skilled rat-riders, using the rodents both as riding mounts and beasts of burden during these trading missions.

"Well," said the sage hesitantly, "if you put it like that ..."

"That's the spirit," said Buntleby, slapping his elder friend on the arm. "I'll meet you at my place at ... shall we say sundown tomorrow?"

"Hrrrm," agreed Willowquisp, and they went their separate ways.

The next day, Willowquisp strode up the path to Buntleby's dwelling in the Western Grove, the plot of land the young wizard had inherited a little over a year ago and more or less transformed into an osquip farm since. The place looked much the same as it did before coming into Buntleby's possession—he had caretakers to oversee the mundane chores of running the place. Buntleby might now own the land, but he was much more interested in pursuing his own wizardly affairs and raising the multi-legged osquips that he loved so much.

"Ah, there you are, right on time!" greeted Buntleby as he caught sight of Willowquisp. "Ready to go?"

"I suppose. This won't be dangerous, will it?"

"Not overly so. We'll both appear to be jermlaine, but if anything goes wrong I've got a few combat spells memorized. Plus, Ozzie will protect us, won't you, Ozzie?" The wizard bent down and scratched his six-legged familiar on the head. Ozzie wrapped his rat-like tail around Buntleby's leg and purred contentedly.

"Do you have the hat?" asked Willowquisp.

"Right here," responded Buntleby, plopping the hat of disguise onto his older friend's head.

"How does it work?"

"Just concentrate on what you want to look like, and the hat does the rest."

"I've never seen a jermlaine up close

Jermlaine are almost totally bald from birth, remaining so throughout their lives.

before," said Willowquisp. "What if I don't get it right?"

"Tell you what—I have, so I'll change first, and then you can pattern yourself after me. How's that?"

"Okay."

"All right then. Here, put this on first." Buntleby offered his friend an amulet on a slender chain. The amulet was made of silver, and depicted an open mouth with a protruding tongue.

"What is it?" asked the sage, looking at the item with mild distaste.

"An amulet of tongues. I admit, not very fashionable, but you'll need it to make sense of the jermlaine speech.³ I'll be wearing one too, if it makes you feel any better."

The two of them put the chains over

their heads. "Ready then? Prepare to get small!" Buntleby rattled off the words to the reduce spell, and before the elderly sage knew it, he was about a foot tall and looking up at his enormous friend.

"My turn," boomed the giant Buntleby from above. Arcane words spilled from his lips, and he shrunk to the same size as Willowquisp.

He was, however, no longer the young wizard that Willowquisp had come to know over the course of the last year. Where once he had light brown hair, Buntleby now had a pointed, mostly bald head with only a few sparse wisps of gray hair flowing in the breeze. His blue robe was gone, replaced by a filthy-looking loincloth. Thick, dirty nails grew from nimble fingers and toes. And his

3. Jermlaine speech is comprised of high-pitched squeaks and twitters, easily mistaken for the sounds of a rat or bat. This isn't coincidental, for jermlaine are also able to converse with rats of all types (including normal rats, giant rats, vapor rats, and osquips). The "rat language" is simple, but through long association with the creatures, jermlaine can converse with rats as per the 2nd-level priest spell *speak with animals*.

In addition to these two languages, each jermlaine has a 10% chance of understanding common, dwarvish, gnomish, goblin, or orc—a separate roll is made for each language. Jermlaine have excel-

lent memories and are likely to understand a few words from each language they've heard spoken aloud. However, their vocal abilities being what they are, the creatures cannot speak such languages aloud.

4. Although from a distance a jermlaine appears to be wearing baggy clothing and a leather helmet, the creature's odd appearance is actually the result of having about 50% more skin than necessary. Their skin is warty and grayish tan, allowing them to blend in well with their subterranean environment. Because excessive clothing might hamper this camouflage ability, most jermlaine make do with filthy

scraps of clothing the same general color as their skin. Others go naked, and because of the loose flaps of skin hanging from their bodies, it's often difficult to tell which are clothed and which are not (especially at a distance).

Some sages believe that jermlaine are actually distant relatives of the gnomes and speculate that their appearance is the result of a magical accident that somehow shrunk their bones but not their skin. If true, it does little to explain the jermlaine's hairlessness—they are almost totally bald from birth, remaining so throughout their lives, and males do not grow facial hair.

skin was now a leathery, grayish-tan, sagging in lumps and clumps around his lower arms and legs and dangling over a visible paunch.⁴

"How do I look?" asked the wizard, smiling a wide smile full of crooked teeth.

"Good heavens," said Willowquisp. "Must I really look like that?"

"C'mon, it's all part of the fun," chuckled Buntleby. "And we'd best not tarry—these spells last only so long, you know. I extended your reduce spell, but even so we've got maybe two hours."

Sighing in resignation, Willowquisp closed his eyes and concentrated. His features melted like wax, reshaping themselves into the resemblance of a saggy-skinned jinxkin.⁵ "How's that?" he asked.

"Good, good," commented Buntleby. "I don't like the hat, though—jermlaine don't usually wear hats. See if you can make it a kerchief."

"A kerchief?"

"Y'know, like a pirate would wear. Good, but that's too colorful. Make it gray. Okay, perfect. Now roll around in the dirt."

"What?"

"It's for your own protection. Jermlaine don't see all that well,⁶ but they've got an uncanny sense of smell. You wouldn't want to enter their den smelling like a human, would you?"

"Buntleby, I'm liking this less and less."

"Oh, just do it. Look, I'm doing it, see?" Reluctantly, Willowquisp followed suit, rolling around in the dust and dirt of Buntleby's farm. He sneezed violently several times.

5. Jermlaine are commonly known by a wide variety of names: jinxkin, bane-midges, atomites, and minimi (singular: minimus). Other, lesser-used names for these creatures include: dinkos, globbos, scrabblers, rat-brothers, flappies, flabbies, squeakies, squinties, verminites, trapsters, point-heads, mouse-lings, minimen, tiny terrors, miniscules, manikins, rodent-riders, peewees, diminumen, and jermies—among others.

6. Jermlaine have weak eyes, disliking bright lights and squinting often. They do have infravision to a distance of 30 yards, however—a useful adaptation to an underground environment. Furthermore, their keen senses of smell and hearing grant jermlaine a 50% chance to detect invisible creatures in their vicinity.

7. There is a 75% chance that any jermlaine encountered is accompanied by 1–6 rats (25%) or 1–6 giant rats (50%). Furthermore, there is a 50% chance that any given jermlaine colony shares its lair with the creatures. On top of this, there is an overall 10% chance that the "giant rats" encountered are actually multi-limbed osquips. Regardless of type, these creatures are used as riding mounts, lair guardians,

"All right then, looks like we're ready. C'mere, Ozzie, there's a good boy." The osquip skittered up, now seemingly the size of a large horse. Buntleby grabbed a few small items and stuffed them into a tiny sack, then climbed upon Ozzie's back, settling himself between the osquip's first and second sets of limbs. He pulled Willowquisp up behind him, and off they went down a narrow tunnel into the earth.

"This is an osquip tunnel, one of a huge network that my little pets have dug in the past year or so. As their network expanded, they tapped into a similar one made by the osquips of the jermlaine clan we're going to visit."⁷

"So what's the plan?" Willowquisp wanted to know.

"We ride into their lair, announce ourselves, and chat with the clan. I'll do most of the talking, but chime in every once in a while to make it look good."

"What's our cover story?"

"I'm a jermlaine rover, a traveler between distant clans. I usually provide them with 'information' from these 'distant clans'—actually, I make stuff up, but they never leave their own burrows anyway, so they don't know the difference. You are, let's see, you're an apprentice rover from another clan far away, and I'm giving you hands-on training before you venture out on your own."⁸

"Say, uh, it's getting dark in here."

"Oh, yeah, sorry about that. I've got infravision in this form, but I don't have any way of providing you the same. Don't worry, though, there's light at the jermlaine community—it's part of one of their traps."⁹

and trusted equals. Many jermlaine clans name themselves after the type of rodent with which they share their lives.

8. That's actually how jermlaine rovers get their start. Any above-ground encounter with one or two jermlaine is likely to be a rover with or without an apprentice, and their rodent mount or mounts.

9. Being so short and relatively powerless, jermlaine depend heavily on traps to capture victims. They rely mostly on pit traps, trip wires, and nets—the latter two usually being made from the shaved hair of former victims. Once a victim is down, the jermlaine warriors swarm all over him or her, pummeling the individual with crudely made blackjacks. There is a 2% cumulative chance that a jermlaine attack knocks the victim unconscious, unless the victim wears splint, banded, or platemail. These heavily armored unfortunates are usually attacked with flaming oil or acid, then devoured by the clan once slain; others are merely stripped, robbed, shaved completely bald, and left tied up in a nearby passageway.

Jermlaine only occasionally attack victims without first "softening them up" in one of their traps—

"Wonderful."

Ozzie pressed on down the lightless, winding tunnel. Before too long, the Monster Hunters became aware of a large, open space ahead of them. The glimmerings of light up ahead teased their eyes; as they advanced, they could see it was the result of a glowing coin lying on the stone floor of an immense cavern.

"I gave them that coin the first time I visited them," whispered Buntleby. "They use it as a kind of lure to attract adventurers into this cavern—the coin is sitting on top of a pit trap. The place is riddled with hidden pits and snares—look, there's another one there."

"Ozzie knows to avoid them?"

"Sure, we've been here plenty of times before. Ozzie even helped carve out a pit or two for the clan with those teeth of his."

"Where exactly are we?"

"I'm not sure exactly. At least a mile from my place, south or southeast, I think." Buntleby looked around the empty cavern. "Funny, nobody's here. Jermlaine usually keep a lookout or two around, especially this close to their home dwellings."

"Maybe nobody's home," suggested Willowquisp.

"Somebody's always home," corrected Buntleby. "Even when the adults are out ambushing victims, the women, children, and guard rodents stay in the lair."¹⁰ Let's announce ourselves."

Buntleby dropped down from Ozzie's back and landed gracefully on the stone floor of the cavern. Picking up two stone pebbles, he clacked them together

and then only when there's no serious opposition. Injured, ill, or sleeping victims are preferred targets.

10. The role of the female in jermlaine society changes over the course of time. Female children are treated the same as the males: noncombatants who must learn from their elders. As adults, they are trained for combat and take part in raids and ambushes along with the males. Once a female becomes pregnant, however, she removes herself from such combat roles and devotes herself exclusively to the birthing and raising of her children. As the children mature, she takes them on practice attacks, allowing them to participate in the humiliation of captured victims. Once they are old enough to fend for themselves (around age ten—the jermlaine life span is only about sixty years), the female often resumes combat roles within her clan. Of course, this assumes that she hasn't become pregnant again during the child-rearing years.

Jermlaine women give birth to one or two children after a three-month gestation period. Seventy-five percent of those born are male, but by adulthood, the male/female ratio has evened out due to attrition of the older males.

noisily in a repetitive pattern. Willowquisp crawled down off of the osquip somewhat less gracefully, landing on his bottom with a whoof of air.

"That's done it," whispered Buntleby, dropping the pebbles as Willowquisp regained his feet and dusted himself off. "Here they come."

Emerging silently from the shadows,¹¹ several humanoid figures crept into view. Each carried a thin, wooden pole to which a bladed weapon was affixed. In addition, many wore a crude quiver over their shoulder, filled with what looked to be oversized darts,¹² and most carried a crudely fashioned blackjack as well. They slid out of various tunnel holes into the cavern, surrounding the two disguised Monster Hunters and their osquip mount.

"Greetings to you and your clan," said Buntleby, his words coming out as squeaks and twitters as a result of his tongue-shaped magical amulet. "I have come from afar with news of other tribes."

A hunched, old jermlaine approached. "Ah, the famed rover returns," he cackled. "And who is this?" he asked, indicating Willowquisp.

"This is Queesp,¹³ an apprentice rover from the Black Rat Clan, many days' ride to the north. I am taking him on a tour of the neighboring communities, allowing him to meet with the other clans. Queesp, may I present Skeeble, the clan elder¹⁴ of the Stonebiter Clan."

Skeeble grinned a crooked grin and, grabbing the flaps of skin around his

belly, vigorously shook them up and down. Willowquisp stared at the ritual in puzzlement, trying to determine the reason for such a strange display: Was the chief fanning himself, or Willowquisp? Was he showing off his "saginess"—was that a sign of importance, virility, perhaps? In any case, a quick glance around him showed that the other jermlaine were flapping their belly-skin at him as well; taking a wild guess, he grabbed his own illusory flaps of skin and began shaking them up and down as well. That seemed to be the right response; Buntleby gave him a quick smile and the chief beckoned them to enter the jermlaine habitat.¹⁵

"So, tell us of the neighboring clans," said Skeeble as they sat around a common area. "How is the Long-tail Clan? Did they enjoy the hardtack we sent them?"

"They did indeed, and send this gift in return," replied Buntleby, pulling a chunk of taffy from the tiny sack he carried. The jermlaine smacked their lips and made appreciative noises.

"We will share this after our meal," said Skeeble, setting it aside. "I hope you are both hungry; our hunters gathered a bundle of fresh grubs the other day, and they have finally decayed sufficiently."¹⁶

The clan leader grinned wickedly at Willowquisp. "Do you like grubs, Queesp?"

"Me? Uh, yes, yes, I love them!" sputtered Willowquisp, all the while giving Buntleby a dirty look. "But, uh, I'm afraid we have both eaten recently, and, uh..."

"Nonetheless, we are honored to join you at your meal," interjected Buntleby

quickly. "I'm sure your grubs will be as delicious as they sound. I, for one, look forward with anticipation to a marvelous repast."

"Me too," added Willowquisp dejectedly.

"So, tell me, what of the Sewer Clan?" asked Skeeble. "Have they adapted well to their new home?"

"They seem to be doing well for themselves," answered Buntleby, making up the news on the spot. "Most have gotten used to the smell, and there is certainly an abundance of rats, but it's often difficult for them to find prey."¹⁷

"And the Fieldmouse Clan? How do they fare?"

"They've been having trouble with moles recently. Lost two of their number, poor things."

"And the White Rat Clan?"

"Oddly enough, they've begun breeding their rats for some of the giant races, trading them to wizards and alchemists for use in their laboratories. A strange practice, one I don't pretend to understand or condone."

"Ah, I see," said Skeeble mysteriously.

"So, what have you been up to?" asked Buntleby.

"Oh, you know, this and that. Breekee had her babies—twins, Skwee and Skwee-Skwee, a boy and a girl. One of our osquips was recently wounded on the surface by some tentacled horror that dripped acid on it from above." At that, Buntleby and Willowquisp stared at each other, each silently sending a signal of recognition: flumph! "Oh, and we caught

11. Although only 1 foot tall, jermlaine move at an exceptionally quick rate (movement 15). Because of their eerie silence while moving, they impose a -5 penalty to opponents' surprise rolls, and are 75% undetectable in an underground environment. In addition, their nimbleness allows them to save as 4-HD creatures, and they suffer no damage from an attack that would normally inflict half damage on a successful saving throw.

12. The miniature pike is a preferred jermlaine weapon, inflicting 1-4 points of damage. They are also proficient in the dart, causing 1-2 points of damage. These needle-sharp darts can be hurled accurately up to 120 feet. (Not 120 yards, as erroneously noted in the *MONSTROUS MANUAL* book—these humanoids are only 1 foot tall. A human can throw a dart only 120 feet [or 40 yards; see Table 45: Missile Weapon Ranges in the *Player's Handbook*]. It's one thing to allow the diminutive jermlaine a missile range equal to that of a human, but another to believe they can hurl darts three times farther.)

Other, less common weapons employed by jermlaine are the lasso (used to ensnare victims from above) and the grappling hook—usually comprised of a fishhook attached to a length of hair-rope.

13. Most jermlaine names sound like something a rat might say if it tried to speak. Long "e" sounds are

therefore very popular, as are the "squ" or "skw" clusters. Many names use a single, repeated syllable. (This is especially common with twins: the first-born might be named Squee, and the second named Squee-Squee.) Oddly, jermlaine names are not gender-specific, as is the case in most languages—any name can be used by individuals of either sex. Common names include Squeewee, Skeeke, Jee-Jee, Weeble, Skitter, Kee, Chee, and Fleenkie.

14. Groups of thirty-five or more jermlaine are liable to have an elder among them. The elder can be male or female, but is always at least sixty years old. At that age, the jermlaine magic-draining power often begins to manifest: By simply handling a magical item for 1-4 minutes, the elder can permanently drain it of all magic. Artifacts and relics are immune to such attacks.

The strongest or cleverest elder often serves as the clan leader, or chief. This does not mean that all jermlaine chiefs have such magic-draining abilities, or that only the chief can develop such powers. Smaller clans of younger jermlaine may not have any elders, while larger clans might boast several.

15. The belly-flapping routine is the jermlaine equivalent to the human handshake. Both developed for the same reason—to show a stranger that you are unarmed. Humans clasp hands as a sign

that they are holding no weapons; jermlaine take this a step further and reveal that they have no hidden weapons concealed within the folds of their loose skin. (This is not as absurd as it seems, for the jinxkin routinely keep small items tucked into their skin folds, using them the way we use pockets.)

16. The jermlaine diet consists primarily of insects, carrion, fungi, and molds. They eat meat when they can get it—mostly lizards and their own rodents (but only when they die in battle or from natural causes; jermlaine respect their rodent companions too much to carve them up for food otherwise), plus the occasional adventurer. They don't mind eating carrion, often dining on whatever carcasses they come across. Jermlaine have a special fondness for surface foods, especially sugar, candy, and fruit. Adventurers can occasionally bribe jermlaine communities with such goodies.

17. Buntleby might be making up stuff as he goes along, but some jermlaine clans have been known to dwell in the sewers of major cities. There they often form alliances with the local Thieves Guild (especially those with wererat members), exchanging information for food and treasure. Jermlaine, with their quickness and ability to blend into the background, make excellent spies (and their ability to speak with rats doesn't hurt, either).

some intruders recently that—ah, here come the grubs!”

Skeeble’s discourse was interrupted by a pair of female jermlaine dragging in two smelly insect larvae impaled on pikes. They plopped the grubs in the center of the room, then sat down on the cave floor among the warriors.

“By all means, guests first,” motioned Skeeble.

Buntleby reached out and ripped off a hunk of flesh. He popped a bite into his mouth and chewed vigorously. Hesitantly, Willowquisp followed suit, taking only a small portion and saying a silent prayer that he wouldn’t vomit it all back up.

“Excellent,” replied Buntleby. Willowquisp decided that his friend was either an excellent actor or had an iron stomach. He kept his own piece of grub in his hand and pretended to take tiny bites from it, unable to actually put another piece into his mouth. The jermlaine, on the other hand, ripped off great slabs of grub meat and popped them into their mouths with gusto.

“So, you were saying something about intruders,” prompted Buntleby. “What were they? Mites? Pesties?”¹⁸

“No, humans, actually,” responded Skeeble. “Foolish humans who thought they could disguise themselves as jermlaine and walk right in here with us none the wiser.”

Buntleby looked at Willowquisp. “Uh-oh,” he said.

As if on cue, the jermlaine hunters all grabbed up their pikes and leveled them at the two intruders, surrounding them. “So, how long have you known?” asked Buntleby nonchalantly.

“We’ve had our suspicions from the first,” replied Skeeble.

“So what finally tipped you off?”

“Skee-Skee.”

“Skee-Skee?”

A lone figure emerged from a nearby entrance tunnel. His lumpy, rock-colored flesh identified him as a jermlaine immediately. However, he was somewhat different in appearance from the members of the Stonebiter Clan. For one thing, he

wore a fur wrap around his loins—rat-fur, Buntleby realized. A pointed cap of the same material graced his head. And strolling up behind him was a giant rat, not an osquip.

“Allow me to introduce Skee-Skee, a rover—a real one—from the Whitebelly Clan. He recently stumbled across our clan in his travels, and he’s covered quite a bit of the territory around here. According to Skee-Skee, there is no Long-tail Clan, no Sewer Clan, and no Fieldmouse Clan that he’s aware of. It would seem you’ve been feeding us a bunch of tales these past few months.”

“So it would seem,” said Buntleby. “May I ask what your intentions are for the two of us?”

“First of all, let’s get rid of this,” said a scratchy voice from behind Willowquisp. Quick as a wink, the wrinkled old jermlaine that had sidled up behind the elderly sage snatched the kerchief from his head. Immediately, it returned to its natural shape—the nymph Azurielle’s hat of disguise—as did Willowquisp himself. While still only one foot tall, he was nonetheless recognizably human.

“Oh dear,” said the sage. “This is not going well at all.”

“Just as I suspected,” said Skeeble, nodding in confirmation to himself. “Well, we all know what happens to human intruders, don’t we?”

“All too well,” said Buntleby, putting his fingers to his mouth and letting loose with a piercing whistle. Then, spouting off a few words in an arcane tongue, he called forth a stinking cloud in the center of the cave.

With jermlaine warriors staggering and coughing around him, Buntleby grabbed Willowquisp by the arm and led him to an exit corridor. There they were met by a large, looming shape—through eyes streaming with tears, Willowquisp recognized Ozzie, summoned to their side by his master’s whistle.

Buntleby shoved the sage up onto his familiar, then yelled “Home, Ozzie! I’m right behind!” Ozzie bounded down the corridor, into the large cavern lit with the glowing coin. He sniffed around, found

his bearings, and headed for the osquip tunnel that led to his master’s farm.

Buntleby ran directly behind his familiar, legs pumping furiously to keep up. Several sets of glowing red eyes appeared around the perimeter of the cavern, moving forward to pin in their prey.

The wizard stopped and spoke the words to another spell, and Ozzie shot off at the speed of a cannonball, easily outdistancing his pursuers. Buntleby saw that they were safe, then turned and worried about his own predicament.

He was surrounded, both by armed jermlaine and their osquip companions. A few darts dashed past his head, narrowly missing him. The jermlaine were staying back out of reach, using their ranged weapons while they sent their osquips in for close combat. Still, there was an easy way to counter that ...

Buntleby concentrated and shifted form. His jinxkin features melted and reformed into a circular disk sprouting eyestalks from one end and tentacles from the other. Flexing his tentacles, he pounced at the nearest osquip. The creature, recognizing a natural enemy, skidded to a stop and fled in the other direction. The other osquips slowed as well, fearful to attack a fearsome, acid-spitting flumph.

However, the jermlaine had no such qualms. Several darts found their marks, buried in Buntleby’s flumph-flank. Enough of this, he thought, and tried flying down the cavern. Unfortunately, his polymorph spell provided him only with physical motive abilities, not the flumph’s innate anti-gravity. He flopped on his side in the middle of the cavern floor.

He spent a moment’s indecisiveness deciding on another form before finally shifting to a bat. As his features melted into their new configuration, he was amazed to see a dozen jermlaine warriors pop up out of the cavern floor around him. Wielding blackjacks, they pounced on Buntleby’s prone bat-form, pummeling him into unconsciousness. As his vision went black, Buntleby’s last thought was: How did they?—Of course,

18. While the genetic link between jermlaine and gnomes is still unproven, there is a greater body of evidence linking jermlaine to several other types of gremlin, specifically mites and snyads (or pesties).

Mites share many jermlaine traits: small size; mischievousness; hairless, warty skin; high-pitched, twittery voices; a penchant for pit traps, nets, and trip wires; and subterranean lairs. Snyads are even

taller and, while sharing many jermlaine traits, differ from them by having heads full of shaggy hair. This leads some sages to speculate that the two races are stages in the regression from gnome to jermlaine.

Buntleby was naked, shaved totally bald, lying face-down with his hands hog-tied to his ankles behind him.

osquip dung! Should have thought of that myself ...¹⁹

Grindle was the first to spot Buntleby's prone form in the cavern, illuminated not only by the glowing coin but by Grindle's own lantern. Buntleby was naked, shaved totally bald, lying face-down with his hands hog-tied to his ankles behind him. His eyes were closed and his body covered in bruises, but Grindle could see the tell-tale movement of his chest as he breathed.

"Buntleby!" cried Willowquisp, running to his friend's side. Ozzie skittered to Buntleby's face and licked him with a raspy tongue. Buntleby groaned.

Grindle cut the wizard's bonds with a dagger, as Zantoullios and Dreelix stood on guard, ready to let fly with any of a dozen magical spells at the slightest hint

of movement from the darkness. Willowquisp took the lantern as Grindle wrapped Buntleby in a blanket and hefted him over his shoulder.

"He was right where you said he'd be," commented the gangly Zantoullios. "Good thing, too, or we wouldn't have found him so quickly."

"It was stupid of him to have come here in the first place," grouched Dreelix. "We've got better things to do than rescue him in the middle of the night."

"So what should we do about the jermlaine?" asked Zantoullios. "Torch the place with a few fireballs?"

"No," whispered Buntleby feebly. "Leave them be. This is entirely my own fault. Let's ... let's just go home."

The Monster Hunters turned to go, back the way they came. Ozzie trotted at

Willowquisp's heel.

"Wow, Buntleby, they did a good job on you," commented Dreelix as the group departed the cavern for the surface. "You know you don't even have any eyebrows, don't you?"²⁰

From the silence of the cavern came the sounds of quiet chuckling and twitting, and then an eerie silence.

Johnathan M. Richards says his oldest son, Stuart, has a deep hatred for jermlaine, ever since they shaved his female elven thief/mage's head and eyebrows bald. She went so far as to burn the building they had been infesting down to the ground after being rescued by her party members. Which just goes to prove—"Hell hath no fury like a woman shorn."

19. Those jermlaine fortunate enough to lair with osquips have the added advantage of being able to work fresh osquip dung into a variety of useful forms before it hardens to stone-like consistency. The dung forms trapdoor covers that can conceal jermlaine warriors in tiny foxholes strategically placed around a large cavern. For more properties and uses of osquip dung, see "The Ecology of the

Osquip" in *DRAGON* Magazine #227.

20. The jermlaine have a fierce dislike for the "giant races" and like nothing better than to humiliate them whenever possible. While shaving a human's hair actually serves a useful purpose (providing the clan with the raw materials needed to fashion their ropes and nets), shaving their eyebrows does nothing but amuse the little tormentors.

Other favored tricks, once the helpless captive has been securely bound, include rubbing their naked bodies with poison ivy or poison oak, destroying a favorite item in front of them (or handing a magical item to a jermlaine elder, who drains the item of all magic), and smearing finger-paint graffiti on them (these are rude, simplistic pictures, as the jermlaine have no written language).

THE ECOLOGY OF THE

KAORTI

"I have seen beyond the bounds of infinity and drawn down daemons from the stars... I have harnessed the shadows that stride from world to world to sow death and madness... Space belongs to me, do you hear?"

—H. P. Lovecraft, "From Beyond"

The world as we know it is a poison to some, a canker whose very existence is a constant irritant to something larger, more vast than anything sane mortal minds can comprehend. What we take to be order and nature is in fact the aberration, for the Far Realm is vast beyond all concept. It is what lies beyond the infinite of possibility. It is

the infinite of impossibility. And that which dwells beyond where man was meant to travel does not react well to our timid intrusions.

HISTORY OF THE KAORTI

The Far Realm predates existence and life on the Material Plane—in fact, life might have begun on the Material Plane when one of the Elder Evils from the Far Realm brushed against it, and what leaked into our world became the aboleth race. Yet beyond the aboleths, few even guessed that there lay beyond our world a more ancient and insane realm. At some point after the collapse of the aboleth empire, the Elder Elves

became the first mortal race to discover the Far Realm when, quite by accident, they created the Vast Gate, a portal they hoped could bridge all distance and push “outside” creation. What they discovered undid everything the Elder Elves strived for, and when what dwelt beyond noticed the pinhole the elves had punctured into the outer madness, they invaded reality. Although the Vast Gate was eventually closed, the link between the Far Realm and the Material Plane, a link the multiverse never intended, remained and grew.

In ancient Imaskar, long before Martek came to rule and yet long after the Elder Elves pierced the veils between reality and unreality, a sect of proud and elite wizards who called themselves the Quin (after the Imaskari word for “entitled”) discovered ancient tablets bearing fragments of the Elder Elves’ magic. Working from these fragments, the Quin became

KNOWLEDGE OF THE KAORTI

The following table shows the results of a Knowledge (the planes) check as it relates to kaortis. As kaortis are rare and alien creatures, all DCs to reveal details about them are 10 higher than normal. Information about kaortis is most likely to come from their escaped victims, experienced planewalkers, and those who glimpsed the malign insanity of the Far Realm. The kaorti appears on page 108 of the *Fiend Folio*.

Knowledge (the planes)

DC	Result
21	This creature is a kaorti, a creature humanoid in shape only. It is an alien to the Material Plane, hostile as much due to its sheer wrongness as due to its inherent cruelty and evil.
26	The kaortis are adept at manipulating arcane magic, and while not all kaortis are sorcerers or wizards, they do all possess spell-like abilities that allow them, among other things, to disguise their appearance with illusions, sap the strength of their foes, and unleash blasts of sickening color to stun or blind their victims.
31	Kaortis are immune to poison, yet ironically, the natural world itself is poisonous to them. Druidic magic is particularly effective against them.
36	Those captured alive by a kaorti are advised to seek death at their own hand, for these monsters can infuse beasts they captivate with their own alien taint, transforming prisoners into monstrosly deformed and insane thralls. Humanoids subjected to this procedure instead become kaortis themselves.

obsessed with the concept of reality beyond reality and wondered what great magic might lie hidden in such a realm. Eager to be hailed for what they felt would be a great discovery but wary about repeating the Elder Elves' mistake, they constructed a structure that would transport them to the Far Realm rather than bring the Far Realm to them.

Their work was highly publicized, and as they neared the end of ten years of toil in creating what had come to be known as the Quinspire, the entire nation watched expectantly, hoping the Quin would return with fabulous resources and powers to elevate their proud nation even higher. The Quin made bold promises, and even started work on projects to be finished after their return, but when the time came and the Quin activated their tower, they simply vanished. All that remained were the tower's lowest foundation stones. Eventually, Imaskar forgot the Quin, and then Imaskar itself crumbled and was all but forgotten.

Yet the doom triggered so long ago by the Quin has only now begun. For their experiment had been a success. They arrived safely on the Far Realm, yet they did not remain safe for long—they had vastly underestimated the sheer hostility and alien nature of the Far Realm, and their tiny mote of Material Plane matter was like a beacon. Within minutes of their arrival, a vast and ancient entity called Zurguth, one of those whom the aboleths know as the Elder Evils, came to investigate the disturbance. Yet so potent was Zurguth's existence that its very proximity changed the Quin and their works. They were transformed into something new, and when Zurguth arrived and turned its mind to them, it found nothing to see, for nothing remained of the Quin but their warped Far Realm translation. They had become the first of the kaortis.

For untold eons, the kaortis dwelt within the Far Realm, yet deep within their now-alien

minds remained a seed of memory. When their alien curiosity finally drove them to investigate this memory, they found traces of the Material Plane too minute for Zurguth to notice, but not quite so small to escape the kaortis' own investigations. When they used their magic to trace these fragments back to their source, they discovered what, to them, was a new realm—a realm so inimical to them that they could have but one reaction: a consuming urge to overwhelm and transform. When the kaortis finish with our world, the Far Realm will be all that remains.

PHYSIOLOGY OF THE KAORTI

Although the kaorti might appear to be humanoid, they are not. The shape of their forms is little more than an accident, just as one might be able to coax mold to grow in artificial paths, so did the presence of Zurguth use the Quin's human frames as a matrix.

A kaorti's resemblance to a human breaks down quickly once viewed in detail. Their bodies are painfully thin and wet with alien excretions that serve

more as blood than sweat. Hands and feet are long and distended, with digits that seem connected not by rigid bone but flexible strips of resin and cartilage, allowing their fingers to bend in unnatural directions. Yet it is in the kaorti's face where one can see the greatest echo of Zurguth's alien presence, for the shiny black spheres that serve them as eyes and the bony ridges of ivory-colored hardened resin that serve them as teeth give the viewer a tiny hint of the appearance of what forged them from sane flesh.

Kaortis have no need to eat or sleep, for these are diversions mortals use to replenish their bodies and minds. Rather, kaortis exist from the outside in. A kaorti's body is in a state of constant self-consumption and replenishment, as the ooze that coats their bodies gathers unknown resources from the environment and then hardens into a shell-like but flexible "skin." This shell is slowly drawn into their cores by strange and hideous sucking and chewing organs

KAORTI 3.5

The kaorti detailed on pages 108–110 of the *Fiend Folio* are, for the most part, usable with the 3.5 rules. The one major disconnect between revisions, though, is in their spell-like abilities; spells like *alter self* and *reduce* no longer affect outsiders. When running an encounter with kaortis in a 3.5 game, you should substitute their spell-like abilities with the following:

1/day—*color spray*, *comprehend languages*, *disguise self*, *feather fall*, *ray of enfeeblement*, *spider climb*.

Disguise self lets kaortis continue to masquerade as humans while harvesting thralls, while replacing *reduce* with *comprehend languages* gives them the capacity to understand languages spoken or written by their prey; kaortis have little interest in communicating with their victims until they become kaortis themselves, but they find the ability to understand things like road signs or directions helpful.

designed to cannibalize and recreate the green fluid that serves them as blood. Deep within the kaorti's torso is a pressurized reservoir of this reeking fluid (an organ mistaken by some scholars as a heart). Tangles of arteries run along their arms to pores along the inner surface of their fingers so they might secrete their blood as tools. It might be easiest to think of the kaorti's "heart" as a forge that transforms its outer body into the resinous "building blocks" of Far Realm matter, stuff the kaorti use to not only create their armor and weapons but to build their cysts.

The resin also serves an important role for kaorti invaders, for the Material Plane is poison to them. An unprotected kaorti can survive only for a few hours or days on the Material Plane before the non-resin parts of its physiology are scoured away. The first kaortis to invade the Material Plane learned this weakness the hard way and their deaths served as an object lesson for those who came later. On the Material Plane, kaorti explorers wear chitinous bodysuits made of resin, often sculpting horns, ridges, and spikes upon their shoulders, faces, and torsos to make their appearance all the more horrific.

PSYCHOLOGY AND SOCIETY OF THE KAORTI

Little is known of how the kaortis exist in the Far Realm, but on the Material Plane their society is brutally simple and efficient. Little interests the kaortis other than the transformation of what is natural into what is theirs—

everything in a kaorti-held region exists in some way to perpetuate this one driving urge.

An initial group of kaortis invading the Material Plane is known as a cyst pilgrimage; this exploratory band consists of 10–20 kaorti and 1–3 thralls (typically pseudonatural creatures harvested from a similar Material Plane region to the one they are invading). The goal of a cyst pilgrimage is to establish a beachhead on the Material Plane, to create a cyst of kaortis resin that blocks out the harmful effects of the Material Plane and gives their kin a safe fortress to stage further colonization and transformation efforts. Kaorti resin suits are costly and time consuming to create, so typically a cyst pilgrimage only consists of a few kaortis who seek out a remote or hidden area to begin their work. Pilgrimages lucky enough to have access to urquirshs (see Minions of the Kaorti) can establish large cysts in a relatively short time, but most pilgrimages must make do with what they can secrete on their own.

When a kaorti pilgrimage is sent into the Material Plane, the trip is one-way; there's no return portal for them to retreat to if things turn sour. This is to prevent their enemies on the Material Plane from being able to strike at their unknown fortresses just on the other side as much as it is to prevent the Material Plane from leaking into their world. Yet the kaortis do not view this as a disadvantage, for their method of procreation is as swift as it is horrifying.

Once a cyst is established (typically a network of cavelike tubes and chambers deep underground or in remote wildernesses, but rarely in areas close to urban regions), the kaortis begin their harvest. Their spell-like abilities allow them to cloak themselves in illusions, allowing them to walk among humanity, where they can pick and choose their victims. Initially, they choose their victims from the dregs of society: vagabonds, prostitutes, scoundrels, and street urchins—those whose vanishing won't be noted. They return to their cyst, where after 8 hours of surgery and injection of kaortic fluids (typically delivered through 8-hour bites, but sometimes through tools like wrist lancets), their abductees become new kaortis, immediately capable of capturing and transforming others. Left unchecked, a kaortic incursion can very rapidly become a major invasion.

Kaortis take to arcane magic, especially sorcery, and many become rogues or fighters with ease (although their natural weakness make them poor melee combatants), but to date, no kaorti clerics, druids, rangers, or other divine casters have been encountered. This is likely a psychological issue, for the kaortis have no concept of faith in anything but themselves.

MINIONS OF THE KAORTI

Where kaortis are found, so too are their monstrous minions. While creatures transformed into pseudonatural thralls are far and above the most common of kaorti minions, they frequently create other monsters to serve as mounts or guardians as well, shaping and sculpting the warped flesh of several creatures at once, using them as clay to form more powerful minions than might be achieved by a simple kaortic transformation alone. These transformations take place in bubbling pools of raw resin deep within kaortic cysts and generally take several days to complete. The three most commonly created minions are the destructive insectoid rukanyrs (used as living siege engines and tanks in large conflicts;

Fiend Folio, 144), the alien and horrific skybleeders (used as mounts and magical support; *Fiend Folio*, 156), and the savage and ruinous kaortie hulks (used as shock troops; *DRAGON* #330).

Yet not all of the monstrous minions of the kaorti are their creations—many are denizens of the Far Realm, brought along on their initial forays or called in through portals deep within a kaortie cyst. These creatures, such as half-farspawn (*Lords of Madness*, 151), amoebic crawlers (*DRAGON* #330), and nightseeds (*DRAGON* #330) are, if anything, even more alien than creatures sculpted from once-normal beings, for they are wholly of the Far Realm.

Perhaps the most commonly utilized creature is the vile and foul-smelling urquirsh, an abominable miscarriage of flesh that looks like nothing more than a writhing tangle of spurt-ing tubes, greasy entrails, and dangling arms held aloft by three long spidery legs. These horrific monsters are notable not just for their detestable shape and smell, but for the fact that when they are brought to places outside of the Far Realm, their alien cores implode, creating a tiny but mobile rift between realities back to the Far Realm. These rifts always lead to the tidal washes of the Amoebic Sea, providing the urquirsh with an endless supply of resin that the kaorti can use to coat large regions, altering the environment so they can exist within with relative ease.

URQUIRSH

KAORTI EQUIPMENT

Kaorties are masters at using their resin to create organic tools, weapons, and armor. Kaorti resin items appear alien and horrific, and their use is sometimes not readily apparent from their appearance. The resin suit and the ribbon dagger (*Fiend Folio*, 110) are the two most common kaorti items, but others like those detailed here exist as well.

Wristlancet: This purple device is worn on the wrist and triggered by a flexible stalk that protrudes from its midsection. At one end, a flexible resin sac can store poison or disease-laced fluid, while protruding from the other end is a rigid hollow spine. When triggered as a standard action, the spine shoots out to a distance of up to 2 feet and the fluid within is dispensed reflexively. A kaorti can use this device to inject a target with whatever fluid is stored inside by successfully hitting a target with the device. A wristlancet is an exotic light weapon that deals 1d2 points of piercing damage on a hit, with a critical multiplier of $\times 3$. Its wrist-mounted straps make it difficult to disarm, granting the wielder a +4 bonus on checks made to resist being disarmed. Likewise, it leaves the user's hand free to hold other weapons or tools. **Cost:** 100 gp. **Weight:** 1 lb.

Green Rapture: Introduced to a creature via consumption or injection, a dose of this pale green poison (which is distilled from the resin of newly created kaorties) deals 1d2 points of Constitution damage if a DC 14 Fortitude save is failed. One minute later, the DC 14 Fortitude save must be

made again to avoid paralysis for 2d6 minutes. As long as a creature remains poisoned by the green rapture and retains the Constitution damage or is paralyzed, the poison acts as a catalyst for kaortie transformations. Such a victim subjected to a kaorti's vile transformation ability makes the change into kaorti or pseudonatural creature after only 2d6 rounds of contact. **Cost:** 300 gp. **Weight:** 1 lb.

Spd 60 ft., climb 60 ft.

Acid Bomb (Su) Once every 1d4 rounds, an urquirsh can generate a small

globe of concentrated acid extracted from its planar rift. This globe has a range of 90 feet and explodes in a burst of rancid acid, filling a 20-foot-radius burst and inflicting 4d6 points of acid damage to every target in the area. A DC 15 Reflex save halves the damage, but if this save is failed, the creature is also nauseated by the horrific stink for 1d4 rounds if he fails a DC 15 Fortitude save. An advanced urquirsh's acid bomb deals an additional +1d6 points of acid damage for every 2 Hit Dice it possesses. The save DCs are Constitution-based.

Death Burst (Su) When an urquirsh is slain, its internal rift to the Far Realm bursts before it closes. Any creature caught within this 10-foot-radius spray must make a DC 15 Fortitude save or be nauseated

ZURGUTH, THE FEASTING VAST

The Far Realm is home to ancient entities of vast power. Although not technically deities themselves, their powers approach and might even eclipse the gods. They existed before divinity, and will likely do so beyond the advent of the last deity's death. Respect for these entities is as close to religion as the aboleths come—saner scholars whisper of them collectively as the Elder Evils.

As with the majority of these cosmic entities, Zurguth does not dwell on the Material Plane. His influence is felt there, though, primarily through the actions of his accidental creations, the kaortis. The kaortis do not count divine spellcasters among their ilk, nor do they erect temples in Zurguth's image, yet those who escape the vile transformation of a kaortic embrace speak of memories that are not theirs. Memories of drowning in a sea whose water can think, of fluids thicker than flesh that still run like mud, of vast islands heaving out of an endless bulk only to open eyes and split open into bottomless tooth-lined throats, of mountains of parasitic creatures heaving along a landscape of shuddering mobility too huge to be a planet and too mobile to be something dead or dying. Few who escape the kaortic transformation sleep well ever again, for many fear that when they die, it is not the afterlife that waits for them, but the infinite wet embrace of Zurguth, the Feasting Vast.

for 1d4 rounds. A *delay poison* or *neutralize poison* spell removes the effect from a nauseated creature. Creatures with immunity to poison are unaffected, and creatures resistant to poison receive their normal bonus on their saving throws. Worse, the death burst has a 50% chance of summoning another urquirsh into the spot previously occupied by the first urquirsh. A summoned urquirsh does not generate a death burst when it is slain, nor can its death trigger the summoning of a third urquirsh. The save DC is Constitution-based.

Freedom of Movement (Su) An urquirsh is constantly affected by a *freedom of movement* effect that cannot be dispelled.

Internal Rift (Su) An urquirsh that enters an area that blocks extraplanar travel is cut off from its internal planar rift to the Far Realm and takes a –4 penalty on all attack rolls, saving throws, and skill checks as long as this condition persists. It cannot use its acid bomb, death burst, or vile spray abilities while within such an area.

Sightless (Ex) An urquirsh has no eyes, and is thus immune to gaze attacks, visual effects, illusions, and other attack forms that rely on sight.

Stench (Ex) An urquirsh's odor is

abominably offensive to all creatures not of the Far Realm. Any such creature within 20 feet of an urquirsh must succeed on a DC 15

Fortitude save or be

sickened for 1d6+4 minutes. A creature that successfully saves cannot be affected again by the same urquirsh's stench for 24 hours. A *delay poison* or *neutralize poison* spell removes the effect from a sickened creature. Creatures with immunity to poison are unaffected, and creatures resistant to poison receive their normal bonus on their saving throws. The save DC is Constitution-based.

Vile Spray (Ex) An urquirsh spews a relentless spray of vile otherworldly ooze, channeled in through its internal rift to the Far Realm. This foul-smelling ooze coats everything within 20 feet of the urquirsh, quickly hardening to a flexible, rubbery texture. Creatures in its area must make a DC 15 Reflex save or take a –4 conditional penalty to their Dexterity. Being hit by and failing multiple Reflex saves does not

result in a higher penalty. The ooze is permeable and can be breathed through and does not hamper speech. The stuff can be peeled off of a creature with 1d4+1 rounds of work, though one covered in the slime cannot effectively remove it from his own body. The ooze hardens slowly, with the imparted Dexterity penalty increasing by 4 points every hour. A creature who accumulates a penalty equal to or in excess of his Dexterity score is rendered immobile as the stuff dries completely; further Dexterity penalties do not accrue, but without external help, the victim can only escape the resin cage with a DC 22 Strength or Escape Artist check. The save DC is Constitution-based.

Skills An urquirsh has a +18 racial bonus on Climb checks and a +10 racial bonus on Jump and Use Magic Device checks.

The Ecology of the Kappa

Little things should not be taken lightly

by David R. Knowles

From the Complete Bestiary of the Reaches of Kara-Tur, of which one copy survives in the city of Waterdeep:

The Kappa

Appearance

Certainly, one of the most bizarre and dangerous of local beasts is the kappa, whose appearance is like that of a tiny, ugly boy with a distended stomach and slippery skin. Often thought to be a type of monkey because of its stance and posture while moving, the kappa is an amphibian with magical powers. An upright kappa stands, on the average, 2' tall, though a few larger ones have been seen. Female kappa are generally 6" shorter than males. Both females and males have pot bellies, each with a pouch in the abdomen similar to that of a kangaroo. Their feet look like those of a snapping turtle, having three webbed toes, and their hands are webbed and clawed. Indeed, most kappa are known to have hard shells like those of small turtles¹, and almost all kappa have scaled bodies, though occasionally they have been seen with smooth skin. Their skin is very tough and is normally green, often with yellow tinges, and is clammy, slimy, and cold to the touch because they are cold-blooded. A few are able to change the color of their skin to match their surroundings in the same manner as a chameleon, adjusting to almost any color to enable them to hide or stalk successfully².

Clothing irritates their skin, and they never wear garments, finding them silly and pointless. They have a thick layer of fat under their skin for both buoyancy and warmth, and some kappa have a small amount of body hair. They smell vaguely fishlike. Their boyish heads are fairly chubby and flat.

On the top of each kappa's head is a saucerlike depression filled with water from the kappa's home body of water. This water is the source of that kappa's strength. The kappa will lose vitality and other abilities in proportion to any amount of this water spilled from the bowl in its head, and it will die within minutes if all

the water is lost and the kappa is unable to replenish this vital fluid with fresh water from any source (though "home" water is preferred).

Around this bowl, most kappa have hair that is usually cut short, though some scholarly or artistic kappa wear it long. Kappa have large eyes with humanlike tear ducts, and though most have large beaks, some have long noses instead. All kappa are able to breathe comfortably underwater or in air; however, they have only lungs and do not have gills, taking the water in through their mouths. Their lungs filter oxygen out of the water.

There are two types of kappa: the common kappa, which is bad enough, and the vampiric kappa, whose bite drains vitality. The vampiric kappa is usually a solitary creature, preying upon all who fall within its grasp (even other kappa).

Common kappa weigh, on average, approximately 20 lbs. Vampiric kappa usually weigh slightly more. Huge kappa have been known to stand 5' tall and weigh up to 150 lbs.; these are believed to have once been experimental subjects of a wu jen³.

Abilities

Kappa are extremely strong despite their small size, and some have been known to wreck bridges, hurl rocks, and tear flesh from their opponents with their clawed hands. Kappa prefer not to use weapons, but they can throw daggers and darts if given the chance.

Kappa have lithe, supple bodies and are fluid movers, allowing them to climb and swim with great ease and grace. This grace, combined with their thick skin, makes them difficult to strike in hand-to-hand combat, adding to the dangers of fighting them in close quarters.

Additionally, each community of kappa has developed its own style of martial arts, and the kappa have become masters of their own styles. Often, these styles are based upon basic wrestling techniques in which the kappa are highly skilled. Kappa martial-arts styles usually contain many grappling moves and maneuvers designed to throw their opponents off balance.

All kappa regenerate wounds that they

have received; even their limbs can regrow quickly. Kappa may reconnect severed limbs if they are able to spend time undisturbed to allow their regenerative and recuperative powers to work. They are reputed to be masters of *koppo*, which is the knowledge of bone structures and the art of setting or breaking bones. This art may well be included in the martial combat styles of some kappa⁴.

Vampiric kappa differ from their common brethren in a number of ways. They are not undead, but they are more powerful and deadly than their kin. Their eyes are blood red but dead looking, giving little indication of emotion or intent. Their skin is more like hide, being tougher and more resilient than that of normal kappa. They are as strong and powerful as the other types of kappa, but they are more agile and much harder. This difference in physique and stamina allows vampiric kappa to move nearly as quickly as a human on dry land and gives them excellent endurance. Vampiric kappa are slightly more intelligent than normal kappa; this difference in mental power only worsens the naturally crafty and malicious attitude that kappa seem to harbor.

In addition to normal attacks, vampiric kappa also attack their prey by biting. Once this kappa has successfully bitten its victim, it will lock its jaws and not release until the victim is dead or the kappa is forced to disengage. This bite causes both physical damage and a loss of strength, and may also inflict a dreadful disease that drains strength. This disease lasts approximately six days before killing its carrier.

Folktales tell of spell-casting kappa, but nothing else is known of such matters.⁵

Habitat & Diet

Kappa most often live in rivers but also inhabit deep streams, lakes, and large ponds—almost any suitably large body of fresh water. Kappa die from extended exposure to saltwater, being unable to tolerate it for longer than a few hours". Often making their lairs around rocky outcrops and bridges, they use these areas as solid, defensible bases from which to scavenge. On occasion, these lairs may contain magical items and treasures such as gold and jewelry, all gained from the demise of their victims. In fact, kappa are a major cause of drownings in fresh water in Kara-Tur, as they delight in dragging unsuspecting human and animal victims into their waterways. Kappa can see perfectly underwater, having strong transparent protective coverings over their eyes.

All kappa consider themselves gourmets. They normally live on fish, but they are especially fond of cucumbers and melons such as cantaloupes, muskmelons, and the like. Some kappa have a special taste for fruits such as oranges or grapes, but some hate sweet fruits with a passion. (No one has yet tried to feed pickles to a kappa.) They are also very fond of horse, cow, and human flesh. Their normal method of

eating slain animals is to suck out the entrails of their victims. Kappa have been known to indulge in *sake* (rice wine) or plum brandy; such beverages have been used to bribe even the destructive kappa into temporary truces.

Society

A group of kappa usually has two to six members, though larger groups do exist. What little society kappa share works much as an extended family whose members are bound to one another by social obligations more than by blood. These bonds, however, do not interfere with each kappa's independent, ruthless, and predatory behavior. (Vampiric kappa almost never live in groups, preferring solitude or living with a mate only.)

Courting among kappa is initiated by the females, who chase their chosen males vigorously until the former's advances are accepted. Once established, partnerships are usually permanent. Males outnumber females, though only by a small margin, and the females are equal to the males in their abilities, strengths, and aggressive natures. Young are hatched from tiny eggs that are kept hidden within the pouches of their parents (males, however, sometimes eat the eggs they carry).

Kappa are believed to have a lifespan similar to humans, although they develop their skills and abilities at a younger age in comparison to humans⁸. The most obvious example is that their babies can walk and talk at hatching and very quickly learn to swim well.

Almost all kappa have, even from a very early age, full literacy in their own language and usually in those tongues spoken commonly in their lands. They are able to speak, read, and write with great eloquence in "kappanese," although they are somewhat less capable in other languages. The script of the kappa is very spindly and spiral; it is not aesthetically pleasing but rather is disturbing to the human eye and difficult to read by nonkappa.

As a race, kappa are inventive and clever within their own lifestyle, but they are no more intelligent than human beings, often exhibiting lesser intelligence. As with any intelligent creature, there are exceptions to this, and a few intelligent (even brilliant) kappa have been discovered. These kappa use brain-power to manipulate others to achieve their goals.

Kappa are self-centered and self-motivated to the exclusion of the opinions and ideals of others. One unexpected aspect of their personalities comes to light when they are in trouble or somehow compromised. They fawn on the people who have cornered them, and nothing is too much trouble for a kappa in this situation. Rumors exist of captured, grateful, or indebted kappa teaching some or all of their skills to whomever controlled them. All kappa thoroughly enjoy the pain and discomfort of others and are great practical jokers, especially if the joke ends in

disaster for their victims. Kappa sometimes assault lone travelers for no reason other than to cause them misery, greeting the victim with great formality just before the attack. This malicious streak stems from a kappa's complete and utter disregard for anyone or anything else.

Travelers and local inhabitants attempt to appease kappa by throwing food into kappa waters. Village folk write the names of their family members on these gifts so the kappa know who should not be attacked. Another way to pass the lair of a kappa without being attacked is to offer to wrestle the kappa for the right of passage. As all kappa are skilled wrestlers, they will often agree to this. However, if a kappa defeats his opponent, he will almost always drag the victim into his lair to be eaten at his leisure.

Kappa are extremely polite, even to their prey, but they make their intentions well known. If treated with great respect, a kappa might be swayed from slaying and eating its victim, but it will certainly demand immediate payment of money or valuable belongings in return for sparing the victim's life.

Given to such exhibitions of extreme behavior, all kappa regard odd and seemingly meaningless acts as perfectly normal. To a human being, a kappa's lifestyle would appear random, thoughtless, and devoid of almost anything other than self-gratification. This is perfectly true, and kappa not only admit to this but take pride in it. Their rarity is, perhaps, their only blessing.

Footnotes

1. About 10% of all common kappa lack shells, having a base armor class of 3. Such kappa are always solitary, being bullied by other kappa.

2. Assume that 5% of all kappa have this chameleon power, which gives them a 75% chance to hide in natural terrain.

3. Assume that there is a 5% chance that a particular kappa is a huge one; double its hit dice, movement rates, damage (giving it a strength of 19 with huge claws), and height (4-5'). These huge kappa are always solitary and extremely rare. Huge vampiric kappa are, as one would imagine, incredibly dangerous; these specimens drain two strength points per round that they can bite.

4. The special maneuvers Crushing Blow and Eagle Claw come to mind here.

5. Spell-casting ability exists in approximately 10% of all male kappa. Each may cast as many spells per day as a wu jen with as many levels as the kappa has hit dice. For example, a vampiric kappa would be able to cast four first-, three second-, two third-, and one fourth-level wu jen spells. These spells need not be chosen at the beginning of a day, nor do they have to be learned from a scroll or book, since they come from the kappa's elemental sympathy with water. A kappa may cast

spells only within one mile of his own waterway. Spells should be chosen as needed. If a kappa has lost any water from the bowl in his head, his spells' durations and effects are reduced by the same degree as the amount of water lost. Spell-casting kappa may choose any spell listed as "Water" or "All" from page 73 of the *Oriental Adventures* tome.

6. Nonvampiric kappa lose 1-4 hp per turn they are immersed in saltwater; vampiric kappa lose only 1 hp per turn. Furthermore, if the water in the bowl on their heads is filled with saltwater, they gain no special strength, though they can still regenerate wounds and do not lose 2 hp per round, as per *Oriental Adventures*, page 124.

7. If six individuals are indicated by a die roll, allow a 50% chance that there are another 1-6 individuals present. If another six is rolled, allow another 50% chance for 1-6 more kappa, and so forth.

8. Common kappa typically live to an age of 100 years, and vampiric ones live to 130. From birth, kappa gain 1 HD per year until they reach adulthood.

The Ecology of the Kech

What evil lurks in the heart of the forest?

Taken from a lecture series given by the esteemed naturalist and sage Oparin, on the subject of dangerous creatures of the woodlands:

The kech is another of the foul fiends that make the woods a dangerous place

for inexperienced adventurers and travelers. The physical appearance of the kech is perfectly suited to an arboreal life. Its leathery skin is green, ranging from a light, silvery green similar in hue to the underside of a leaf to the deep green of

oak leaves, and this coloration makes it possible for a kech to remain unnoticed in the trees. A kech also possesses long arms and legs, complete with handlike feet, which make it easy for it to move from tree to tree as does a monkey.

Male and female keches are similar in appearance, although the female is smaller and lighter in color. Adult males are 5-6' in height and weigh 120-150 lbs. Adult females stand upright at 5' and weigh close to 100 lbs. Both genders are lithe and well muscled, and can walk upright as well as race on all fours. A kech's face is very humanlike (perhaps keches are some accursed offshoot of the human race that became adapted to living in the trees), but the eyes are blood-red in color and pupilless, and the mouth is filled with many blood-letting fangs. Also, the nose of the kech is smaller than a normal human's - almost unnoticeable - and the ears can only be distinguished from the rest of the head by close scrutiny. Although mammalian, a kech has only a few traces of hair on its body.

Keches are wily creatures made infamous by the many snares and traps they set to capture careless and unsuspecting prey, much like those human trappers use to catch the small fur-bearers on which the trappers make their living. These snares are nearly impossible to detect by any but skilled woodsmen and druids. A kech often covers its hunting territory - an area of indeterminate size which

Illustrations by David Zenz

includes several well-traveled paths, roads, and animal trails – with as many as a half-dozen of these traps. And the more kech found in the same area (for these creatures are commonly found in groups), the larger the hunting area and the greater the number of pitfalls present.²

However, keches do not fully rely on the various traps and snares they set to catch all their prey. They actively patrol their hunting areas looking for suitable prey (of the human variety) most of the day and night, resting only in the heat of the day and the middle of the night. Keches never attack a group of four or more individuals unless the group looks particularly weak, unobservant, or careless. If the keches possess two-to-one odds in their favor, they may attack any human gathering. Keches will try to separate larger parties into smaller ones by various means, attacking the smaller parties separately. Their hunting territories are always heavily forested, for keches are excellent climbers and stay in the trees as much as possible.

One of the keches' favorite ways to separate larger groups is to mimic the sounds of a human in trouble – a ploy that some companions and I learned about firsthand during an expedition to investigate these beings. A kech will call for help in a local human tongue, seeking to lure victims into traps and ambushes. These cries are remarkably realistic but can be distinguished from actual human voices by careful listening and attention. While studying these creatures, our party witnessed the death of one of our retainers, who fell into a covered pit when he rushed to aid another retainer whom he believed was screaming in distress. The crier turned out to be one of a pair of keches. While I cannot urge that cries for help be ignored, travelers must use the utmost caution when these creatures are known to be about an area.³

Keches can stalk prey silently in the deep forests (although they can still be heard by thieves and elves if an attempt is made to listen closely). In addition, keches are difficult to track as they leave false tracks and use other such ploys to avoid being followed. Because of their leaflike skin and silence, keches often succeed in attacking their victims with surprise.⁴ By hiding in the branches of trees, a kech can drop on an opponent from above, knock him off his feet, and bite and claw at him; this is the keches' favorite method of assault.⁵ Keches also use their prehensile toes to hang from limbs, using their claws as victims pass underneath. Keches sometimes rush victims on the ground in an effort to kill or disable one or two of them, fleeing with their prey before the victims' allies have a chance to retaliate.

Keches normally choose to disable prey, clawing and biting at the faces and necks of victims rather than killing them outright. This is especially true of attacks against humans, whom kech prefer to

torture before killing and devouring.⁶ Once an opponent is disabled, the kech moves on to attack another foe, returning to kill the incapacitated one after other victims present are also incapacitated. Keches rarely kill more prey than necessary for survival, but their hatred for humans is so great that they kill as many humans as possible without endangering themselves.

Keches are extremely evil and rapacious creatures who view nearly all other creatures as food – especially humans, whom they seek to kill, maim, and destroy without restraint. The reason for this hatred can only be speculated upon; perhaps it has something to do with man's disregard for the forests or with some ancient feud between man and kech. The only creatures keches are known to associate with are su-monsters. These associations rarely last more than a week or two because of the chaotic nature of the su-monsters, but during this time the number of raids on human settlements nearby increases greatly. Whole villages have been destroyed by the combined might of the two.⁷

Although intelligent, keches hardly ever use tools or weapons of any sort, preferring instead to use subtlety and brute strength to kill prey. Keches speak a language that seems totally incomprehensible to outsiders. The language of the kech is a tongue filled with much chittering and whistling, sounding for all the world like squirrel's chatter. Scholars have spent many years studying captive keches in an effort to understand them, but have managed to translate only a few words thus far. Keches can also speak a few words of Common learned from those they have captured or overheard previously. Being intelligent creatures, keches never continue fighting if the odds turn against them or if they are sorely wounded. They will even flee their lairs if attacked by overwhelming numbers, leaving behind all their treasure.

Small groups of keches sometimes band together for mutual protection and for greater ease in dispatching foes. Such groups are led by the largest male, who decides where the traps are placed and which victims the group attacks. The group contains an equal ratio of females to males, with only a slight male plurality in some cases. These groups infrequently raid forest settlements of humans for victims. These raids are lightning-quick forays in which the keches quickly kill up to a dozen victims and carry them back to their lairs deep in the woods. Because these raids always take place in the depths of the night, it is even harder to avenge those carried away.

The lair of a band of keches is always deep in the forest and surrounded by many traps and places for ambushes. Those foolish enough to follow a kech back to its lair rarely return. The lair itself is a crude structure made of tree limbs lashed together with vines to provide

protection from the elements. Keches remain in the same general area and use the same home for no more than a year; this reduces the chances of both overhunting the surrounding area and being discovered in their lair. The treasure found in a kech lair is gained mainly from that kech's previous victims and is scattered about the lair along with the bones, clothing, and other belongings of their victims. Keches do not value treasure as such, although they use it in their traps to catch greedy humans.

Keches are not prolific creatures, thankfully. Male and female keches mate about once every three years in the spring; permanent mating pairs are not formed. The young, usually one but sometimes two, are born the following spring. All females help care for the young, but the males provide only protection for them and do not help in any other way. Young keches grow very slowly; it takes 20 to 25 years for them to grow to full size, whereupon they become capable of reproduction themselves. According to the records of several adventurers, no more than four young keches have ever been found in the lair at one time, regardless of the number of adults also present.⁸ Keches are long-lived creatures, however, which is one of the few things that saves them from eventual extinction. Females average about 150 years, while males often live to be 175 years old. With age comes cunning and cleverness, making the older keches the most dangerous of all.

In summary, keches can be dangerous

foes, especially for unwary and inexperienced adventurers. Even seasoned adventurers respect these foes for their cunning and cleverness. And it is doubtful they will ever cease to trouble mankind as long as there are forests for them to inhabit.

Footnotes

¹The snares set by a kech should be treated as those created by the third-level druid spell snare. Also, the other types of traps used by keches are 90% undetectable by most characters. Druids and rangers, however, subtract 5% for each level they have when trying to detect traps set by a kech.

²A single kech covers as many as 20 square miles of forest a day when searching for prey. For every other kech in addition to the first, add another 10 square miles of forest covered, though the kech will travel together in a single group and will not cover the whole area every day.

³Keches are good mimics, being extensively familiar with the sounds humans in trouble make. Using this talent, they often succeed in luring victims to their deaths. The base chance for a kech to successfully mimic a cry for help is 90% minus 5% per intelligence point of the-victim. If the kech is successful, NPC victims are attracted to the direction of the voice, believing that some human is in trouble. Otherwise, the victim simply hears creature screaming.

⁴Thieves may detect the approach of keches on a successful listening roll; elves

have a 15% chance to hear them, and gnomes (so rare that they are often forgotten about, even by sages) have a 20% chance. A kech's base chance of surprise is about 83%, but if the attack takes place at night, it becomes 95% (surprising 19 out of 20 times). The reduction by half of all chances of tracking a kech applies only to those with tracking skills (rangers, barbarians, etc.). All others have only a 10% chance to successfully track a kech.

⁵Unsurprised characters must make a successful dexterity check on 1d20 to avoid being struck by a falling kech, which makes a single "to hit" roll at +2 for the attack. Surprised characters are not allowed a dexterity check. Any character fallen upon is immediately knocked to the ground, with the kech automatically clawing and biting the victim (no "to hit" roll required). In addition, the character must make a saving throw vs. paralysis or be stunned for 1-2 rounds more; a successful saving throw means the character can scramble back to his feet the following round. Failure also means the character remains prone and is at -4 to hit and damage. The attacker, on the other hand, is at +4 to hit for the number of rounds determined above. This applies only to keches attacking from above and not to keches surprising opponents while on the ground. Falling attacks are made from a height of 5-30'.

⁶Whenever the kech's modified "to hit" roll is four or greater than the number

required, or when a natural 20 is rolled, there is a 40% chance the kech has hit its opponent in the face or throat for the following effects (roll 1d20):

1d20	Effect
1-3	Both eyes blinded
4-7	Left eye blinded
8-11	Right eye blinded
12-17	Face hit
18-20	Throat torn open

Blindness caused by an attack is permanent unless healed by magic. A damaged throat causes the loss of 1-6 hp per round until the blood loss is stopped or until the character dies. A face hit leaves scars that permanently reduce the victim's comeliness by one.

⁷There is a 15% chance that 2d4 summons are also found any encounter with four or more keches.

⁸Kech young are born with 1 HD and are about 1' tall. For every six years following birth, a kech gains 1 HD and grows 1'. Keches with less than 4 HD are agile and fast, but are unable to attack opponents. After that time and until they reach adulthood, they can claw for 1-2 hp damage and bite for 1-4 hp damage. Otherwise, kech young are exactly like adults in appearance and (unless they are less than one year old) have the same innate abilities. There will rarely be more four young in a kech lair at any one time. Ω

the Ecology of the

Keepers

They appear without warning, demanding answers and enforcing silence. Their expressions grim, their mannerisms inhuman, their very presence unsettling and unnatural—the few who dare speak of these men in black know them only by their unnerving moniker: the keepers. A faceless collective of questionable intentions and dreaded methods, they seek information and secrets while offering none in return. Their very nature is ever shrouded in mystery—be they the lingering demons of an overzealous creator, servants of a dead god, or beings from another reality altogether? As with every detail of their existence, the truth is yet another of the secrets they keep.

HISTORY OF THE KEEPER

Keepers fixate on secrets and secrecy, especially in regards to their own origins, holding their race's past among the darkest of the lore they hide. While scholars disseminate stories and legends about them, the veracity of such myths proves difficult to judge—just the way the keepers like it, of course.

Of the stories told about the keepers, perhaps the most compelling tale puts their creation roughly thirteen hundred years ago at the hands of a singularly talented wizard, alternately placing him in the Fortress of Enlightened Discipline on the plane of Mechanus or within Sigil, the City of Doors. Hungrier for secrets than power, this fanatical scholar obsessed over scattered bits of obscure and hidden lore. Through his work he hoped to gather a palette of secrets, step back, and gain some profound insight into the very nature of reality.

Covetous of knowledge as he was, he was only one man, and he lacked any sort of followers or apprentices upon whom he could rely to further his pursuits. Of course, had he either, his secretive nature would have precluded granting them any trust. So he solved his problems in a most elaborate way: he created the keepers, a wholly unique and specially suited race of like-minded servants.

From there, the tale grows muddled, as some tellings claim the keepers were found, rather than made. These versions claim the wizard called them into the world from

“He that has eyes to see and ears to hear may convince himself that no mortal can keep a secret.” —Sigmund Freud

somewhere else, some alternate reality of bizarre and alien law that he either discovered or created from nothing. Whatever the specifics, if he found the keepers already extant, or created them from a malleable void of potential, the legends agree that when he called out the keepers responded.

Ultimately, though, after the wizard had gathered hundreds, maybe even thousands of blank-faced keepers, his obsession turned to paranoia and began to gnaw at him. Concerned that his enemies, real or perceived, might come to understand the secret process by which he had found the keepers and bound them to his will, he instructed them to destroy or silence any source of that knowledge.

Of course, given their nature, they dispassionately complied by immediately killing him.

PHYSIOLOGY OF THE KEEPER

The first thing most people notice about a keeper's physical appearance is a contrast of pale flesh and dark clothing. Looking closer, though, one begins to notice the incongruities—the things

KNOWLEDGE OF THE KEEPER

The following table shows the results of a Knowledge (the planes) check as it relates to keepers. Loremasters, planar scholars, and those who study obscure magical lore might possess this information. Keepers appear on page 111 of the *Fiend Folio*.

Knowledge (the planes)

DC	Result
----	--------

- | | |
|----|--|
| 17 | Keepers are humanoid creatures about which little is known. They are supposedly obsessed with finding and suppressing obscure knowledge. |
| 22 | Keepers lack normal humanoid anatomy. They have no eyes yet seem to see perfectly and can alter their limbs to form weapons. Keepers sometimes perform rude, repulsive, or comical acts in an attempt to blend in with society. |
| 27 | The bizarre physiology of keepers' bodies provides them with immunities typical of unliving creatures. When killed, keepers completely dissolve into puddles of poisonous, foul-smelling toxins. They are known for murdering those who possess secrets they either desire or seek to erase. |
| 32 | Keepers share a telepathic hive mind that places them in constant communication. They are capable of bending space in order to instantly physically switch positions with other nearby keepers. |

that stand out as disturbing, and hint at something terribly amiss.

The typical keeper dresses to cover as much of its body as possible, usually only showing its face and hands, obscuring the rest beneath heavy cloaks or greatcoats, boots, and opaque goggles or dark spectacles. And all

for good reason. Devoid of its heavy clothing, a keeper seems like less a living being than a half-completed artist's model given life by some fickle demiurge. The gray, glossy flesh of a keeper is smooth, hairless, and lacks any sense of musculature beneath the surface. When a keeper moves, it displays

none of the hallmarks of typical humanoid motion. The joints seem far too flexible, sometimes flexing in wholly wrong directions, and its limbs show a disturbingly amorphous, liquid ripple, as though the creature's body was nothing but a thin, rubbery membrane barely containing a volume of homogenous protoplasm.

Their odd, rubbery flesh can congeal and shift form into myriad simple shapes. If pressed into combat, rather than drawing a weapon a keeper forms one from its own flesh. When it does so, its hand seems to melt away, hardening, and reforming into knots of dense, heavy bone for a club, or elongating to fashion a blade.

Most disturbingly, though, keepers lack eyes. Hidden beneath their ubiquitous dark eyewear is naught but the smooth, gray sheen of their skin stretched over shallow, empty depressions. Despite this defect, though, their vision seems unimpeded, suggesting that they utilize either some form of quasi-telepathic mindsight or navigate by a combination of vibration, smell, and an enhanced sense of touch.

While all of these traits hint toward some complex, alien internal structure, the specifics of keeper anatomy prove impossible to determine through normal dissection. When a keeper dies, becomes magically imprisoned, or succumbs to any other situation that would leave it vulnerable to revealing its secrets, it undergoes a process of dissolution, melting into a poisonous biological slurry. Some have been known to vomit gout of the disgusting stuff, using it to debilitate prey. Those covered in the reeking, alien humor are typically disgusted, while some exposed to heavy doses are mortally poisoned.

With alien thoughts swimming within the anomalous hollows where their brains should reside, keepers instead possess some powerful telepathic cells. Allowing them to communicate telepathically over a range of approximately a tenth of a mile, the

shared thoughts provide individuals with details of the activities, needs, and experiences of their nearby brethren. This intimate mental connection seems to be fundamentally tied to another unusual trait, the ability of mentally linked keepers to simultaneously teleport, spontaneously swapping places with one another. With each keeper serving as a destination for the teleportation, wounded or hindered keepers can retreat, filling their position with a healthy reinforcement or sacrificing a mortally wounded peer. Often, groups of keepers assault foes one at a time, exchanging places as their resources are expended, their victim possibly not even aware that his opponent has been replaced.

In addition, keepers seem to lack gender, or any differentiation based on age or maturity, so the question of keeper procreation has lingered in the minds of scholars for centuries. Keepers might be unable to form more of their kind, but other theories suggest that once a group of keepers arrives at some critical mass of knowledge, the group gathers to pool what it learned and, through some alien processes, summons another of its kind into being. Many scholars discount this theory, lending popularity to the idea that keepers are a dying—or at the very

least, stranded—race, and one of the secrets they hope to collect in their endless searching is for a way to reproduce.

PSYCHOLOGY AND SOCIETY OF THE KEEPER

Keepers organize within hundreds, possibly thousands of distinct, intensely compartmentalized groups. Assuming truth in the tales of their original creation, each group of keepers was collectively spawned or summoned and subsequently tasked to a specific goal, seeded with instructions still being processed after centuries. While none can know how many keepers exist, they are most commonly encountered in groups of three to thirteen members, although larger groups (or “conspiracies”) with twenty-three or more members are known to exist. In every case, the number of keepers in a group consists of an odd number of individuals and seems to directly relate to the importance or obscurity of the knowledge they seek.

Each small, cloistered sect of keepers has no males or females, no old or young, and no apparent hierarchy. In these groups, each keeper functions as a limb or extension of the group, each being an interchangeable fraction of a shared hive mind. Because of this, keepers have extreme difficulty functioning outside of their groups. The concept of a solitary existence seems to terrify them, and if a group of keepers befalls some harm, leaving only one left alive, the survivor almost inevitably dissolves, unwilling or unable to exist in the absence of its fellows.

Linked by their own group mind, keepers fail to truly understand normal society and socialization. They go about the motions of normality and fitting in—as they perceive such—acting as if they belong, but their horribly superficial efforts betray a frightening, puppetlike lack of empathy or cultural knowledge. A group of nine keepers might purchase food in a marketplace and later eat raw, uncleaned fish while drinking flasks of lamp oil in the common room of a tavern, silent and

unaware of the incongruity they present to their surroundings.

The keeper mental organization seems to preclude individuality in the sense that most mortals possess. Keepers distinguish one another by some set order, seemingly unrelated to age or accomplishments. As such, while they do not have names, per se, they are called "First" or "Second," or another numerical designation. Within a group, there is no need for any further suffix to this, but when groups of keepers gather, or refer to keepers of groups other than their own, they use very specific titles for those other groups that invariably refer to the type of secrets they were originally tasked to discover. For example, a keeper known as "Twenty-Three" to those of its group might be "Twenty-Three of the Darkened Sun" to others. A few noted names of keeper groups include: the Apotheosis, the Draeden, the Final Gate, the Iron Flask, the Maze, the Mists, the Gray Path, the Seven Parts, the Ur-Fiend, and the Unliving God.

The only time keepers are found away from their typical pursuit of others' knowledge is in the depths of the Ethereal Plane. Although normally isolated from one another, multiple groups of keepers irregularly congregate and converse in the most remote portions of the Ethereal Plane, gathering around features known as ether gaps. These gaps resemble holes in the fabric of the plane itself, wounds in the essence of the ether, places where the raw probability winnows down to nothing and vanishes to some unknowable elsewhere. Groups of keepers float silently around the margins of these ether gaps, just outside of the reach of the tidal forces. They linger there for days or weeks on end, unmoving, deep in meditation and mental conversation, filling the ether with a material hum from their telepathic banter, speaking with one another, and possibly with something from beyond the ether gap speaking back to them. The purpose of these strange gatherings, the schedule on

ENCOUNTERING THE KEEPERS

Few ever go looking for keepers, as these men in black never share the secrets they protect. Rather, keepers typically seek out individuals for their own predictable, but nonetheless enigmatic, reasons.

- **Knowledge:** A person who discovers some mystery of the Multiverse—the existence of a parallel dimension, the key to a banished race's prison, a weakness of all deities—might be visited by the keepers. Somehow innately knowing of the discovery, a lone keeper typically approaches to verify that its target actually knows the secret. Once this suspicion is confirmed, a group of keepers hunts its prey and silences him for good.

- **Association:** Sometimes one doesn't even need to know a secret to attract the attention of the keepers. Someone closely associated with an individual who makes some forbidden discovery might, for seemingly no reason, be shadowed by keepers who seek to determine exactly what he knows—or to permanently silence him just in case.

- **Guidance:** For all their mystery and seemingly preternatural knowledge, sometimes keepers simply lose track of their prey. In such cases, an individual or whole group of keepers might approach those associated with their person of interest and conduct roundabout interrogations or blunt intimidations. Keepers sometimes stalk wholly unwitting individuals for weeks in the hopes of gaining a lead to their true prey.

Of course, those few who do dare seek out the keepers run the risk of discovering some secret truth about these enigmatic strangers, and so risk becoming their next target.

which they occur, and their connection to the ether gaps are simply more secrets these strange collectors keep.

ADVANCED KEEPER

As keepers age, gaining further exposure to various mortal and immortal cultures and societies, their normally rigid minds become more adaptable to new situations, allowing them to advance by character class. Most often, as to best aide their subterfuge, they take

levels of rogue, although rare keepers take levels in sorcerer, typically learning spells that benefit and support their group as a whole.

Third of the Colorless Pool has hunted for various secrets revolving around a legendary and unique color pool on the Astral Plane for more than six hundred years. As the oldest surviving member of his cloister, he has increasingly concentrated upon the practice of interrogation through intimidation and the often-bloody erasure of secrets once they've been gained.

Blindsight (Ex) Keepers possess a special, non-visual way of sensing their surroundings. The spell *silence* negates this ability and effectively blinds a keeper.

Hive Mind (Ex) All keepers within 500 feet of each other are in constant communication. If one is aware of a particular danger, they all are. In one in the group is not flat-footed, none of them are. No keeper within range is considered flanked unless they all are.

Body Switch (Su) As a standard action, Third of the Colorless Pool can

change places with any other keeper within 500 feet as per the spell *teleport without error*. The other keeper is instantaneously moved to the space Third of the Colorless Pool occupied before using this ability.

Mimic Weapon (Ex) Third of the Colorless Pool can form its arms into any melee weapon (even an exotic weapon) it has witnessed in use and then wield the weapon with proficiency. It can form either arm into any Medium melee weapon, or fuse both arms into a Large or double-weapon. A keeper cannot form weapons larger than it could normally wield. A mimicked weapon has all the properties of a standard weapon of that type. A keeper's attacks with a mimicked weapon are treated as natural weapons; thus a keeper does not incur the normal penalties for fighting with two weapons, cannot be disarmed, and does not gain iterative attacks with its mimicked weapons.

Poison Spit (Ex) Once every 1d4 rounds, Third of the Colorless Pool can spit a nauseating contact poison in a 20-foot cone. Contact, Fortitude DC 14, initial damage nauseated for 2d6 rounds; secondary damage 2d6 Con.

Dissolution (Ex) When Third of the Colorless Pool dies or is captured, pinned, or held helpless for 10 rounds, it dissolves into a 5-foot-wide puddle of the same contact poison it spits. The puddle and any poison taken from its evaporates in 4 rounds—a DC 20 Craft (poisonmaking) check made during that time preserves one dose. Any creature that touches the puddle or the dissolving keeper (such as with a natural attack that dealt the death blow) must make a Fortitude save to avoid the poison's effects.

Skills Keepers have a +8 racial bonus on Climb checks and can always choose to take 10 on Climb checks, even if rushed or threatened. Their malleable physiology also grants keepers a +8 racial bonus on Escape Artist and Jump checks. *Keepers are not limited by their heights when determining the distance they can jump.

THE ECOLOGY OF THE

KENKU

In the dark places of many cities, hidden by the refuse of those who walk the streets by day, stretch ominous markings, scores in the stone left by the unseen passage of powerful talons. Although dark figures lurk within the alleys of any city, in some skulk deadlier avian intruders. These interlopers are kenkus, a vagrant people akin to crows and other filthy avian scavengers. Hidden by shadows and tattered rags, they plot in larcenous flocks, taking what they please and preying off their unsuspecting neighbors. Without homes of their own, these greedy, cruel beings scheme against their enemies from within, thieving and murdering for even the most trifling copper. Yet, beneath the guise of murderous vagabonds kenkus hide far darker secrets and ties to powers both ancient and foul.

HISTORY OF KENKUS

Secretive and reclusive, kenkus reveal little about their true origins—if indeed their scattered communities even know them. Scholars who delve into their history find that

for centuries kenkus have existed as a ubiquitous part of most large urban areas—the largest cities always having aeries of kenku lurking in the darkest parts of town.

What few details the eldest and most learned kenkus let slip to outsiders indicate that their race came into existence as the result of tragedy piled upon tragedy. Long ago, kenkus existed as a race of large, intelligent ravens that lived in the shadows of other races. During a time of strife, a great plague spread among their hosts. In desperation, these proto-kenku resorted to theft and blatant raids, and in doing so spread their disease among the neighboring peoples. Infuriated, many races took up hunting these sentient birds and destroying their mountainous nests—almost universally aided by giant eagles, who bore a long-standing rivalry with the massive ravens. Driven nearly to extinction through assaults on their homes, the ravens' various aeries came together into a single massive flock. Their numbers blackening the sky, they squawked and cried out to something, anything, to save them from their unrelenting enemies and seemingly incurable disease.

The answer came in the form of an enormous raven, its unnaturally white feathers soaked and stained red with gore. Descending from the moonless sky and speaking in all the languages of the world, this raven agreed to grant the petitioners their wish; but at a price. In that single night, the ravens' plague was miraculously cured and all giant eagles and their eggs within 100 miles were laid to bloody ruin—a nightmare that race vengefully remembers to this day. In exchange, the cruel birds agreed to call one lord, Pazuzu, their true master and spread his name among the creatures of the world.

Yet even in those times, the creatures that would be kenkus were a fickle, deceitful lot. Their proselytizing in honor of the Prince of the Lower Aerial Kingdom proved to be short lived as their attentions were drawn to the treasures of those to whom they preached. Within a generation the ravens grew bored with their piety, some even turning to the worship of humanoid deities promising greater wealth and power. Enraged, the demon prince Pazuzu returned, slaughtering many of the ravens and cursing the survivors with an affliction far greater than that which he removed. From that day on, the giant ravens' fledglings hatched without wings, instead

KNOWLEDGE OF KENKUS

The following table shows the results of Knowledge (history) checks related to kenkus. Those who inhabit large cities most often learn this information, commonly from victims of the insidious plots of these avian humanoids.

Knowledge (history)

DC	Result
----	--------

10	Kenkus are birdlike humanoids who skulk in the back alleys and abandoned areas of most major cities.
15	Kenkus are extremely greedy, vicious beings, but work closely with each other. They prove deadly in groups, but are often cowardly if caught alone. It's extremely difficult to force a kenku to turn against its kin.
20	Kenkus can mimic almost any sound they hear and use this ability to sow lies and mistrust among their enemies. Their aeries are most commonly found at heights of tall abandoned buildings or within sewers.
25	Kenkus are consummate assassins, often hired by other races to do their dirty work. Being that they fill a similar niche in a city's underworld, kenkus and thieves guilds often fight ongoing criminal wars for territory.

possessing scaly arms and legs, forever exiled from the skies for their betrayal. Thus, kenkus were born.

PHYSIOLOGY OF KENKUS

Although humanoid, kenkus clearly come from avian stock and retain many features common to birds. Kenkus average 5 feet in height, but because of their partially hollow bones, commonly weigh a mere 75 pounds. Their heads are the most distinctive part of their

bodies—resembling those of oversized ravens or crows—complete with large, inquisitive black eyes and short beaks. Lacking wings, kenkus possess scrawny arms that end in powerful claws and legs supported by taloned feet. (As a result, kenkus are unable to don normal shoes or other footwear, magical or otherwise, unless such items were created to fit taloned wearers.) Born from large eggs, young kenkus naturally have soft, dark feathers, typically a

shiny black in color, which cover their heads and torsos, although variations do occur in certain individuals. As kenkus age, their feathers—beginning on their heads and slowly extending to the rest of their bodies—turn a pure, ivory white. These aging creatures typically retain their intellect and cunning until the moment of their death, becoming true masterminds and pulling the strings of entire aeries from afar. Despite their kin's superficial loyalty, however, the competitive nature of kenkus requires elders to maintain a constant vigil as there is always a potential rival or ambitious child plotting to take over.

Kenkus are omnivores perfectly adapted to eating the abundant scraps found on and under city streets. They enjoy carrion intermixed with the occasional bit of rotting vegetable or fruit.

Although they possess beaks like birds, the throat and tongue of kenkus resemble elongated humanoid structures, granting them the ability to mimic almost any sound, voice, and even accent that they overhear. Kenkus might not understand the meaning of the words they mimic, but they do so with astounding accuracy. They typically use this ability to guide unsuspecting victims into ambushes, frequently by tempting victims with the voices of allies or threatening them

with monstrous growls. Kenkus speak flawless Common, but possess their own language filled with squawks, caws, and other sounds similar to crows and ravens. An angry or excited kenku sometimes slips, interspersing these sounds with the Common tongue.

Light does not harm kenkus, but they commonly only venture onto the streets at night, where their black coloration and natural stealth suit them well. Kenkus seriously dislike traveling in sunlight and garb themselves in dark, tattered clothing to shield themselves from the sun's rays, in addition to helping them blend into surrounding throngs of people. Regardless, only the most elaborate disguises allow kenkus to hide their prodigious beaks.

PSYCHOLOGY AND SOCIETY OF KENKUS

Unlike many fractious evil humanoids, kenkus get along well and work best with others of their own kind. This tight-knit attitude ensures that they never lack for allies to assist them in their sinister schemes.

Kenku society resembles that of some birds, with several family units dwelling together in communities called aeries located in or near large cities. Like other avians, kenkus prefer creating lairs on the highest ground possible in order to keep an eye out for attacks—towers and minarets proving

the most valuable real estate in their minds. Failing to find a tall place to make their lair, kenkus go the opposite route, squatting in sewers and long-forgotten basements. Because they never announce their presence unless sorely pressed, kenkus have secretly migrated into such places for millennia, with the original occupants none the wiser. Despite the efforts of law-enforcement and other power groups, kenkus excel at getting into places they aren't wanted. Once an aerie establishes itself, it's extremely difficult to root out.

Even in these communities, kenkus stick close together and spend most of their time interacting with their immediate family or in coterie of like-minded individuals. Kenkus rarely travel anywhere alone, preferring multiple eyes to warn each other of danger or to watch for opportunity.

Kenkus greatly desire wealth, and much like crows and ravens they become obsessed with collecting shiny things. Status within kenku society is measured almost exclusively by ostentatious displays of wealth, regardless of how it was amassed. Theft is perfectly acceptable among kenkus and most aeries are rife with petty bickering as the result of one kenku stealing from another. Kenkus desire knowledge almost as much, particularly the dark secrets

of individuals that they can use for blackmail and extortion.

Ever mindful of their duty to the aerie, even the most selfish kenkus offer a portion of what they find or pilfer to the rest of the flock. Such distributions of food and treasure become true tests of the kenku pecking order, as elder kenkus squawk, squabble, and fight for the finest scraps, while the young and weak look on greedily until their chance to clean up anything that remains. Unsurprisingly, even in a city filled with garbage and abandoned food, starvation proves the primary cause of death among kenkus, followed closely by disease and death by violence. While many races might seek to change their ways in the face of such pointless deaths, kenkus have no sympathy for their brethren who lack the cunning and skill to survive.

Reproduction and child rearing is an odd dichotomy of protectiveness and negligence in kenku society. Kenku females lay eggs like regular birds, but leave the protection of their group's aerie to do so. Creating nests in high, hidden places, mothers seek to avoid scheming eyes and hungry mouths, especially those of their own race. Commonly laid in clutches of three to seven, these eggs hatch after only a month. Once the eggs hatch, the nest is abandoned and the newborns are introduced to the rest of the aerie. Staying close to the communal nests for nearly nine years, the young kenkus learn the valuable skills of hiding, taunting others, and stealing unattended objects, all the while forced to fight for even the most meager scraps of food. Attrition is high among young kenku: typically only half survive the first month.

Kenkus commonly show little remorse for the dead. The bodies of young kenkus who have not yet proven themselves valuable to the community are dumped in some lonely, forgotten spot or given to the aerie's clerics for unspeakable purposes. However, older kenkus who die undergo an

BIRDS OF A FEATHER...

Kenkus were first introduced to the DUNGEONS & DRAGONS game as part of the original ADVANCED DUNGEONS & DRAGONS *Fiend Folio*. These original kenkus were telepathic, hawk-headed kidnappers who commonly wielded quarterstaves or samurai swords. Related to tengus, shapeshifting birdmen of Japanese myth, kenku have appeared in

numerous adventures throughout D&D's history, as well as being memorably featured in the popular D&D computer adventure *Eye of the Beholder*. The kenku's current statistics appear in the *Monster Manual 3*, and these flightless pilferers make appearances in the *Deathknell* expansion for *DUNGEONS & DRAGONS Miniatures* and the *DUNGEON* adventure, "Forsaken Arch," both of which release this month.

elaborate ceremony in which the corpse is placed upon a significant height for winged scavengers to feed on and carry the remains aloft. In this way, all kenkus hope to regain their lost ability to fly after death. The height at which a kenku is placed is directly proportional to its usefulness and respect within the community, with most kenku corpses being placed upon tall hills or castle spires. Particularly honored elders might have their bones borne all the way to a mountain top, while the greatest insult is for a body to be deposited merely on the street, left for the dogs and other land-bound scavengers. In all cases, of

course, the bodies of the dead are thoroughly stripped of valuables first. Pious kenkus are a rare sight and few feel the desire or inclination to become clerics. Those who do find themselves drawn to darker deities, most notably Vecna, the god of secrets, whose dogma parallels the kenku lust for the forbidden. Some particularly sinister kenku—hoping to garner his favor and return to the skies—turn to the worship of Pazuzu (see page 56 of this issue). The demon prince has not forgotten the kenkus' ancestors' betrayal, however, demanding far more of these cults who in turn seek to placate him with grotesquely elaborate and creative sacrifices. Among kenkus, such demon cults are known as "murders."

VERSUS KENKUS

Kenkus possess a well-deserved reputation as devious, dangerous opponents who work extremely well with one another. They prefer to attack only when the chance for victory sits squarely on their side. Although not particularly strong or dangerous as individuals, kenkus congregate and attack in groups, posing a serious threat to those who fail to keep an eye out for danger or consider them beneath attention.

It should also be noted that kenku have a level adjustment of +0. Thus, players and DMs might want to consider

TALONS OF REKROK—A KENKU THIEVES' GUILD

The Talons of Rekrok is a band of kenku thieves, assassins, and information brokers typical to most large cities. Named after its leader, the white-feathered elder rogue Rekrok, the Talons maintain a low profile, but are willing to use their impressive skills for anyone willing to pay their exorbitant prices. Primarily focusing on breaking-and-entering, theft, and murder for hire, this group has garnered a well-deserved reputation for efficiency and a lack of scruples.

In order to employ the Talons, the prospective client must meet one of their agents atop a high place—a castle spire, a watchtower roof, or some other place uncomfortably high off the ground and largely inaccessible. With little chance of escape should things go awry, the client must offer, up front, a combination of treasure (the shinier the better) and tidbits of information. Once the kenku operative—usually one of Rekrok's lieutenants—feels the gesture is made in good faith, the client must offer additional loot, serving as the true heart of the deal. While expensive, the client gains the skills of a dedicated band of murderers, thieves, and other unsavory types for whatever job necessary. However, as might be expected, the Talons are perfectly willing to sell out a potential client for a better deal, especially if the risk proves low.

As with any band of kenkus, the Talons of Rekrok work best together, forming small teams composed of specialists who augment each other's skills. A typical band for a common breaking-and-entering job is comprised of two rogues, two warriors, and an assassin/rogue.

kenkus as a player race in addition to those presented in the *Players Handbook*.

Sneaky Foes: When kenkus fight, they do so with stealth and cunning. Kenkus prefer ambushing opponents and despise a direct fight unless they outnumber their enemies by at least two to one. They choose dark alleys, sewer grates, and other cover from which to strike, using it to protect them from harm and provide them with an escape route if things turn sour. Thanks to their Hide and Move Silently bonuses, kenku slink through most areas without concern.

Beware Allies: Kenkus work best together, as most notably shown by their great ally ability. This ability works with any ally, so a kenku fighting with other types of creatures gets this bonus too. Those fighting kenkus and their allies should keep their backs against walls or some other cover to minimize the chance of getting flanked by more than two kenkus. When fighting kenkus, it's best to find one individual and isolate it from its aerie mates, thus denying it this ability. Also, a lone kenku is much more likely to crack from fear and surrender when cornered rather than face death.

Cowardly Combatants: Kenkus possess a deep cowardly streak and flee

or surrender as soon as things turn against them. If captured, a kenku offers up almost anything for its release, but always with the thought of treachery in the back of its mind. Non-kenkus who deal with kenkus should never accept their word at face value, as kenkus lie and bend the meanings of agreements without hesitation.

Skilled Sneaks: The strength of a kenku can never be judged based on its race alone. Kenkus are often skilled warriors or rogues, and some might even have levels in fighter or cleric. Older kenkus often multiclass between these roles and might even take up the assassin or shadow dancer prestige class.

Don't Believe What You Hear: The remarkable tongue and throat of a kenku allow it to mimic familiar sounds, voices, and accents. As this ability isn't magical in nature, magic often fails to detect this falsehood. In addition, the untrustworthy and duplicitous nature of a kenku virtually guarantees that anything coming out of its beak is a lie. Those forced to make a deal with a kenku should use treasure as an equalizer, as a kenku's natural tendency to lie fails in the face of serious material gain. ■

KENKU MIMICRY

One of kenkus' most distinctive abilities is their power of mimicry. While imitating familiar voices to lure victims into ambushes is a tested staple of their strategy, these cunning birdmen have been known to use this ability to many other devious effects.

City Code: On the bustling streets of any large urban center, no one pays any attention to the whiney of horses, the creaking of wagon wheels, or the tolling of distant bells. Yet if such sounds are part of an elaborate kenku code, they might foreshadow some elaborate concerted crime.

Distractions: The sounds of a battle, breaking glass, or a watch whistle are all sure ways to call attention to an area. Or in the case of kenku using these sounds as distractions might serve to divert even the most attentive eyes.

Gaslighting: Blindfolded and trapped, surrounded by the sound of sharpening metal, monstrous snarls, and pain-filled screams, a victim might reveal anything—never realizing he is actually being held by only a single kenku.

Performance: No sound is too complex for a kenku to mimic, not even those of elaborate musical instruments. Kenkus might use their mimicking ability as a means of performance or to weave elaborate musical illusions.

Pseudo Spellcaster: Hooded and cloaked, a kenku might perfectly mimic the chanting prayers and arcane sounds of spellcasters. Although their words hold no magic, those they're trying to intimidate probably don't know that.

Sow Dissension: Another way for kenkus to use voices they overhear is to try to pass themselves off as the original. If the kenku can convince—or even just confuse—a party into thinking that one of their allies is a doppelganger or shape-shifting spellcaster, such dissension might be turned to their advantage.

by Mat Smith • illustrated by Peter Bergting • Cartography by Chris West

THE ECOLOGY OF THE KOBOLD

Never has a race of creatures been so perilously underestimated.

Countless adventurers' tales describe kobolds as cowardly weaklings easily dismissed by any who encounter them. If kobolds were truly such a pitiful race, however, they would have been exterminated ages ago. Those few survivors of an actual kobold attack tell of devious warriors emerging from the darkness—sometimes through the very walls—in relentless waves of sadistic ferocity and lethal ingenuity.

Brethren of dragons, kobolds are one of the most resourceful, industrious, and tenacious races to ever plumb

the reaches of the Underdark. Hidden away beyond labyrinthine tunnels and countless traps, kobolds manage to do more than just survive in the deadliest realms known to explorers, they thrive.

HISTORY OF KOBOLDS

While not organized enough as a culture to have constructed a common history, kobolds do share a great deal of folklore and a number of heroic stories, most of which vary slightly from tribe to tribe. Not surprisingly, kobold culture lays claim to a few impressive creation myths, including one that traces back through the ages to the earliest times—back

to the cavernous lair of the goddess of evil dragons, Tiamat.

Shortly after the Queen of Dragons laid her first clutch of eggs, an army of thieves invaded her lair. Enraged by the intrusion, Tiamat sprung from her mountainous nest of gold and gemstones to crush the interlopers. Her merciless teeth and claws tore through scores of intruders while her terrible breath weapons destroyed hundreds at a time. The attackers hurled countless swords, spears, and arrows against the Chromatic Dragon. Most of the weapons shattered harmlessly against her formidable hide, but as the battle wore on, those few that hit their mark began to take their toll on the mighty goddess.

Amid the chaos of the frenzied attack, the swiftest of the bandits snatched up fistfuls of treasure and attempted to flee. The boldest of these struggled under the burden of even the smallest of Tiamat's magnificent eggs. Upon noticing the violation of her nest, Tiamat let forth a thunderous roar that brought down the ceiling of her lair and its connecting

tunnels, crushing her attackers and trapping the escaping thieves.

Weakened by innumerable wounds, Tiamat crawled through the rubble of her lair and collapsed upon her nest. Needing time to recover from her injuries and unable to adequately protect her incubating brood, Tiamat used the last of her strength to cause the first of her precious eggs to hatch early. Punching his way out of his still-hardening shell with a stinger-tipped tail like that of his mother, Kurtulmak entered the world.

Infused with a fraction of Tiamat's divine power, Kurtulmak understood his situation and immediately set about clearing the fallen rock from his mother's lair. As he worked, he concocted a way to single-handedly defend the entire cavern from further intrusion. Collecting the weapons strewn about the lair, Kurtulmak constructed hundreds of devious traps to riddle the floor, walls, and ceiling of the vast chamber. Satisfied with the impenetrable perimeter of deadly mechanisms and pitfalls forming

around her nest, Tiamat charged Kurtulmak with reopening the tunnels connecting her lair to the planes and then fell into a deep slumber.

In order to foil further intrusions, Kurtulmak began carving a twisting mazelike network of passages, unfathomable to any but himself. After cutting through miles and miles of rubble, earth, and stone, Kurtulmak eventually came across a niche filled with a small portion of his mother's stolen treasure. As he collected the gold and gems that had become fused in the living rock, intending to return them to Tiamat's lair, he also discovered one of her pilfered eggs. Knowing that the egg had been away from the nest for too long and deciding that his immense task would be easier with help, Kurtulmak caused the egg to hatch, creating miniature incarnations of himself. Thus the first of the kobold race was born.

Working alongside their creator, the kobolds quickly learned the art of mining through the earth and soon had discovered other caches of treasure and wayward eggs (which

KOBOLD KNOWLEDGE

The following table shows the result of a Knowledge (local) check as it relates to kobolds. Gnomes and those who dwell in or explore the Underdark (or the other dark places kobolds thrive) also might possess this information.

Knowledge (local)

DC Result

10	Kobolds are small, weak, cowardly reptilian humanoids who live underground.
15	Kobolds attack in overwhelming numbers using ambush tactics. They foster an intense hatred of gnomes and are highly sensitive to bright light.
20	Kobolds protect their lairs and their narrow connecting tunnels with deadly traps. They often employ poisons (favoring Strength-draining toxins) and guardian creatures, particularly when fighting larger enemies.
25	A kobold tribe usually hoards its treasure deep inside a temple dedicated to its god, Kurtulmak. Filled with the deadliest traps imaginable, these temples are usually rigged to collapse.

Kurtulmak also caused to hatch, further proliferating the kobold race.) Kurtulmak also showed his people how to construct wily traps and various defenses in order to secure the newly carved tunnels. As creatures began to discover and explore the passageways, Kurtulmak taught the kobolds the art of ambushing enemies and the wisdom of entering battle only with the advantage of superior numbers.

As the kobolds grew in number, they continued digging an ever-expanding network of tunnels, eventually reaching every corner of the Material Plane, where they established lairs of their own and began to flourish.

PHYSIOLOGY OF KOBOLDS

Standing just over 2 feet tall and weighing around 40 pounds, average kobolds are physically weak but fast and agile. Their thin and wiry frames make kobolds well suited to moving quickly and fighting within the cramped tunnels of their lairs.

After hatching from its egg, a kobold grows quickly, reaching maturity around the age of six. While the lifespan of an average kobold might be shortened by violence, accident, or disease (in that order), particularly wise and wily kobolds can live up to an astonishing 120 to 140 years (owing to their draconic heritage).

Kobold skulls are often described as being doglike due to their long snouts and sharp teeth. However, many of the characteristics of a kobold's head are more accurately defined as displaying rudimentary features of dragonkind: forward-facing nostrils, ear holes, a forked tongue, and two short, keratinous horns sprouting from the top of the skull.

Kobolds' remarkably sensitive, glowing red eyes allow them to pick out the smallest details from their surroundings, even in pitch-black caverns. However, intense light (such as bright sunlight or that created by a *daylight* spell) is difficult for kobolds to tolerate and causes discomfort and disorientation (resulting in the dazed condition). Kobolds also rely on their acute sense of hearing to detect approaching danger and to pick out familiar sounds that help them navigate the confusing maze of tunnels surrounding their tribe's lair.

Ranging in color from dark, rusty brown to reddish black, the toothy scales that cover kobolds' tough hides are similar to those of an iguana or other large lizard. The scales that cover kobolds' short tails are very fine and slightly lighter than the rest of their mottled hides, giving them a smooth, "naked" appearance. While primarily used for balance, kobolds often use their highly flexible yet non-prehensile tails to wield specialized

weapons (see the tail blade and tail club in *Savage Species*).

Kobolds can eat just about anything—plants, animals, and even intelligent humanoids (cannibalistic kobold tribes are common). Despite an omnivorous diet, kobolds do not possess differentiated teeth—they are all short and pointed. Interestingly, a kobold loses and grows new teeth throughout its entire life, taking anywhere from two to three years to completely replace an entire set of fifty-four. Kobolds often save their teeth, strung on necklaces or other adornments, as an impressive demonstration of their age.

PSYCHOLOGY AND SOCIETY OF KOBOLDS

As a relatively small and physically weak race, kobold society revolves around survival. Virtually every aspect of all kobolds' activities contribute toward the tribe's survival in one way or another. As such, all kobolds serve their tribes by filling at least one of several predictable roles.

Kobold trapmakers not only create deadly devices that guard against intruders, they also design contraptions to catch or kill animals for food. Farmers cultivate mushrooms and edible plants as well as carnivorous, poisonous, or dangerous vegetation that serve as barriers or deterrents against invasion. Miners extract precious metals, minerals, and gemstones from the earth while carving the intricate tunnels and chambers that form the tribe's lair, its outlying defense, and mazelike escape passages. Animal handlers capture, raise, and train the tribe's guardian creatures while also tending small herds of lizards, centipedes, or other domesticated animals and vermin.

The warriors of a kobold tribe, of course, play the most proactive roles in the tribe's collective effort to survive. Kobold warriors constantly remain active and alert—verging on paranoia. The need for constant watchfulness is such that a warrior caught sleeping or distracted while on duty faces a death sentence.

KOBOLD TRAPS

For miles around and throughout every kobold lair are set a dizzying number of traps. Kobolds make use of materials from their surroundings and use weapons and armor from fallen enemies. They fill clay pots with vermin, oozes, and other deadly substances. They lace corpses with vermin eggs, ready to burst into swarms, and cultivate deadly plants, mold, and fungi. They dig pits lined with disease-ridden spikes or containing deadly creatures. Kobold trapmakers are renowned for their enviable skills but feared for their innovation—they're always devising something new.

Ceramic Mines

Commonly fashioned as shallow ceramic bowls, ceramic mines are filled with any of a variety of alchemically prepared substances and then sealed. The creation process, which involves firing the ceramic vessel in a kiln, creates a fragile vessel filled with a pressurized gas or liquid that explodes outward when the mine is broken (Hardness 2, 2 hp).

Usually buried in a passageway so that a passing creature treads upon them, some ceramic mines are concealed in walls or ceilings to be targeted with a crossbow bolt or sling stone during a fight. Others are fashioned to appear like rock formations (usually stalactites or stalagmites) or even decorative sculptures. Sculpted ceramic mines are commonly placed where they can be dropped on opponents or hidden among kobold treasure hordes to confound thieves (often exploding within packs of stolen loot). Substances often used in the creation of ceramic mines include inhaled poisons, molds, oozes, slimes, vermin eggs, or other alchemical substances.

Ceramic Mine (Basic): CR 1; mechanical; touch trigger; no reset; DC 11 Reflex save half damage; 2d6 points of acid, cold, or fire energy damage; single target; Search DC 25; Disable Device DC 15; Market Price: 600 gp.

Ceramic Mine (Green Slime-filled Stalactite): CR 5; mechanical; location trigger; no reset; Atk +15 (2d6, stalactite; see note); single target; Search DC 15; Disable Device DC 15; Note: When targeted square is entered, this stalactite drops from the ceiling, possibly striking the character. Upon impact, the stalactite shatters, covering everything within the target square with a veneer of green slime (see page 76 of the *DUNGEON MASTER'S Guide* for effects); Market Price: 2,500 gp.

Kobold executions usually take the nerve-racking form of forcing the condemned to test the effectiveness of newly created traps. The execution continues until either the condemned kobold is killed or he has sprung or avoided three traps. At that point, the kobold emerges either as a corpse or an exonerated hero worthy of praise and respect from the tribe.

While survival of the tribe is paramount, for an individual kobold self-preservation remains top-of-mind. Because of this "better you than me" mentality, patrols and warbands actively recruit even the weakest, most incompetent, and dull-witted kobolds. That way, when encountering a superior enemy, the clever, swift, and strong kobolds can safely retreat while encouraging their less-apt companions to "hold them off while reinforcements move up." (This explains why the caricature of the bumbling kobold remains so prevalent—those are the ones most adventurers actually see.)

As Kurtulmak teaches, fleeing from certain, probable, possible, or perceived danger is acceptable, intelligent behavior. Most kobolds quickly come to the realization that "I don't have to outrun a dire bear, I just have to outrun another kobold." Particularly clever kobolds discover that tripping or incapacitating another kobold often makes it even easier to get away. Survivors of these when-push-comes-to-shove situations become envied by their more fleet-footed peers for their ingenuity and superior escape tactics.

The only exception to this cowardly trend arises when a kobold warband encounters a group of gnomes. All kobolds share a vitriolic hatred of gnomes and (unless outnumbered) ferociously ambush them on sight, fleeing only if the tide of battle turns tragically against them.

TRIBAL STRUCTURE

Most kobold tribes form caste-based gerontocracies—where the oldest

individual kobold leads the others. Often, this leader is a powerful sorcerer, but occasionally a highly skilled warrior or another particularly talented kobold outlives his contemporaries to assume the leadership of a tribe. Change in leadership usually happens when a leader dies, although some are usurped when the tribe determines that the mere fact that he continues to draw breath no longer warrants his position of power.

Tribal laws come and go as each leader of a tribe changes rules to suit his personal ideas and vision. Regardless, a constabulary force enforces even the newest laws as if they had always existed, often causing problems for kobolds away from the tribe during a change in leadership. Devious kobolds who come to power occasionally institute laws that enable them to eliminate rivals or make other personal gains.

Clerics of Kurtulmak (known as Eyes of Kurtulmak) rarely live long enough to become chieftains. However, they

do possess a great deal of power and influence within the tribe, as their place rests at the center of every important endeavor. The installation of traps and construction of other tribal defenses are always blessed by a cleric of Kurtulmak. Additionally, they oversee a tribe's tunneling and mining efforts, directing new excavations toward "divinely inspired" goals, such as one of the fabled Lost Eggs of Tiamat. Whether exploring new areas, facilitating a trade of commodities, or probing for weaknesses in nearby gnome or dwarf settlements, an Eye of Kurtulmak leads all expeditions. Every warband, hunting party, and raiding party includes at least one cleric, whose presence and prayers draw the favor of their deity down upon them.

While worship of Kurtulmak is prevalent in kobold societies, organized religious services are virtually nonexistent. However, all kobolds utter small prayers and makes observations to their deity regularly throughout the day. This is largely because Kurtulmak takes a very active interest in his people, to the point that he regularly sends an aspect of himself to assist in particularly important raids, battles, or other crucial undertakings.

A kobold tribe's activity continues around the clock, with each kobold's work, rest, and recreation time broken into shifts based on the amount of time it takes a patrol to make one or more tours of the tribe's longest patrol route. (Kobolds keep track of time in "watches," rather than "hours," making each tribe's unit of measure different.) This perpetual activity keeps a tribe extremely vigilant.

As a caste-based society, certain occupations afford greater privileges. Each caste, in turn, forms a sort of pecking order that determines leadership and differentiates a master from an apprentice. (Positions in this chain of command shift with regularity, as talented and determined kobolds supplant those above them.) Gender has no bearing on the structure of kobold society—roles

and responsibilities fall upon the most suitable or convenient individual.

The most coveted and privileged roles for a tribe member are trapmaker, sorcerer, caretaker, and warrior. Clerics, farmers, and miners make up the bulk of the tribe's second-class. Animal handlers, craftsfolk, and those with other abilities usually fill the lowest rank in a kobold tribe, as their contribution to the welfare of the tribe doesn't immediately impact its survival.

NEST TO PYRE: GROWING UP KOBOLD

Kobolds rarely mate for life. Typically, a romantic bond between an adult male and female lasts no more than a few months, often culminating in the female laying a single egg. Kobolds of both genders remain fertile throughout their adult lives, with females capable of laying around a half dozen eggs over the course of a year.

Kobolds are partially ovoviviparous—the embryonic kobold develops inside its egg for two months before its mother lays the egg and another two months before hatching. Once laid, each egg is carefully collected in a central nursery where caretakers and an array of traps keep them safe. (Once an egg has been moved to the nursery, neither parent takes much interest in its welfare—a task left to the caretakers.) A typical clutch of eggs for a tribe of two hundred kobolds ranges anywhere from twenty to fifty. Upon hatching, kobolds are fully formed and somewhat self-sufficient (able to derive nutrition from just about anything they can chew),

but aren't strong enough to fend for themselves against predators.

During the first six months of life, hatchlings form powerful emotional bonds with their clutch mates—other kobolds who hatch within a month of one another. The intense rivalries and friendships developed between clutch mates are the strongest in kobold culture.

Hatchlings quickly develop motor skills and a rudimentary understanding of the Draconic language. Also among the first things taught to hatchlings are fundamental survival skills—ranging from rock throwing and digging holes to running away and hiding. Kobolds' natural talents for trapmaking are also fostered at an early age. Kobolds learn to use simple weapons, such as slings and spears, as soon as they're coordinated enough to survive the learning process. Caretakers note each hatchling's particular skills and aptitudes (or lack thereof), watching for that first spark of sorcery, gift for trapmaking, skill with a weapon, or any other trait that could pigeonhole where a kobold might fit into the tribe.

By age two, a kobold may petition to leave the nursery by enduring a private ceremony known as the Blessing of the Pit. Presided over by a caretaker and an Eye of Kurtulmak, the simple ritual requires the kobold to cross a 10-foot-wide pit constructed with a variety of hazards. Pit dimensions and contents vary from ritual to ritual as determined by the presiding priest. How the young kobold leaps over, climbs around, drops

down to navigate through, or otherwise circumvents the danger is irrelevant—the end result being what's important. By successfully reaching the far side, a clever or capable kobold earns the Blessing of the Pit and the right to join the rest of the tribe as a juvenile. Failure to cross the pit invariably results in the unremarkable death of a particularly clumsy or dull-witted kobold.

The Eye of Kurtulmak who presides over the ceremony assigns the young kobold her first role in the tribe. The assignment usually follows the suggestions of the nursery's caretakers, but might differ depending on the presiding cleric's whim or the immediate need of the tribe. (If an entire warband has recently been slaughtered, the nursery produces a surprising number of new warriors.)

Non-warriors aggressively seek out apprenticeships in accordance with their assigned roles, trying to impress would-be mentors with demonstrations of talent or capacity for a chosen vocation. An apprenticeship might last anywhere from six months to several years, terminating when the student demonstrates a higher degree of skill than the master (at which point, their roles are reversed).

A significant number of kobolds (often those without any noteworthy talents or ambitions) become miners. Fortunately, few races possess a greater inborn proclivity for mining than kobolds. The unrivaled industry and skill of a kobold workforce produces a remarkable amount of gold, iron, coal, and other valued substances in a stunningly short time. Governments and crafts guilds often secretly employ kobolds for just this reason.

Kobolds most commonly mine in one of two ways, as dictated by threats within those regions and the ambitions of their leader. Some skittish kobold

miners venture far from their lairs, yet avoid lingering around large deposits of precious metals and gemstones for very long, as too many other races seek such treasures. When encountered, these miners usually extract a few cartloads of these valuable substances and then hurry back to their lair. Alternatively, more ambitious kobold tribes covetously guard precious deposits and mine them until depleted. Rather than hoarding such wealth, such tribes usually turn their treasures toward currying the favor of more powerful allies, like derro, troglodytes, and deep-dwelling dragons.

Working in tandem with miners, tunneling crews are charged with exploration and crafting defensive mazes around a tribe's lair. They often employ trained or magically controlled burrowing creatures, such as dire badgers or thoqqas, to speed their efforts.

Budding warriors are assigned to the tribe's constabulary, the least-respected role in the warrior caste,

where they gain additional training with weapons and simple tactics. By the time a kobold outgrows her first set of teeth, she is considered old enough to join a patrol. (Some kobolds, eager to see action before their third year, attempt to collect or claim other kobolds' teeth as their own.) In order to join, a kobold must prove herself worthy by defeating and taking the place of a superior. Such challenges rarely prove fatal, but the grudges they often produce frequently end in accidents in the field.

By the onset of adulthood, a kobold usually settles upon a vocation, although this role commonly changes several times over the years depending on the fluctuating needs of the tribe. At this point, a kobold focuses on honing her skills in order to increase her standing in her caste and value to the tribe. Age and ability are the two most attractive qualities a kobold can possess, warranting larger shares of food, safer sleeping arrangements, better weapons and

gear, and increased interest from the opposite gender. An adult kobold's life consists of perpetual jockeying to gain more of all of these.

Kobolds usually meet their end in combat, during a cave-in, or in a messy accident involving a newly installed trap. In order to avoid attracting scavengers, and not wanting to waste perfectly good meat, the remains of a slain kobold are usually cooked and eaten. Hunting parties use the bodies of kobolds who died of disease or poison as

bait. Tribal heroes and those few kobolds who live long enough to die of old age receive the honor of being burned on a funeral pyre (after they've been stripped of particularly valuable items and gear).

KOBOLD LAIRS

Kobolds have been encountered in just about every location that is suitably dark and restricts the movement of Medium or larger creatures, such as heavily overgrown forests, jungles, and swamps. However, most

kobold lairs are located underground, formed by series of interconnected caves surrounded by a snarl of trap-laden tunnels and shafts that might span several miles. Innumerable intersections, unexplained dead-ends, and concealed passages make navigating the labyrinthine network all but impossible for any outsider. While even the largest tunnels usually hamper the movement of anything much bigger than a kobold, some narrow to a point so that even

THE ORIGIN OF KURTULMAK'S RIVALRY WITH GARL GLITTERGOLD

From a young age all kobolds learn to hate gnomes and crave to confound all their efforts. This rivalry amounts to far more than ingrained racial hatred, however. Rather—as kobold priests often relate—there is a very specific reason for this centuries-long blood feud, which traces back to their very gods.

The Kobold Myth

Long ago, Kurtulmak set about carving an immense cavern, the grandeur of which soon rivaled the audience chambers of any of the other deities. Kurtulmak intended to use the magnificent grotto as the setting for the greatest prank ever played—he planned to invite all the other deities to dinner, and as entertainment he would tell the tale of “The Violation of Tiamat’s Lair,” ending when he dropped the cavern on their heads.

As a miner without equal, Kurtulmak skillfully cut from the roof and walls ponderously large slabs of rock and held them in place with a complex, interconnected series of cunningly wrought and artfully concealed beams. The entire devious construction,

which ranged over the whole cavern, would collapse in rapid succession after the removal of a single golden keystone.

One day, while looking for shiny gemstones, Garl Glittergold passed near Kurtulmak’s cavern and heard the toil within. Ever curious about Kurtulmak’s activities, Garl crept nearer in order to spy upon the kobold god, as he so often did. As he caught sight of the grand cavern, the gnome god stopped to observe Kurtulmak’s breathtaking endeavor.

While puzzling over the intricately crafted stonework, Garl’s eye was caught by the twinkle of a small, gold-colored stone wedged tightly into a nearby wall. Greedily, he tugged and tugged on the sparkly stone, but it wouldn’t come loose. Frustrated, Garl gave up his struggle in order to further marvel at the work that sprawled overhead. Slowly, the nature of Kurtulmak’s construction dawned upon the gnome god who then guessed at the keystone’s purpose, becoming awed by Kurtulmak’s incredible skill.

Stricken with jealousy, Garl became intent on destroying Kurtulmak’s brilliant creation before anyone else witnessed its subtle majesty. He seized the keystone once more, twisting and turning it every possible way until he finally wrested it free from its socket. As Garl dropped the golden prize in his pocket, a sudden rumbling noise filled the enormous cave. Frightened, he fled down a nearby passage and hid from the catastrophic cave-in that followed. As a souvenir of his harrowing experience, Garl pierced the stone and hung it on a chain around his neck, adopting it as his own holy symbol.

Kurtulmak, furious at the cavern’s impossibly premature collapse, quickly dug his way out from under countless tons of stone. Soon afterward, the kobold deity discovered the culprit responsible for the calamitous event when he noticed Garl wearing his keystone like a trophy around his neck. Kurtulmak confronted the gnome god, who nervously chuckled, dismissed his disastrous act as an

Small creatures must squeeze in order to pass.

At least one section of virtually every kobold tunnel is rigged to collapse, enabling a tribe to quickly and easily seal off a passage in the event of an invasion or other imminent danger. To prevent accidents, these areas are usually constructed with two or three fail-safes (requiring the removal of multiple bypasses before triggering the cave in), although some function as particularly deadly traps.

The actual inhabited area of a tribe's territory consists of an ant-hill-like combination of natural and kobold-made chambers often adorned with simple carvings, murals, and totemlike trophies. Aside from these rudimentary decorations, most kobold lairs are fairly Spartan, as individual kobolds keep all of their personal possessions with them at all times. Usually shared by several kobolds at a time, in shifts as each day progresses, living and sleeping

quarters take the form of ledges, nooks, and small caves fashioned to conceal their occupants from casual observers (Spot DC 14). Kobold lairs are very clean and sanitary; waste is disposed of by dumping it down a deep shaft or by feeding it to a captive creature that subsists on refuse, such as an otyugh or gelatinous cube.

Every kobold community contains a temple or shrine to Kurtulmak carved from solid rock and accessed through twisting, trap-filled tunnels. The skulls

episode he'd long forgotten, and hastily excused himself.

His legendary stunt spoiled, Kurtulmak vowed to exact a slow and terrible revenge upon the gnome god. Kurtulmak's intense hatred for Garl Glittergold sparked a feud between the two that spread across the planes, touching the races created by each of the deities, which explains why kobolds and gnomes hate one another.

Gnomish Revisions

While the basic points of the story of how Garl Glittergold collapsed Kurtulmak's cavern remain irrefutable, most gnomes point out a few misconceptions about Garl's intent and involvement with the kobold god's schemes.

Never having taken any real interest in Kurtulmak, Garl found himself at the entrance to the kobold god's cavern only because of the tremendous racket echoing from within. Having followed the cacophony of hammer, pick, and chisel, Garl became somewhat curious about the work going on inside. Renowned for his masterful execution

of countless practical jokes, The Joker quickly surmised what Kurtulmak was up to. When the twinkling keystone caught his eye, Garl smiled as he instantly understood its function and decided to put Kurtulmak's work to the ultimate test—just to see if it would work. The gnome deity was pleasantly surprised when the entire cavern actually did collapse, toppling Kurtulmak from his ladder and burying him under enormous slabs of stone. The gnome god decided to keep the nugget-shaped keystone both since it so closely resembled his long-held holy symbol and as a souvenir of his quickly forgotten little joke.

As Garl has greater cosmic concerns and distractions, the conflict between he and Kurtulmak continues, for the most part, to be a one-sided battle. However, as kobolds developed a deity-fueled hatred for gnomes, they came to pose a very real danger to his people. Because of this, Garl keeps a casual eye

on his self-proclaimed "archenemy" and warns his followers to never underestimate the threat posed by Kurtulmak's vicious spawn.

of all the gnomes slain by the tribe festoon the interior of the temple. Deep within the structure, the accumulated wealth of the tribe lies secured within a heavily trapped vault. (Reliable sources report that kobold temples are always constructed in such a way that they collapse when triggered purposefully by attendant clergy or accidentally by unwitting thieves.) Few kobolds, aside from the clerics who know the secrets to the temple's many traps, actually ever set foot inside the temple. Instead, kobolds offer prayers at its entrance with the belief that Kurtulmak hears them.

While the temple to Kurtulmak is a lair's dominant edifice, the most important structure to a kobold tribe is its well-concealed and trapped nursery, with hatchlings raised in a secured cavern and eggs locked away in a well-protected hatchery. Safe passage into and through the nursery requires admittance and guidance by one of its caretakers.

Other structures commonly found within a kobold tribe's lair include a small forge, an oven or kiln, a well or cistern, and a chamber that serves as a storage locker for food gathered by the tribe's farmers, foragers, and hunters. Large caverns nearby are often reserved for cultivating foodstuffs and raising livestock. Located throughout a kobold lair, particularly at every entrance and major intersection, signal devices such as gongs, drums, or horns contribute to the tribe's collective vigilance.

The layout of a kobold tribe's lair is extremely fluid—workers regularly collapse or seal off tunnels and caves as they carve new ones. This makes any information about the layout or location of areas inhabited by kobolds progressively less reliable over time. In fact, a kobold lair actually migrates slowly through the Underdark as its miners and priests cautiously search for a defensible, safe area in which to establish a more permanent kobold settlement.

VS. KOBOLDS

Because of their physical weaknesses, kobolds rely on a combination of ambush tactics, ranged attacks, traps, and overwhelming numbers to defeat

MINIATURE MULTITUDES

Along with D&D staples and fan favorites like orcs, goblins, and drow, *DUNGEONS & DRAGONS Miniatures* provides a host of miniature kobolds, each meticulously crafted to 32mm scale. Starting with the Kobold Warrior in the *Harbinger* set, kobold reinforcements have since appeared in *Dragoneye* (with the Kobold Skirmisher) and *Aberrations*

(featuring the Kobold Champion and the Kobold Sorcerer). This trend continues next month with the release of *Angelfire* and the new Kobold Soldier.

Kobold Champion **Kobold Sorcerer** **Kobold Soldier**

their enemies. Never underestimate the viciousness of a kobold force and always remember the veteran explorers adage: "For every kobold you see, there's a dozen more hiding in the walls."

Watch for Traps: Walk slowly and carry a 10-foot pole. Kobolds protect their lairs and a vast area surrounding them (reaching miles in all directions) with all manner of traps. Use caution when moving through kobold territory, making liberal use of Listen, Search, and Spot checks along with tracking and stone cunning abilities if available. The Disable Device skill also proves invaluable. Keep in mind that by the time a party actually sees a kobold, they've probably already stumbled deep inside a tribe's trap-laden province.

Be Suspicious: A kobold holding its ground is probably bait, daring an attacker into moving within range of an undetected trap or other threat (such as a roper or darkmantle). Taking the time to make a Sense Motive check on any enemy is never a bad idea.

Beware Divine and Arcane Magic: Fear the wrath of Kurtulmak and the blood of Tiamat, as a kobold warband always counts a cleric and often at least one sorcerer among its number. Commonly used spells include those that bolster the effectiveness of a warband's members, such as *bear's endurance*, *bless*, *cat's grace*, and *haste*, as well as spells that add to the warband's numbers and strength, such as monster summoning and *planar ally* spells. Spells such as *confusion* and *suggestion* are also often used to reduce the effectiveness of an enemy force.

Light 'Em Up: Kobolds prefer to fight in darkness, where they retain an advantage over light-dependent enemies. Extinguishing light sources is among the first actions taken during a kobold ambush. Like many underground-dwelling creatures, kobolds become dazzled in bright sunlight. Well-prepared explorers of any subterranean realm should possess at least one *daylight* spell, although scrolls and wands of this spell might prove even more valuable.

Fire Bad: Kobolds always try to use a party's already-lit torches and lanterns to ignite combustibles—such as oil, flammable gas, or other alchemical substances. Using magic light sources, such as magic weapons or sunrods, avoids inadvertently contributing to the kobold war machine.

Poison: Kobolds often employ poison on their weapons and traps, favoring Strength-sapping toxins harvested from domesticated vermin (most commonly Medium spiders and Large scorpions).

Don't Start a Fight You Can't Finish: Encounters with kobolds are often cut short as they flee into the darkness. Their hit-and-run style of fighting usually lead adventurers to mistakenly claim victory. As Kurtulmak teaches, no fight is truly over if even one kobold survives. Surviving kobolds regroup, gather reinforcements, and patiently tail a party with the intention of springing another ambush. This follow-up attack likely occurs after the party has been weakened by another threat, is incapacitated or distracted in some way (such as by climbing a wall), or has settled down to camp. ☐

Kobold

“Clink. Clink. Clink. All night we heard their damn picks and hammers, prying the earth apart one seam at a time. At night, we saw their eyes and heard the rustles in the bushes, and even the creak of the small carts they used to carry ore. Each morning, when we went to the quarry, our tools were missing, and their clawed footsteps showed us where they had been. But we left them alone, and they left us alone, until that damn fool dwarf Hedras decided he should stay after sunset, as a night watchman, and drive them away.

“We found Hedras the next morning, his beard and bits of his bones sticking out from under a deadfall they rigged over the quarry trail. We never did see a kobold, and I hope I never do.”

—Darath Fellmin, Mine Manager

Kobolds are creatures of the deep, dark places of the world. They are masters of digging, setting traps, and engineering the earth, making them the lesser cousins of dwarves in many ways. They are cowards individually, but they always come in large numbers, and usually by night. Kobolds never fight fair—traps and poison, subterfuge and diabolism are their tools and pride. Kobolds hate goblins, gnomes, dwarves, and a long list of other creatures. They are false friends and schemers.

Overview

Kobolds are among the weakest humanoids, yet their hatred of all other races makes them fight as fiercely as creatures six times their size. They are small but cunning, channeling their evil into traps, schemes, and plans that never seem to quite bring them the respect they are certain they deserve.

Long ago, kobold legends claim, kobolds were the true-blooded sons and daughters of dragons. They were the first to learn magic (which they foolishly shared with the elves), the first to make tools and dig metal from the earth

(which they foolishly showed to the dwarves), and the first to herd animals and keep their meat, milk, eggs and leather (again, foolishly shared with humans). In fact, according to kobolds, they did everything first, as their dragon mothers and fathers loved them above all others.

No one else believes in this version of events, and it makes kobolds furious. They enjoy raiding and capturing the “lesser races” to show their superiority, and they have a strong evil streak, apparently also inherited from draconic forebearers. Dragons themselves find this all a little embarrassing, but chromatics indulge the “wingless wyrms” like favored pets.

Kobolds know they are weak, and so seek to ally themselves to strength: strong animals, strong patron gods, strong traps, and strongholds. They dig to hide themselves, then set traps and alarms all around their lairs just in case someone does enter their territory.

Despite their conflicting ego and fear, kobolds make good servants, as long as they understand the hierarchy. They respect strength, keep their word, and bow down to “the big ones” as long as they are in arm’s reach. Once they are left to themselves, things often go missing or break mysteriously.

Kobold combat is a bit of a contradiction. Their tactics focus on retreats and ambushes, although they willingly follow a strong dragon or bulette’s charge on a battlefield. They grow bold only in defense of their eggs and underground homes.

Ecology

Kobolds are hatched, not born, although few ever see this happen. Their nesting tunnels are the deepest and most secure, lined in feathers and soft grasses and kept warm by the earth’s natural warmth and heat from smoldering charcoal and heated stones. A kobold’s early years are spent entirely underground, away from the harsh sun.

Young kobolds mature and are sent raiding or mining by the age of 10. They grow to a little more than 3 feet tall and weigh about 35 pounds fully grown. In the rare cases when they do not die violent deaths at the hands of larger creatures, kobolds can easily live to 130 or 140 years.

Elderly kobolds are rare on the surface, but are quite common hidden deep underground. Kobold matriarchs, in particular, become more fertile with age. A kobold egg-mother who reaches the age of 40 or more can lay as many as 50 or 60 eggs per year. An egg-mother who reaches the age of 80 can lay 100 eggs per year. These numbers help explain kobold survival in an uncaring and hostile world.

It also explains why they are so determined in defense of their lairs. A relatively small number of egg-laying elderly matriarchs can breed an entire tribe, but only when nesting and brooding. If they are disturbed, their

egg laying tapers off and, given kobold losses to natural causes and predation, any decline in the hatching rate is dangerous to a small tribe. As such, elder matriarchs are hidden in heavily trapped mazes and fiercely defended. The only time kobolds show serious physical bravery is in defense of their nesting grounds.

Kobold eyes are invariably red, but their scale color varies. The scales of kobolds often match the colors of the chromatic dragons: red and black are common, while green, white, and blue are less so. Wild or mongrel kobolds sometimes have brown, gray, or rust-orange scales. They have small tails and blunt snouts, somewhat like lizards, and their voices are a bit rough, like a barking dog. Their clawed hands are large proportional to their size.

Kobolds are never farmers and are rarely great hunters (their nobles practice it as sport, but not for sustenance). Instead, their skills at mining, extortion, and trapmaking generally make them useful to larger and more powerful races that see to their feeding. They gather plants from the forests, trap small animals, and eat most creatures smaller than themselves. They take considerable delight in torturing fey, gnomes, and goblins.

Kobolds are fairly good at animal husbandry: they keep dire weasels as guard animals and dire boars as pack animals and war beasts. These are by no means the strangest creatures found among kobold tribes. Kobold scouts and raiding parties generally prefer boar mounts and weasels as tracking and harrying animals, a bit like hounds are for humans. The boars, in particular, are often outfitted with panniers and baggage saddles to carry the maximum amount of plunder from a raid. In underground environs close to dwarven ruins, kobolds rely on slurks, a form of slime-covered toad (see *GameMastery Module D1: Crown of the Kobold King*). These hopping mounts are ideal for crossing large ditches and moats, and they give kobolds the ability to retreat quickly from an ambush.

In addition, advanced kobold tribes train bats as messenger animals. Clouds of bats keep these kobold tribes in close communication. When tribes gather in huge numbers to raid racial foes, their gatherings are only possible because of their swarms of homing bats.

Kobolds frequently tame bulettes as mining machines. Few people have ever seen the ones that kobolds just call mine diggers, but they can tear through stone at a kobold’s command and are trained to follow a vein through rock. Kobolds treat these as their best and favorite animals, and show remarkable ferocity when they are fighting beside one of these beasts. Kobolds seem to think that bulettes simply cannot be defeated; if one is slain, kobold morale within sight of this disaster always collapses utterly.

Kobolds understand the principles of breeding to type, backcrosses, and other elements of animal husbandry, but

STARING BOX

Many kobold sorcerers make a magical trap called a staring box, which resembles a treasure chest or an ivory or rare wooden coffer, such as a merchant might use to transport jewels. When a staring box is opened, however, a *hypnotic pattern* spell is unleashed, affecting all those within a 10-foot radius who fail a DC 14 Will save. The pattern remains for 1d6 x 10 minutes. Kobolds are entitled to a +4 racial bonus on this save, as they often use such boxes as a form of entertainment, staring slackjawed at their glittering light patterns for hours.

SMOKE BULLETS

It's unclear whether these sling stones are the product of kobold alchemy, sorcery, or both, but they are fairly effective weapons. They can be hurled as sling stones with normal range, but require only a touch attack to succeed. When they strike a target they release a cloud of gas that requires a DC 13 Fortitude save. If the saving throw succeeds, the target is unaffected. If the save fails, the target is nauseated for 2 rounds.

they lack a standard. Different tribes prize different sizes, patterns, and colors of domesticated animals, and they are cruel masters. Animals that fail kobolds are either quickly sold or eaten—usually eaten.

Habitat & Society

Kobolds live in dark, deep forests with heavy undergrowth, and underground in mines in any mineral-rich region. They avoid the sun entirely, as it dazzles their vision. Those who do visit the surface scurry away to their lairs each dawn, returning to the Lands Above only after sunset. Many live their entire lives in cities deep underground—some as slaves to the drow, others free and fierce in narrow cities that only *svirfneblin* can visit without shrinking magic.

Kobolds are good miners and many of them love work. These miner kobolds cheerfully spend all day in the mines or at the smelter, sleep, and then wake up to do it again. Unlike many humanoid races, their work ethic is astounding. Perhaps they feel an urge to compensate for their small size with relentless persistence.

While their numbers and industry make it possible for them to earn their keep entirely from hard labor and the rich rewards of toil, many kobolds do not live as miners. Their innate cowardice and cruelty impel them to prove themselves by capturing and tormenting other creatures, claiming that their noble draconic blood entitles them to far more respect than they receive. This insecurity makes kobolds very susceptible to flattery.

Kobolds make good spies in underground societies, as they are small and rarely noticed. Most underground races consider them slaves or servants, and speak in front of them without care. Kobold spies use this to their advantage. Their ability to hide in small spaces for long hours also helps them. Like reptiles, they seem able to doze in a form of torpor that is not quite sleep, but simply very low activity.

Kobolds are surprisingly competent with math, masonry, carpentry, smelting, metalworking, and mining. They never create masterwork items, but the sheer size and volume of their warrens is rarely appreciated (because they are too small for larger races to visit—even dwarves have a tough time in tight kobold tunnels). Their largest cities stretch for miles, unsuspected by those living above.

Finally, kobolds often work with mechanisms other than traps, such as locks, clockworks, constructs, and even large public clocks or bells. Although they lack strength, their nimble fingers are often in demand for fine metalwork among jewelers, so long as they are never trusted with unsupervised access to valuables. Most kobolds employed in this way are kept locked inside the jeweler's shop.

Not all kobolds are valued for their skill. Wild forest kobolds are barely literate, barbaric creatures who live merely to hunt and kill and feast on their enemies (that is, everyone non-reptilian). These kobolds live short lives but breed prodigiously to make up their losses, and are often involved in blood cults and child kidnappings.

Most kobolds venerate the gods of their draconic ancestors or, in some rare cases, an actual dragon who happens to live nearby. To them, these are living gods and ancestral gods, and are addressed as family. Food, gold (which dragons love, but kobolds seem less keen on), and livestock are typical offerings. Kobolds are quite practical, and they know that dragons don't really appreciate traps, clockwork devices, or well-trained bats.

Some kobolds take to diabolism and worship Asmodeus, the Prince of Devils and Master of Witches. In this sense, they are the perfect pawns: willing to do anything in the hope of power—even selling their souls,

sacrificing their children, or killing indiscriminately when ordered to.

Kobolds also worship Lamashtu, mother of monsters, offering her frequent blood sacrifices and even (it is said) the unhatched eggs of their young. Other stories claim that Lamashtu is the patron goddess of the kobolds, and that she watches over the race to ensure it thrives and multiplies.

Kobold priests tend to emphasize the glories of the afterlife in an effort to instill courage in their followers. Most kobolds are too canny or cowardly to believe that the afterlife is any better than their current existence, and exhortations to sacrifice themselves are usually ignored unless the kobolds' lair or fellows are threatened.

Kobolds have an unhealthy fascination with traps and deadly devices of all kinds: blades, spikes, spears, darts, fire jets, crushing stones, and acid baths are all popular ways for them to defend their homes against bigger and stronger creatures. Although all kobolds are adept at trapmaking, the elders are usually the ones asked to build the deepest pits or the deadliest poison needletraps. Different clans tend to use different styles of devices, and especially successful trap designs are passed down in family lines.

Traps themselves are often combined with ambushes, as no kobold wants to fight an unbloodied foe. Deadfalls, rolling logs or boulders that knock opponents prone, and bear traps that hold a foe in place are the typical traps used in quick ambushes. The last of these is always combined with ranged weapons—while the bear trap holds a leg, kobold slingers finish off the prey.

With more time to prepare, kobolds set up pits with stakes, hidden nets, and oil-slicked fire zones at ambush sites. The traps around a matriarch's nesting ground tend to be layered with poison needles protecting spear traps, pit traps at the end of corridors that release poison gas, falling stones that push foes into spike pits, and so on.

Campaign Role

Kobolds are best played either as skulking, annoying menaces who never fight fair or as comic relief—a race of creatures with a bit of the buffoon about them, always shooting for the moon.

As skulkers and diabolists, they are best never seen immediately, but serve as masterminds buried deep in tunnels and operating through more physically powerful intermediaries. A kobold works through others both because he is weak and because he is a coward.

As comic relief, they make good but completely unreliable minions and servants, scraping and bowing before the obviously more powerful big people, but quick to run off in the night if it suits them. Kobolds are an excellent source of rumors and information, because

KOBOLD SLANG

Kobolds speak with a high-pitched chatter, and babble on with frequent repetitions. Their version of Common contains many pidgin words and bits of slang, such as the following.

- Beards:** Dwarves.
- Bigfeet:** Medium or larger humanoids
- Blackeye:** Any non-reptilian creature or humanoid.
- Eggsucker:** A vile insult.
- Digger:** A bulette.
- Ears and Arrows:** Elves.
- Fight-Fight:** An ambush and retreat.
- Goldfever:** Greed or excessive bravado.
- Good-Good:** Warmth or thanks
- Hatchwit:** Young, green, inexperienced
- Mother-egg!** An expression of alarm or fear
- Redgut:** Hunger. "Me have redgut."
- Run-Run:** Retreat.
- Shiny-Shiny:** Any treasure.
- Slow Fang:** A trap.
- Snout-Stinks:** Orcs.
- Stink-Stink:** Carrion, or sometimes poison.
- Sunmeat:** Mammals or prey.
- True-Trueblood:** A dragon.

they are weasely little snitches who try to ingratiate themselves with anyone. They can keep a secret, certainly, but once they decide to spill the beans, they usually seek out someone else who they think might take action.

Kobolds play on their weakness. Most good people hesitate to kill a lone kobold out of hand (considering them not worth the time or otherwise too pitiable), and might even attempt to "reform" the creature. Kobolds know this and use it to manipulate good-aligned characters. They make their weakness into a virtue (although it fuels their impotent rage even further), and they make themselves seem as pathetic and "safe" as possible.

Treasure

Kobold treasure tends to include silver, platinum, and mithral coins and jewelry, even more than gold. No one knows why, but they love shining silver and prize it and other silvery metals. Some believe it is used in their magic or religious practices. Others believe that it is simply more beautiful by moonlight or starlight than gold, which looks best in the sun. Their real treasures are tomes of draconic lore written down by kobold scribes who revere every word that patron wyrms speak. Some of these writings go back to ancient times, and much is drivel. Kobolds keep all of it as holy writ and recite the best bits of any day's utterings among themselves. This drives dragons crazy.

In addition, kobolds have good tools and mechanisms for mining, pumping, smelting, and carrying. Occasionally, a suit of bulette armor (as hide armor, but granting a +4 armor bonus), made from a particularly beloved bulette, can be found in a kobold lair. Kobolds also make exceptional fire- and lightning-proof dragon-scale armor, made from a tribe's "god" who dies before its time, but more often from a metallic dragon instead.

Finally, kobolds make excellent traps and devices, such as timers, clockworks, and even constructs. These devices rely on very small gears and springs that kobold claws and fingers can manipulate much more readily than the fat fingers of humans and dwarves.

Variants

While most kobolds are red, green, blue, or black in coloration, a few among them exhibit powerful abilities based on the color of their scales. These truly exceptional specimens are admired by their kin and often rise to positions of power and authority in the tribe. None of these exceptional kobolds are powerful enough to have higher CRs, but they are slightly superior to their kin nonetheless.

Black: Widely dispersed in forests, swamps, and underground, the black-scaled kobolds are better swimmers than their brethren and gain a +4 racial bonus on Swim checks.

Blue: The blue variant of kobolds appears most often within tribes dominated by other scale colors. They are said to be among the best diabolists and schemers, and gain a +1 inherent bonus to their Wisdom. Many are powerful clerics of Asmodeus.

Green: These are the standard forest kobolds, well camouflaged in leafy undergrowth. They gain an additional +4 racial bonus on Hide checks.

Red: These kobolds are pyromaniacs and make extensive use of fire, especially the alchemical and magical kinds. These kobolds gain a +2 bonus to the DC of any spell they cast with the fire subtype and a +2 bonus on saves made against fear effects. Most are a bit more arrogant than average kobolds.

White: Like the blues, white-scaled kobolds are a little less frequent than other types. They are often powerful sorcerers, gaining a +1 bonus to the DC of any spell they cast with the cold subtype and a +1 inherent bonus to their Charisma.

In addition to these, the kobolds of Golarion sometimes hatch out a throwback to their draconic ancestors. These are the dragonbreath kobolds, who share the ability of the chromatic dragons to breathe acid, cold, electricity, fire, or poisonous gas. They can breathe in 15-foot lines or 10-foot cones once per round as a move action, forcing a DC 13 Reflex save for half damage. Those who fail the saving throw take 1d8 points of damage. After using their breath

weapons, dragonbreath kobolds must wait 1d4 rounds before using them again. These kobolds are CR 1.

As sneaky nocturnal creatures with a huge streak of cowardice, kobolds make decent rogues and assassins. A society of such assassins exists in Golarion; they call themselves the Dragonblood Circle and serve the will of Zon-Kuthon. This group of kobolds communicates by bat messenger and travels by boar from settlement to settlement, carrying messages and news between the larger tribes and hiring itself out to take revenge on those who oppose the rulership of dragons and their kin. Dragonblood Circle members typically disguise themselves as gnomes or halflings to spread the blame for their acts of arson, murder, or extortion to others.

Kobolds in Golarion

In Golarion, kobolds are scavengers, miners, and minions for more powerful creatures. They spy out rich caravans for the plucking, they dig to steal the ore and ingots from dwarven mines, and they are generally pests. Their numbers and quick rate of reproduction help them survive.

Most Golarion kobolds fall into two categories: the wild forest kobolds who plague every deep woodland, and the deep-mining kobolds who live in (or rather under) every area of rich mineral wealth. In both groups, infighting is constant and harmony elusive.

The surface regions where kobolds are found in the greatest numbers include the forests near the Five Kings Mountains and within the Lands of the Linnorm Kings. The kobolds with the largest mines and the largest numbers of bulette are those under western Andoran and eastern Cheliax. Many of the River Kingdoms suffer from kobold problems as well, where they are often called "river kobolds" for their habit of burrowing in riverbanks and in hills with a view or overlook.

As for cities beneath the earth, it's anyone's guess where they might be, although the number of raiders suggests that at least one lies beneath northern Osirion. Some stories there do tell of a time when the pharaohs enslaved kobolds by the tens of thousands, and a breed of desert kobolds that can walk fearlessly under the sun is part of that region's legends.

Names

Kobolds tend to take names that sound dragon-like or draw sounds from impressive-sounding Draconic words.

Male: Andrek, Arzhun, Eepo, Franj, Kander, Kapmek, Kerrack, Kerddremak, Koner, Lekmek, Mandrek, Merlokrep, Mipo, Sinder, Yagrik

Female: Alloneek, Epina, Feshto, Feepwin, Greska, Grusta, Gwelly, Kally, Kapmeek, Kissgo, Lemmeek, Mekapa, Mollish, Shondra, Sindra, Vreggma

KOBOLD

Their eyes are red, and that's all that most people see of kobolds. Their large hands and blunt reptilian snouts are revealed only at night, usually hidden deep below the earth, or concealed underneath folds of clothing to avoid the sun. Their scales vary from black to reddish and even white or green. Their voices bark and chatter, and their footfalls are silent in the dark.

TACTICS

Before Combat Kobolds begin a fight by slinging bullets, closing only when they can see that their foes have been weakened. Whenever they can, kobolds set up ambushes near trapped areas.

During Combat Kobolds fight from behind traps, cover, small tunnels, and larger monsters—anything that might help them survive. They are not brave except in large numbers.

Morale Kobolds like to attack with overwhelming odds—at least two to one—or trickery; should the odds fall below this threshold, they usually flee. They attack gnomes on sight, however, even if their numbers are equal.

The deadfall was the first sign. Then the pits of sharpened stone, the floors caked in ooze, and that swinging contraption made from our missing pickaxes. And that was all before we even saw the first kobold. And he just laughed.

THE ECOLOGY OF THE KOPRU

"Who can fathom the depths of the abyss?"
—Ecclesiastes

A monstrous mix of human, eel, squid, and lamprey, koprus are deep-dwelling amphibians of evil disposition and appearance. Uncivilized and savage, koprus dwell under the sea, roaming submerged caverns and ruins. They are rarely seen above the surface, but sometimes they emerge from the watery depths and saltwater pits of ancient coastal cities to prey on the local population. Whether these creatures have goals beyond their hunger for live flesh is a mystery. It is rumored, though, that koprus were once a civilized and powerful race ruled by a caste of sorceress-matrons and fanatically devoted to Demogorgon, the Prince of Demons.

HISTORY OF THE KOPRU

Although they have regressed to a primitive state, koprus were once part of a great civilization comprised of a multitude of city-states across the oceans of the world. More than three thousand years ago, these twisted, aquatic cities were founded at the time of a great proliferation of the kopru race, which coincided with an abundant growth of their basic food source, a particular species of clam mollusk called kopura. At that time, the largest of the kopura were imbued with demonic magic by early kopru shamans, who cultivated a fiendish specimen sacred to Demogorgon. These fiendish clams invariably produced black pearls of great size and value, used by the kopru shamans to work dark magic. The shamans founded a class of ruling nobility, and kopru power swiftly

spread throughout the oceans with the rise of thousands of city-states in the following centuries.

Although the first kopru nobles were male shamans, the physically stronger and sorcery-attuned females soon took charge, and the government of the city-states developed as a form of matriarchate, an oligarchy of noble families headed by the eldest female member. Wherever they ruled, koprus enslaved masses of primitive sahuagin, locathah, and sea elves, which they captured in hunting raids and subjugated with their domination ability. The kopru forged occasional alliances with kuo-toas but were almost always in conflict with ixitxachitls. They fought ritual wars with neighboring city-states and periodically sacrificed slaves to two supernatural entities, which they believed to be the creators of their race: Prukai, the Dark Globe, and Shothotugg, the Great Whirlpool.

About two thousand years ago, the kopru were at the peak of their civilization and were among the most powerful marine races of the world—exceeded only by the deeper-dwelling aboleths. A sudden, unexplained disease caused the

KNOWLEDGE OF THE KOPRU

The following table shows the result of a Knowledge (nature) check as it relates to koprus. Members of aquatic races, veteran sailors, and natives of remote islands most commonly possess this information. The kopru appears on page 134 of *Monster Manual II*.

Knowledge (nature)

DC Result

- 16 Koprus are deep-dwelling monsters with eel-like bodies and humanoid torsos. They are savage, cunning, and terrible to behold.
- 21 Koprus are mainly driven by hunger and the will to survive. Aside from powerful claws and tails, their gazes can bend others to do their will.
- 26 Koprus are the descendants of a fallen ancient civilization that once spanned the oceans. The fall of that culture has left them scattered and largely disorganized.
- 31 Rumors exist of koprus with deformed skulls, five-digit talons, and exceptionally large eyes. These koprus comprise a special caste of highly intelligent specimens that once ruled their ancient civilization.
- 36 Koprus actively worship Demogorgon. As servants of the Prince of Demons, they often have demonic allies and fiendish weapons.

koprus' kopura food source to diminish, resulting in a severe shortage. This famine, coupled with the depletion of other marine resources, marked the beginning of their decline.

The kopru grew increasingly greedy and angry, and they developed cruel eating habits. To survive the famine, they killed and devoured their slaves, and

in some cases members of the nobility practiced cannibalism on lesser kopru. Wars erupted among bordering city-states, and strife grew between kopru nobles and commoners, until a great rebellion of slaves finally caused the destruction of most of the undersea city-states about fifteen-hundred years ago. Nobles were hunted and mercilessly

slain by both their rebellious slaves and vindictive subjects. Kopru society fell to ruins. As other marine races occupied their territories, the few surviving kopru went into hiding in remote depths.

Today, kopru ruins are remembered as drowned places of great woe and slaughter, and have been abandoned and shunned ever since. Only the savage descendants of the kopru of old return to the places of their former glory, both to seek refuge from their enemies and to relieve the insane melancholia that constantly torments them.

PHYSIOLOGY OF THE KOPRU

The serpentine body of the average kopru is 9 feet long and weighs 300 pounds. A humanlike torso with a large, anguilliform head and two muscular, spine-covered arms extends down into a powerful tail that splits into three flexible tentacles. Kopru hands have four webbed and clawed fingers, useful for swimming but as dexterous as any land-dweller's—perhaps even more so. Their skin varies from tones of gray to blue, green, and orange, and is thick and oily like a whale's, providing excellent protection from the elements. Upon their forward-jutting heads, koprus' bulging eyes resemble polished orbs of mother-of-pearl protected by heavy, wrinkled lids. Below the mouth is a fanged orifice surrounded by four to eight prehensile tentacles, a number that differs depending on breeding and regional variation. An average specimen lives for fifty years.

Once a year, female koprus lay three to five eggs, which need a very warm environment to hatch. For this reason, koprus usually mate in tropical regions, and the females look for hot springs or sulfuric waters to lay their fecundated eggs. Koprus enjoy bathing in such hot water and can tolerate boiling temperatures without harm, sealing their eyes, nostrils, and gills if fully immersed. Koprus have both gills and lungs, although these organs are atrophied in some regional breeds (see the Amphibious Kopru sidebar). They are excellent swimmers but are extremely clumsy out of the water, where they must slither and crawl using their tail and hands.

KOPRU MAGIC

Koprus practice strange magic drawing upon the powers of their fiendish patrons.

KOPRU SKULL DEFORMATION

The young of kopru nobles were once deformed in order to enhance their strength and intellect, making them so-called "high skull" kopru. Although forgotten by most of the race, a few surviving nobles still engage in this practice. The effects of skull deformation result in the following traits (in addition to their modifiers for size and advancement) and related changes to a kopru's statistics. Only a kopru who underwent the proper rituals soon after birth can benefit from these alterations.

Size: Large.

Hit Dice: 12 HD.

Abilities: +2 Dexterity, +4 Intelligence, +4 Charisma.

CR: 9.

KOPURA SHELLS

Large, black clams filled with bitter, Hell-red meat, many kopru spellcasters employ kopura shells in their magic. Any spell with the evil descriptor cast using a koprua shell as an additional material component has its effective caster level increased by +2. The shell is destroyed in the spell's casting. Koprua shells are exceedingly rare and cost upward of 100 gp.

In ancient times, kopru nobles customarily practiced skull deformation as a sign of noble status, enhancing newborns both physically and mentally. The deformation allowed the newborn to grow bigger through a program of hypernutrition. Being more intelligent and stronger than their lesser brethren, noble, or "high skull," koprus were natural leaders and ruled without opposition for more than a thousand years.

Koprus are capable of speech, but infrequently do so. On the rare occasions they do vocalize, their words are ugly strings of halting gasps, hisses, and belches. Among their own kind they communicate through their gazes—an eerie, completely silent form of communication. Noble koprus, thanks to their skull deformation and larger eyes, seem able to perform more elaborate communication.

PSYCHOLOGY AND SOCIETY OF THE KOPRU

Their ancient civilization shattered, most kopru live alone or in small bands, caring only about survival. While dangerous predators and fearsome combatants, melancholia has become a common problem among koprus, which show a distinctive maniacal-depressive behavioral pattern. When not pushed by hunger, most koprus lie inactive in their lairs for weeks, a factor that contributes to their inability to rebuild anything of their past splendor. Koprus almost never wear clothing or jewelry, but practice tattooing and piercing with bone instruments and ornaments. They can wield weapons but rarely do so.

At the time of the city-states, kopru commoners, the so-called "low skulls," lived under the strict regulations ruled out by their dominating caste, the "high skulls." The matriarchal oligarchy of the koprus was a trapezoidal-pyramidal scheme of ruling families, with a small group at the top and a much larger number near the bottom. The "high skulls" had different levels of influence and prestige, depending on the number of individuals in their service and on their degree of affiliation to the colleges of shamans and sorcerers. "Low skulls," on the other hand, were all the same, with little influence and voice.

Kopru commoners built houses, palaces, and temples, tended the kopura vats, and fought in slave raids and ritual wars between city-states—mock wars where every death was considered a sacrifice to Demogorgon. They were allowed to mate and reproduce, but they could not form named families on their own and could typically only earn respect through combat in ritual warfare.

In kopru noble families, the matriarchs ruled as ruthless tyrants, constantly fomenting strife among their subjects to divide and rule them more easily. Their prestige in kopru society was the highest, and they were chosen among the females of a house for their might as sorceresses. The exclusively male college of shamans was the other, equally potent power in the city-state. Although they had a great

AMPHIBIOUS KOPRU

Koprus are a disparate race, with wide regional variations in color, number of tentacles, and ability to function on land. While some deep-dwelling koprus live their whole lives beneath the surface (like those presented in *Monster Manual II*), those who lurk near islands, in marshes, or underground might make regular forays out of the water. Such coastal koprus usually possess the amphibious trait, although it makes them no more adept at moving on land. This addition does not change a kopru's CR or any other abilities.

Amphibious (Ex): Although koprus are aquatic, they can survive indefinitely on land.

degree of freedom in their matters, the shamans were considered the voices of Demogorgon and, when organized, could cow even the matriarchs.

At the bottom of the social ladder were the masses of nonkopru slaves, who had no rights whatsoever and were doomed to lifelong exploitation.

Koprus were very observant of the superstitious practices linked to Prukal and Shothotugg, the Dark Globe and the Great Whirlpool of their mythology. More than "real" deities, Prukal and Shothotugg represented darkness and water, or the "qualities" of the Abyss, and were believed to be the parents of Demogorgon. According to kopru legends, Prukal manifests at sunset above the sky, enclosing the entire world in darkness for the night. The stars are holes punched through Prukal when it was wounded by the light beyond. This happened the day land emerged from the sea-covered world, confining the power of the koprus to just a portion of the world. The matter that once filled the holes fell unto the world as dark dust, which transformed the kopura. Since then, fiendish kopura have supplied the kopru with powerful black pearls made of Prukal's own substance, which are capable of incredible dark magic. As such, koprus love the darkness of the ocean depths and hate any form of skylight. They are almost never seen above the surface during the day, and they prefer moonless, starless nights to emerge for any reason. Koprus consider starlight a cursed element and mark themselves with special, star-shaped tattoos to neutralize its influence.

The other primeval deity of the kopru, Shothotugg, symbolizes both their favorite element and their greatest supernatural faculty. Koprus believe

that Shothotugg lives in large underground basins and the deepest of pits. Shothotugg's chaotic whirling is where everything originates and where everything must return. The day the first kopru city state of Shotho'Kopur was founded, the shamans performed a massive sacrifice, dropping tons of treasure and hundreds of victims into a great chasm on the bottom of the sea. In return, Shothotugg granted the koprus their ability to dominate sentient beings with their hypnotic gaze. Nowadays, koprus still make similar sacrifices on much smaller scales and out of sheer superstition.

Although the vast majority of koprus seen today are round-headed "low skulls," a few surviving nobles are rumored to live under the ruins of some cities, where they have renewed the traditions of their race and rediscovered many secrets of their ancestors. Having shaken off their racial melancholia, these "high skulls" even dream of restoring the might of their ancient civilization. Regardless of caste, all koprus revere Demogorgon and, if called to his service, answer with the fervor of true fanatics.

KOPRU RUINS

Kopru ruins lie in many places at the bottom of the oceans. They are huge complexes of palaces, pyramidal temples, lesser houses, and large squares, now reduced to heaps of salt-encrusted rubble covered with seaweed, coral, and anemones. A decorative theme common to all kopru architecture is the depiction of the kopru head. Kopru heads were sometimes carved into colossal proportions, like the 40-foot-tall ones sometimes found on coastlines near areas of kopru influence. Sometimes heads are carved in ivory, coral, and amber, or

have details in mother-of-pearl, jade, and other semiprecious materials. These heads are often larger than life-size, and can have incredible value as art objects.

THE CULT OF DEMOGORGON

In ancient times, koprus worshiped Demogorgon extensively, and their shamans formed an organized clergy at the service of the Prince of Demons and his supposed progenitors. The adepts were invariably male, and the most powerful among them were able to summon the Prince of Demons in a way that their body merged with Demogorgon's essence. When this happened, the kopru shamans permanently transformed into hideous, two-headed mutants who were actually aspects of Demogorgon himself (see "City of Broken Idols" in *DUNGEON* #145).

Sacrifices in the name of Prukal—Demogorgon's mother in kopru mythology—took place on special occasions, such as celebrations, the conclusion of a successful slave raid, the end of ritual war between two city-states, or the annual laying of eggs by a matriarch. The sacrifices were held atop great basalt pyramids, which were invariably topped by apparatuses used to crush the victims. The apparatus looked like a large amber cylinder with a descending stone piston, which pushed down the millstone

on creatures trapped inside. After the death of the victims, the millstone was raised and the shamans would foresee the future through the bloodstains on the calendar stone's surface.

The pyramids were usually built over a deep undersea pit, where weekly sacrifices were done in the name of Shothotugg—Demogorgon's other mother. These pits were connected to nearly bottomless undersea rifts. The treasure cast into the pits was considered taboo, and whom-ever tried to recover it was immediately put to death, be it a noble, commoner, slave, or foreigner.

ADVANCED KOPRU

Oleklan is the priestess of a group of koprus who rediscovered the traditions of their race in the labyrinths under Shotho'Kopur. Her skull was deformed at birth by an incredibly old kopru, probably an undead survivor of the original kopru civilization. During her life, Oleklan has ritually deformed the skull of about thirty other koprus, effectively creating a new noble family, whose female members are already showing sorcerous talent. Oleklan has also recruited about two-hundred normal koprus, forming one of the largest organized groups since the fall of the city-states. Up until now, the aging Oleklan has cared only about

KOPRU PROPHECIES

Kopru writing was a clumsy, loose, and rarely used ideographic code with hundreds of thousands of complex symbols spread throughout the various city-states across the world. This writing system is today undecipherable without the help of magic, and has been long forgotten by the kopru themselves. Numbers, on the other hand, were strictly codified in handy ciphers by kopru law. These numbers were engraved on the calendar millstones used by the shamans to crush sacrifice victims and perform divinations. The way the victim's blood stained the numbers on the stone's surface was the omen the shamans needed to foresee the future.

Having a strong oracular tradition, kopru shamans often recorded their perceptions of the future in the same way other civilizations might recount the past. Thus, much of kopru artwork—mostly being elaborate bas-reliefs and heads—have dates, either in the past or future, incorporated into them. As the kopru calendar begins with the founding of their first and greatest city-state, Shotho'Kopur (nearly 13,600 years ago), every date measures from that time. For example, a massive onyx relief dug from kopru ruins off the coast of Keoland and now hanging in the Gradsul library shows horrible twin serpents breaking from an egg covered in continents and screaming humanoids. Symbols depicting the number 13,597 circle the work.

the survival and prosperity of her family, but her sons have resumed active worship of Demogorgon and might be planning some greater evil already.

KOPRU NUMBERS

The kopru numerical system is a hybrid of Roman (prevalent) and Arabic. Numbers are written as the Roman ones with the following exceptions:

- 1) A "zero" symbol exists, although it is used only to indicate "0" and multiples of thousands, millions, and billions (see below).
- 2) Special symbols for "2," "3," and "4" exist. They are used only as the unit digits when a number (or prefix, see below) ends with them (i.e., "234" or "13," but not "16" or "39").
- 3) To make unit digits from "6" to "9," the symbols for "1" and "5" are used as in the Roman system.
- 4) When more than one "M" symbol is needed, multiple thousands are shown by a prefix number separated by a slash, which represents thousands, millions, and billions.
- 5) Multiple thousands, millions, and billions are written in a Roman/Arabic way, putting the "zero" symbol after a normal number for thousands, millions, and billions each in the prefix before the slash (in much the same way as a comma is used).

Dominate Person (Su) Once per day,
Oleklan can produce an effect like
that of a *dominate person* spell (caster
level 10th, Will save DC 16), except

that the range is 180 feet and the
duration is eight days.

Amphibious (Ex) Although koprus are
aquatic, they can survive indefinitely
on land. ☐

The Ecology of the Korred

The wild lives of the Dancing Folk

by Ed Greenwood

In the northern Realms, the tale of Olithard's Tune is well-known and often heard around a taproom hearth or barracks-board, when the night is old and the drink running low. Elminster tells me he lacks the proper storyteller's flair, and I can't even come close to *his* melodious voice and the perfect mimicry of various beast calls and accents he used, so here's a bare-bones summary of the tale:

Olithard was an indifferent bladesman and a capable but half-hearted thief — who longed to become a bard. His tongue was nimble, his wits quick, he could carry a tune, and he loved to pipe airs on his flute. Often, he sat in gardens or woody glades and piped for hours, lost in thought, barely noticing the occasional curious stare, copper piece, or kick aimed his way. He dreamed of entrancing courts and serenading ladies by moonlight with a magical harp, being called on by kings to write the lays of their lives, being looked up to by other harpists, and having his name writ in the Roll of the Remembered after he was gone. "That song was written by the great Olithard," he often said to an imaginary audience as he set down his flute. Yes. He would be a bard, and a great one.

When he at length scraped together a fistful of gems (enough, he hoped), he set out from Silverymoon south into the vast forests, seeking a college of bards that he had heard of, determined to learn all the old songs and how to play the harp. He walked alone, awed by the beauty of the woods but unfamiliar with their ways — and was soon hopelessly lost. Weeks passed as he wandered in the unending shade, until he lost track of his journey days.

One night he sat playing his flute while he pondered (for he was too naive to fear attracting attention to himself), when he found his song answered. He was playing along, working harmony, before he fully realized that another flute was being played nearby!

He trilled, and the other flute answered, echoing his own. Then it piped short, sharp, rapid calls, like an anxious bird — followed by silence. Olithard matched the piping, and was answered again, a little faster. He stayed with the unknown piper this time, faster and faster, falling into a rapid, swirling rhythm of little runs and slurs. The tempo picked up again, and another piper joined in. Olithard thought with leaping hope that he had stumbled upon the bards he sought, and played on like a man possessed, as more pipers joined in and the music rushed its crazy tune to pounding speed. Olithard's head swam, he breathed in hoots and gasps, and his fingers hurt and yearned to fall off — then the music rose into one eerie shriek and ended. Panting, Olithard let fall

his flute, head spinning, exhausted — too exhausted to run when suddenly he was surrounded by bearded, grinning faces — belonging to cloven-hooved creatures no higher than his belt, with blue-black hair hanging in wild manes all about their heads. He groaned as the weird creatures loomed over him, cudgels in hand, and fell into darkness.

When he awoke, with a splitting headache, it was morning. Of the horrible creatures there was no sign — but in front of his nose was a pile of gleaming gold shears, daggers, bowls, and coins. Atop the pile was his flute. And scratched in the dirt was an arrow and the words: “Silver-moon — go.”

It is generally agreed that Olithard (who went on to become a respected and skilled songsmith and bard) met with a band of dancing korreds, the strange “dancing folk” of the forests. Little is known of them, but I put Elminster to work and have boiled his findings down to the notes below.

Korreds are curious folk indeed to humans, who tend to lump them together with the fey, dangerous creatures of the woods and wilderlands (like satyrs, grugach, leprechauns, and pixies) that are best avoided. This is wise policy, for korreds dislike and fear intruders, and entrap them (usually in deadfalls, pits, and snares, but sometimes in ambushes — then, korreds favor rocky places where they may use stones as both weapons and shields through use of their spell-like powers over stone). Intruders who are favored, who are considered dangerous to harm because of retaliatory consequences, or who are obviously harmless are carried away to some lost, remote place and set free (usually separated from captured companions, if any). Captives are always shorn of their hair, which the korreds use to make ropes (see below).

Korreds prefer to live in woodlands or rolling, rocky, forested country, and dwell in well-hidden underground caverns and lairs, which they can literally seal off whenever intruders come near. If intruders persist, the korreds magically dig themselves away from the area without ever emerging aboveground. It is very rare for the precise location of such a lair to be divined, because there are always guards posted to watch for intruders. Korreds may dwell in colonies of up to a hundred, but almost always a hunting band of 1-4 adults is encountered, for these range far afield in search of food. Female korreds, like female dwarves, are bearded and maned with hair, and are difficult to distinguish from the males (although a korred can readily tell the difference). Korreds trap small game with animated hair-snares and club it to death, and slay bigger game by animating rocks as weapons. Korreds pair to have a child and remain together until birth is imminent, whereupon the mother-to-be literally

“goes to earth.” There she is fed by the hunting of others as she rests underground until the child is born. In large communities, elders take care of the young korreds and educate them, and the mothers return to hunting. Korreds may pair with several other korreds over the years to produce various children, or remain together in a stable pair. Korreds often do not hunt or live directly with their chosen mates.

Korreds are primarily hunters and fishermen, using magical nets of woven hair in lakes, coastal waters, and rivers or mountain streams. They also collect the edible fungi of the deep caverns as a staple, and gather woodland berries of all sorts to mash and ferment (in large stone vats) into a potent red wine.

Korreds are independent, but all obey without question the commands of their god, Tapann (see below) and his servitors — Jambul, Hrressek, Tishlun and Bresk are four of the most famous of these. They also respect and revere the thoughts and advice of community elders, but are only punished for disobedience to elders if such disobedience seriously and willfully endangers other korreds.

Korreds worship Tapann, the eldest and wisest of korreds — Tapann the Undying, the Father of the Dance — but they do not have an organized priesthood with shamans, clerics, or spells granted by Tapann. Instead, once every seven days (or more often in times of gratitude or need), communities of korreds worship Tapann together through dance.

Korreds dance in solitude as a form of self-calming and relaxation, or in asking Tapann for a sign to guide them in making a decision or plan, but once a week they gather with all other korreds in the vicinity and join in a religious, magical “circle dance.” Korreds unable to dance due to infancy or infirmity are carried along to observe.

A circle dance is performed in a woodland glade, clearing, or hilltop, or where there are none to be found, in circles created by raising stones of great size to stand in an open circle. The circle may be of any size, depending upon the number of korreds, and the dance is performed to the music of the slap-drum (an instrument of hide stretched over a circular frame, struck with a fist or open hand) and bone flute (hollow bones holed so as to produce a variety of tones when differing combinations of holes are covered with the fingers), and the humming and exultant wailing of the korreds themselves (the korred musicians always dance unless physically unable). The dance begins casually and builds as more korreds join in and the tempo and noise increase. Elder korreds of a community serve as leaders, and after casual, free-form beginnings to the dance, the dancers begin to move in unison, following the leader’s movements with (to human eyes) uncanny precision, building to a wild frenzy that always ends with a unison shout (often heard echoing across wastelands at night by travelers) and a collapse to the ground. After a time of rest, the dancers usually dine on berry

Contents of a korred pouch

Item	Chance of finding in pouch
Hair (of various creatures and differing quantities)	80%
Shears* (of iron, steel, bronze, or silver-plated iron)	70%
Dagger* (varying quality and makes)	30%
Whetstone* (rough, irregular)	90%
Skin of water, 1 quart	96%
Skin of berry wine, 1 quart	40%
Berries, 2-6 cups	50%
Berry bowl, wood or stone*	99%**
Meat (various sorts)	30%
Cheese (goat’s or cow’s)	10%
Coins* seized from captives (1-20, all types possible, usually mixed types)	10%
Gems* (cut, 1-6, all types possible, seized from captives)	3%
Gemstones* (uncut, 1-12, all types possible, found in rock by korreds)	35%
Slap-drum (circular wooden hoop covered with stretched hide)	52%
Bone flute (hollow bone pierced with finger-holes)	73%
Leather thongs, 1-4 in number, up to 3’ long	62%
Hide (cured or uncured, one large beast, uncut)	22%
Hide (cured, small scraps or complete hides of small creatures)	53%
Bone needles, 1-6 in number	19%

wine and the roasted flesh of livestock or forest creatures such as bear, deer, and wolf, slain by bands of korreds hunting or animating rocks as deadfalls.

The circle dance drains vitality from korreds; indeed, aged or mortally injured korreds strive to "dance to death," considering it an honor. Each turn a korred dances, 1 hp is lost — and even more is lost (1 hp/round) from non-korreds who join the dance (including captives). This life-force is used to raise a *sending* to Tapann, who may appear to aid his people by healing the sick, advising korreds,

fighting for them, or working with them. (Forest folk such as satyrs, pixies, brownies, and the like are drained by a circle dance as korreds are, not at the greater rate suffered by non-woodland creatures.) There is a base 4% chance that Tapann will appear at the "shout" of a circle dance (8% if more than 66 korreds are dancing in unison). If a korred is slain while in a circle dance, Tapann is 33% likely to appear; destruction of the circle by moving or destroying a stone or stones (or causing a tree to fall into the glade) adds a further 5% probability of his appearance. Unless

prevented from doing so, korreds always bury any korreds who die or are slain at a circle dance.

Korreds speak their alignment tongue, common speech, and usually a smattering of other woodland tongues (brownie, centaur, dryad, satyr, sprite, sylph) and dwarvish or gnome. Tapann and his servitors can employ *tongues* at will. Korred have an average strength range of 19-21 (typically 20); elders have a strength of 19. Their intelligence range is 11-12 (elders usually have 13).

TAPANN ("The Horned Dancer" or "The Horned Leaper")

Lesser god

ARMOR CLASS: -4

MOVE: 16"

MAGIC-USER/ILLUSIONIST: 16th-level illusionist

THIEF/ASSASSIN: Nil

MONK/BARD: Nil

PSIONIC ABILITY: II

S: 22 (+4, +10) I: 20 W: 17

D: 25 C: 25 CH: 19 (25 to korreds)

Tapann appears as a 6'-tall male korred, bearing a cudgel. He wears a rough tunic of bearskin or owlbear hide, a belt, and a pouch containing locks of his own hair,

a pair of silver shears (damage 1d8, plus strength bonus if wielded by Tapann), and 2-6 steel vials of *holy water*.

Although his abode is a hill studded with standing stones in Limbo, Tapann spends much of his time on the Prime Material Plane, for he may journey thence whenever he hears the hooves and music of korreds dancing in worship. He actively aids his people on many occasions and may fight with his shears, his cudgel (damage 1d12, plus strength bonus), or bare hands to aid them — although he prefers to utilize certain magical powers, primarily his *laugh* (usable at will, but Tapann can never *laugh* on successive rounds, so that each *laugh* is preceded and followed by a round in which he does not *laugh*), which causes creatures within 9" to be *stunned* (01-60%), *feeble-minded* (61-71%), affected by *reverse gravity* lasting two rounds (72-82%), or (83-00%) as if by an *Otto's irresistible dance* spell for 3-8 rounds (save vs. breath weapon at -6 to avoid these effects). Creatures caused to dance by Tapann's *laugh* cannot move about but are forced to remain, dancing, within 1" of their location when affected. Tapann may also weave any strands of hair not attached to a living creature into a rope, and animate such a rope, within one round. All animated ropes obey his will, even if they are enchanted ropes normally under the command of another creature, and he may command any number at once. If Tapann so wills, the touch of a rope can cause a creature to suffer effects identical to *Otto's irresistible dance* for 2-5 rounds. Beings who save vs. spells at -3 may avoid this effect. Note that Tapann can employ such ropes to trip, constrict (cf. *rope of constriction*), entangle (cf. *rope of entanglement*), whip (cf. *Quaal's feather token: whip*), bind, or otherwise hinder opponents.

At will and by touch, Tapann can *consecrate* water and cause *faerie fire*. He can also use the following abilities at will, one at a time and only once per round: *stone shape*, *animate rock*, *stone door* (unlimited teleportation and intraplanar if desired; up to a dozen living creatures can accompany Tapann unharmed on such a journey if he wishes), *shatter rock*, *vanish* (up to 666,000 gp weight) rock (stone is trans-

ported to the Ethereal Plane and replaced by air), *transmute rock to mud*, and *stone tell*. Tapann regenerates 2 hp damage/round, and can (by touch) *heal* himself or another creature once every two turns. He can also transmute all non-organic matter to "alunrum," a substance which becomes gold at the touch of *holy water*, and does this as a matter of course to all items left in the centre of a circle-dance ring if he appears. (Creatures to be healed are also placed by korreds in the center of the dance circle.) Korreds use this gold to trade with dwarves, sprites, and other such creatures to obtain clothes (used as dancing finery), shears, some foods, and certain services — or, in a pinch, to bargain for their lives. Such *transmutation* is usable by Tapann once per turn, and affects up to 666 gp weight of non-organic matter (such as metal). Tapann or his servitors can *enchant hair* at will, so that it obeys the will of the last korred to touch it, for 1-6 rounds after activation (being magically consumed at that time). The hair of any creature suffices, and the hair can be carried for decades, if need be, before a korred weaves it and works his or her will on it to bring it to animation.

Korreds of unusual bravery, strength, and loyalty to their people are *raised* or taken by Tapann to Limbo to be his personal servants. Such korreds (usually 6-14 of them) gain the ability to *laugh* seven times per day and regenerate 1 hp of damage suffered, every second round. They guard Tapann's abode in his absence, and he may bring up to a dozen of them with him when he appears on the Prime Material Plane, to aid him in battle or in assisting korreds. Tapann is immune to the effects of a *laugh* by one of his servitors, and can strip all powers at will from servitors who misuse them. If physically threatened, he can also shift his anima (self or spirit) to one of these servitors and possess it, adding its life-force (hp), memories, and intelligence to his own, so that it becomes Tapann. He can do this despite intervening distance or planar separation.

Tapann glories in the natural rhythms of living things, their celebration in dance, and both admires and cherishes skilled and acrobatic dancing on the part of any creature. Ω

THE ECOLOGY OF THE

KRAKEN

"Who knows the end? What has risen may sink, and what has sunk may rise. Loathsomeness waits and dreams in the deep..."

—H.P. Lovecraft, "The Call of Cthulhu"

They rule the mightiest kingdoms, lightless trenches of crushing pressures where the sun never touches, unreachable seas that writhe in anger, jagged depths under sheer black cliffs. Their home is alien, elemental, and unforgiving. And here they are masters. Cruel geniuses possessing vast strength, they wait in the dark, weaving their plots, slowly considering their next abomination, their next move in an endless evil game of vast complexity. Not merely hulking mindless brutes nor cathedrals of flesh given fury, but sadists, torturers, and unspeakable terrors, thinking goliaths of calculating hate. So many places exist where the sea touches the land and sky, so many places where krakens—the unseen masters of the oceans—might reach out their cruel tentacles to afflict the lives of men.

HISTORY OF KRAKENS

Festering within the depths of vast watery abysses lie the lightless domains of the mercifully elusive krakens. Only the foolhardy or insane try to learn more of these terrible leviathans, as even the mere rumor of a kraken can turn back a fishing vessel or force a captain to hastily beach his ship. Those who learn much of krakens speak of scattered island communities or remote coastal villages that worship these tentacled horrors, even supplicating them with slave offerings to stave off their fury. Yet the most terrible reports arise only occasionally, ever so rarely, when some insane escapee emerges from decades in the dark to tell of air-filled prisons far below where there is no hope. These escapees never live long in the light.

Some whisper that evil gods made krakens so the creatures of the land would never dare stray far from their homes. Others argue—primarily against those who posit the opposite—that aboleths created krakens. Regardless, scant knowledge leads to conjecture, as krakens share nothing, least of all their secrets. Most laymen accept that there are fathoms where the ocean is blackest and the sea most elemental, and from these trenches of primordial fluids and infinite darkness krakens first emerged.

Krakens themselves believe they came from the mouth of the Great Unbeheld, a kraken of impossible size who sleeps within the deepest ocean abyss and whose great tentacles thread through the depths of the entire world. Only by claiming all oceans as their own and enslaving every other sea-bound race might the Great Unbeheld rise and flood the world, giving them dominion over all. Although krakens don't worship the Great Unbeheld as a god, it is treated as a communal ancestor and is often touted as a favored child of Panzuriel or even as the guard of his severed limb (see the Panzuriel sidebar).

KNOWLEDGE OF KRAKENS

The following table shows the results of a bardic knowledge or Knowledge (arcana) check related to krakens. Any sailor, port-town tavern owner, or scholar of the seas might know varied pieces of the following information. However, as every deckhand and dockside drunkard weaves tales of sea monsters, truths about krakens are often garbled by the fictions of the uninformed, superstitious, and wildly imaginative. As such, some of the information provided at low DCs (15 and lower) is blatantly false. However, higher DC results (20 or greater) contradict such yarns with actual facts.

Knowledge (arcana)

DC	Result
10	Krakens are brutish gigantic squids that plunder ships and coastal communities in search of food and wealth, which they collect in vast coral palaces deep underwater.
15	Krakens can snatch sailors off the decks of their ships with two massive, barbed tentacles. A ship might ward off a kraken attack by hauling five dead bodies and a chest of copper behind it.
20	Krakens are loners with an astonishing sense of their own importance and a hard and cruel intelligence. They can also dominate native animals and often press intelligent undersea creatures into their service.
25	Krakens can shoot clouds of murky black ink and jet through the water with near-unparalleled speed. Their lairs deep below the waves often hold huge air-filled caverns to keep and breed hopeless generations of slaves but rarely any substantial material wealth.
30	Krakens possess the ability to control the weather and winds. Rumors persist of islands and ports where whole populations worship an individual kraken. These locals make living sacrifices to the kraken and act as its eyes and ears on land.

THE CALL OF THE KRAKEN

Krakens first appeared in *DUNGEONS & DRAGONS* as part of the 1983 *Monster Manual* 2, by Gary Gygax, and have remained a part of the game ever since. However, they bear a far deeper history than merely their appearances in D&D bestiaries.

For centuries, krakens have lurked as legendary terrors of the sea. Erik Pontoppidan, a Norwegian bishop, first described a kraken in his *Natural History of Norway* (1752), noting it as a "floating island" one and a half miles across. Also known as a *krabben*, *sciur-crak*, or *hafgufe*, the tales of numerous cultures detail krakenlike creatures. Such tales even provided the inspiration for the poem "The Kraken," by Alfred Lord Tennyson:

"Below the thunders of the upper deep,
Far, far beneath in abysmal sea,
His ancient, dreamless, uninvaded sleep,
The Kraken sleepeth: faintest sunlights flee..."

In more recent years, British novelist John Wyndham's novel, *Out of the Deep*, or *The Kraken Wakes*, presents a perfectly insidious plot from beneath the sea (although it is devoid of actual krakens in all but its title). In this tale, an invulnerable undersea intelligence terrorizes shipping lanes, leaves islands and ports empty, and eventually melts the polar-ice caps, flooding the land.

For D&D's most recent encounters with krakens, scour "The Styes" in *DUNGEON* #121 or dare alien depths in "Seekers of the Silver Forge" in *DUNGEON* #125.

them in any way, whether it be with increased power or simply a more threatening appearance (grafts, templates, and prestige classes—especially those in *Lords of Madness*—see regular adoption by krakens).

Krakens lay cylindrical membranous eggs, but these are rarely seen. Indeed, krakens seem to mate only every century or so in a ritual known to them as the Hateful Compulsion, where the seas churn as though in the grip of some dreadful storm.

PSYCHOLOGY AND SOCIETY OF KRAKENS

Loners—primarily because of their evil, selfish minds and huge appetites—krakens claim territories ranging over hundreds of miles. However, once every century or so, krakens instinctually come together in deep

PHYSIOLOGY OF KRAKENS

Essentially huge intelligent squids, krakens never stop growing. The average kraken measures around 100 feet long. However, the near-immortality of these creatures leads to tales of staggeringly huge beasts that sailors mistake for small islands.

Average krakens possess a distinctive head, bilateral symmetry, and tentacles with suckers and hooks. Six of the beasts' tentacles stretch to merely 30 feet in length, while the remaining two, covered in cruel barbs, writhe to nearly 60 feet long. A huge beak, curved and capable of tearing apart whales, nestles at the

point where the tentacles meet the creature's bloated head.

Krakens have huge eyes, which give them formidable sight and the ability to hunt in total darkness. Most krakens spend their lives at incredible ocean depths, but some make lairs near the lands of men where there are plentiful supplies of food and slaves. Voracious carnivores, krakens need vast territories in which to feed, the greatest whale constituting little more than a fair meal to a kraken.

Despite their formidable shapes, krakens do not view their own forms as sacred and willingly alter themselves if they believe it might benefit

ocean trenches to mate. This fleshy, feeling ritual is abhorrent to the coldly calculating minds of krakens and is known to them as the Hateful Compulsion. Krakens from vast areas of the ocean gather, both fearful of the danger in doing so but unable to control their lustful compulsions. Males frequently get torn to pieces by the less numerous females in their insane desire to be fertilized, turning the sea black with kraken blood and causing parts of limbs and heads to wash ashore in oily froths. (This black rotting flesh has an appalling odor

and is avoided by living animals.) In their coitus-fuelled madness krakens involuntarily create cataclysmic storms (see page 94 of the *DUNGEON MASTER's Guide*), leading to horrifically sized whirlpools and waves, which might rage for months or even years. The Hateful Compulsion continues until all the assembled females are impregnated, an act that forces a male to struggle for life within his mate's grip, a lustful battle capable of lasting for months. Fearing such eventualities, some krakens have risked the most extreme measures—including self surgery and undeath—to avoid these spawning moots.

After mating, great black eggs soon fill deep oceanic trenches. Kraken young take a decade to hatch, and—mercifully—over this time even the brood-mothers who watch their spawn lose many of their eggs to daring predators. Occasionally, and for reasons even krakens cannot understand, some brood-mothers devour their whole clutch, an act that always leads to the loss of the kraken's sanity. Such an insane kraken is a terrible foe indeed, as its calamitous psychosis menaces anything that lives in or near the sea. Some suggest that this madness is connected with the insane god, Tharizdun, as part of some unfathomable plot he weaves from his prison. The few krakens who don't worship Panzuriel often turn to Tharizdun, usually after witnessing a brood-mother consume her young.

All krakens believe themselves to be divine creatures and the rightful rulers of the deep. As such they cannot conceive of a sea without their presence. Thus, they never knowingly put themselves at physical risk and always plan a hundred cunning escapes. Krakens possess cruel, calculating intelligences and use them to move events to their own advantage. Effectively immortal, krakens patiently plot over centuries to concoct elaborate escapes, hatch fearful schemes, and breed loyal servants in their sightless lairs deep below the waves. While nearly all krakens keep slaves or dupe worshipers, kraken

PANZURIEL

Intermediate God (Neutral Evil)

The god of the seas' foulest evils, Panzuriel ever seeks twisted minds and abominable visionaries to carry out his will both below and above the waves. The Writhing One welcomes all evil ocean-dwelling creatures into his crushing fold with sahuagin, sea hags, scraggs, and kuo-toas (heretics against Bildooolpool) proving particularly prevalent. However, Panzuriel prefers creatures warped of body as well as of mind, making koprus and krakens his favored children.

Panzuriel bears an ancient hatred for Deep Sashelas, patron of aquatic elves. In aeons long lost, Panzuriel sought to make the darkened lands below the sea his exclusive dominion, perverting them into roiling oceans of fluid horrors. An alliance of opposed gods, led by Deep Sashelas, rose to resist the Writhing One, driving his corruptive ambition from the Material Plane and cutting off his left foot. The god's massive, gnarled appendage fell into the ocean but was never found. Thus, Panzuriel retains his link to the mortal world and, through his favored minions, seeks to corrupt the seas and avenge his ancient exile.

Symbol: A left footprint, kraken head, or squid eye surrounded by nine tentacles.

Portfolio: Confusion, murder, subversion, and evil aquatic creatures.

Domains: Corruption¹, Darkness, Evil, Water.

Favored Weapon: Whip (for land-dwelling worshipers) or net (for use underwater).

Clerical Training: Worshipers must sacrifice a sea elf in a ceremony known as the Endless Revenging.

Quests: Panzuriel sends visions to his servants to destroy specific ships, raid under-sea and coastal communities, and defile the temples of all other aquatic deities.

Prayers: Hugely complex low tonal chants, usually conducted in vast groups, the echoing songs of Panzuriel's worshipers are sometimes heard even on the surface, where mariners refer to the doleful droning as the "Wail of the Severed God."

Temples: Huge cave complexes deep underwater or simple stone circles centered around tentacled idols serve as Panzuriel's temples. Krakens often force slaves to toil for centuries, digging unholy trenches deep enough to reveal portals leading to the Pool of Panzuriel (said to fester somewhere in Carceri).

Rites: Panzuriel regards the sea as a battleground between himself and the hated sea elves, making raiding and slaughter the only rites he demands.

Herald and Allies: Panzuriel's herald is a 50 HD pseudonatural² kraken known as Tirbitus. Corrupted by Panzuriel's maddened will, Tirbitus hardly resembles a kraken anymore, appearing more like the Writhing One's symbol made flesh: a swollen red eye surrounded by countless flailing tentacles. Panzuriel's allies and those he most commonly sends to fulfill *planar ally* spells are callers from the deeps³, half-fiend krakens, and scyllans³.

¹ Detailed in the *Book of Vile Darkness*.

² Detailed in *Lords of Madness*.

³ Detailed in *Stormwrack*.

elders often manipulate the younger of their kind, sacrificing them to enemies or duping them into performing dangerous undertakings. The prevalence of such trickery causes krakens to wisely avoid others of their kind and hold them in constant suspicion.

Many krakens—but by no means all—keep lairs in caves deep below the waves. These dens often serve as little more than hiding places, both for the kraken and the useful treasures it might collect. To krakens, prime among such exploitable valuables

KRAKEN CULT: THE BROOD OF WORSHIPFUL K'THURALL

For centuries, the people of remote St. Telers island have kept a deadly secret. Their religion, on the exterior nothing more than a quaint island tradition of worshipping spirits of the sea, in fact reveres the depths-spawned abomination they know as Worshipful K'thurall.

Having lived below the island for countless ages, Worshipful K'thurall claims St. Telers and the seas around it as his personal dominion. In the centuries since worshipers came to his island, K'thurall has styled himself as their patron deity and the sole source of either their prosperity or annihilation. Fearful and reverent toward their worldly god, all the people of St. Telers devotedly serve the kraken—whispering frequent prayers and decorating their structures with countless ichthyoidal shapes—dreading his anger and the storms and droughts it incurs.

Worshipful K'thurall forces two obligations upon his cultists: sacrifice and service. Sacrifice to K'thurall is conducted in a yearly ceremony known as the Drowning Man. In this ritual a dozen men and women are imprisoned within the belly of a gigantic man-shaped wicker cage, then slowly lowered off a vast cliff known to the locals as the Despair of Salvation. K'thurall accepts the drowning victims and dines not only upon their flesh, but their very souls, as the rite has long since transformed him into a soul eater (see page 66 of the *Book of Vile Darkness*). Some sacrifices he lets drown, transforming them into drowned undead (see page 46 of the *Monster Manual III*), which he then sends to attack ships and bring him more victims.

Even as a yearly offering, the Drowning Man ceremony threatens to deplete the adult population of St. Telers. Thus, many of Worshipful K'thurall's cultists travel to distant lands, telling of their home as either an island paradise or an oppressed slave-state in need of a savior, all in hopes of luring victims to the Drowning Man.

For their life-long service, Worshipful K'thurall blesses his most pious followers with his touch: a "gift" his cultists claim brings them "closer to the sea," but in fact begins the transformation into a deep thrall (a kraken monster cultist prestige class from "The Minions of Darkness" in *DRAGON* #300). The island elders exhibit the most obvious changes, as they are afflicted with huge bulbous eyes, tentaclelike limbs, gasping breath, and innumerable skinless abscesses—marks from the touch of K'thurall's powerful suckered arms. Once these cultists complete their apotheosis into creatures more kraken than humanoid, Worshipful K'thurall accepts their leap from the Despair of Salvation. Upon taking this final step, K'thurall welcomes his deluded children into the ranks of an aberrant generation of cultists that he sequesters beneath the island in a hellish, tentacular mockery of life above.

are slaves, and as such a kraken's lair might hold several leaking air-filled chambers. Egotists of the highest degree, krakens never deign to sully their tentacles with simple chores. Whether its desires entail carving its lair to meet its whims or spying upon land-dwelling creatures, a kraken's slaves serve out of fear and the knowledge that escape means only a crushing death miles below the surface. Regardless of their uses, to krakens, the word "slave" and "meal" often prove interchangeable.

Those krakens truly devoted to keeping slaves might house whole

degraded societies within their lairs, as generation after generation of servants are born, serve, and die, never knowing a world of light and open air. Even if liberated, such slaves rarely flourish if brought to the surface, as all their minds know are the horrors of worshipping a living god and its foul experiments. This is to say nothing of the scars, grafts, and other manipulations krakens regularly inflict upon their servants to better serve their needs.

Besides slaves, krakens often maintain relationships with groups of other underwater-dwelling evil creatures. While such associations are rarely

equal, creatures like sahuagin, scraggs, and sea hags frequently worship krakens or pay them tribute in return for aid or protection. To a kraken, such arrangements serve merely as preliminaries to it claiming an entire tribe, society, or race as its slaves.

VS KRAKENS

Krakens possess an astonishing sense of self-preservation and, if ever victory seems unlikely, retreat always remains an option. Easily embittered and possessing lengthy memories, a defeated kraken might calculate its revenge for decades, inflicting brutal retribution upon foes who have long forgotten their victories.

Watch the Weather: Krakens use their *control weather* and *control winds* spell-like abilities to bring foes to them or sink vessels without ever rising above the water. Despite these powers, many krakens relish the chance to personally splinter ship masts and drown weaker creatures. Many seafarers know to rightly fear gales that seemingly arise from nowhere, as these might prove to be the work of a kraken.

The Terrible Embrace: A kraken possesses a monstrous grapple modifier: +44 at the very least. Its constrict attack deals automatic damage every round, which might wear down even the mightiest foe and could prove impossible to break. With such a significant modifier, a kraken might opt to take a -20 penalty on its grapple check to use only one tentacle and retain its ability to make attacks and threaten an area (see the description of the improved grapple ability on page 310 of the *Monster Manual*). With merely a second opposed grapple check a kraken might move with its victim, dragging it underwater to a terrible, gurgling end (see the descriptions of moving while grappling on page 156 of the *Player's Handbook* and drowning on page 304 of the *DUNGEON MASTER'S Guide*). Thus, magic items like *helms of underwater action* or *potions of water breathing* might help those fighting krakens stay alive for a time, but only treasures

like a cape of the montebank, cloak of etherealness, ring of freedom of movement, or armor with the slick special ability might save a kraken hunter's life.

Tentacle Attacks: When facing a kraken, sundering the creature's tentacles proves the most effective way to avoid being grappled. A kraken's tentacles can be specifically targeted with sunder attempts as per the rules on page 162 of the *Monster Manual*. Attacks upon the tentacles, however, deal less damage to the kraken as a whole. Thus, those combating krakens should stay cautious when making such targeted attacks.

Water Reliant: Krakens are most confident and deadly within the expanses of the seas. However, those somehow removed from such an environment prove a far less significant threat. If a kraken can be lured into a port or other costal inlet, spells like *control water*, various *wall* spells, and creative uses of *transmute rock to mud* or *move earth* might trap the creature inland. Even more effectively, if such traps dispose of the water, leaving the kraken beached, the monstrosity cannot breathe and thus swiftly suffocates. Krakens are keenly aware of their reliance on water, however, making such traps incredibly difficult to spring.

Defensive Defilers: In keeping with their extreme senses of self-preservation, krakens often protect themselves within layers of magical defenses. At the most basic level, this means making use of their *resist energy* spell-like ability (usually cast to resist electricity). Krakens with slaves might also have spellcasters cast long-lasting defensive spells like *mage armor*, *protection from arrows*, or *shield other*. The most twisted and ambitious krakens might even seek out creatures capable of giving them grafts or research ways to adopt a variety of acquired templates.

Minions and Worshipers: Commonly encountered alone, krakens usually prefer solitude as they hunt or attack choice targets. Despite these tendencies, krakens regularly have access to a horde of allies, whether

these minions be deluded worshipers, slaves, monstrous allies, or sea creatures they control through the use of their *dominate animal* spell-like ability. Those hunting a kraken should remain exceptionally wary, as any person or beast might secretly be a kraken's servant.

Retreat and Revenge: Krakens willingly use their jet ability to escape at rapid speeds, covering such retreats

with clouds of ink. Once out of direct danger, a kraken invariably begins plotting its revenge, relying on its minions to extend its reach far beyond the sea. However, even with armies of minions at their disposal, krakens favor ending such standing debts themselves. Thus, a kraken's servants often merely lure prey within reach, letting their master take revenge at his leisure. ■

The Ecology (Love-Life) of the Lamia

A story told after the kids were sent upstairs

by Spike Y. Jones

Artwork by Susan Van Camp

"Brendan," the innkeeper began, "you've sent my children to bed with their faerie story. Now earn your keep. Tell us a tale."

"And make it a good one," a patron said, "with lots of adventure."

"Yeah, fightin'!" specified a more inebriated patron.

"And women," suggested a quiet young man.

"Big, lusty women!" clarified the less-restrained drunk.

"Wantons and weaponry, the measures of good entertainment as far as the outspoken Kennan is concerned," sighed Brendan. "Yes, I must know at least one such tale. So, if Iain fulfills his obligations as innkeeper" —he glanced at his empty beer mug— "I shall fulfil mine as house-bard.

"I'm sure that those of you beyond your first beards have heard of the pyromancer, Taircon Firesoul, who alternately seduced the women and looted the villages of Delitan for many a year some half a century past. But, while you have *heard* of the man, I was an intimate of his for a time, and I was one of the few men privileged enough to see him die."

Brendan Farwanderer took a deep draught from his refilled mug, then leaned back to pull out a pipe, carefully fill it, and light it from the candle on his table. He looked up and noticed the circle of anxiously waiting men, and seemed only then to recall that he had been telling a story.

"Actually," he continued, "I overstate the case. Last I was to see him, but as for the 'man,' I was only a lad the age of our host's son Aidan. After being wrongly accused of a number of improprieties" —here he paused for the chuckles of his audience— "exorbitant fines were set. When I could not pay, I was declared the bondsman of the first who would pay my fines. This happened to be Firesoul.

"I was an imaginative boy, and I wove wondrous tales to amuse my fellow servants. Taircon heard of this and demanded that I tell my tales to him, to amuse him and distract him from worldly concerns. I did this gladly, thankful for an appreciative audience."

"To get yourself out of doing real work is more like it," muttered the innkeeper.

"To improve my storytelling from Taircon's point of view, I was made to accompany the pyromancer on a number of his adventures, in which he and his cut-throats burst upon sleeping hamlets, emptying them of valuables faster than a

purse dropped in Cassard. After each ride, I was required to retell the events for my master's entertainment, attempting to make the litany of atrocities more palatable and less boring in its repetitiveness.

"This continued for some months until Firesoul's band happened to set upon an inn much like this one in a village some days travel from the cities of the western coast. As usual, their attack was hardly opposed, but Firesoul was incensed to discover that one of his men was killed and another two were severely injured in capturing a young man who had attempted to flee the scene.

"An examination of the youth's armor, weapons, and decorations revealed to his captors that he was a paladin serving one of the major temples of far-off Mardukan, and his other accoutrements and the quality of his steed suggested that he was a messenger of some sort. While religion was not a subject of any importance to Taircon Firesoul, he had had more than one encounter with paladins set on capturing him before and had developed a distaste for the whole breed. Moreover, he was interested in discovering what important message had cost the life of one of his henchmen. Firesoul inquired politely of the young paladin the nature of his mission, and when the boy refused to mouth even a single word, the wizards temper flared.

"At first the paladin resisted Firesoul's attempts at interrogation, refusing to utter a syllable while the pyromancer danced finger-fires within inches of his captive's eyes, then burned him lightly upon the cheeks and hands. This torture grew more intense until the young man was clearly and gravely injured, but he still refused to speak. Firesoul was frustrated until he thought to use subterfuge to break the paladin's resistance. After casting *fire charm* spell, the wizard suggested to his captive that his spells not only singed the flesh, but also subjected the soul to the fires of damnation; if the paladin were to die as a result of these flames, his soul would similarly perish.

"Under this magical persuasion, the paladin finally broke his silence. He was a courier, carrying a message from a small temple in Varga to the north, describing the story of a merchant from that place who had recently attempted to navigate the eastern deserts by a northerly course through the Desolation of Ptarn, bypassing the taxation of the central Rama-Resh oasis. This merchant had later been found

by some pilgrims on the outskirts of the Desolation, ragged, near starvation, and half-dead.

"Much of the merchant's story was incomplete—for example, the fate of the other members of his caravan. But the central episode, concerning a desert citadel festooned with gold, littered with jewels, and graced by most intriguing occupants—namely women of surpassing beauty—was fully described.

"While it had obviously been the treasures of the citadel that had sparked the temple's interest in the story, the references to the beautiful but isolated women intrigued Firesoul. Abandoning the tortured and dying paladin to his fate, the band made its way northward to the way-city of Pa-Dedun, and thence to the wild.

"After seven uneventful days of travel across the Desolation, we advanced over one of an endless series of rolling hills and saw in the distance a squat border-fort, long in need of repair, with a small group of what looked like wild goats grazing where they would on the surrounding plain. This little outpost matched the fabulous citadel described in no respect but its anticipated location, and Taircon Firesoul's dour mood turned suddenly foul as he made for it.

"The goat-creatures hardly took notice of us as we advanced through their field, but once we were in the approximate center of their foraging formation, their nature changed. Of a sudden, they sprang at our camels, with one camel and its rider falling immediately under the onslaught."

"In a similar change of demeanor, the dust-coated riders of the surviving camels burst into action, throwing aside desert cloaks to reveal gleaming weapons and armor. The goat-beasts had no more success in the end than the villagers these same raiders had fought in the past. Little could stand up to the savagery these thugs had penned up during the crushing boredom of the journey. Without Firesoul having to cast a single spell, all the goatbeasts soon lay dead or dying on the waste, with no further loss to the reavers. The men quickly stripped the valuables from their fallen comrade and, leaving his body to the wind, turned back to the fort."

"That's it? That's all the fighting? What kinda story is it when the . . ." began the drunken Kennan, before someone put another mug in his hand to occupy his mouth.

"Somehow," continued Brendan unper-

turbed, "the caer looked different now than it had before. The gates hung straight on their hinges, the walls appeared taller and firmer than they had from a distance, and the whole seemed to have exchanged its image of disuse for that of a strong, competently cared-for citadel—the very thing we had sought from the first.

"While this seemed to me very strange, Taircon Firesoul appeared to take it easily in stride as he hailed the fortress and was answered by the opening of the gates. Fearlessly, he led the band into the grounds, dismounted, and strode imperiously towards the solid-looking keep, leaving his camel to wander the courtyard.

"Once through the keep's door, the a powerful fortress gave way to private apartments. We followed a corridor decorated with flamboyant frescoes, passing by numerous side chambers furnished with soft beds and couches strewn with cushions and partially curtained with hanging sheets of cloth-of-gold. Shortly, we arrived at the heart of the keep.

"The audience hall was of such dimensions that it seemed larger than the outside walls could have held. Moreover, it was decorated more sumptuously than the alcoves had been. Every inch of the walls was covered with gold and silver-woven tapestries, with gem-laden ornaments hanging from the rafters like bundles of drying herbs. Jewels lay scattered like so much sawdust on the carpeted floors. As with the other rooms, there were couches and cushions scattered about the hall; all was, soft, padded, comfortable, and inviting."

"The women, bard, tell us about the women!"

"Ah, thank you, Kennan, for reminding me of the crux of this tale. At my age I sometimes digress from my topic, then have difficulty finding my way back without assistance.

"As I was saying, all was soft, padded, comfortable, and inviting, and that included the occupants of the hall. Arrayed about the room were almost a dozen young women. At that age, I was only beginning to gain an appreciation of the fair sex, but even I recognized that these women could have commanded the attention of princes, let alone any other man they desired.²

"One of the maids was so beautiful as to make the others seem like the lowest harlots of Plinth. She lounged across a throne at the hall's far end, looking regal and alluring at the same time. When the pyromancer strode towards her, his mage's robes fluttering behind him, she took notice and properly took her seat to meet him. There followed the niceties of introduction, during which we all were invited to a grand banquet, but it was obvious throughout that the mistress of the citadel had her eyes set upon the pyromancer.³

"Crusted with the grime of our week-

long journey, our party took gladly to the bathing chamber. When all were refreshed, we found our trail clothing now as fresh as ourselves. We returned to the audience hall and found platters of exotic meats and fruits and fluted bottles of strange liquors placed about the floor. The women reclined next to the refreshments, while their mistress sat at a table set with two chairs.

"Our party needed no urging, and all set upon the food, drink, and women with equal energy—excepting Firesoul, who strode to the chair opposite the mistress's to engage her in conversation. I was ignored by all, including the guard charged with keeping me from escaping, although there was nowhere I was likely to wander on my own in the middle of that waste. I walked about, admiring everything and partaking of the viands as I wished.

"As the supper continued, some of the men drifted out of the hall, accompanied by the young ladies.⁴ I eventually ate, drank, and admired my fill, but when I looked for one of the ladies to talk to, I found myself alone but for the pyromancer and our hostess. I wandered up to their table and broke into their conversation.

"Before I could complete even half a sentence, Firesoul casually slapped me across the face and, without even looking my way, ordered me out of the hall. Tears streaming down my face, I ran out into the courtyard and cried myself dry.

"That done, I sulked as a hurt child will, rehearsing complaints about how unfair my life was and concocting various schemes for revenge. I know not how long I sat there, but as I did, a strange transformation came gradually over the caer, and I quickly forgot my own small troubles.

"Slowly at first, but then more rapidly, pieces of the walls and buildings began to disappear from sight. I do not mean that the parapets crumbled to the ground, or that something blocked the outbuildings from my view. One moment the parapets were full and strong, and the next they were gone, the wall itself a tumbled pile of ruins. Again, a few moments later, one of the outbuildings vanished, to be replaced by the remnants of its cornerposts and a few wooden slats, enabling me to see where some of our camels had wandered.⁵

"Of more dire concern, if that could be possible, I saw through a newly vanished wall a great cloud of dust in the distance. While it might have been sign of a storm or other natural phenomenon, seeing it combined with the magical deterioration of the caer caused me to fear for the worst, and I ran back into the transformed keep to warn someone of the army I felt sure was approaching. I first attempted to alert my assigned guardian, but as I looked into the sumptuous cham-

ber the man had entered some hours before, I saw only a shabby cell. As for the raider, he and one of the . . . young women were there, in some disarray. Shocked anew by what I saw there, I ran to the next chamber along the hall."

"A bit new you were to the ways of men and women, eh bard?" Kennan quipped.

Brendan paused for a moment, as if trying to craft a proper reply to Kennan's comment, but then continued. "Seeing a variation on the same thing in the next chamber, I was sure this scene was repeated in the other niches. I abandoned hope of alerting the men, and I stumbled to the audience hall where last I had seen my master.

"When finally I arrived, I was relieved to see that this chamber at least had not lost its opulent appearance, and Firesoul had not succumbed to the temptations that had claimed all of the others. He was sitting at a table while the citadel's queen stroked his forehead and shoulders, attempting to force him to relax.

"Rushing in, I attempted to warn Firesoul of the strange occurrences piling one upon the other. Before I could get more than half of my words out of my mouth, my speech was befuddled by some spell cast by the caer's mistress.

"'Taircon, darling,' she cooed in his ear, attempting to turn his attention away from me, 'why do we not go to the couch? It is late, and all of your companions are already abed.'

"'Later,' the mage gasped. He seemed half asleep and struggling for both air and full consciousness. 'The boy said something about attackers approaching the fortress. While he isn't above lying to interrupt my pleasures, I think he's telling the truth this once. If the outpost is being attacked, we'll have to quickly set up some ambushes, and then—'

"'That can wait,' she said, nuzzling the back of his neck. 'I have been patient and more than patient. Kiss me again.'

"'Later, I say,' he barked, suddenly shrugging away from her.

"'Now, I say,' she almost screamed. Showing a passion I have never seen matched, she clasped him to her and began to hungrily kiss."

"At first, the pyromancer struggled in her supernatural embrace, but after a time a change came over both of them. He relaxed and finally seemed to be enjoying her attentions. Silently I watched, engrossed and repelled by what I saw, and I knew then that Taircon was doomed.

"I stated earlier that the bandits and women were in some disarray when I came upon them, the women suffering the most in this regard. When unclothed, the upper half of the woman my guardian had embraced was unchanged from that of a beautiful woman, but below her waist she resembled a lioness; the whole was not unlike a grotesque centaur. In the sec-

ond room had been a woman with a goat's body parts, and I had no stomach to discover the horrors of the other side-rooms.⁷ Before me, however, I watched a greater horror unfold.

"Once the woman had Firesoul securely in her embrace, the illusion that had been dissolving elsewhere about the fortress disappeared from there as well. The elegant fixtures of the room vanished in an instant, as did sections of the hall's roof and walls. As the room changed to join the rest of the fort in appearance, so too did its mistress become as bestial as her sisters. While her upper half retained most of the beauty of her previous form, this was now joined to the body of an immense and horrible serpent whose tail lashed like a living whip.

"Oblivious to this change and to the urgency of the situation all around them, Firesoul and she continued their activities for a time. When that was finally done, she spoke again.

" 'We've disposed of the essentials,' she said, loosely uncurling her serpent's body around his waist and pulling her long, pointed nails from his throat. 'Now, slave, defend me.'

"She must then have released him from a part of the spell she'd held him under, for I heard him gasp in horror. His eyes cast desperately round the room, looking for salvation, and he squirmed in her light embrace. He saw me then, and for a moment his eyes beseeched me, calling for me to do something that he could not. But then she caressed him casually on the cheek, and a crazed smile spread across his face and his struggles ceased.⁸

"Firesoul leaped up and rushed from the room, followed by his mistress-monster, who had resumed her human form. Drawn as much by despair as by fascination, I too followed the rushing pyromancer. From room to crumbled room throughout the ruin he ran, commanding his men to arms, an order that each followed only after the monster's queen commanded *her* subjects to release their prey for the moment.

"Soon Firesoul had his entire command assembled in the debris-strewn courtyard to see the approach of a company of men sitting upright on their horses in gleaming armor. At another time, I would have laughed at how inappropriate horses and heavy armor were in the desert, but this was not that time. The knights carried a number of banners proclaiming to all that they served the same god as that paladin the reavers had tortured and abandoned weeks before, and they were but moments away.

"Being supremely confident of his men's abilities, as much from his own ego as from the compulsion to defend his 'lady,' Firesoul ordered those men who could find their camels to charge headlong against the holy attackers, while

those who were stranded, including the pyromancer, would lend their support from what few of the battlements still stood. The monster-women seemed content to merely watch their 'lovers' fight, while I thought it best to seek a sheltered corner where I could watch and yet remain protected from the brunt of what was to come."

"This should be a laugh," chortled Kennan, "ev'ryone knows that paladins fight fair. That's why Firesoul lasted so long before."

"The battle was a spectacular thing to behold," Farwanderer continued, his eyes bright, 'with Firesoul's cavalry harassing the paladins from all sides as those other raiders rained arrows on the knights from above. When the pyromancer began to lend his own arm to the struggle, throwing spears of flame and clouds of burning gnats at the armored attackers, I thought at first that the raiders had won again. But to my surprise, for all their energy the thugs seemed to have lost all the skill at slaughter they had exhibited earlier in the day against the goat-beasts.⁹

"Within minutes the paladins had fought their way into the courtyard and were engaging the last of the human defenders on foot. When finally Taircon Firesoul was the sole reaver left in the fight, engaging the leader of the paladins in melee with a sword of solid fire, the ladies of the fortress stepped forward to end the battle.

"While I could see the monsters for what they were, apparently they had resumed their guises as human maidens to the eyes of those others, for the paladins neither bolted nor attacked at the sight of them. After their queen ordered Firesoul to put up his arms, they all came forward and attempted to beguile the paladins in much the same way as they had the raiders in their turn. For a moment all seemed to go as before. I was about to cry out in despair when a look of instant revulsion appeared on the face of one of the gallants, and he slashed at the creature nearest him with his sword.¹⁰ Within seconds, all of the holy fighters had freed themselves from the grip of illusion. In less time than they had spent on Firesoul's men, the paladins slew the beast-women, cutting off their heads to ensure that these apparent demons would not return from the grave.

"The last of the group to be defeated was their queen, for once it was obvious that her plot had failed, she commanded Firesoul to defend her anew. Again he fought in the lackluster manner of the possessed, but this time there was no armistice to save him, and he fell but moments before the leader of the monsters was slain. But even in death her bond was strong, for the last action of the seducer of the most beautiful women of Delitan was to crawl the few feet it took to

expire in the same bloody pool as his 'lady-love'."

Silence fell across the room. Brendan Farwanderer looked around to see most of his audience confused, not knowing how to react to the strange tale. Taking pity on them, he added a postscript. "Finally, I stepped from my shadowed vantage and strode toward the commander of the paladin's company. It took some quick thinking and smooth words on my part to convince them that I was not another trick of the ruins heaped around us; but once I'd accomplished this they gladly welcomed me to their troop, giving me a horse and such equipment as I desired from among that lying about. I rode away with them to start my new career—as a paladin-in-training."

Again, the audience was stunned, but only for a moment. Once Kennan began to roar with laughter at the thought of Brendan Farwanderer, paladin, the rest of the taverners were not long to follow.

Footnotes

1. Lamias come in three varieties: lamia nobles, common lamias, and sa'ir. Solely because of the appearance of sa'ir and common lamias, there is conjecture that chimerae and wemics are also part of this family.

While no one knows how lamia nobles came to be (the curses of both demons and gods have been cited in explanations of the lamia's origins, but the truth could be something different from either), they are now produced only as the offspring of matings between other lamia nobles and humans. Common lamias are produced either as a result of noble-noble pairings or by human-common lamia matings. The purely animal sa'ir are only produced by the mating of common lamia pairs, as they are unable to propagate their own sub-race.

Lamias and sa'ir go into heat annually, a week-long period when the urge to reproduce outweighs almost all other desires and at which time they are the most fertile. The intelligent lamia types prefer to mate with humans in order to produce offspring of their own sort, but if none are available they will mate with their own kind. If they encounter a human outside of the summer mating season, the human's presence may cause them to come into heat out of season.

Common lamias are hermaphrodites; any two of them can mate, with either of the pair being impregnated in the process. This also means that they can mate with both male and female humans. If a common lamia mates with a male human, the lamia can be impregnated, but if the lamia mates with a female human, the unfortunate woman bears the cubs. Noble lamias, having differentiated sexes, mate only with humans of the

opposite sex, and they kill humans of the same sex without a second thought.

Lamias produce litters of 1-4 cubs eight months after a successful mating. Most cubs will not reach maturity (at age four years) because of the deadly competition among the young and the fickle emotions and hair-trigger temper of its parents, who are likely to claw a cub to death if it so much as playfully bites the tip of a parent's tail. The lamia's mating urge is strong but its maternal instinct is not, thus the lamia population is never large.

Sa'ir

CLIMATE/TERRAIN: Arid plains and hills

FREQUENCY: Very rare (common near lamias)

ORGANIZATION: Small groups

ACTIVITY CYCLE: Day

DIET: Omnivore

INTELLIGENCE: Animal

TREASURE TYPE: Nil

ALIGNMENT: Neutral

NO. APPEARING: 1-6

ARMOR CLASS: 5/6

MOVE: 12

HIT DICE: 4+1

THAC0: 16

NO. OF ATTACKS: 5

DAMAGE/ATTACK: 1-3/1-3/1-3/1-3/1-6 (two claws, two horns, one bite)

SPECIAL ATTACKS: Surprises prey

SPECIAL DEFENSES: -2 to be surprised

MAGIC RESISTANCE: Nil

SIZE: M (4'-5' long)

MORALE: Steady (11-12)

XP VALUE: 420

Prowling deserts, ruins and other desolate wastes, sa'ir are the offspring of common lamias, almost always found in the vicinity of their parents although they have no ties of affection to their sires.

A sa'ir has the hindquarters of a goat and the foreparts of a lion, including a male lion's mane for both sexes of sa'ir. Its head is leonine with the addition of a goat's horns and dangling beard.

Sa'ir understand simple commands in

the common tongue but are unlikely to obey if they issue from any but a lamia. Their own speech capabilities do not go beyond an odd, bleating roar.

Combat: The sa'ir hunting style takes full advantage of their dual goat and lion natures. Sa'ir stalk prey in the guise of a grazing herbivore until they get within pouncing range of 20'. This tactic is very effective, and as a result the prey get a penalty of -1 on its surprise roll.

When attacking, it strikes with its two lion paws and two goat horns and its bite. Its armor class is 6 overall, but the thick mane protecting its neck and forequarters make those areas AC 5.

Habitat/Society: Although not directly related to lions and goats, sa'ir behave in some ways like these creatures. They live in small groups structured like lion prides, but no sa'ir has ever been seen to give birth (they are believed to be sterile). They are territorial in nature, attempting to kill or chase away other predators that

encroach on their hunting grounds.

Sa'ir are omnivores, able to survive by eating plants as easily as animals. They do have a strong preference for meat, turning down fresh vegetation even for day-old carrion. A group of sa'ir would try to take down a large creature like an elephant if one were presented to them, but the areas they inhabit usually present smaller game. This means that they must forage daily for meat or vegetation, but if they make a big kill they will gorge, then bask in the sunlight for a few days while digesting their meal.

Ecology: Few sa'ir are ever found far from the lamias that sired them. While they are *de facto* protectors of the lamia's lair, they cannot be trained to serve as watchdogs for the lamias. Thus, the population of sa'ir is as much controlled by the mating habits of the local lamias as it is by their own success.

2. Lamias do not usually form stable groups, but roam over a broad territory as

individuals, overcoming their hatred of their own kind only to exploit a rich find (such as an entire caravan of humans) or when they enter into heat and must mate. The urgency of heat temporarily assuages the lamia's murderous tendencies, so lamia pairs break up immediately after heat leaves them (captured human mates are rarely as lucky).

If a region provides only limited resources, such as a single watering hole or a solitary pass through a mountain range, then lamias will be crowded more closely together there. But when even living and hunting together in the same area, it takes the influence of a stronger creature, such as a lamia noble, to force any form of peace on them and coordinate group efforts.

3. Lamias possess four spells they can cast once each daily: *charm person*, *illusion* (as per the wand), *mirror image* and *suggestion*. In addition, noble lamias can cast 1d6 (if male) or 2d4 (if female) levels of wizard spells, with two restrictions on

what spells they can use: availability and suitability.

Lamia nobles can neither make spell books nor copy spells from one spell book onto a blank page in another. Thus the spells they can choose from each day are limited by the spell books they have at hand. For this reason, human wizards are considered valuable prizes by nobles; two encountering a magic-user would fight over him, possibly to the death.

As lamia nobles are naturally competent in the casting of illusory and mind-control spells, and reticent about using high-damage spells such as *fireball* or *lightning bolt* on potential human mates, they tend to select only deceptive spells from those available to them. Their preferences include most illusion/phantasm and enchantment/charm spells, but those of other schools are also chosen, even those not available to illusionists and enchanters such as the necromantic *feign death* and the invocation/evocation *wall of fog*.

Against nonhumans or in an emergency, lamia nobles are willing to use

destructive spells if they have any in their spell books. Their lack of skill with this type of spell gives victims a bonus of +2 on saving throws vs. non-deceptive spells.

4. Lamias of all sorts prefer not to engage in combat, as it is dangerous and provides only food; subtle snares can gain them information, treasure, and mates who can serve as food when they've outlived their other uses. To accomplish this, lamias use their illusion-creating powers to lure victims into situations where they can employ their Wisdom-draining power.

The draining of Wisdom can't be accomplished by the stab of a knife or the slash of a claw. The lingering touch of a lamia's hand against the victim's bare skin for most of a minute will drain 1 Wisdom point. This is difficult to do during battle, but is not as hard to accomplish in non-combat settings such as seduction or a wrestling match.

If forced into combat, common lamias can use the hooves or claws of their lower bodies, and all lamias can use hand-held weapons. Weapon choice is partially dictated by whatever they have at hand, but male nobles tend to use swords while common lamias and female nobles prefer daggers. If their treasure trove contains magical weapons, these will probably be used.

5. Lamias usually disguise themselves as humans in order to lure real humans into their traps. Common lamias cast *illusion* for their disguises, while noble lamias have the ability to actually change to human form and back to lamia noble form at will and as often as they desire, saving their own *illusion* spells for such things as decorating their lair and hiding the remains of previous victims.

The *illusion* spell requires constant concentration to remain in effect. Minor activities such as moving or talking are possible, but the greater the activity level of the caster or the more distracted she is, the more difficult it is to maintain the spell. As the amount of attention given the maintenance of the spell drops, its effects are similarly reduced: Intricate details disappear from scenes, the radius of effect decreases, and patches of reality can "shine through" the layer of illusion covering them.

6. One of the greatest difficulties a lamia is likely to have during the Wisdom-draining procedure is impatience. If the lamia was unlucky or uncreative enough to only make occasional short draining attempts spread out over a period of hours or days, it would be likely to lose its temper and force the issue by seizing the victim or otherwise attempting to enforce contact, which would probably alert the victim. Every hour that a lamia spends attempting to drain a victim, it must make an Ability Check on 1d20 against

its Intelligence; if it fails the check, it loses its temper. A threat to its carefully laid plans is another reason for a lamia to abandon subtlety in favor of speed.

7. While the upper body of a common lamia is that of a human woman, its lower body can resemble a lion, goat, deer, antelope, or other creature. As to sex, it's hermaphroditic—each common lamia is both male and female. What beast makes up the lower body at birth is random. As each body has advantages or disadvantages, the least powerful types, deer and antelope, are rare among adults, while the lion form is quite common. Fully 60% of all adult lamia are of the lion-type, with 25% goat-type and only 15% of deer/antelope-type.

Lamias prefer to avoid pitched combat. If forced into melee because of a threat or their chaotic natures, they can attack with spells, weapons, and the armaments of their animal halves. Lion-type lamias make two claw attacks per round for 1-4 hp each; if both of these attacks hit, they can rake with their hind claws for two attacks of 1-6 hp each. Goat- and deer-type lamias can make two hoof attacks for 1-3 hp each, but deer lamias are somewhat frailer than the others (only 5 HD, compared to the 9 of the lion and 7 of the goat lamias). Deer lamias are fleet of foot (MV 24), but in combat their bloodthirsty nature usually prevents them from fleeing, so they tend to be slain young by other lamia types. Experience points for defeating lamias are: 650 XP for deer-, 1,400 XP for goat-, and 4,000 XP for lion-type lamias.

8. A victim fully drained of Wisdom loses his self-control and judgment, forming an irrational emotional bond to the lamia who drained him. He doesn't lose his other faculties, which can lead to a horrible torture. In the control of the lamia, a victim can be conscious of his slavery (if the lamia doesn't take pains to maintain its illusions once the prey has been snared) and can frantically cast about for a means of escape. However, even if given a chance to leave, he will be unable to take advantage of it. As with an addiction, the thought of escape might be appealing, but the thought of leaving his "beloved" would be almost unthinkable.

This torture is usually short-lived unless the victim has been taken by a lamia noble who has other needs besides mating and eating, including the desire for more and stronger spells, the urge to rule over others, and even a longing for companionship. A common lamia usually kills a human mate immediately after its period of heat ends, but a lamia noble keeps its catch as a play-toy for as long as the prey pleases it.

While it is unlikely a lamia noble's prey could survive for long without being killed

for some imagined slight, some rare victims are eventually released unharmed if they have been witty, charming, and "good company" for the duration of their imprisonment. While this is the result of the lamia noble's lingering affection for its prey, it must be remembered that all lamias are somewhat insane, and such gentle treatment is not to be relied upon.

9. Because Wisdom includes one's judgment, guile, and common sense, draining someone of these capacities does more than make him a slave of a lamia. A man with no common sense or ability to make sound judgments finds it difficult to perform in a hectic situation such as combat (including commanding one), and thus will suffer a penalty of -6 on all "to hit" and saving-throw rolls (including but not limited to saving throws against mind-affecting spells). Because of this, a man controlled by a lamia and sent into combat is often little more than cannon-fodder designed to weaken the lamia's opponents before the lamia makes its own attack.

10. No matter what spell was used to create it, a lamia's human disguise can be penetrated either by the very experienced or the very young. Adventurers have a chance of 5% per level above 6th (e.g., 5% at 7th level, 10% at 8th) of spotting inconsistencies in the disguise, such as forgetting to create adequate illusory clothing when playing a role that would normally require it.

Lamias adopt a number of forms, such as those of children, confused peasants, foreigners, or the like, so that they'll have a ready excuse to cover up any minor errors they make in their disguise. Erotic guises are also quite effective and often used. Persons untempted by this sort of illusion have a bonus to their chance of seeing through it, ranging from 15% for paladins and some clerics to 90% for the very young, for whom these illusions would hold no attraction.

Lamia nobles are more adept at illusion generating (-10% to the chance of spotting them), and because of this are more successful at infiltrating human society. They will sometimes be found in crowded cities as opposed to barren wastes, gaining the simple companionship they tragically desire along with a greater supply of prey.

The author would like to thank Phil Masters for his many suggestions during the writing of this article and for creating the lamia noble (in the FIEND FOLIO® tome) in the first place.

Here it comes!

A Visit With Powerful Protectors of Law and Good

e were known as the
Company of Singing
Soldiers. We had traveled a

great distance to reach the foothills of the Roaring Mountains, wherein lay the temple of my forefathers, an ancient stronghold against evil but one long forgotten to song and tale. At first, our journey went easily, but as we climbed higher into the mountains, the way became more difficult. With each step our muscles ached and our backs strained under our load.

On the 15th day of our journey, we spotted orc tracks. As fate would have it, the weather grew foul we were pelted by wind and rain.

On the 21st night, before dawn, we were attacked. After a fierce battle, those that remained of us made for the heights. Half way up, our path was suddenly blocked by boulders and felled trees. An ambush. The orcs flew over them with mad glee, outnumbering us ten to one. We ran, fighting as we fled, but were lost; our strength was waning, and the last of our arrows was spent. No amount of valor could hold off so numerous an enemy for long. One by one we fell; there were just the three of us now, the other four unmoving at our feet. I, too, finally began to give in to the pain, to the exhaustion.

As I fell, a crack of light slammed into the orcs. They cried in sudden shock and panic. Another bolt of light flashed before me; the scent of sulfur and burnt flesh filled my nostrils. Again and again lightning exploded in the orcish ranks, and they fell back. In the sky appeared winged lion-beasts who dove at the orcs with flames and lightning leaping from their massive paws.¹ My head throbbed horribly, and as my thoughts faded into darkness, in my delirium, I could have sworn that I was flying over the battlefield, watching orcs squirm in the grasps of trees.²

We awoke to find ourselves lying on piles of fresh rushes in a bare room with no windows and only one heavy wooden door. We were in the temple. My limbs ached and my mouth felt parched, but I was otherwise in good health; though we still wore our tattered and stained garb, our wounds were healed, and our hands and faces were clean of blood.

"What were those beasts?" I asked. "What do they want from us?"

"They're manticores," said Lorien.

"They've brought us here to eat us at their leisure."

The Lammasu

by Belinda G. Ashley

Artwork by Tom Baxa

"I don't think so," Sharyllon said. "I've never seen a manticore cast a lightning bolt."

"Manticores wouldn't bother healing us just to turn around and eat us," Bromar added. "Maybe we can reason with them."

As we slowly, painfully, rose to our feet, the bolt on the door pull back. The doorway was at once filled with the body of one of the winged lion-beasts. Though its mane and eyes were that of a lion, the face was human and wore an amused expression.

"Well, warriors," it said, humor in the baritone voice, "I'm glad to see that you're awake. My name is Raliendar of the Krondak Pride and I am to be your advisor."³

I introduced our company and—with more than a bit of apprehension—asked what he planned to do with us.

He gave a deep chuckle. "What do you think? Eat you?" Then he laughed a great laugh that made our chests rumble with the sound. "Are the songs so old and forgotten that none know of the Rewarrien, Harwei nak Grwellin? In your language we are called *lammasu*." When we didn't answer, he shook his shaggy head and sighed. "You have much to learn. Well, I would imagine you are all hungry. Dinner is waiting, if you'll follow me please."

We followed Raliendar through ancient marble halls, occasionally catching glimpses inside the rooms. In several, the lion-beasts—*lammasu*, did he say?—lay sprawled across the stone floor, leisurely cleaning their tawny coats and feathered wings. In others, adults supervised playful cubs as they swatted each other with their

paws. Many of the rooms, however, were empty. Raliendar told us that most of the pride had gone to the war council.

"The Defenders and Enlightened are making battle plans to rout the enemy," Raliendar explained.⁴ "We were aware of the orc's army but were waiting for the gathering of Whitemoon to hear from the elders and the Pride Lords. All the prides have now gathered here in preparation of war."

I asked him how many prides there were.

"There are six within the area you call the Wilderlands. Each one is responsible for keeping a lookout for such evils as this. Come, let me show you something." He stopped in front of two ornately carved doors and opened them for us to see within. On the floor of the room, drawn in chalk, was a detailed map of the area. A dozen or more stern faced *lammasu* bent their heads over the map, speaking in tense tones.

"They look different from you somehow," I whispered.

"These are the Pride Lords; they are the greater *lammasu*." See the tall one to the far right? That is Krondak, our Lord," said Raliendar proudly.

Raliendar told us that each pride's Defenders, Enlightened, and Pride Lords were here discussing tactics for the upcoming battle. "The Enlightened are informers and surveyors. They give the Defenders the needed information to lay battle plans. The Defenders are our protectors; they use strategy and spells to drive back and defeat our enemies."

He turned and motioned us to follow. We passed from the war room into a brightly lit hall. In the center of the room stood a large table with heavy oak chairs. Arranged on the table was an assortment of fresh vegetables and melons. "Ah! Your meals are ready," said Raliendar. "I am sorry that we do not have utensils for you; we have little need of such items."

Bromar looked at the food hesitantly, "Will you be serving any meat by chance?" Raliendar frowned, "We do not eat the flesh of animals with whom we share our homes. We are not the only ones to live under the sanctuary of the Temple. There are many here who help us in our cause and deserve protection."

"Of whom else do you speak?" I asked. "I've seen no one here but you lammasu."

"Well, there are the forest creatures that help us keep an eye on things. And then, of course, there are the brownies."⁷

"Brownies!" we said in unison.

Dalysyn looked shocked. "Brownies up here? In this rocky area?"

Raliendar chuckled softly. "Of course! They help us tend the gardens. Beyond the ridge is a green valley in which we grow our food. It is not cultivated like the gardens of man, and to the uneducated eye it looks like an overgrown meadow. But with the brownies' help we've more than enough food to keep everyone happy. Enough questions. Eat! I must see how the council fares. Wander around as you please; I shall join you later."

After eating, we strolled around the buildings and headed for the temple. We had not actually seen it as yet; we had only wandered through the outlying halls and living quarters. Climbing the well-worn steps, we came to a level courtyard, and there, across the uneven stones, it stood.

I trembled with excitement. The building glowed with the setting rays of sunlight and from within floated the beautiful sound of voices. We entered solemnly. Before us stood dozens of lammasu singing before a golden altar. Amber light poured through stained glass windows, bathing their tawny bodies in a holy radiance. Though their words were unknown to me, the purity of the song overwhelmed my heart with peace.

Raliendar later joined us and asked if we would come with him. We passed from the temple through a tiled foyer and entered a small chapel called the Tomb of Souls. "Beneath these marble stones," he said, "Lie your forefathers. We have kept these tombs sacred for many an age against the dark rulers who would defile this holy place."

He spent most of the night telling us about his kind. We discovered he was a Healer and one of those who had rescued us from the orcs. Healers, he told us, weren't just for healing wounds of the body but for healing the soul as well. They dedicate their lives to teach the pride the sacred songs of the First Elders. "Song

worship is how we keep our history and faith in our gods."⁸

"First Elders?"

"The Illuminated Ones. The first pair to have walked upon the world and breathed life into our kind. Rhamaldrig the Father, Lord Protector, and Chareah the Mother, Queen of Knowledge."⁹

After our wounds healed, our company lent a hand in the great battle against the orcs for which our hosts had been planning. We were amazed at the organization of the lammasu. Every member, except the cubs and den mothers, helped in the conflict against the orcs.¹⁰ An entire pride would make themselves invisible, split into three units, and set up an attack. We joined them on the second day of battle as part of the second line of attackers.

The morning sun had not yet risen, and the sky was still a misty grey. Rain fell on leaves with a soft pitter-patter, muffling our footsteps through the woods. The lammasu had spotted a small group of orcs that had become separated from the main army; this was our target. The Enlightened positioned themselves on the orc's left and right flanks as we positioned ourselves in the center. Silently we drew our swords and bows and tensed ourselves for the moment of battle.

Without warning, the Enlightened hurled their first attack. Bushes and small pines grasped the enemy in leafy boughs. Orcs yelped in surprise, struggling with their woody opponents. Lightning leapt into their ranks and sent those not yet entangled running for their lives.

The Lords and Defenders descended from the air, sending bursts of flames among the orcs. We rushed forward, keeping clear of the entangling plants, and set upon the retreating enemy. The Healers, who were hidden at the rear of the orc army, cast a wall of spiked plants to prevent escape. No orc escaped their wrath. After a week, the orc army dispersed and scattered across the great Wilderlands.

Months went by; heavy rains held us within the mountain's grasp. Yet the Temple was dry and comfortable, and so we spent a peaceful season within its halls. But alas, with the coming of summer our spirits once more yearned for adventure, and we readied ourselves for the long march ahead. We gave heartfelt farewells to our new friends and set ourselves on the path homeward.

Several years have passed, and I can still recall the beauty and splendor of the lammasu and their great love of song. Most of all I remember their cunning and courage against their enemies. And now, on every Fallfest, I raise a toast: To the lammasu, for bravery, wisdom, and justice, I salute you. May the gods' breath be always under your wings.

1. Common spells that the lammasu use in combat are, *lightning bolt*, *produce flame*,

entangle, *plant growth*, and *spike growth*.

2. Lammasu will seldom allow any to ride upon their backs except in dire need, and the being carried must be small-sized or smaller. They can, however, carry large items grasped in their great forelimbs for short distances. Their maneuverability class in this case would be two levels lower than normal.

3. A pride consists of 10–35 members and takes the name of its lord. All members of the pride are responsible for foraging for food, raising the young, and keeping their dens clean and orderly.

4. The lammasu have a strict hierarchy. Each member of a pride belongs to one of three groups: Defenders, Enlightened, or Healers. Each of the three groups is commanded by an elder. Though all lammasu can cast spells, each group memorizes spells that benefit his group. For example, the Enlightened would take *detect* spells, *endure cold/heat*, *pass without trace*, *know alignment*, and *messenger* as typical spells to have for surveillance.

5. The Pride Lord is not of any one group but is representative of all groups. The elder of each group chooses the Pride Lord; these four, elders and lord, will always be greater lammasu unless there are none available for these positions. The Pride Lord is always a male.

6. Greater lammasu have black tipped manes, tails, and wing feathers.

7. Lammasu get along well with most sylvan creatures, but they are especially fond (and protective) of brownies, who are also lawful good. Brownies will always show up when lammasu are near, no matter the area, and will offer their help in tending the gardens and doing any occasional writing needing to be done (as lammasu can not hold pens with their massive paws).

8. The lammasu keep no written records of their histories; however, they have excellent memories and use song and stories to pass on the knowledge of one generation to another.

9. Rhamaldrig and Chareah are celestial lammasu. (See *MONSTROUS COMPENDIUM*® tome 8.)

10. "Den mother" is a term used to denote those responsible for the young and does not refer to gender.

Other Notes

The lammasu do not have infravision but have eyesight as keen as a cat and can see well even on a moonless night. They also have sensitive hearing.

Lammasu mate for life and live to be approximately 150 years old. Greater lammasu can live to be as old as 200. During their life they will only have two or three breeding periods, giving birth to one to two cubs per period.

Of the three groups, the Enlightened are the most likely to run into PCs, as they are often out scouting their terrain for trouble.

Ω

The ecology of the leucrotta

A familiar-sounding but fiendish-looking beast

by Ed Greenwood

From the *Pseudobiblia* of Edygulph Eremmore, naturalist and sage:

One of the ugliest and most cruel of all creatures is the leucrotta, a loathsome carnivorous beast that inhabits wastelands in the wilderness. On its cloven hooves it runs as fast as a medium-sized warhorse, and it savages prey with its jagged, bony jaws rather as sharks do. Humans are its favorite prey, and the “ugly killer” is one of the most dangerous and most feared predators of the wastes because of its cunning and its strange talent for mimicry.

Whether acting individually or in a small group, leucrotta are sly and enterprising. They can develop simple but effective tricks to take advantage of their ability to mimic the human voice, and are often able to lure large groups of travelers to their doom.

One group of leucrotta, for example, came upon and devoured a few pilgrims on the road, took brands from their fire, and

carried these for miles along the road to a long-deserted keep, where the creatures lit many torches and brushpiles along the walls to make it appear inhabited. Then, with their human-like speech, they called out (while in seclusion) to a passing caravan, luring the group inside to rest for the night. The leucrotta slew many of the party as the members split up to explore the dimly lit interior of the stronghold, bounding out of the darkness to bite at faces and necks. The monsters returned later to devour the bodies — after harrying the fleeing survivors and chasing them down the road until dawn.

Leucrotta often lurk along roads and near habitations by night, learning information about humans who live in the area or are passing through the wilderness. They take note of expressions often heard in Common Tongue speech, so as to improve their mimicry. One leucrotta ventured abnormally close to civilization and took to prowling a glen where thieves would come to meet in

the night. With the vocabulary it overheard there, it was soon able to begin devouring thieves who fell into its trap. The creature returned to the glen every few weeks for several years before it was discovered, trapped, and slain.

Those who, for some reason, must dwell near the known haunts of leucrotta are prepared for a raid at any time, and they quickly learn not to engage in conversation with anyone whose face they cannot see. They begin to expect an assault when their dogs start to disappear; leucrotta hate these noisy, persistent trackers and alarm-raisers.

Leucrotta almost always use concealing darkness or terrain cover to draw near to prey (or to remain concealed while the prey comes closer). Then they rush out with great speed, attacking furiously and tearing with their powerful jaws. They will always disable one victim and turn to another, rather than finishing off one at a time, more out of cruelty than voraciousness. The

creatures are skillful at tracking, and exult in the gaining of food as much as in the devouring of it.

The appearance of the leucrotta is not utterly horrifying, but certainly repulsive, nonetheless. Its bare, ragged-edged jawbones give its face and head a ghoulish, skeletal look. It has the body shape of a large deer, but without even a close-cropped coat of fur or hair; its trunk, legs, and cloven hooves seem mismatched with its head, which resembles that of a giant badger or similar burrowing animal, and its tail, which is thin and slightly tufted at the end like that of a lion. If the creature had a more pleasant demeanor, its appearance might be tolerable or even humorous — but such is not the case.

Leucrotta have been known to cooperate with other creatures, such as lamia or even evil naga, for mutual gain, but most prefer to hunt alone or with two or three others of their own kind. Most other creatures shun them, for even those stronger than a leucrotta can never let their guard down near one of them. Leucrotta will attack anything that is at a disadvantage or that they think they can defeat, whether or not the prey is preferred or even edible. Leucrotta will serve only evil creatures more powerful and vicious than themselves, and then only when promised enough reward. They have been occasionally reported to consort with and aid demons, and at least two observers (the adventurer Ironbars of Elcathra and the wizard Gulgath of Mulmaster), who encountered the demon lord Kostchtchie many years (and planes) apart, reported that the demon was accompanied by two astoundingly large leucrotta of exceptionally vicious temperaments, which apparently serve him as bodyguards.

Although they have no personal use for it, leucrotta will gather treasure to bargain with, or to lure prey into traps with. (Experienced travelers know enough not to hastily approach any hoard found in a cave or grotto in the wilderness, for a leucrotta may be planning to take greedy discoverers from behind while they pore over their riches.) If one of a group of leucrotta is captured or injured in battle, the others will not aid it or attempt to rescue it. On rare occasions leucrotta will team up for a short time (perhaps only one assault) with more powerful creatures of like alignment in a hunting group.

Male and female leucrotta (or “leucrotas”; either term is accepted) tend to be of equal size, and appear identical to casual scrutiny. They do not take permanent mates, and the father does not usually aid in the raising of young. Calves are born six months after mating, live and in full control of themselves. They follow their mother for at least four months, learning trickery and hunting skills, and always go off on their own at the age of eight months, or shortly before the mother is about to give birth again. During the first two months after giving birth, the mother goes into a killing frenzy to provide her offspring with

sufficient food. The lifespan of a leucrotta is not known, but is thought to be shorter than that of a human.

Leucrotta tend to wander, following food, and although they like to frequent a “territory” they know well (so as to readily escape pursuit, arrange ambushes, and the like), they do not fight off other predators to defend such an area, and will leave it without hesitation if threatened by very strong foes, lack of food, or natural disaster.

Avoid this creature, travelers and even warriors, unless you are prepared to fight — and do not expect to win. Even some strong bands of men who have gone forth to slay leucrotta have not returned, and most creatures give the “ugly killers” a wide berth whenever possible.

Appendix

1. Leucrotta track as well as rangers do, and try to make this task easier by savaging prey so that it is weakened and slowed, and perhaps leaves a bloody trail when fleeing. In battle leucrotta bite, slash, and tear with their ridged, bony jaws for 3-18 points of damage. They have a chance of disabling or killing prey with a strike to the throat, determined as for the devil dog (see the FIEND FOLIO® Tome): If the leucrotta’s modified “to hit” roll is 4 or more greater than the number required, or a natural 20 in any case, the victim has been hit in the throat. Damage from the bite is the normal amount, but the victim is rendered unconscious from the strike. This comatose condition will last for 2-8 turns, and at the end of this time the victim will die if not revived beforehand by the application of *cure serious* wounds or some similarly strong healing magic.

A leucrotta can kick backwards with its rear legs, even when fleeing, and still retain its full movement rate in that round. The hooves each do 1-6 points of damage (roll “to hit” separately for each hoof) to anyone standing directly to the rear of the creature, or anyone in close pursuit of it. If pressed, a leucrotta can rear up and lash out with its front hooves (for 1-6 damage each), but it cannot do this and kick with its rear hooves in the same round. It can combine a bite attack with either kind of hoof kick in the same round, providing that victims are in a position to be hit by both forms of damage.

The monster can stamp on or trample any target that is lower than itself (on lower ground, fallen, crouching, etc.), striking with both sets of hooves together and crashing down with the full weight of its body, for 4-16 points of damage. If this stamping attack hits, all hoof and bite attacks against the fallen victim in subsequent rounds are made at +2 “to hit,” unless and until the victim avoids being hit for one round and is able to get to his feet. When engaging a fallen opponent, the leucrotta has a better chance of scoring a hit to the throat (see above) because of the +2 bonus “to hit.” If other opponents are nearby, the leucrotta will break off its attack against a fallen foe as soon as it scores a hit to the target’s

throat or when the victim is reduced to one-third or less of his hit points.

2. Leucrotta have hardy constitutions; the climate of the creature’s habitat ranges from subarctic to subtropical. Those encountered in cold regions have a layer of body fat which increases their ability to endure physical attacks; opponents take a -1 penalty to damage inflicted on any successful hit with a non-magical weapon (minimum damage of 1 point per hit). All leucrotta gain a +4 bonus on saving throws vs. disease or poison.

3. All full-grown leucrotta can mimic the human voice with the same degree of skill. Any character within earshot who can understand the common tongue will believe that the voice is that of a human if the character fails to roll less than his intelligence or wisdom (whichever is higher) on d20. Thus, a character with 16 intelligence and 18 wisdom has a 3 in 20 chance of being fooled by the mimicry — on a roll of 18, 19, or 20. A character who is not fooled will recognize the voice as an impersonation, but will not know who or what is doing the mimicry, and may well still decide to approach and investigate. A character who is fooled will not rush forward blindly; he will assume that the voice is that of a human, but may still be cautious about approaching an unseen “person.”

4. Young leucrotta are size M and have 3+1 HD when born. They gain 1 hit die every two months thereafter until at full 6+1 HD and size L status at the age of six months. The bite of a young leucrotta (less than six months old) does 2-12 points of damage, and each kicking hoof does 1-4 points of damage. They are able to mimic the human voice at two months of age, and characters receive a +2 bonus on their attempts to “disbelieve” the mimicry. This bonus decreases to +1 when the young leucrotta reaches four months of age, and is eliminated altogether at six months of age.

5. If two leucrotta are encountered at once, there is a 50% chance that they are a mated pair (a male accompanying a female who is carrying young). The male will go into a frenzy if either he or the female is attacked, gaining a +2 bonus “to hit” and on damage. If a solitary leucrotta is encountered, there is a 50% chance that it is a single adult of either sex, a 25% chance that it is a female on a hunting spree for her young, and a 25% chance that it is a female accompanied by young (85% chance of one offspring, 15% chance of two) of between 1-8 (d8) months of age.

6. A leucrotta is not overwhelmingly intelligent, but its innate evilness lends it a slyness and cunning not usually found in non-evil creatures of average intelligence. The tricks a leucrotta uses to lure its prey are not overly complex or sophisticated, but are often all the more effective because of their simplicity. One ploy that all leucrotta use from time to time is to imitate the voice of a wounded or diseased character crying out for help — a plea that most good-aligned characters find difficult to ignore.

Ecology of the Lich

by Richard Pett
Art by Pat Loboyko

'I have immortal longings in me'
— Shakespeare - *Anthony and Cleopatra*

'Will it be the throat or the heart?'

The phylactery is made, the container waits for just one more thing. My immortal soul.

So now comes the moment of my glory, when I become whole. Never to age, never to sicken, never to wither.

Greatness awaits me and but one cut remains – yet now I quiver, now I doubt, now I fear.

One final act for the man – one final moment before life begins anew, and forever. I have chosen...

— Last mortal words of the Great Druid Croglin, the lich of the Mire

The sorcerer or wizard with an unnatural lifespan has been the subject of tales and fables throughout the ages; a thousand, thousand stories hint at their dark beginnings. One of the best known tales tells the story of the Cabal of Unsleep – a cabal of wizards who worked towards the single goal of immortality.

The Cabal ruled kingdoms eons ago, and all its members were tyrants of renowned cruelty. While they waged war with each other on the surface – they secretly held true as a brotherhood, using their squabbles to gain influence in other lands until, at last, no part of the world was

untouched by their icy fingers. This cabal, it is rumored, were among the first to discover the Dreadful Pact and thus were the first lichs.

However, unlife can breed insanity, and the lichs had barely achieved undeath before they began turning upon each other. The present day Knights who hunt by Sunset are descendants of an ancient holy order intent upon killing all the Cabal of Unsleep – a task they have yet to complete.

Physiology

Liches are created, not born, and their only method of reproduction is the creation of a new lich. Undead

liches do not eat, sleep, or breath, and the pattern of a lich's life generally follows a set route, commencing with the Becoming.

The Becoming

The lich monster description casually mentions that the process of becoming a lich is *unspeakably evil*, and that it can only be undertaken by a willing character. In his great work *Arcanum*, Manse Hoff describes three methods through which a lich can be created, although he hints that some three dozen methods were once catalogued in the great *Monstorum Sorcerus*. The three known to most

are the Dreadful Pact, the Hideous Sacrifice, and the Ripping.

The Dreadful Pact – in this method, the would-be-lich's soul is ripped from the body and placed into the phylactery by the self-destruction of the spell caster. The caster creates the phylactery and takes his own life, hoping that the magic that he has used to make the phylactery is strong enough to draw the soul into it.

This method is quick but has the drawback that unless the phylactery has been prepared perfectly, the soul of the caster is simply drawn away. Some surmise that souls drawn in this way do not simply pass onwards, but move to some unspeakable nether place where they spend eternity wandering in madness.

The Hideous Sacrifice – this method draws the soul into the phylactery through a variant of the *magic jar* spell. However, the lich-initiate must cast the spell at the precise moment of his death, and this requires extraordinary timing on behalf of the spellcaster.

As a consequence, this method is the one most fraught with the chance for mishap - the soul can be drawn before death, trapping the caster in his own spell; the caster can fail to complete the spell and die prematurely, or (in the worst case) the caster's soul is drawn into entirely the wrong place. In this last case, the lich might end up trapped within a nearby creature or object, such as an accomplice, building, or item.

The Ripping – the most dreadful method requires a trustworthy and willing volunteer. The ripping is spiritual warfare; the soul is driven from the body into the phylactery through force of pain inflicted on the spellcaster.

This method is the most sure of success, but it is also the longest and most painful, and requires extraordinary determination on the part of the spellcaster.

Once the transformation from lich-initiate has been withstood, three further stages remain in the life cycle of a lich: the Journey, the Fading, and the Corruption.

The Journey

Only some lich-initiates complete the Beginning and become lichs. Those that are lost are variously referred to in arcane works as *NetherLiches*, *the Lost* or simply *Fallen*. Those who do survive acquire the lich template and can look forward to eternal life – and eternal waking. The spellcaster knows well that near eternity could be a curse beyond measure, but few are truly prepared for what eternity means for their minds. A certain group of newly-made lichs go mad moments or days after their creation.

Those few who survive have gained eternity to plot and weave. If their ego is great enough, newly-formed lichs welcome undeath, and these lichs undergo a transformation almost immediately called the Glory. Glorified Liches are so overjoyed at the prospect of undeath that their abilities are enhanced, and all DCs against their special abilities are permanently increased by 2.

Once the Journey truly begins, so do the lichs prepare for and ready themselves for their great quests. These quests are known among other intelligent undead, but they are more common and indeed essential to keep the active minds of the spellcasters amused and distracted.

Each lich will pursue at least one great quest, but some have dozens of plots and plans – from simple vengeance to the discovery of the answers to ultimate questions. As the months turn into years their flesh corrupts and falls away, leaving only bleached bones and red eyes of hate.

The Fading and Great Search

In time, no matter what the distraction, age and wear takes their toll on the physical form of the lich, and the Fading begins. Subtly at first, then with increasing forcefulness, the body

and bones begin to decay, and the lich must find an alternative home for its soul.

A variation of *trap the soul* offers the lich one direct option to continue, by securing a suitably impressive gem in which to store his soul. This invariably requires the lich to search places unknown to even the wisest sages – the mere value of the gem alone is not enough to enable life to be stored within. Gems that allow lichs to live on are rare indeed, and the search for them can take centuries.

Often the moment of Corruption concludes with the lich becoming a demi-lich, although occasionally something goes wrong and the soul is lost, in a similar way to the Dreadful Pact.

The Corruption and the Demi-Lich

While the special gems a lich finds may enable it to keep its soul safe, at this stage it is a creature with little physical being. It spends most of its time wandering the planes of existence on quests beyond the comprehension of man.

Generally only physically disturbing its remains will make a demi-lich return, although any lich will also leave at least one method for its followers to summon it. So ancient is the creature by now that any followers are likely to be less than dust, but the lich still harbors a hidden need to connect to the physical world and so will find the compulsion to be drawn back almost impossible to overcome.

When even the last fragment of skull is crumbled and gone, the lich exists only through the gems that remain and has almost entirely left the physical world. Although an aura of lingering corruption and hate may remain on the gems, the lich is seldom brought back, unless through some calamitous event or powerful summoning.

...and Beyond

Liches believe a path to enlightenment and pure mind is possible to those who pursue the far path. Some

Table 1: Knowledge of the Lich

Characters with ranks in Knowledge (the Planes) or (religion) may know about the lich. Characters making a successful skill check know all the information up to and including the DC check.

DC	Result
10	A lich is a vile undead spellcaster with a life prolonged by arcane horrors.
15	The touch of a lich can paralyze; its appearance causes fright.
20	Each lich is bound to a phylactery – a magical box into which the creature has placed its life. Destroy the phylactery, and the lich can also be destroyed. A lich with an intact phylactery reappears after death and cannot be destroyed.
25	Some lichs reappear after death more quickly than others, and with centuries to plot, they are formidable foes, well prepared for any threat.
30	Even lichs die, and over eons their bones wear away. Some become demi-liches – ghostly creatures that suck souls.

say the undead being becomes pure hate and is cursed by the gods with some horrific fate as a lesson. Others say that ultimately the lich develops into a being of pure enlightenment, able to atone for its corruption at last. Still others hint that the gods will only allow this enlightenment to occur in the seconds before the end of all things...

Psychology and Society

Their paranoid nature leads lichs into solitary lives, although occasionally need or necessity can bring some together. Such alliances exist in an atmosphere of indescribable unease. They form alliances with vampires, some ghouls, and vampire spawn, generally using the ally to do their dirty work out in the worlds of men.

The life of a lich is one of long, slow decay, and to a lich, the passing of decades seems the blinking of an eye. By necessity, they occupy themselves with plots and intrigues, quests and machinations, and so they are encountered with surprising frequency, considering the appalling methods of their 'birth'.

Characters encountering a lich should do so cautiously, their enemy may have had several hundred years to plan for such an event and is quite likely to be much smarter than the PCs. Liches can be killed only by the destruction of their phylactery, and

while chances are that the phylactery is somewhere at hand, only a foolish adventurer attacks first and seeks the phylactery later.

Unless its phylactery is found and destroyed, a lich reappears 1d10 days after its destruction. This reborn lich will seek vengeance; though it may fear its enemy, it seeks to deal with them immediately.

Lich Feats

Rapid Rebirth [Monster]

This feat allows lichs to reappear much more quickly than usual. Taking the feat once allows the lich to reappear 1d10 hours after its physical death, taking the feat twice allows it to reappear in 1d10 minutes. The feat may not be taken more than twice.

Undeath Familiar [Monster]

This feat allows lichs to retain an ageless familiar: the familiar gains the undead type but can be destroyed by normal means. Other than the alterations listed above, the familiar remains unchanged.

Lich Wrought Magic

With eternity at its command, the lich does not merely seek to create idle objects and mundane equipment; even the most powerful magic seems trite to the more ancient and powerful lichs. When lichs create

magic, they create *magic*. Working in solitude for decades on a single item is but a short span when you almost have forever.

As a result, many items created by lichs are tremendously powerful, rivalling those created by the gods themselves. Dabbling in such infernal arcana is risky, however, and many lich items cause disaster to those who seek to use them. The Maw of Gales, the Black Orb of Torm, and the Darkness in the Sandstorm are three such lich-spawned items.

The Maw of Gales - This infernal cave mouth resembles the mouth of a great whale carved at the foot of the mountain. A beaten copper door of great size warns intruders to leave the occupant in peace or face the consequences.

The Maw is, in fact, an elaborate trap created by the Whorl, a lich-hierophant who spent ten centuries covering its own tracks with traps, rumor and false leads. After destroying an empire, the Whorl had so many enemies in so many countries and planes of existence that flight was the only option. It spends its whole existence on the run, never spending more than a few days in one place before moving on. It resembles a wanderer in ragged robes leaning on a bent staff.

The Maw is an advanced *censer of controlling air elementals*; when the valve is opened, elder air elementals arrive at a rate of one per day. These elementals faultlessly pursue those who broke open the doorway. They appear until the violators of the door are slain or a *wish* or *miracle* spell prevents any more appearing.

Caster Level 20th; Prerequisites: Craft Wondrous Item, *summon monster IX*; Market Place 360,000gp

The Black Orb of Torm – this black sphere reflects no light and is cold to the touch. It was created by the Archlich Torm for her followers as weapons in the quest to discover the the Garden of Unending Beauty.

When activated, the Orb replicates an *implosion* spell cast by a 20th level wizard. Occasionally, Torm traps the orbs to turn on those who use them.

Caster Level 20th; Prerequisites: Craft Wondrous Item, *implosion*; Market Place 9,000 gp

The Darkness in the Sandstorm - What happened with the Darkness no one knows, save the great lich Kov was somehow responsible for its creation.

The Darkness is a storm of black desert fury, a dark hole that rolls across the sands causing appalling sandstorms. Its heart is a huge *sphere of annihilation*.

Some say the Darkness contains the lich Kov itself, and is guided by his hate. They whisper that one day it may find its way across the desert and enter the Caliphate.

The Phylactery

Generally phylacteries are sealed metal boxes containing strips of parchment inscribed with magical phrases. However, the tiny box is only one option; others are available.

The Iron Mirror – a black mirror in which no reflection can be seen.

The Black Diamond – a diamond so dark it appears as night, its surface etched with runes that look like stars.

The Grey Tooth – the tooth of a great ice tiger fully two feet long and covered in curious writings.

The Great Lintel – a huge beam many feet thick, the surface must be examined closely to see the finest of runes – writings that have worn to nothing over eons.

The Mithral Valve – a vast door depicting demons devouring angels.

The Great Bell – a green copper bell covered in vile sigils and images.

Many liches study puzzle boxes – complex interlocking objects within which the phylactery is stored. These boxes are of varying complexity. Some require many Intelligence checks (DC 25 upwards), some may be opened in only one way, and the puzzles must be unwrapped in order, while others are horribly trapped.

In each case the phylactery has the same statistics – Tiny, 40 hit points, hardness 20, break DC 40.

History of the Lich

Lich. *lych*. n. Corpse (obs): -gate, roofed gateway of churchyard where coffin is placed to await clergyman's arrival; - owl, screech-owl

Liches as generic animated corpses are mentioned in Clark Ashton Smith's "Empire of the Necromancers," a short story full of marvelously disturbing and evocative imagery:

'Dead laborers made their palace-gardens to bloom with long perished flowers; liches and skeletons toiled for them in the mines, or reared superb, fantastic towers to the dying sun. ... Those that were the fairest, whom the plague and the worm had not ravaged overmuch, they took for their lemans and made to serve their necrophiliac lust.'

The idea of storing one's soul in an object to permit life after death is an image prevalent in many mythologies. Eluding death through sorcery or black magic is also a common theme in folklore.

Sample Liches

The lich's motivation is an important way for the DM to judge how to run both the lich and its followers. Here are a few samples:

The Scholar: The scholar has entered undeath to allow it to continue its research, what great quest can captivate a thousand lifetimes?

The Hater: The Hater wishes only one thing – the extermination of all things so that at last, it may find peace.

The Hermit: always whispered, never seen, there is something out there that wishes to be left undisturbed. Why do men continually seek its treasure?

The Paranoiac: The Maze they say fills the whole mountain roots – a catacomb of traps and protections, doorways to death impossible drops and endless fear. At the heart of the maze dwells the lich, its only fear

– its own death.

The Enlightened One: beyond all thought of hate, beyond the need for avarice and corruption, even a lich may find a path to enlightenment. These liches become something new, a creature of joy and peace; some even surmise that all liches wish for contentment, and that their dark souls crave only one thing – happiness. Could this lich have found it, and will anyone countenance dealings with this creature – no matter how good its intentions seem?

Rare Liches

Fell-lych: The Fell-lych, or the *Lych Born of Madness* is a lich that uses an aberration as a base creature. These beings have twisted dreams and goals that humans find hard to fathom.

The Dead Kings: The Race of Dead Kings began as a cult of storm giants, twisted by some fell magic in ages past. The Dead Kings have spread to other giants, but their ancient rulers are still fallen storm giants. They are both beautiful and appalling to behold – towering masses of pale ragged flesh with deep eyes of black fire.

The Thing at the Soul of the Mire

'I sprang to my feet, my mind paralyzed by the thing that appeared through the mist. It was something dead, yet hateful life stirred in its skull, a fire the color of blood and misery. This lich held aloft a great scythe, light dancing on its blade even in the darkness of this dreadful cloying mire. The antlers of a great stag rested on its brow like a crown – and this king of old still wore his rags of office – a cloak and robe stained with a thousand winters.'

—The final moments of Joshua Cane, Poacher

'Stay off the moors lads'

—Motto of the Severed Ram, Grimward Edge

They say the Grimward is alive – a moor with a soul. From the Shepherd's Meeting Stones in the north to

the Bleakfalls to the south, all avoid its misery – no track or road or even shepherd's trail crosses the Grimward, and even in summer it is the color of rotting autumn leaves. The moor is alive with biting insects and strange calls, baying hounds and living mists. The weather is odd, and the mire has disappeared behind mist for months on end.

Once the moor was a great kingdom, the ruins of which still dot the landscape. What horrific event caused the land to fall into a great mire is unknown, but the little life remaining there is twisted and pitiable. A few balding, mangy wolves scratch out a life feasting on diseased sheep with white eyes. Crows are fond of the mire, but other birds avoid it.

The Thing at the Soul of the Mire is a lich, and his dabbling is responsible for the fall of the kingdom. By tampering with the spirits of nature, he robbed the land of life and sucked its soul. Packs of dead hounds bay in the night, and the moors are dotted with harmless-looking expanses of gray and russet that become mires. The bog itself is scores of yards deep.

The land grows ever more dreary as travelers approach its heart. The mire covers over 60,000 acres that are almost impossible to cross, a place of thorns and quicksand and death. At its heart lies Grimward Tor, which seems to be little more than a curious rocky spot. The tor contains the ruins of a great tower which once stood at the heart of this dead kingdom. The Soul, a druid lich of incredible age, broods at the summit of the tor, sending its hounds and flocks of birds to be its eyes and ears in the land. Perhaps it waits for some omen before it reawakens the kingdom.

Adventure Hooks

- ❑ The Mire is spreading year on year – what dark heart drives its remorseless advance? Can it be stopped?
- ❑ Strange lights are seen on the mire, will-o'-wisps have entered the towns around the moor by night,

seemingly searching for something.

- ❑ The Soul of the Mire sends a voice to the folk of Grimward Edge warning them that unless they aid it, something terrible will happen. The townsfolk cannot side with evil, yet as the next day dawns, impossible monsters are seen on the outskirts of the town.

Other Sample Liches

Here are a few lichs you may wish to hint at in your own campaign world. Perhaps their deeds are little more than stories in the books of children, or perhaps they are neighbors – rather nasty neighbors who cannot be ignored.

S'sssssaf Thay

Female Locathah Cleric 14 Lich

It has never seen the sun, never felt the rain on its brow or the wind between its fingers, yet it hates all these things, hates and fears the world above. Its children are krakens that scour the seas of men intent on recovering some vast object that, to human eyes, more closely resembles an island than something made in ancient days. Why does she seek this sinking land, and does it signify the flooding of the world?

The LichGate

Created by the minions of Belphegor, the Prince of Laziness (see *KOBOLD QUARTERLY* #2), this colossal arched gate holds the bodies of 13 bound lichs and stands guard on the baron's domain. Belphegor finds the binding of the lichs to the site particularly amusing; the passing of eons has driven the lichs into a madness of enforced torpidity.

The Mad King

Male human bar6/sor12 lich

The Mad King, they say, never rests. His kingdom, called the Web of Spears, is perpetually on the move, the gypsy king's hordes spreading across the world to blacken all lands.

Great iron towers move with the army, which is more akin to a moving city than a gathering of warriors. Stories say a barbarian horde mounted on black elephants is approaching: are they his allies, or his downfall?

The Queen of Dark Whimsy

Female elf bard16 lich

The EbonWood lies on the edges of the kingdom, and tales of horror whisper through the trees from its dark heart. They say the fey within have grown depraved, that they run and consort with beasts, and their wives have birthed things that should not walk or stand.

As the PCs arrive in town a hunting party returns with a horrifically deformed animal in their net. What does the capture of the Beast of Thorns signify? The Queen of Dark Whimsy grows angrier with every passing moment it remains in human hands.

Other Possibilities

Imagine a triad run by lichs, crimelords whose sway over an entire kingdom is purely for the acquisition of magic. This trio controls the gangs within the city by drugs and *suggestion* spells, perpetrating gang wars to hide their activities. What do the lichs seek?

Master Cuper is a lich who hides within society as the master of the Great University of Hane. While on the surface his funding of archaeological expeditions seems benevolent, he is really seeking prodigies to uncover a type of magic only hinted at. The ancients called this new arcana "Unmaking".

Could Master Cuper sponsor your own party this way? Must lichs be villains or could the enemy they are trying to thwart be a thousand times worse than the lich itself – could the future of the world rest on the bony shoulders and deep knowledge of a lich?

0 (6/day) (DC 19) *create water, detect magic, flare, know direction, read magic, virtue*

Tactics

Before Combat With so many eyes and ears across its vast moorland home, the Soul is almost always alerted to intruders. It will prepare its hounds, which it will send out to meet visitors soon after they step onto the great mire. It will aid the hounds by covering their attack with a great storm, called by *control weather*.

During Combat It uses its lightning spells to aid its hounds, and casts its *earthquake* spell to turn the mire into a quicksand hell. If half the hounds are slain, it will attack with *fire storm*, *finger of death* and *creeping doom* before returning into its lair, preparing *antilife shell* and from which it will cast its final attack spells before moving into attack with the scythe it calls "*harvest becomes midnight*". It takes the form of a great tendriculos if badly injured (less than half hp left).

Morale The lich's *phylactery* lies buried 100 yards below the mire, in a box of lead within a box of gold within a box of adamantite. It is confident no one can locate it and enjoys combat accordingly, certain it will always rise from the mire.

Special Abilities

Animal Companion (Ex) The Soul has a dire elk animal companion (AC 14, Spd 50 feet, hp 54, +8 horns for 1d10+3).

A Thousand Faces (Su) The Soul can change its appearance at will, as if using an *alter self* spell. This effect only works while the Soul is in its normal form.

Fear Aura (Su) The Soul is surrounded in a dreadful aura of death and evil. Creatures of less than 5HD in a 60-foot radius that look upon the Soul must make a will save (DC 20) or be affected as though by a fear spell as if cast by a 15th level sorcerer.

Nature Sense (Su) The Soul gains +2 bonus on Knowledge (Nature) and Survival checks.

Paralyzing Touch (Su) Any living creature the Soul hits must make a Fortitude save (DC 20) or be permanently paralyzed.

Resist Nature's Lure (Ex) The Soul gains +4 to saves against spell like abilities of fey.

Trackless Step (Ex) The Soul leaves no tracks.

Turn Resistance (Su) The Soul has +4 turn resistance.

Venom Immunity (Ex) The Soul is immune to all poisons.

Wild Empathy (Ex) The Soul can improve the attitude of an animal by making a wild empathy check with a +20 (results determined as a Diplomacy check).

Wild Shape (Su) Five times per day the Soul can take the form of a tendriculos. The effect lasts 15 hours or until the Soul choose to revert to its original form.

Woodland Stride (Ex) The Soul can move through any sort of undergrowth at normal speed.

Skills the Soul gains +8 bonus to Hide, Listen, Move Silently, Search, Sense Motive and Spot checks.

THE ECOLOGY OF THE Linnorm

"Thor shall put to death the Midgard Serpent, and shall stride away nine paces from that spot; then shall he fall dead to the earth, because of the venom which the Snake has blown at him."

—Snorri Sturluson, *The Prose Edda* (Brodeur translation)

Although many true dragons are storied to be covetous, deadly creatures, there are those who balance the depravity of their evil brethren, wyrms who exemplify the virtues of honor, charity, and self-sacrifice. Yet not all breeds of dragonkind possess such balancing agents. Born of dark legends and apocalyptic myths, linnorms are dragons of

ruin, covetous monstrosities that care nothing for their kin, the world, or the devastation they bring to all things.

HISTORY OF THE LINNORM

Scholars believe linnorms are evolutionary members of the dragon family—lesser serpents evolved from a common ancestor of dragons. The physical anatomy and behavioral characteristics of a linnorm are similar enough to a dragon's that this is widely accepted among the scholarly population. Researchers also claim linnorms are on the precipice of extinction, and the fact that younger linnorm sightings occur infrequently adds weight to the hypothesis.

Some sages tell a different story, though, declaring these theories pure drivel—pretexts manufactured to keep the heritage of these god-defying creatures hidden. These sages assert that linnorms instead originated from the far side of the Corpse Gate in Niflheim, the layer of the Gray Waste of Hades where the goddess Hel courts the dead. There, in the boiling spring of Hvergelmir, the primeval ancestors of linnorms bred among themselves in an orgy of debauchery and incest.

Chief among them was Nidhogg the Dread Biter, the vile corpse-sucker who gnaws one of the roots of Yggdrasil, forcing the great ashen World Tree to know true suffering. Nidhogg is not alone in Hvergelmir—other serpents thrive there and help the great corpse-tearer rot away the roots of the World Tree. There are the serpent brothers Goin and Moin and their father

Grafvitner the Gnawing Wolf. There live Grabak the Gray-Back, Grafvollud the Field Gnawer, Ofnir the Entangler, Svafnir the Sleep-Bringer, and countless others.

How the linnorms broke free of their vile breeding nest and into the realm of mortals remains a point of contention. The popular theory speculates that the World Tree's roots have decayed enough so that a twig has fallen away, allowing the lesser serpents to wriggle through to the Material Plane. A more radical view claims that Odin's cataclysmic imprisonment of Hel's older brother Jormungandr, the immense World Serpent, created a planar rift that allowed the linnorms to extend their uncle's hatred to the Material Plane. Either way, what was thought to be locked away by the deities themselves have found a way to envenom the realms of mortals.

Whether they are draconic stepchildren or godly progenies, linnorms are among the most despicable of all dragonkind. Rumors of their capacity for meting out destruction precede them, and most who encounter these dread wyrms dearly hope the scholars—those who proselytize the coming end of the linnorm race—are right.

PHYSIOLOGY OF THE LINNORM

Although linnorms draw frequent comparisons to dragons, their anatomies are more suggestive of serpents, with elongated bodies that lack wings and rear legs. Linnorms live longer than dragons and never stop growing, reaching ages of 4,000 years, lengths of 70 feet, and masses of 2 tons. Unlike dragons, however, they do not gain new abilities and powers as they age.

Sporting a flexible skeleton containing hundreds of vertebrae, a

KNOWLEDGE OF THE LINNORM

The following table shows the results of a Knowledge (arcana) check as it relates to linnorms. Dwellers of the frigid Northlands, dragon hunters, and worshipers of the Norse pantheon most often possess this information. Linnorms appear on page 140 of the *Monster Manual II*.

Knowledge (arcana)

DC	Result
10 + CR	Many different breeds of linnorms exist and you have enough passing familiarity to identify this one's name and behavior. This result reveals dragon traits and the special qualities of linnorms.
15 + CR	All linnorms are cunning creatures with a variety of magical abilities, the gray and corpse tearer varieties even cast spells as clerics do. Linnorms can speak Abyssal and Draconic, though some know other tongues.
20 + CR	Linnorms are fiercely territorial and tolerate no other intelligent creatures in their domains, including other linnorms. They defend their habitats using their imposing size, powerful physical attacks, and deadly breath weapons (this result reveals information about the linnorm's breath weapons).
25 + CR	Linnorms are cold and calculating, never entering battle before studying their foes and formulating a plan. When they do strike, it is quick and deadly. This result reveals all the linnorm's spell-like abilities.
30 + CR	The oldest linnorms are insane, made so by centuries of solitude and the obsessive gathering of power and wealth. They keep and aggressively defend sizable treasure hoards. This result reveals all the linnorm's unmentioned special attacks.

linnorm grows large trunk muscles that allow for rectilinear locomotion—digging into the ground with the scales of its underbelly and pushing forward with its ribs. Only two front legs facilitate movement as its hind limbs, or anal claws, have been lost to atrophy due to elongation of the body. The forelegs end in sharp, razorlike claws.

A narrow skull with locked jawbones contains roughly three-dozen teeth that curve back toward the throat, making escape difficult once it bites into its prey. Unusually long saliva glands in its upper jaw store an enormous amount of toxins or other compounds, which many linnorms utilize to poison their enemies or create their deadly breath weapons.

A linnorm has a central nervous system and a developed brain. Its internal organs are compact—it is missing its left lung and has the ability to shift its three-chambered heart to one side, allowing it to swallow food within the narrow confinement of its body. During digestion, by-products pass to the cloaca, where the body reabsorbs water and

excretes the rest through an opening at the base of the tail near the internalized reproductive organs.

Cold-blooded, a linnorm can survive for a full year without sustenance by allowing its body temperature to drop. This efficiency has proven serendipitous, as a linnorm often depletes the food supply of its surroundings. In warmer climates, a linnorm pants so that the water in its mouth evaporates, which causes a cooling effect that helps to regulate its overall body temperature.

A linnorm interacts with its environment using superior sensory systems. It lacks external ears but has eardrums below its eyes that allow it to pick up low frequencies and vibrations. It constantly flicks its tongue to gather information about its surroundings, as it has highly developed taste buds that intercept airborne chemicals and a specialized organ in the roof of its mouth that processes this information. A linnorm's head bears small pits that contain heat-sensing cells that convert the infrared spectrum to nerve impulses that transmit to the brain,

allowing the linnorm to detect creatures in even total darkness.

Rough, dry scales serve to retain body moisture and prevent the linnorm's internal organs from drying out due to loss of water. The underlying skin determines these scales' pigment and varies among the many different linnorm breeds, ranging from dull grays to bright oranges. Once a year, a linnorm's eyes gloss over, indicating that it is ready to shed—a new layer of skin growing beneath the old causing the scales' color to become dull. Eventually, the linnorm hooks its lip on a tree or rock and squirms out of its old, dead skin. Many scholars and trophy hunters prize the cast-off skins of linnorms and might pay up to 12,000 gp for an intact find.

Out of the many different breeds of linnorms, the gray linnorm, dread linnorm, and corpse tearer are the three most extensively documented.

Gray Linnorm: Grays are the smallest of the linnorms, reaching lengths of only 20 feet. They use their trunk muscles exclusively for locomotion without the aid of their front legs. At birth, their scales are jet black and fade to dull gray with age. Unique to gray linnorms are a rear poison gland and curved stinger at the tip of their tails that drip with deadly venom.

Sleeker than most of its brethren, a gray linnorm must take care when swallowing its food. To this end, its saliva glands store a black corrosive fluid that it can breathe as a deadly weapon, allowing the gray to begin the digestion process before swallowing to lessen its chances of choking.

Dread Linnorm: Not only are these linnorms unique in that they sport two separate heads, they are also the largest of their kind, reaching lengths of up to 70 feet. Two serpentine necks extend from the main trunk of their bodies, each ending in a massive head adorned with a blotchy, rancid mane that hangs below the jaw. Their scales are pitch-black upon hatching but seem to rot with age, turning a variety of sickly gray and brown shades. A dread linnorm reflexively flushes its

ORIGIN OF THE LINNORM

The lindworm, or lindwurm, has Germanic linguistic roots, meaning "dragon" or "wingless dragon." Norse mythology contains numerous references to these serpents in the *Codex Regius* of the *Poetic Edda*. The Vikings believed lindwürms feasted upon their dead, inherent in their creation myth, *Völuspá*, regarding the corpse tearer Nídhögg. Jörmungand, the linnormlike Midgard Serpent that encircles the world consuming his own tail, is one of the centerpieces of Ragnarök, the end of the world, when he and Thor are fated to kill one another. Another tale gives the account of Fáfnir, the giant who murdered his brother and then turned himself into a great serpent to hoard his stolen gold.

The introduction of lindwürms into *DUNGEONS & DRAGONS* came in 1991 with the release of the *Vikings Campaign Sourcebook*. Although rather concise and containing few game mechanics, the linnorm entry set the tone for Jean Rabe's compelling two-part article, "The Vikings' Dragons," that appeared in the pages of *DRAGON* 15 years ago in *DRAGON* #182 and *DRAGON* #183. These articles greatly expanded the linnorm by detailing ten different breeds and were the basis for all material that was to come thereafter.

scales depending on its mood, causing them to darken as its temper sours.

Two volatile compounds are stored in a dread linnorm's saliva glands, which combust with explosive force when they make contact with air. The first compound bursts into flame and the second freezes instantly. Using their enormous lungs, a dread linnorm's two heads can blow forth either compound with sustained force.

Corpse Tearer: Corpse tearers are the most revolting of all linnorms, exuding a stench of death so overwhelming it is impossible to ignore. Having a splotched, brownish hue, corpse tearers sprout patches of hair seemingly at random, giving them the appearance that they were once covered in hair but large clumps of it have since fallen out. Moss and slime hang from their scales, which they use to camouflage themselves, making them resemble enormous dead trees while still. Their claws are broken off at the ends, with nothing remaining but soiled shards that are jagged and deadly.

These horrific serpents can spit two deadly toxins. The first is a magic-infused venom that can paralyze any living creature and the other is an airborne disease called linnorm fever that attacks the central nervous system.

abandonment as a hatchling, centuries of solitary living, selfishly putting its own agenda before all others, and refusing to trust anyone—especially other linnorms. This ultimately takes its toll on the minds of linnorms and once they reach their venerable ages they are quite insane with rampant paranoia.

A linnorm has one sole purpose in life, driven by instinct: to amass wealth and power at all costs. They are

PSYCHOLOGY AND SOCIETY OF THE LINNORM

There is no empathy or compassion in linnorms' spiteful hearts. They care nothing for the life or death of other intelligent races and would not even lift a claw to save their own race if threatened. The attitude of a linnorm boils down to very basic terms: it is the linnorm against the world. This single-mindedness results from

loners, usually refusing to ally with any living thing. When they do, they turn upon their collaborator as soon as they achieve their goals. They make their lairs in deep tunnels and outfit them with elaborate traps so they can stash their hoards away from the world. A linnorm spends long, forlorn centuries coveting and guarding its treasure, calculating its value and memorizing its contents.

Linnorms have no societal structure to speak of and do their best to ensure that their territories do not encroach upon one another—an unusual event in most regions considering these creatures' rarity. The only contact among the species occurs during mating. Once every decade, a female linnorm releases pheromones tuned to the heightened senses of a male, indicating that she is ready to breed. Potentially, the breeding of linnorms is a repulsive sight, as they engage in a "mating ball," entangling each other with their long bodies until observers cannot determine where each begins or ends. More often than not, though, this instinctual call goes unanswered.

Should mating occur, soon after, the female lays her clutch of eggs and cares for them until they hatch, abandoning the young to their fates immediately thereafter. The life of a hatchling is often short and cruel, with the weakest perishing from exposure or the predations of its kin. This is ultimately the cause of the race's scarcity and aggressive behavior.

A linnorm doesn't hesitate to raze the landscape out of spite, and intruding upon linnorm territory is the quickest way to draw its attention. Linnorms study their foes from a distance to plot their attacks, which are often quick and decisive. They exploit their strengths to the utmost advantage, raining destruction down upon their enemies while targeting the strongest foes, moving in close when they deplete their magical and long-range attacks. Even then, linnorms only directly engage in battle when they have a clear and decisive advantage. A wounded linnorm usually retreats, as none are gallant enough to have pride.

Gray Linnorm: Grays are the most spiteful and hostile of all the linnorm breeds, reveling in deception. They make their lairs in elevated locations so they can see any fool who dares approach. Paranoid to an extreme, grays assume any intruder to be after their hoard and attack on sight.

Grays love to kill with their claws and tail stingers, and frequently close with enemies after initial batteries of long-range attacks, preferring improvisation

OTHER LINNORMS

Aside from the commonly described linnorms, at least seven others are storied to exist.

Flame Linnorm: Radiant, fire-breathing beasts, these linnorms lair in deep caverns and dote over massive treasure hoards.

Forest Linnorm: Like gigantic snakes, these linnorms possess no limbs, slithering through the wildness and tricking prey with their ability to mimic noises.

Frost Linnorm: Incredibly territorial, these furred, blue-white linnorms employ strange magics and attempt to freeze any creature that ventures into their domains.

Land Linnorm: Greedy in the extreme, these hill-dwelling linnorms are the most likely to manipulate humanoids into their service.

Midgard Linnorm: The direct offspring of Jormungandr, the Midgard Serpent, this powerful, elusive linnorm—possibly the only of its kind—has incredible control over water and lairs upon the ocean floor.

Rain Linnorm: Arrogant land and swamp-dwelling dragons, these weather-manipulating linnorms exhibit incredible greed, even for members of their covetous race.

Sea Linnorms: Cold and vicious, sea linnorms terrorize the waves of the deep ocean, seeking to keep sentient creatures confined to their tiny continental homes.

to planning. They often take a wounded foe into the deep tunnels of their lairs, where they play a cruel game of "escape the dragon" before finishing off the poor soul.

Exceptions to their species, gray linnorm parents remain together until their hatchlings can fend for themselves, pairing to mate again in another 30 years.

Dread Linnorm: None of the linnorms bear more of an irrational hatred for humanity than dread linnorms. These linnorms make their lairs as far from human settlements as they can, typically in dangerous and barren climates. Nevertheless, history has recorded several incidents of dread linnorms completely annihilating towns or villages and making their lairs in the resulting devastation. Thankfully, these occurrences are few due to the rarity of the breed.

A dread linnorm considers everything around its lair to be under its rule, which usually consists of laying everything to waste so it can plunder the spoils. It spends much of its time afterwards surveying the devastation, scanning for intruders. If someone does encroach upon its domain, or worse, steals some of its treasure, the linnorm stops at nothing to locate the trespassers and exact horrific retribution.

A dread linnorm accumulates wealth solely from instinct and does not feel the stir to catalog its hoard

or put it to use. While other linnorms might alter their combat strategies so that no harm comes to their foes' loot, a dread linnorm thinks nothing of unleashing the full force of its fury. On the other hand, this lack of regard does not extend far—like all linnorms, a dread linnorm spends most of its days defending its hoard.

Corpse Tearer: Thought by some to be direct descendants of Nidhoggr, corpse tearers are the most feared of the linnorms, and rightly so, as few other serpents or dragons are powerful enough to oppose them. Having developed a taste for rotting flesh, these linnorms make their lairs deep beneath ancient burial sites and battlefields, leaving the surface to the desecrations of other linnorms. Defending their underground lair are countless undead minions, stirred from their eternal sleep by corpse tearers' excavations or the remains of fallen adventurers brave or foolish enough to have once challenged the linnorms.

Always striving to increase their wealth, corpse tearers send their minions out to raid graveyards and human settlements, the undead invaders returning with ever-increasing numbers and more treasure. All manner of undead form the morbid society of a corpse tearer's abode—skeletons, wraiths, wights, banshees, vampires, and even the animated corpses of dragons and other linnorms.

SEA LINNORM

A massive snake, finned and frilled in all the colors of the angry sea, splits the waves in a spray of stinging salt water. From above a mouth full of sharklike fangs, a pair of pupilless, ruby eyes narrow menacingly.

Keen Senses (Ex) A sea linnorm sees

four times as well as a human in low light conditions and twice as well in normal light.

Breath Weapon (Su) 60-foot cone of

caustic acid droplets, once every 1d4 rounds; damage 24d6 acid, Reflex DC 32 half; only effective above water.

The save DC is Constitution-based.

Capsize (Ex) A submerged sea

linnorm that surfaces under a boat or ship less than 30 feet long capsizes the vessel 95% of the time. It has a 50% chance to capsize a vessel from 30 to 70 feet

long and a 20% chance to capsize one more than 70 feet long.

Tail Sweep (Ex) This special attack allows a sea linnorm to sweep with its tail as a standard action. The sweep affects a half-circle with a radius of 30 feet, extending from an intersection on the edge of the linnorm's space in any direction. Creatures within the swept area are affected if they are four or more size categories smaller than the linnorm (Small size or smaller for a sea linnorm). A tail sweep automatically deals the indicated damage plus 1-1/2 times the linnorm's Strength bonus (round down). Affected creatures can attempt DC 32

Reflex saves to take half damage. The save DC is Constitution-based.

Skills A sea linnorm has a +8 racial bonus on any Swim check to perform some special action or avoid a hazard. It can always choose to take 10 on a Swim check, even if distracted or endangered. It can use the run action while swimming, provided it swims in a straight line.

*Sea linnorms have a +8 racial bonus on Hide checks when submerged.

Maritime tales speak of mighty sea serpents that are large enough to capsize galleys. These seafaring linnorms are exceedingly vindictive and seek retribution for the harm done to the ocean's marine life. The sea linnorm traverses both land and sea with ease, terrorizing shipping lanes and fishing villages. Accounts told from shell-shocked survivors tell of a whirlwind fury of dreadful fogs, crushing fins, and a haze of acid lingering behind the barely glimpsed form of a terrible serpent slithering back out to sea.

Sea linnorms speak Aquan, Draconic, and Infernal, although some have been known to learn Common. 

The Vikings' DRAGONS

by Jean Rabe

Artwork by Jim Holloway

An overview of the Norse lands' great serpents, part 2

In DRAGON® Issue #182, we presented the first portion of this article, detailing linnorms — Norse dragons first described in The AD&D® 2nd Edition HR1 *Vikings Campaign* sourcebook — and how to use them in your own AD&D campaigns. We now continue with our parade of Norse nasties — plus two deity class individuals for your highest-level campaigns

MORALE:	Fanatic (17-18)
XP VALUE:	Variable

Flame linnorms are the most beautiful of the Norse dragons and perhaps the most rare. They live to bend others to their will and to accumulate wealth. Adept at magic, even the youngest of the flame linnorms can master spells.

Upon hatching, the scales of a flame linnorm are as black as unused coals. By the time a linnorm reaches the juvenile stage, the scales have faded to a soft, dull gray, the shade of ash. At this stage the linnorm is sometimes confused with gray linnorms. However, when the linnorm reaches adulthood, its scales become vibrant, starting with a glowing orange in the young adult stage and reaching a pulsing scarlet by the time it is a wyrm. Adult and older linnorms appear as a mass of fire when they walk, their scales shifting, seeming like flames lapping over the creature's body. Great wyrms are said to look like living fireballs.

Flame linnorms speak their own language and can communicate with all other Norse dragons. In addition, a very young linnorm has a 20% chance to pick up human tongues. The percentage chance to gain this ability increases 10% per age category of the linnorm until the wyrm stage, when it is certain to possess this skill.

Combat: Flame linnorms attack nonintelligent creatures only for food. These great dragons reserve their full fury for Viking ships, castles, and bands of adventurers laden down with chests and bundles. In combat, a flame linnorm prefers to attack from above where it has a good vantage point and a better chance to escape a dangerous situation. It almost always attacks first with its spells, hoping to take down its targets without damaging any valuables. If, however, its adversaries prove too staunch, the linnorm continues with its breath weapon and magical fire abilities. It fights with its claws and bite only if it has no choice, as the linnorm fears close combat could harm its beautiful scales.

Breath Weapon/Special Abilities: A flame linnorm has two breath weapons that cause equal damage. One is a cloud of hot ashes 90' long, 70' wide, and 40' deep. The second is a stream of flame 5' wide at the linnorm's mouth and 110' long. The flame linnorm casts spells and uses magical abilities at 9th level, plus any combat modifier.

From birth, a flame linnorm is immune to nonmagical fire. As the lin-

norm ages, it gains other abilities: very young—immune to magical fire-based attacks, plus *heat metal* (three times a day); juvenile—*pyrotechnics* and *produce fire* (three times each a day); adult—*fireball* (at will every three rounds); old—*fire charm* and *fire trap* (three times each a day); venerable—*flame strike* and *wall of fire* (twice each a day); great wyrm—*fire seeds* and *firestorm* (once each a day).

Habitat/Society: Flame linnorms are loners, making their homes as deep within the earth as possible in caverns that can accommodate their huge forms and even larger piles of treasure. The linnorms do not hate other flame linnorms or other breeds of linnorms. However, they choose to isolate themselves, not wanting to risk the chance that other linnorms might steal their wealth. The linnorms frequently inventory their treasure to make sure every piece is accounted for. Magical treasures are especially prized, and the linnorms will spend long hours trying to discover what those treasures do. Flame linnorms that master the use of magical items use those items in battle or to *charm* or enslave humans and demihumans. These captives help the linnorm acquire more treasure.

Flame linnorms memorize every inch of their territory and guard it zealously. There is a 25% chance for a flame linnorm that has attained venerable age or greater to have 1-4 fire elementals guarding its lair. Sages are uncertain whether the elementals are summoned by magic the linnorms have acquired or whether they willingly serve the linnorm in exchange for treasure.

Flame linnorms mate every 30 years, then separate. The female is left to lay its eggs on its own, and she abandons them as soon as the young linnorms hatch.

Ecology: Flame linnorms have been known to eat herd animals, trees, and the very earth. However, their favorite food is in the form of any object on fire. These linnorms sometimes set sections of a forest ablaze just to dine.

XP VALUE: Variable

Gray linnorms are ruthless to a fault and revel in deceiving and harming all other intelligent creatures, especially humans and demihumans. While they have the smallest bodies of all Norse dragons, they have long, whiplike tails that they are quick to employ in combat.

At birth, a gray linnorm has shiny black scales so small they appear as smooth skin. The black scales remain, although they grow larger and thicker until the linnorm reaches the juvenile stage. Sometime during this growth stage, the scales' color begins to fade. By the time the linnorm has reached the mature adult stage, the scales are normally a dull gray, the color of lead. While the linnorm can alter the appearance of its scales by concentrating, it is limited to changing the shades of gray and making the scales appear shinier or duller.

Gray linnorms speak their own language and can communicate with all other Norse dragons. They also have a propensity for learning other languages. A hatchling gray linnorm has a 40% chance of being able to speak with any other intelligent creature. The chance to gain this ability increases 15% for each age category up to the young adult stage (100%).

Combat: Gray linnorms spend little time plotting their attacks, usually adopting a plan on the spur of the moment. They prefer to initially strike from a height, from where they have a better vantage point. However, unlike some of the other linnorms, they do not attempt to kill their victims only using spells and their breath weapon; they use these abilities only to weaken their foes (of course, their foes are often not hardy enough to stand up to a breath weapon attack). Gray linnorms relish killing their foes with their foreclaws and whiplike tail. Especially malicious gray linnorms capture humans and demihumans, taking them to their lair where they toy with them before eventually finishing them off.

Gray linnorms of the adult stage and older will often use their *shape change* ability to appear as a different type of linnorm (especially if another Norse dragon is in the area) in an attempt to blame that other linnorm for the attack.

Breath Weapon/Special Abilities: The breath weapon of a gray linnorm is a jet of black slime 3' wide and 60' long. It is a corrosive substance that, in addition to causing physical harm to creatures, will rust

or corrode any metal in 3-12 rounds unless washed off. The metal is allowed a saving throw vs. acid to avoid this effect (magical bonuses may be applied).

The tail of a gray linnorm oozes a poisonous substance that is the equivalent of poison type B. Creatures struck by the tail suffer 2d6 hp damage from the physical blow, plus 20 additional hp damage from the venom unless they save vs. poison.

Unlike other linnorms, a gray linnorm is not born with any special abilities. However, it gains abilities as it ages: very young— *protection from normal missiles* (constant); juvenile— *contagion* (three times a day); adult— *shape change* (at will, three times a day); old— *wraithform* (three times a day); venerable— *distance distortion* (three times a day); great wurm— *sink* (twice a day).

Its clerical spells come from the spheres of All, Charm, Elemental, Protection, and Weather. A gray linnorm casts spells and uses its magical abilities at 7th level, plus its combat modifier.

Habitat/Society: Gray linnorms usually are found on mountains, hills, ridges, and other places that overlook the land. They place themselves on these earthly pedestals and consider their territory everything within their lines of sight. Their lairs are usually tunnels into hillsides, the entrances of which are carefully concealed and trapped.

Gray linnorms mate once every 20-30 years, with the parents staying with their offspring until they have passed from the young stage. After that time, the parents separate, meeting again in another 20-30 years.

While gray linnorms are solitary, they have been known to join forces with others of their kind to raid a settlement or ship, particularly if they can place the blame through their *shape change* on another linnorm, particularly the frost linnorm, whom they hate above all other dragons.

Gray linnorms will immediately attack any intelligent creature that encroaches upon its territory, as it fears that the creature might be after its wealth. A gray linnorm hordes its wealth deep within its tunnels. While it will collect virtually anything (including cloth, furniture, and ship gear), it is especially fond of coins of all types.

Ecology: Gray linnorms can digest nearly anything. However, they have acquired a taste for deer, cattle, and sheep, and they are a terror to farmers.

While these linnorms have no natural predators, they are sometimes hunted by adventurers who use their scales for armor and their poison and other body parts in potions and for spell components.

Rain linnorms are the most vain of the Norse dragons, and will go out of their way to destroy communities and harm the land in the area of other dragons. However, unlike gray linnorms, the rain linnorms do not attempt to place the blame for the attacks elsewhere. The rain linnorms demand credit for their atrocities. The more heinous the act, the more powerful the rain linnorm considers itself. Further, the rain linnorms seek to gain vast amounts of treasure, more than they believe other dragons could possibly accumulate.

When rain linnorms hatch, their teardrop-shaped scales appear shiny and white. As the linnorm ages, the scales retain their shape, but they become larger, thicker, and are able to become gray, blue, green, or white at the creature's whim.

Linnorms speak their own language and can communicate with all other Norse dragons, although they rarely lower themselves to do so. In addition, a hatchling linnorm has a 5% chance of being able to communicate with all animals. The chance to possess this ability increases 5% per age category of the linnorm.

Combat: Young and juvenile rain linnorms are quick to rush into battles that will net them treasure. This includes attacking traveling merchants, wandering adventurers, and small communities. The linnorms attack first with their breath weapon and any magical abilities they possess. A favorite strategy of juvenile rain linnorms is to *call lightning* on a target, then breathe on anything left standing. However, if the target appears small and nonthreatening, the linnorm will combat the victim with its claws and bite in an effort to keep any valuables intact. As the linnorm ages, its tactics change. Adult and older rain linnorms hate to sully their claws with physical combat. The older linnorms always attack first with their weather-related spells, to show their superiority even over the elements. Then they assault their targets with their breath weapons.

Breath Weapon/Special Abilities: A rain linnorm's breath is a stream of boiling water 3' wide at the linnorm's mouth and 90' long. Creatures struck must save vs. breath for half damage. A rain linnorm

casts spells at 8th level, adjusted by combat modifiers.

Rain linnorms are born invulnerable to electrical attacks. As they age, they gain additional abilities: very young— *create food and water* (twice a day); young— *plant growth* and *entangle* (each three times a day); juvenile— *call lightning* (twice a day); young adult —*lightning bolt* (twice a day), *water breathing* (at will); adult— *control winds* (twice a day); mature adult—*moonbeam* and *rainbow* (each three times a day); old—immune to missile weapons and *transmute dust to water* (three times a day); very old—immune to nonmagical blunt weapons, *weather summoning* (twice a day); venerable—immune to nonmagical edged weapons, *conjure water elemental* (twice a day); wyrms—regenerate 10 hp/round, *control weather* (once a day); great wyrms: regenerate 20 hp/round, *wind walk* (once a day).

Habitat/Society: Rain linnorms live on hills where they can be comfortably buffeted by the winds and rain. Their lairs are usually deep within the hills, and their treasure hidden inside the many chambers. A linnorm usually stays in its lair only when the weather is pleasant. Wyrms and great wyrms have been known to *control weather* around their domains when the land has been too long without inclement weather.

Rain linnorms consider all others—including other rain linnorms—to be beneath them, and therefore improper company. The only time more than one rain linnorm will be encountered is when a pair has mated. The pair separate when the eggs hatch, abandoning the baby linnorms to their own devices.

Rain linnorms attempt to kill all intelligent creatures that come too near their lairs. If a linnorm believes the location of its lair is known, it will painstakingly move every piece of treasure to a new lair.

Ecology: Rain linnorms are able to subsist on almost anything. However, their favorite sustenance is lightning bolts, which they attempt to catch in evening storms. They have no known predators except human adventurers.

SIZE:	G (330' long)
MORALE:	Fearless (19)
XP VALUE:	35,000

The linnorm called Corpse Tearer is the most hideous of the Norse dragons and one of the most feared. The only offspring of the godlike linnorm of the same name, this mottled-brown dragon has long front legs that end in broken but deadly claws. It has no rear legs. The creature's slime-covered scales are small and weathered, and when the linnorm is at rest it looks more like a fallen, dead tree than a serpent. The linnorm's snakelike head is ringed with matted brown and gray hair. Tufts of the hair appear at random intervals over his body, in places so matted it resembles loose, rotting flesh.

Despite its ragged appearance, the linnorm is very much alive, moving and striking quickly. Corpse Tearer is ancient, and because it has traveled greatly it has become fluent in nearly all human and demihuman tongues. Further, it is able to converse with all linnorms and many evil, intelligent monsters.

Combat: Unlike many other of the great dragons, Corpse Tearer enjoys fighting and will not often let lackeys do battle for it. This ancient linnorm is not quick to fight, however. It watches foes carefully and from a distance, noting their abilities, potential weaknesses, and determining if it can gain something by defeating them.

When it is ready, it strikes, flying above its victims and beginning with its paralyzing breath weapon, followed by its disease breath and spell-like abilities. If its victims survive the first onslaught, Corpse Tearer lands on top of the strongest ones in an attempt to crush them, then fights with its energy-draining claws and powerful bite to finish them off. Each successful claw attack drains one life level automatically from its victim. If Corpse Tearer suffers more than 170 hp damage, it flees, flying away if possible or using its *dimension door* ability to escape.

Breath Weapon/Special Abilities: Corpse Tearer's breath weapon is a cone of *paralyzation force* 10' wide at his mouth, 300' long, and 50' wide at its apex. Creatures of less than 4 HD caught in the cone are automatically paralyzed for 4d4 turns. Creatures of greater than 4 HD are allowed a saving throw vs. breath weapons to avoid the effects. This breath weapon causes no physical damage. Corpse Tearer's second breath weapon is another matter, however. The disease breath is a cloud 100' long, 80' wide, and 80' thick. All creatures trapped within the cloud suffer 8d12 + 12 hp damage (save vs. breath weapon for half). Further, the creatures are subjected to a magical disease that slowly weakens them. The disease manifests itself within 1d6 rounds by cutting a crea-

ture's strength score in half. Every three turns, the strength score is halved again until the creature's strength drops to 1. A *cure disease* will stop the strength loss. However, a *wish* or *limited wish* is needed to restore all lost strength points.

Corpse Tearer can breathe twice before needing to rest two rounds before it can breathe again. It can breathe as many times as it wishes within this restriction.

This linnorm has the following permanent abilities, useable at will: *fly water breathing*, *continual darkness* 100' radius, *feign death*, *polymorph self*, and *speak with dead*. In addition, he is able to use the following once a day at will: *protection from good*, *spectral hand*, *delude*, *vampiric touch*, *wraithform*, *energation*, *dimension door*, *animate dead*, and *control undead*. Corpse Tearer uses all magical abilities at 15th level.

Habitat/society: Corpse Tearer's lair is in a vast chamber beneath an ancient Viking burial cave on the Vikings' home world. His lair is guarded by a pair of *controlled* vampires and the corpses of dead linnorms and Vikings. This lair is almost impossible to find because it is so deep beneath the earth. The few creatures that found their way there are now helping to guard it.

The lair is dank, stinks of rotting flesh, and is filled with Corpse Tearer's considerable wealth. The linnorm is obsessed with garnering an ever-increasing amount of gems, magic, art objects, and coins, and uses his animated corpses to dig through graves to obtain more. Further, the linnorm raids human and demihuman communities and Viking ships to gain more treasure.

Corpse Tearer claims little territory, only its sepulcher-like lair. It enjoys the closed-in feeling of the chamber walls and the darkness, willingly leaving the above ground to other linnorms. Because Corpse Tearer spends an extraordinary amount of time cataloguing his wealth, he rarely leaves its home.

Ecology: Corpse Tearer does not need sustenance when inside his lair. Outside, he is able to eat virtually anything, although he prefers rotting carcasses. This linnorm has no known predators, as the men and demihumans who hate him so are wise enough not to pursue him.

The Midgard linnorm is said to be the sole offspring of the Midgard Serpent, child of Loki. The Midgard linnorm, of which sages believe (and hope) there is only one, is the most magnificent of the Norse dragons and rivals Bahamut and Tiamat in power (see FOR1 *Draconomicon*, pages 57-59). Sages think that this great wingless serpent may be as immortal as his sire. Their flamboyant and frightening stories claim the Midgard linnorm lives at the bottom of the ocean. Few have actually seen the Midgard linnorm, and fewer still have lived to tell of it. They say the creature is so long they could not see the end of it.

The giant linnorm's body is covered with massive blue, green, and silver scales that glisten like opals. When it moves, the shifting colors make it look like a stream of running water. Its head, filled with a double row of pale-blue teeth, is said to stretch 50' wide and twice that long. Its emerald-green, lidless and pupil-less eyes are perfectly round and mirror whatever is looking into them. While the Midgard linnorm has no horns, its head is topped with a ridge of coarse midnight blue hair that looks like a horse's mane. The hair extends partway down its massive neck where it becomes a lighter blue spinal ruff that runs to the tip of its barbed tail.

The Midgard linnorm's rear legs are short and stumpy for its massive form, and appear as if they are not strong enough to support it. Its front legs are longer and end in razor-sharp claws. The linnorm uses its legs primarily to aid its maneuverability as it slithers along in the water and across the land.

The Midgard linnorm speaks the languages of all Norse dragons and can telepathically communicate with all other intelligent creatures. This is the only linnorm with this extensive telepathic ability.

Combat: Despite its malicious nature, the Midgard linnorm avoids battles, considering physical struggles beneath it. It prefers to meddle in the affairs of other linnorms, humans, and demihumans through its spells and abilities, keeping its distance yet maintaining control of the situation. The Midgard linnorm has entered few fights in its centuries-long existence. It relies on guards to fight for it.

However, if a threat is menacing enough, the Midgard linnorm breathes on the targets. Those left standing are next subjected to its spells and further breath weapons. The Midgard linnorm will only attack with its bite, claws, and tail slash if there is no other recourse.

Breath Weapon/Special Abilities: The Midgard linnorm possesses three breath weapons. The first is a spray of boiling water 10' wide and 200' long. Creatures of fewer than 4 HD struck by the spray automatically drown unless they are capable of breathing water. Creatures of 5-7 HD drown only if they fail their saving throws vs. breath weapon. Creatures of greater than 7 HD are not subject to the drowning attack. Further, all those struck by the water spray suffer 20d20 + 12 hp damage (save vs. breath weapon for half), and they are propelled 100' back. The second breath weapon is a cloud of dust 200' long, 80' wide, and 60'

deep. Those caught within the cloud suffer 16d20 + 12 hp damage (save vs. breath weapon for half). All those who fail their saving throws are affected as if they were subject to *dust of sneezing and choking*. The final breath weapon is a cone of wind 20' wide at his mouth, 200' long, and 50' wide at the base. All those caught within the cone suffer 12d20 + 12 hp damage (save vs. breath weapon for half). Further, they are automatically propelled backwards 200' from their starting position. The Midgard linnorm is able to breathe every other round as often as it wishes. Creatures struck by a breath weapon save at -3 because of this linnorm's awesome power.

Another deadly attack is its ability to constrict creatures by wrapping its tail about them and squeezing. Those caught in this grip suffer 20 hp damage per round until dead. A successful bend-bars attempt at one-half normal chances is needed to wriggle free.

In addition, this great linnorm has the following permanent abilities, useable at will: *water breathing*, *ESP*, *telepathy*, *create water*, and *protection from fire*. At will, he can perform the following, once a day: *charm person*, *charm monster*, *wall of fog*, *detect invisibility*, *hypnotic pattern*, *whispering wind*, *improved invisibility*, *solid fog*, *wizard eye*, *airy water telekinesis*, *death fog*, *raise water*, *veil*, *power word stun*, *teleport without error*, *power word blind*, and *shape change*. The Midgard linnorm uses his magical abilities at 14th level.

Habitat/Society: The Midgard linnorm lives at the bottom of the ocean on the world of the Vikings, and there spends most of its time. The serpent is a solitary creature, believing the company of others largely inconsequential. Still, the linnorm recognizes the value in keeping others nearby as guards. The serpent's lair is a huge underwater sea cave, so deep beneath the surface of the water that no light filters down. In this lair, the Midgard linnorm is guarded by a quartet of venerable sea linnorms of maximum hit points (see DRAGON® issue 182). The Midgard linnorm stores his wealth within the deepest chambers. Discarding coins and gems, the serpent elects to keep primarily magical treasure, and he employs some of that magic when venturing out of his lair. Also in his lair are remnants from visits to the surface—prowls of Viking ships, statues from villages, large shields, and other trinkets.

The Midgard linnorm considers all of the sea floor his domain and is quick to dispatch any creatures that claim territory in his presence.

Ecology: The Midgard linnorm requires very little sustenance, dining once every four or five decades. During this time, the linnorm consumes vast amounts, of sea foam—and whatever is floating on it.

The Midgard linnorm has no known predators but many enemies in human and demihuman communities. Occasionally, bands of humans and demihumans who have heard of the Midgard linnorm foolishly band together in an attempt to hunt it; they are never heard from again. All normal linnorms bow to the Midgard linnorm, never daring to challenge it.

THE ECOLOGY OF THE LIZARDFOLK

Hidden behind walls of tangled vines, towers of primordial willows, and moats of slow-moving waters brimming with a thousand different deaths, lizardfolk claw out their savage domains. From the hearts of the deadliest swamps, dark places where sinister things crawl and forgotten evils lurk, these reptilian primitives thrive in savage solitude. Often numbered among the evils that stalk such wetland wilds, lizardfolk are far more than simple-minded raiders and territorial murderers—although they are exactly those things too.

HISTORY OF THE LIZARDFOLK

Lizardfolk have a strong oral tradition, and the story of how they came to exist is the first legend taught to hatchlings.

Semuanya, the breeder of all lizardfolk, had a mate in the long ago times. Kecuala and Semuanya lived in harmony together, neither one dominant. Each of them was a Watcher who prowled the primordial jungles, seeking

out their enemies, a Survivor who plucked edible things from the ground and slew wild beasts for their flesh, and a Breeder who bore clutches of soft eggs and buried them in the ground to keep them warm and safe.

While Semuanya settled contentedly into its life, Kecuala did not. Kecuala worked its soft, gray brain with pointless questions. It made no decisions, squatting and thinking while life went on around it. When Semuanya chided Kecuala, Kecuala cried, "How can I watch or hunt or breed without first thinking? The decisions are so many and so great! What if my actions bring trouble? I must be cautious, must be careful, must think things through!"

Semuanya shook its head and went out to hunt, and when it returned it found Kecuala gone. Unable to conquer its indecisiveness, it had split in half and left two smaller Kecualas behind. One of the small new lizardfolk waved its sharp claws in the air, growling its desire to fight

and hunt. The other hid behind its partner, hissing its will to stay home and breed, and to cover its clutch with earth to keep it warm and safe.

Semuanya in its wisdom called the aggressive Kecuala “male” and the passive Kecuala “female” and helped them to build a place to live and breed. Semuanya watched over the Kecualas—which lizardfolk still call themselves to this day—and continues to guard their progeny, hoping that one day Kecuala will stop thinking so much and join its halves together again so it can watch and hunt and breed with Semuanya once more.

PHYSIOLOGY OF THE LIZARDFOLK

While at first glance lizardfolk bodies seem as straightforward as their culture, in reality they are much more complex. Lizardfolk weigh from 200 to 280 pounds and possess powerful builds. Their stout frames stand 6 to 7 feet tall—in addition to 3-to-4-foot-long nonprehensile tails that they use for balance.

Lizardfolk skin is a thin white membrane that grows hard scales

KNOWLEDGE OF LIZARDFOLK

The following table shows the results of a Knowledge (local) check as it relates to lizardfolk. Those who live in or near swamps, hunt the marshes, or have dealings with lizardfolk communities might possess this information.

Knowledge (local)

DC	Result
10	Lizardfolk are monstrous scaled humanoid that stalk swamps and live in small, primitive tribes.
15	As skilled warriors, lizardfolk respect strength and martial prowess, but most seek peaceful existences. Many settlements of lizardfolk live harmoniously alongside communities of other humanoids.
20	Lizardfolk are not amphibious, but they can remain underwater for long periods of time. Separate lizardfolk tribes vary greatly in technological advancement, alignment, physical stature, and racial abilities.
25	Lizardfolk revere an androgynous deity named Semuanya. Their tribal leaders are commonly the most powerful of the tribe's warriors. Lizardfolk almost never count arcane spellcasters among their ranks.

ranging in color from onyx black to olive green to mud brown, sometimes with mottled or even striped patterns. As their eggs have porous shells, the pigmentation of mud and water seeps in during development, determining a hatchling's coloration. This means that if lizardfolk move from one area to another, new hatchlings might possess different colorations than their

parents, although body size, eye color, and the number of serrations on their crests are inherited traits.

The jaws of lizardfolk bear a unique construction of solid bone plates with a serrated front edge. The sharp edge of the jawbone protrudes through the gum line, functioning as canines for ripping meat while molarlike ridges run along the rear of the jawbone.

Crests are another distinctive physiological trait of lizardfolk. Males possess large crests that run from the tops of their heads down between their shoulder blades, while females have two smaller crests running parallel along their heads down to the backs of their necks.

Lizardfolk reproduce sexually. A female lizardfolk lays a clutch of

one to three eggs several weeks after mating and buries them in mud and composted plant matter. These eggs, each just larger than a foot in diameter, absorb water and plant matter to feed the growing embryo inside. The fetus does not develop genitalia until approximately a week before it hatches, which develop in response to the type and amount

of nutrients the fetus receives. A prosperous tribe that has an abundance of compost hatches an equal number of males and females. A less well-off tribe that has few scraps to bury its eggs in produces mostly males. This adds valuable hunters to the tribe while reducing the number of needy offspring the next generation hatches. Irregularly, lizardfolk

SEMUANYA

Lesser God (Neutral)

The dualistic deity of the lizardfolk, Semuanya embodies the chief facets of lizardfolk life: hunting and breeding. During times of peace and plenty they speak of Semuanya as "she" and worship her as the Breeder. During times of strife and hardship they speak of Semuanya as "he" and offer sacrifices to him as the Watcher or the Seeker.

Symbol: A reptile egg.

Portfolio: Fertility, the hunt, lizardfolk, swamps.

Domains: Animal, Plant, Water.

Favored Weapon: Greatclub.

Clerical Training: New shamans learn at the feet of the previous generation's healers, replacing them when they can no longer fulfill their duties.

Quests: Semuanya instructs its worshipers to serve where needed, frequently questing them to aid warbands or recover a tribe's lost eggs.

Prayers: In times of war, prayers to Semuanya take the form of short hisses and reptilian barks made before battle. When a tribe is at peace

there is time for longer chants and epic songs intoned in Draconic.

Temples: Semuanya's only temples are in the hearts and minds of its worshipers. Only the occasional symbol or idol is made as a physical representation of its worship.

Rites: Breeding and battle as they benefit lizardfolk tribes.

Herald and Allies: Semuanya's herald is an 18th-level albino lizardfolk druid called Spirit Scale. Semuanya's allies and those it most commonly sends to fulfill *planar ally* spells are celestial or fiendish dinosaurs, giant crocodiles, hydras, or tendriculoses.

hatchlings are born with both male and female sex organs—neither set functional. Such sterile offspring often possess female crests, unusually complex brains, and correspondingly greater intellects.

Several atypical varieties of lizardfolk exist, the most common being brutish blackscals and the cunning pygmy poison dusks (see the *Monster Manual III*). Each breed exhibits traits suited to the lands it inhabits, as well as customs and practices that vary radically from tribe to tribe. As such, it proves as difficult to predict the temperament and actions of lizardfolk as it would be to do so for humans or elves. Varying breeds of lizardfolk rarely occupy the same areas, but when they do, tribal conflicts prove just as likely as unified societies.

PSYCHOLOGY AND SOCIETY OF THE LIZARDFOLK

The societies of most lizardfolk tribes seem simple by the standards of non-lizardfolk, but this simplicity has developed as a reflection of their deep-rooted faith. The story of their origins has led most lizardfolk to condemn intelligence as pointless and wasteful. Lizardfolk believe, like their deity Semuanya, that life is meant to be lived and that hunting, fighting, and breeding matter most. Intelligence leads to overthinking situations and to the corruption of their straightforward culture.

The exception to this philosophy comes in the form of the occasional sterile, hermaphroditic lizardfolk hatched with superior intelligence. Often taking up the mantle of shaman, lizardfolk of this uncommon breed advise the tribe but rarely rise to positions of true power. Lizardfolk revere such shamans as touched by the divinity of Semuanya—paragons closer to returning the broken halves of Kecuala to a unified state. As these shamans cannot breed, and lizardfolk females reject mates who display above-average intellects, lizardfolk technology rarely advances.

Survival is of key importance to lizardfolk society, and so the tribe

DOGON TO DUNWATER

References to lizardlike people exist in the mythology of many different cultures. The Dogon tribe of Africa believes that human beings are descended from a race of reptilian aliens called the Nummo. The Hopi tribe supposedly has legends about a race of lizard people who lived on the earth five thousand years ago, and who all died in a rain of fire. In D&D, lizardfolk (formerly lizard men) made their first appearance in 1976's *Supplement I: GREYHAWK*. They are also prominently featured in the first edition adventure *U2: Danger at Dunwater* and more recently in Chapter 4: Saltmarsh of the *DUNGEON MASTER's Guide II*. Check out the most recent lizardfolk incursion in the Age of Worms Adventure Path adventure, "Encounter at Blackwall Keep," in *DUNGEON* #125.

treats the strongest and hardest males and females with the greatest respect. The most powerful male warrior takes command of the tribe and selects the healthiest and strongest females to mate with. Although exceptional intelligence is disdained, cunning and tactics in battle are highly respected, especially when combined with the prowess to implement such strategies. Thus, many lizardfolk leaders show exceptional canniness in leading their people, both on and off the battlefield. When multiple lizardfolk lay claim to the position of leader—or there is any dispute within the tribe—the feuding parties fight to the death, the victor proving that Semuanya favors him.

Due to their martial culture, most other humanoids view lizardfolk as a violent, cannibalistic, savage race, but in reality lizardfolk tribes vary in their methods of dealing with outlanders. Lizardfolk as a whole have no strong leaning toward any extreme alignment or particular ruling philosophy other than survival of the fittest. They

defend their territories ferociously, but when approached respectfully most tribes trade and negotiate with other races willingly. Some tribes, however, attack strangers on sight—especially those of the primal blackscale tribes—but such aggression usually results from years of fighting off invading races.

Lizardfolk disdain intricate deceptions and politics. If they desire something another race possesses, they might try to trade for it or take it by force. A few nomadic tribes—largely among the poison dusk—prefer stealth and theft over diplomacy or aggression. Each tribe differs, but most broadcast their intentions straightforwardly and openly.

In general, lizardfolk make permanent homes in temperate, swampy lands, although the differing breeds prefer some variations. Some of the more advanced tribes build crude huts, but most find natural shelters in underwater caves containing air pockets or large copses of swamp trees with canopies big enough to shield the tribe from the elements.

ADVANCED LIZARDFOLK

Most lizardfolk tribes adhere to proud warrior traditions. As such, advanced lizardfolk regularly take levels in barbarian, fighter, or ranger. Lizardfolk following the path of the shaman might instead take levels of adept, cleric, druid, or—rarely—sorcerer.

Whether the guard of a tribe's chieftain or the leader of a scout party, the swamp stalker presented here is an advanced version of the lizardfolk presented on page 169 of the *Monster Manual*. The scaled horror prestige class and its example Saebeohrt Rippling Death on page 84 of *Savage Species* presents an even deadlier lizardfolk foe.

Females and children guard the settlement and gather edible roots and plants for the tribe. Males serve as scouts, hunters, and warriors.

LIZARDFOLK IN EBERRON

The best-known lizardfolk in EBERRON are the blackscals, poison dusk pygmies, and twenty-four Cold Sun Tribes of normal lizardfolk living in Q'barra. All three varieties are extremely dangerous, although some of the Cold Sun Tribes have made peaceful overtures toward nonlizardfolk. Many of the Q'barra lizardfolk serve the great black dragon Rhashaak and seek to protect their lands and holy grounds from outsider settlers new to the region. Lately, blackscale raiders have captured numerous residents of Newthron's outlying lands and even Cold Sun lizardfolk to sacrifice to Rhashaak in the great volcano-city of Haka'torvhak. This especially disturbs the Cold Sun lizardfolk as they fear some dark plot on the part of Rhashaak. In addition, the agents they dispatched to investigate the blackscals' plots have returned with broken minds and terrible mutations.

LIZARDFOLK IN FAERÛN

Large lizardfolk tribes exist in the southernmost reaches of Faerûn, mainly in the swampy areas of the jungles of Chult and Rethild, the Great Swamp, between Halruaa and Dambrath. Rumor has it that a ruined city in the heart of Rethild has had a corrupting influence on the lizardfolk tribes, spawning demonic lizard kings and queens. These half-fiends have united many tribes of their weaker kin and are slowly conquering the enormous swamp (see *Serpent Kingdoms*).

Lizardfolk also populate the warm marshes of the Western Heartlands, most notably the Lizard Marsh and the Marsh of Chelimer. Some lizardfolk have recently started singling out and attacking Zhentarim caravans that pass too close to the Marsh of Chelimer. In response, the Zhents now spread rumors of lizardfolk assaulting and devouring innocent travelers, hoping that someone eliminates the reptilian threat for them.

LIZARDFOLK FEATS

The new feats presented here are frequently used by lizardfolk but might

be suited to any creature that meets the prerequisites.

DEEP BREATHER [GENERAL]

You can hold your breath much longer than normal.

Prerequisites: Con 16.

Benefit: You can hold your breath for double the normal number of rounds before you risk drowning (see page 304 of the *DUNGEON MASTER'S Guide*). For example, a human with this feat can hold his breath for a number of rounds equal to four times his Constitution score before he risks drowning.

Normal: A human can normally only hold his breath for a number of rounds equal to two times his Constitution score before he risks drowning.

CHAMELEON BLOOD

Lizardfolk with this feat can slightly shift the color of their scales, aiding them in blending in with dense vegetation.

Prerequisites: Lizardfolk, Cha 14.

Benefit: Lizardfolk with this feat gain a +6 racial bonus on Hide checks made in forested or swampy environments.

REPTILIAN HEALING

Lizardfolk with this feat heal at an increased rate, much like many lesser reptilian creatures.

Prerequisites: Lizardfolk, Con 16, Great Fortitude.

Benefit: Lizardfolk with this feat regain hit points from normal healing at double the normal rate. For example, a full night's rest allows a lizardfolk with this feat to regain 2 hit points per character level or Hit Die, while complete bed rest restores 4 hit points per character level or Hit Die. This ability does not allow a lizardfolk to regenerate or reattach lost limbs.

Normal: A full night's rest normally only restores 1 hit point per character level or Hit Die, while complete bed rest usually only restores 2 hit points per character level or Hit Die.

LIZARDFOLK TACTICS

Skilled guerilla combatants, lizardfolk warriors are experienced at fighting in small hunting parties or warbands. In such groups they make use of a variety

of tactics effective against prey, whatever shape it might take.

Scaled Squads: Obedient to powerful leaders, warbands of six to ten lizardfolk commonly follow commanders with barbarian or ranger levels. Skilled ambushers, frequently only half of a lizardfolk warband charges from cover into melee, leaving a reserve group to attack from range and cover the vanguard's retreat. Lizardfolk rarely fight to the death and commonly withdraw once reduced to half their hit points.

Deep Divers: Lizardfolk prefer to engage enemies in or near water. Using their hold breath ability to hide or retreat underwater, they regularly take advantage of the improved cover wading in water provides (see page 93 of the *DUNGEON MASTER'S Guide*). Heavily armed lizardfolk often drop their shields to fight underwater, as shields hamper their swimming abilities.

Swamp Stalkers: While the dense vegetation of their swampy homes makes the mounts of other humanoids impractical, lizardfolk frequently

domesticate animals for their cunning in battle. Creatures like crocodiles, deinonychuses, megaraptors, mudmaws (see the *Monster Manual II*), Medium or larger snakes, or nearly any creature from Chapter 6 of *Serpent Kingdoms* might follow or even be ridden by lizardfolk into battle. In addition, tyrannosaurs or other Huge or larger dinosaurs, black or green dragons, and wyverns might carry entire lizardfolk warbands into battle. Skeletal dragons (see the *Draconomicon*) and various plant creatures are sometimes created or cultivated by lizardfolk shamans to protect their tribes. ■

Nodwick

ADVENTURE LOG

Volume 1 • by Aaron Williams

ON SALE NOW!

Curious in this very town is the genre of superhero's fiction. Nodwick's! You'll read everything from his humble beginnings in a panel strip in Dragon Magazine, all the way through his adventures with (classic RPG adventures) New Artax, Yeager, Piffany and of course, Nodwick, using their way through the most famous first edition dungeons, slower classic villains, and sometimes even save the pre-D&D world from destruction! Plus, a special section of never-before-collected single-panel fantasy cartoons! What are you waiting for? It's time to get your hands on Nodwick!

If you find the price tag on our RPG campaigns, and think look to the other books by Aaron Williams, including most Nodwick and the critically acclaimed ps238, then you should seek professional help.

PS 238

Read the cartoons that started it all! The Nodwick Adventure Log contains all of the original Nodwick cartoon strips and D&D module spoofs from the pages of Dragon Magazine! Plus, check in on the Wizard-Warrior Wrasslin' Federation as well as Nodwick's spin on the D&D movie! There's also a never-before collected selection of Dragonmirth cartoons by Nodwick's creator, Aaron Williams! All this and more in **full color!**

FANTASY NODWICK HUMOR

Ask your local comic and game store to carry your favorite comics from Dork Storm Press!

A COLLECTION OF NEVER-BEFORE-COLLECTED SINGLE-PANEL FANTASY CARTOONS • ISSUE 01-10-2008-2009

Lizardfolk

“From out of the swamp they come, reptilian faces barely above the water, powerful crocodilian tails pumping lazily. Then they reach the shore and stand, water and milfoil trailing down thick-muscled limbs covered in glistening scales. They come bearing massive clubs adorned with stones and the teeth of great swamp predators, and with their free hands they clutch crude wooden shields. Around their necks they wear animal skulls and strange fetishes, and their cold, lizard eyes gaze without emotion on the scene before them. One of them, larger than the others, advances with a long javelin bearing a human skull, which he thrusts into the muck at his feet—a clear warning. This is their ground.”

—Jensen Bakri, *A Walk in the Swamp*

Proud remnants of a once-vast civilization, the powerful reptilian predators known as lizardfolk exist now only in scattered swamp communities, their isolated settlements the last marshy redoubts against the mammalian hordes.

Overview

Lizardfolk are bipedal, reptilian humanoids that stand roughly 6 to 7 feet tall and weigh between 200 and 250 pounds, with scales of gray, green, or brown. Many breeds have short dorsal spikes or brightly colored frills on the backs of their heads or following their spines. Although they swim well and can frequently be found moving silently through their native swamps with alligator-like flicks of their powerful, 4-foot-long tails, lizardfolk are not actually aquatic, and return to land in order to eat, sleep, and reproduce. While they are tool users of average human intelligence, lizardfolk rarely see fit to advance their technology past Neolithic designs that have served them for millennia. Their omnivorous diet contains everything from vegetation to insects to the flesh of intelligent races.

To humans, lizardfolk often seem harsh and strange—standoffish savages and bloodthirsty cannibals. Yet while all of these descriptors are true, those few members of other races who are allowed to permeate the borders of lizardfolk settlements quickly see that this is only one side of their society—among their own kind, they are a vibrant and passionate people. With literacy a relatively rare quality, lizardfolk have an extensive oral tradition, with even the fiercest warriors able to recount rumbling epic poems around the fire pits, passing tribal lore down through millennia. In cold winter months, these storytellings can sometimes last for days, with new tellers taking over as the old ones grow weary. Dancing and ritualistic battles reenacting key scenes are common, and frequently involve elaborate costumes.

Lizardfolk society is extremely communal, and while within it individual lizardfolk might contest for honor and standing, the welfare of the tribe always comes first. Nowhere is this seen more clearly than in the raising of children. While lizardfolk courtship is fierce and passionate, they do not mate for life, and pregnant females are cared for by the tribe as a whole. Once the eggs hatch, the birth mother often defers to the senior dam, and the entire tribe acts in concert to teach the young their race's history and the skills they need to survive. All adults, no matter how gruff or bloodthirsty, understand the importance of rearing strong young, and go to any length to ensure the wellbeing of the next generation.

Ecology

Temperature regulation is a major factor of lizardfolk life, and begins even before birth. As with many species of reptiles, lizardfolk gender is determined by the temperature of the egg during a critical period of incubation. Like the crocodiles and alligators they resemble, lizardfolk eggs subjected to both high and low temperatures during this period result in female offspring, and lizardfolk dams must carefully regulate the heat of the nest to ensure a viable next generation. Since eggs are so delicate and rare—eggs are laid singly, and few females lay more than once per year—it's easy for the gender balance to be upset. Indeed, lizardfolk mythology is full of tales of all-female warrior tribes raiding other settlements in a desperate search for eggs and breeding stock. Lizardfolk mate year-round, and the average settlement contains one well-defended egg for every 10 adults.

Lizardfolk have difficulty regulating their body temperature, and become sluggish and irritable if subjected to temperatures below the standards for their native environments. As a result, they tend to live in temperate swamps and moors, where the verdant plant life and decaying organic matter produce and trap heat. It's undoubtedly for this reason as well that lizardfolk have

evolved to be one of the swamp's few diurnal predators, soaking up the sun's heat during the day and spending the nights holed up in easily defensible positions, where their lack of low-light vision is less of a liability.

Lizardfolk naturally live to be between 60 and 80 years old, although war and the hardships of the swamp tend to claim most of them well before then. Unlike humans, lizardfolk never quit growing—after the initial sprouting during puberty, which occurs in roughly their 10th year, lizardfolk continue to slowly increase in size and mass until their deaths, gaining perhaps an additional foot of height over the intervening years. For this reason, lizardfolk elders are extremely respected, and those who live the longest also tend to be those most suited to leadership.

While the actual evolutionary ancestors of lizardfolk remain a mystery, many believe themselves to be the direct descendents of dinosaurs, and they maintain a certain affection bordering on reverence for these massive, savage creatures. In areas where such animals are common, lizardfolk tribes are likely to contain at least a few dinosaurs, usually kept under control by the village shaman. These trained dinosaurs are either treated as beasts of war and burden or else revered and allowed to roam free and sacred about the settlement, fed and petitioned for favors as a direct embodiment of the tribe's ancestors.

In battle, lizardfolk prefer simplicity, and they rarely wear armor but do wield wooden shields. Clubs and javelins are the weapons of choice, but many are the lizardfolk who drop their weapons and attack ferociously with their teeth and claws once the scent of blood gets in their nostrils. In places where conflict with other races is common, it's not unusual to find lizardfolk wielding the metal weapons of their enemies, particularly large swords, but these are kept as trophies as much as actual instruments of war.

Habitat & Society

Long before humans walked upright, lizardfolk society thrived across the globe. Yet while their racial history reaches back into the dim mists of time, theirs was never an expansive style—uninterested in colonizing the dry land beyond their swamps and riverbeds, lizardfolk tribes remained isolated and closed-off from each other, content to live as they always had. Their only physical legacy, beyond what construction was necessary to survive, was subtle diversions of rivers and streams to flood more land—although few realize it today, many of the great swamps in Avistan and Garund are the results of their ancient work. With the arrival of humans, however, lizardfolk found themselves unable to keep up with the breakneck speed of mammalian reproduction, and instead retreated farther into their swamps, where with each generation, they watch their numbers dwindle.

LIZARDFOLK FUNERALS

In lizardfolk society, death is not looked on as something to be feared, but rather as an inescapable fact of life, and this practicality carries over into their funeral practices. Almost all lizardfolk tribes celebrate a fallen member's life with an elaborate wake in which the deceased's body is laid out to view and his friends and kin gather to tell stories of his life and reenact triumphant moments from his past. What happens afterward, however, varies wildly from tribe to tribe. Since the swamp is hardly ideal ground for burying bodies, many tribes choose to place their dead in "tree boxes," wooden coffins that are then propped in the upper boughs of trees. Others dispense with the box and simply hang their dead, inverted, from the tree's branches, possibly choosing to embalm them first. In areas where peat bogs are common, lizardfolk sometimes weight their dead and sink them, allowing the bodies to eventually mummify naturally. If times are particularly tough for a tribe, the dead might even be consumed in a ritualistic meal, and to feed a tribe in this manner after death is considered a great honor, albeit one that is seldom claimed except by necessity.

Lizardfolk society is patriarchal, with the strongest and most warlike male in the tribe invariably becoming its leader. Due to their continued growth into old age, this leader is frequently one of the oldest and most experienced members as well. Shamans are treated as respected advisors, but are rarely leaders themselves. While females share equally in the hunting and fighting, their slightly smaller size and relative delicacy during pregnancy make them less likely to hold positions of leadership, as the ultimate goal of any lizardfolk tribe is the continuation of its line. For this reason, female leaders are likely sterile. This emphasis placed on male leadership, combined with the tendency of eggs to hatch females unless carefully tended, only perpetuates the gender imbalance.

For all their apparent barbarism, lizardfolk tend to build thoughtfully designed, well-defended settlements in the swamps—the better to protect themselves during the sluggish night hours when other predators are more active. While hunting camps might consist of little more than mud wallows and reed huts, easily left or taken down, permanent lizardfolk structures are more elaborate. The standard tribal home for lizardfolk is usually positioned on a hillock or island rising out of the marsh, with rings of outward-pointing stakes creating a sharp hedge capable of deterring all but the most determined animal life. Within, the settlement is generally lit with soft rush-lights hung from trees, and clusters of small mud and swamp-grass mounds dot the landscape. A mound has a single entrance, covered with a leather flap to keep out the elements and trap

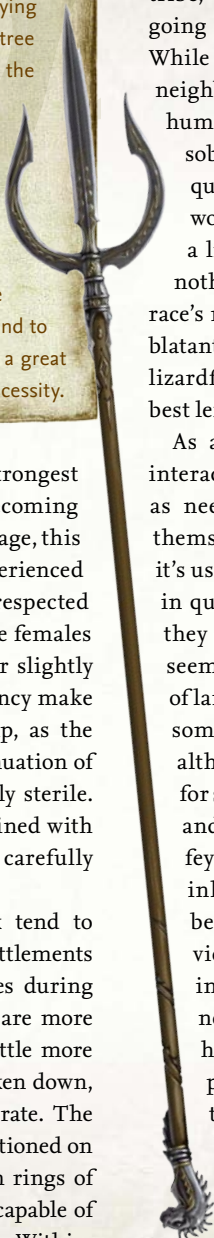

warmth, and a small chimney hole to vent smoke. As many as a dozen lizardfolk share a mound, setting coals at the center to warm them on cold nights. Lizardfolk have little concern for personal privacy, and numerous family groups live inside a mound with only reed screens to separate them, telling stories and basking in each other's warmth and company.

Survival is the central theme of lizardfolk life—both that of the individual, and that of the race. A starving tribe, or one that feels threatened, has no qualms about going to great and bloody lengths to ensure its survival. While this has a tendency to make them unpopular with neighbors, lizardfolk are naturally no more evil than humans. Rather, they are fierce and proud, loyal and sober, and if they are quick to anger, they are also quick to forgive—long-standing grudges are rarely worth the energy to lizardfolk. Eminently practical, a lizardfolk's life in the swamp teaches him to waste nothing, and from this philosophy stem some of the race's more disturbing tendencies, such as the practice of blatantly snacking on one's fallen foes. After all, say the lizardfolk, meat is meat, and squeamishness is a quality best left for the softer races.

As a whole, lizardfolk prefer to keep to their own, interacting with humans and other races only as much as needed to trade for items they can't manufacture themselves. When found venturing into civilized lands, it's usually for a very specific purpose, and the lizardfolk in question are likely to be viewed as reserved by those they encounter. They inherently distrust humans, who seem determined to expand into every untouched patch of land, and their legends hint at a great betrayal by elves sometime in the past. Dwarves are rarely encountered, although they are regarded as excellent trading partners for stone and goods, and gnomes are considered flighty and capricious but generally acceptable, as the near-fey creatures leave little mark on any swamplands they inhabit. Of all the races, lizardfolk are most likely to be found following dragons or nagas, whom they view as reptilian brethren. Those lizardfolk residing in saltwater marshes sometimes band together with neighboring locathahs as well. They hold a particular hatred of boggards (see *Pathfinder* #2), whose similar physiology and vicious and capricious society they see as a degenerate mockery of their own honorable traditions.

Laws within lizardfolk society are generally informal and are restricted to such basic ideas as the right to autonomy and personal property.

Disputes are regularly settled through personal combat, although if one party is significantly weaker, he might ask someone else to represent his claim, up to and including the tribe's leader. These fights are almost always

nonlethal, and once a matter is decided it is considered bad form to press the issue. Conflicts between tribes are resolved in a similar manner, with each side championed by its leader, but overall lizardfolk tend to cooperate, seeing their kindred as allies in the fight against a harsh world. Exile is considered the worst punishment in lizardfolk society, but in those rare cases where a lizardfolk murders another or commits some equally heinous action, a tribe's reptilian practicality often leads it to simply tear the offender to shreds and be done with it.

The predominant religion among lizardfolk is a loose form of animism. Within its bounds, practitioners might invoke any powers from established gods like Gozren to the spirits of their ancestors and the natural world. While extremely individualized and varied in their techniques, the druids and shamans within lizardfolk society are quite effective. Many of their practices, such as curing diseases by transferring them to animals which can then be ritually slaughtered, are viewed as needlessly barbaric by "civilized" societies. Their close connection to both the natural world and the spirits of the past lead many shamans to dress in elaborate costumes of bark and furs, feathers and reeds. In addition, it's common for shamans to have extensive piercings, using bones from animals or even deceased lizardfolk, with the physical mingling of their bodies representing their connection to that spirit or beast. When traveling abroad, lizardfolk shamans are particularly fond of casting *resist elements*, the better to avoid the discomfort inherent in colder climes.

Campaign Role

Lizardfolk have often been seen as bloodthirsty savages, ready to emerge from the swamp and overrun unwary travelers, but it's precisely this stereotype that makes them so interesting to use in campaigns. In a world where other civilized races view them as dangerous and bestial, lizardfolk manage to remain neutral—aloof and defensive, but hardly evil. From the lizardfolk point of view, they ask only to be left alone to rebuild their race, yet they constantly find themselves beset by swarms of humanoids intent on taking their land.

In this clash of cultures, there are ripe opportunities for adventure. How much better is a crusade against the lizardfolk harassing a local settlement if the party realizes halfway through that the lizardfolk have a more legitimate grievance? Lizardfolk law is also equally alien to most of the civilized races, and misunderstandings abound, particularly where theft is concerned. To lizardfolk, anything you can't keep by force was never yours to begin with, but a lizardfolk practicing this philosophy while passing through a human town might quickly find himself the impetus for a boiling race war. Yet not all lizardfolk interaction need be negative—when presented with a

MATING RITUALS

Courtship in lizardfolk society is a loud and flashy affair, but the exact details depend on which gender is doing the wooing. Lizardfolk mate year-round, but each female generally has only one month-long period of "heat" each year, in which she is actively fertile. In tribes where males are more populous, they might attract the favor of chosen females through feats of strength, battle prowess, epic poetry (anything less than 12 hours is a poor showing, and it helps to be attacked during the performance), or merely possessing an extra-powerful build or bright frill. More often, however, it is the females who do the courting, showing off their talent at fighting, singing, cooking, and weapon-crafting. Although lizardfolk sometimes form strong bonds with other individuals in a tribe, these are almost always in the vein of "brothers in arms" rather than lovers, and pairings for the sake of reproduction rarely last beyond the female's pregnancy, with males sometimes impregnating multiple females in a given year.

whole world of advanced technology, some lizardfolk let go of tradition, and it's not unheard of for curious young lizardfolk to make their way into human and elven lands in the pursuit of knowledge.

Treasure

Lizardfolk live close to the earth, and on the whole they rarely amass much material wealth. Most weaponry is made of wood and stone, and even when their spellcasters see fit to create powerful magic items, these are usually fashioned with the same aesthetic—rings of baked clay or wood, enchanted clubs and macuahuitl, and so on. Due to their scarcity in the swamp, coins and other items of metal are highly prized and tend to come to rest in the hands of the chieftains, and steel is generally valued higher than gold or gems due to its utility. Rings of *resist elements* and *water breathing* are common, as they assist lizardfolk who range beyond the tribe's normal territory, and potions are by far the most numerous magic items produced. In tribes where druids are scarce, hunting and war parties might also carry *rings of animal friendship* to assist in calling game, handling mounts and attack beasts, or using local creatures as messengers.

Variants

While the swamp-dwelling lizardfolk presented here are the most common breed, they are hardly the only one. Presented below are several variants, both intentionally created and the natural result of divergent evolution between tribes.

Lizard Kings: Lizardfolk continue to grow throughout their lives, and once every few generations, a tribe is blessed with a lizard king—an individual who for unknown

PARTHENOGENESIS

As with many other species of lizards, lizardfolk are occasionally capable of reproducing via parthenogenesis, in which a female lays a viable egg without fertilization from a male. In addition to being relatively rare—generally only found in situations where a sudden environmental change has rendered all the young of a generation female—this process is viewed as highly taboo among most tribes. Children born in this manner are not treated as individuals and given their own names, but rather assigned their parent's name with a prefix meaning "second." Depending on the tribe, these individuals might be treated as divine blessings, extensions of their parent, or embarrassing monstrosities. Tribes that have undergone several generations of this "mother-birth" often bear physical signs of it, as this form of asexual reproduction greatly increases the potential for mutation.

reasons has a lifespan twice the length of his fellows, as well as the strength of arms to keep it. Due to their vastly superior size and experience, these individuals inevitably become chieftains and warriors of the highest caliber. Lizard kings are usually size Large and have 5 hit dice.

Upon his 100th birthday, a lizard king's status is officially acknowledged, and he is honored with the presentation of a special weapon, the war trident, reserved exclusively for the use of his kind. These large, two-handed tridents are much heavier than normal (12 pounds) in order to take advantage of their wielders' great strength, and as a result they lose their range increment but deal 1d10 points of damage and have a $\times 3$ critical hit multiplier. In addition, extensive ritualistic practice with this weapon gives the lizard king the Improved Critical (war trident) feat as a bonus feat. A war trident is worth 20 gp, although most are masterwork and many are inlaid with precious metals and fetch higher prices.

Sandfolk: Not all lizardfolk have been content to sit idly by and watch as their swamps retreat and mammalian humanoids take over the continents. Thousands of years ago, several tribes of lizardfolk gathered together their greatest shamans and created an answer: a new breed of lizardfolk capable of surviving comfortably in the harshest of dryland conditions and carrying on the tribal lore, should the swamps be wiped out completely. These sandfolk, as they're known, are covered in thick, horny scales, and also bear the unique ability to squirt poison from their mouths as a ranged attack. Treat them as lizardfolk, but trade the hold breath special ability for the ability to squirt poison (range 10 ft.; Fort save DC 13; initial 1 Con and secondary 1d4 Con).

Cliffborn: In the mountainous rainforests of Garund, many tribes of lizardfolk have adapted the ability to climb agilely on walls like geckos, although whether this was the

result of chance or magical alteration in the distant past remains unknown. Treat cliffborn as standard lizardfolk with a climb speed of 30.

The Unseen: The Unseen are lizardfolk with the ability to change their skin color instantly and at will, allowing them to blend into their surroundings. This ability gives them a +10 racial bonus on Hide checks. While this mutation occasionally crops up in all tribes, it's most prevalent in lizardfolk from eastern Avistan and Garund, sometimes resulting in entire tribes of color-shifting warriors.

Lizardfolk in Golarion

No one on Golarion knows exactly how old lizardfolk are as a race, but primitive records and cave paintings indicate that when the first humans arose on Avistan and Garund, lizardfolk society already existed in something close to its current form. Possibly one of the first land-dwelling races to achieve sentience, lizardfolk once inhabited almost every swamp and fen on Golarion.

Then came the Great Darkness, the mighty meteor strike that brought an end to Azlant, carved out the Inner Sea, and wiped entire species from the planet's face. Although the lizardfolk survived, the following age of darkness proved particularly grueling. Whole generations of eggs were lost to the unpredictable weather and cold snaps, and even now, 10,000 years later, their numbers have not recovered to near what they once were.

The lizardfolk of modern Golarion are a culture in decline, a reclusive race of staunch traditionalists uninterested in the fast-moving pace of human society. Those of other races who seek out lizardfolk find them a curious paradox—intelligent but uneducated, honorable yet ferocious. Outside of their marshy homes, lizardfolk are rarely seen, and those who are tend to be either on missions of great tribal importance or else misfits and exiles—lizardfolk with too much curiosity to remain in the swamps. Yet despite their obvious desire to live and let live, lizardfolk across Golarion frequently find their sovereignty impugned by overeager governments or greedy logging concerns. When this happens, the image of the noble savage is quickly shed for one of bestial fury, and the nearby camps and towns run red in the light of burning buildings as the lizardfolk conduct masterfully orchestrated guerilla raids, torching and consuming their foes until the fields are scraped clean of human infringement.

Names

Lizardfolk take distinctly reptilian sounding names, full of sharp clicks and sibilant hisses.

Male names: Ayamet, Dresdak, Garut, Goroket, Graunk, Kassmak, Kopep, Litak, Myrkek, Rokek, Vesk

Female names: Dara, Grael, Hass, Jekraa, Keretch, Laress, Moratai, Ness, Rossake, Saas, Sarakek, Yssala

LIZARDFOLK

This six-foot-tall creature resembles a cross between a powerfully muscled human and an iguana, with leathery scales, a short reptilian snout filled with teeth, and a thick tail like that of an alligator.

TACTICS

Before Combat Lizardfolk are fond of scouting out the battlefield ahead of time when possible, laying traps and preparing elaborate ambushes that use the natural environment to their advantage.

During Combat Lizardfolk prefer to begin combat with a volley of javelins, from concealment if possible, before charging in with clubs and teeth bared. If facing dryland races, they sometimes attempt to grapple and pull their opponents into the water, where their hold breath ability gives them the advantage. While lizardfolk are capable of careful tactical planning ahead of time, once combat is joined, only proper leadership keeps them from going wild with the heady rush of bloodletting.

Morale Lizardfolk are bold and unafraid of death, yet still practical enough to retreat if they feel doing so best serves the tribe.

Constitution score before it risks drowning.

Skills Because of their tails, lizardfolk have a +4 racial bonus on Balance, Jump, and Swim checks. The skill modifiers given in the statistics includes a –2 armor check penalty (–4 on Swim checks) for carrying a heavy shield.

Fiercely territorial and unfriendly to any race without scales, lizardfolk claim all the swamp as their own... and they can have it!

The ecology of the maedar

Medusa's male counterpart does what she doesn't

by Ed Greenwood

The hearthfire flickered in the tavern known as The Leaning Post. The evening was old, and the few tipplers left in the taproom were crouched close around the fire. Tongues were wagging with tales of fell keeps and grim adventures, and monsters most strange. Old Urvan, a grizzled warrior of scars and reputation most grim, rubbed his bald pate and disagreed with a younger man.

"Nay," he rumbled, wagging a cold grey eye, "men die like cattle, for all their armor; I've fought a dozen, on horseback, and slain them all, and me a lone man with but my fists. But the woman-monster, the medusa, the maiden who turns ye to stone, is far the worse."

From his dark corner, Elminster coughed. "Oh? Think ye so?" he said casually. Everyone fell silent at the sage's words. He spoke seldom, but his tales were not soon forgotten. Old Urvan fixed the sage with a colder grey eye and emitted a grunt that urged Elminster to speak.

"The medusa is a fearsome thing, true," Elminster said slowly, looking around the firelit circle of faces. "But as bad or worse is the male, the stealer-through-stone, the maedar. Medusae, ye see, have mates. An' they're by far the deadlier sex. . . ."

Elminster then unburdened himself of the tale of Ilguld the illusionist and the Walking Stone of Yarech. It is a long tale, full of mimes and bawdy jests and local jokes, and unless one is the raconteur Elminster is, 'tis better to paraphrase, thus:

Ilguld was an adventurer, the youngest and least powerful of a proud and reckless band who rode out of Waterdeep often, combing the caverns of the wild North. On one jaunt, the group met a medusa, whose gaze turned two brawny warriors to unmoving stone. The survivors withdrew hastily and thought of a plan. Ilguld had with him a small mirror, and this he tied across his eyes so that, peering down, he could see only the ground before his toes. He covered himself in his storm cloak, the cowl thrown forward to conceal his face.

Thus prepared, Ilguld advanced into the monster's lair, shuffling like an old man and leaning on a staff. The medusa rushed him to bite and slay. As he tried to fend her off with his staff, she tore open his cowl — and, gazing into the mirror, turned herself to stone while she still clutched him.¹

Ilguld tugged himself free of the stony grasp, ran from the lair, and called his comrades out of hiding. They rushed forward heedlessly to seek the medusa's trea-

sure, waving aside Ilguld's stammered warnings, and were soon deep within the maze of small caverns that made up the medusa's lair. Ilguld followed more cautiously, and was scared badly when he saw his comrades at the other end of a long cavern — coming back toward him as fast as they could run with their bags of coins and coffers of gems. The illusionist noticed immediately that two of the band were missing. As he watched, a part of the wall seemed to move, reaching out to fell the rearmost adventurer. At that, Ilguld cast a spell of invisibility on himself and fled until he was just inside the entrance to the lair.

Seconds later he again heard the weapon-clanking and curses of his comrades. They had dropped their treasure and were running hard. The men, now without two more of their number, burst past him and out of the cave. Ilguld remained frozen as he beheld what had chased them out — a muscular, bald-headed man clad only in breeches, who came behind the group at a fast trot².

Ilguld dared to leave the cave entrance after this strange man passed, taking care not to stumble or make undue noise. He turned in the direction his friends had gone, and just ahead he saw them — statues, all, frozen forever in the midst of their flight. Beyond the statues stood the medusa, stone no more, her arms raised in triumph.³

As he watched the bald man approach the medusa, Ilguld realized that she must have somehow been restored to life and had left the lair by another route so as to lie in wait for the intruders to exit. The medusa and the man embraced, and she spoke to him in loving tones.⁴ Ilguld was amazed again by what happened next. He saw the man shatter the stone form of his fellow mage and then touch some of the fragments, which turned from stone rubble to bloody flesh. The bald man and his mate, the medusa, sat down to eat as Ilguld tore his gaze away from the scene and stole away as softly as he could.

"A likely story," Urvan scoffed. "One man, weaponless, defeating an entire band?"

"Why, Urvan," Elminster replied mildly, lifting his tankard, "I hear from your own lips that such a feat — defeating a dozen armed men, and their horses too — is easy, if one has but the use of both fists. Is it then not so?"

"Phauugh," Urvan replied eloquently.

Notes

1. The gaze of a medusa can turn itself or any other medusa to stone. Such petrification is permanent unless reversed by spell or special ability (see note 3 below).

2. Maedar are the male counterparts of the medusae. (Singular and plural forms of "maedar" are the same; the name can be used to refer to both genders collectively, or to the male alone. The latter usage is employed in this text.) The maedar are far rarer and more reclusive than their mates, and are seldom seen. Many men do not

even know, or believe, that they exist. They dwell in the depths of caverns, guarding the pair's hoard of treasure (and food) while their mates hunt.

Maedar appear as bald-headed (in fact, completely hairless) muscular human males. In all statistics they are identical to medusae, except that they have two attacks per round, doing 2-8 points of damage with each blow of their mighty fists. Maedar cannot petrify other creatures and are themselves immune to petrification and paralysis (including related magics such as *slow* and *hold* spells) from any source whatsoever, although they can be confined by *webs*, *forcecages*, and the like.

3. Maedar have the ability to turn *stone to flesh* by touch, once every three turns. Thus, one can free a medusa who has gaze-trapped herself to stone — or, by smashing petrified prey to rubble and then turning it to stone, gain an easy meal for himself and his mate from a creature petrified earlier by the medusa. Like medusae, maedar can see into the Astral Plane and the Ethereal Plane, and they can use their *stone to flesh* ability into those planes as well.

Maedar possess the ability to *pass through stone* as xorn and xaren do, at normal movement rate. A maedar requires one round of concentration to adjust his molecular structure before entering rock and after leaving it again; no other activity may be undertaken during this round. If struck by a *phase door* spell while *passing through stone*, a maedar is killed. If a mated maedar and medusa are confronted by a stronger creature in their lair, the male will abandon the female to her fate without hesitation, escaping through the rock walls of the cavern. However, a maedar will never neglect to unpetrify a medusa when it is safe to do so.

The treasure of a medusa and maedar is usually concealed (behind loose stones, in crevices, etc.) in addition to being guarded by the maedar. The males monitor the treasure continuously and frequently move it from place to place within the lair, particularly to discourage thievery by other creatures able to pass through stone. Males and females alike will flee from strong attackers, abandoning whatever treasure they cannot carry, rather than defend a hoard to the death. The treasure hoard of a medusa and maedar will almost always contain a selection of feminine garb that doubles as the medusa's wardrobe.

4. All maedar and medusae speak and understand the language of lawful evil, the common tongue, and any other languages spoken often by creatures in the vicinity. Details of the courtship of a mated pair are unknown, but they do pair for life (one choosing another partner only if a mate is slain), and live and hunt together at all times. The female produces 1-3 live young every 10 years or so. Young have the same abilities as their parents, but no physical attacks and only 1-2 HD. (A young female can petrify, and a young male can *pass through stone* and turn *stone to flesh*; how-

ever, the asplike, poisonous "hair" growth of a medusa develops only in maturity, and young maedar lack the strength for damaging blows.) Offspring gradually gain hit dice as they approach maturity and adulthood, a process that typically takes four or five years. When they reach maturity and gain the ability to physically attack, the young are roughly encouraged to strike out on their own; no more than one adult medusa and one adult maedar will ever be found in the same lair. If a medusa is slain but her mate survives, the male will search tirelessly for the killer(s) to take revenge, sometimes pursuing such quarry for years. A maedar can track as a ranger does, but this does not include the ability to follow the trail of a creature that has passed through stone. All maedar and medusae are immune to the poison of (their own and other) medusa hair growths.

Medusae and maedar respect, but do not worship, Skoraes the Living Rock (see *Legends & Lore*, Nonhuman Deities), and have a like attitude toward lawful evil deities and creatures. They will cooperate with lawful evil creatures such as orcs, kobolds, or even devils, for reward or security or (rarely) under duress. If forced to aid or serve another, they will always seek revenge. Maedar and medusae cannot be trusted by other creature except of their ilk. Occasionally they will bargain with, or purchase information or services with, their treasure.

FANTASY NEWSFLASH

There are 39 GREAT new molds with 100 fantastic characters

New Orc Catapult and Crew. Knights, Skeletons, Females, Mounted Knights and Warriors, Orcs, Dwarves plus more and more coming.

Write for free update with special offers.

Three mold Catapult Set and Orc Crew (Reg. \$29.95) Only \$19.95 (post paid). Hurry. Casting your own figures is as much fun as playing the game.

ECOLOGY OF THE MAENAD

Calm Above the Storm

By Matthew Hanson

Art by Leon Bakst

"Is there some kind of problem?" Lokesh asked.

A huddle of guards whispered around Lokesh's papers. "You're not from around here, are ye?"

OF COURSE NOT, YOU MORON. *The voice within Lokesh seethed.* DO I LOOK LIKE I'M FROM AROUND HERE? YOU WASTE MY TIME. I SHOULD BASH IN YOUR SKULL AND WALTZE THROUGH THIS FLIMSY EXCUSE FOR A GATE. I SHOULD SACK THIS TOWN. SLAUGHTER YOU ALL.

Breathe. Rise Above. "No. Not from around here."

Finally, the guards returned Lokesh's papers. "Well... everything seems to be in order. We don't want any trouble in town."

TROUBLE? FIRE, DESTRUCTION, BLOOD, I BRING YOU DEATH. THE SCREAMS OF YOUR WOMEN, THE CRIES OF YOUR CHILDREN.

Breathe. Ride the wave. "No trouble. Good day."

Lokesh strode into town. A bite to eat, a glass of water, and a good night's sleep. Tomorrow he would be on his way. Rise above. Ride the wave. Just another small town.

Maenads are a people of contradictions. Rumors and legends describe them as raving lunatics, but most who meet maenads find them stoic and reserved. In reality, they unite these extremes. Maenads must maintain constant discipline to contain the wild rage that brews within. Some maenads have learned to channel this rage, and they are terrible to behold.

In the Beginning

The origin of the maenads is shrouded in myth. Many philosophers hypothesize that they were once humans, altered by exposure to powerful mystical energies.

The maenads tell a different story. Long ago, a crazed god of drink and revelry created the maenads as his favored children. Those ancient maenads

lived in a state of constant mania, intoxication, fear, and lust. Only when the god slept, one day each year, did the maenads' minds clear.

On one such morning, a maenad named Evaga awoke with blood on her hands. While in a mad frenzy the night before, she had torn her own son limb from limb. In grief, Evaga threw herself from a cliff and crashed into the sea below. She did not die, though; instead, Evaga awoke in a far off realm, sheltered from the influence of her mad god. Here, her thoughts turned to revenge. For one year, she honed her mind and learned to control the rage within. She spent the next year compiling her techniques into a text for other maenads to study. In the third year, she traveled the strange land, finding allies to aid her.

Three years to the day after throwing

herself from the cliffs, Evaga returned home, and while her god slept, she led armies of maenads and foreigners against those loyal to the deity. In the end, Evaga forced her way into the chambers of the mad god. She took up a flail and bashed in the god's skull.

With her people liberated from their madness, Evaga got into a small fishing vessel and departed into the waves. She was never seen again, but she left behind her text, which her followers called *The Way Above*.

While many maenads believe this myth is the literal truth, scholars and theologians debate its accuracy, especially the claim that a mortal could slay a god so easily. Some see it as a metaphor of how the maenads turned away from their god, while others consider it nothing but a fairy tale.

Overthrowing their creator god re-

New Feat

Lucid Moment (Psionic)

You experience a flash of clarity during your rage.

Prerequisite: rage class ability

Benefit: By expending your psionic focus, you may take one action normally prohibited while raging, such as manifesting a psionic power or using an Intelligence-based skill.

moved the worst of the maenads' rage, but turmoil is permanently ingrained into their soul. They cannot completely quell the rage, so the maenads seek to rise above it. Their rage is a powerful tsunami, impossible to contain. However, as a boat on the ocean, the maenads train to ride above their emotions.

Maenad Physiology

Physically, maenads are largely similar to humans (lending some credence to the view that they are an offshoot of humanity). Strikingly different, however, are the flecks of living crystal covering their skin. The crystals can be any color of the rainbow, from red to violet, and the pattern and size of the crystals differ from maenad to maenad—a unique fingerprint for each. The crystals form just below the skin and slowly rise to the surface and slough off just as normal skin does. Many natural philosophers believe these crystals help the maenad focus their psychic energy.

The differences between males and females are less pronounced in maenads than in humans. Both genders are of similar height and weight, and neither have any body hair. Combined with the maenads' utilitarian dress, this often leads humans to perceive maenads as androgynous.

Though it rarely happens for social reasons, a maenad and human can mate and produce young. These children are essentially human but they are more likely to manifest psionic powers.

Maenad Society

Most maenad settlements are small coastal villages. Here they subsist

primarily as fisher folk and farmers, favoring orchards of olives and figs. Maenads rarely have their own nations, but instead, they try to live peacefully within the kingdoms of other races. A significant minority of maenads live among other races, particularly among humans. Even here, maenads often live in secluded enclaves within cities.

Maenads typically incorporate and blend the styles and customs of their neighbors but with an austere sensibility. They may take on typical fabrics, colors, and cuts used in the clothes of the more populous races living nearby, but they eliminate ornamentation, embroidery, frills, and ruffles. They seldom wear jewelry, and men and women often dress the same.

In times of peace, most maenad villages are directed by a council of elders. There are generally no set rules for membership in these councils, and each council selects its own new members, inviting the wisest and most experienced.

Maenad settlements also typically have a war leader, who may or may not be a member of the elder council. These individuals have almost unquestioned power in times of war, though particularly incompetent or power-hungry war leaders are quickly disposed of.

Early Life & the Way Above

As children, maenads show only a glimmer of the emotional turmoil that haunts the rest of their lives; they soon must learn to tame the emerging fury that will consume their adulthood. This training is referred to as the Way Above, an allusion to Evaga's teachings.

The first stage of the Way Above is often indirect and disguised as games. In one favorite game, called wave standing, each player stands on a wooden barrel floating in a large body of water, trying to be the last one standing. Nearly anything is allowed as long as a player does not touch his opponent.

The true test of a maenad's training begins at puberty, as the floodgates within their souls open and a torrent of emotions bursts through. Though

most maenads control their anger most of the time, some maenads lose their focus during adolescence. They might run screaming through the streets, only to recover hours later feeling intense shame.

Toward the end of adolescence, a young maenad's training becomes more stringent and resembles a rigorous military regimen, including training in the maenads' signature weapon, the flail. After completing this training, maenads become adults.

The Way Above teaches maenads to control their rage. Maenads understand that the rage is more than a mere curse; when properly channeled, it can serve as a powerful weapon. Those who learn to channel their rage must follow one of two primary paths—the Churning Mind or the Storming Fist.

The path of the Churning Mind channels the emotional turmoil into pure psychic energy that psionic manifesters use to augment their psychic abilities. The path of the Storming Fist teaches maenads to enter a state of heightened physical power, similar to berserkers in less advanced cultures. Though rare, a few maenads, called masters of storms, have learned to combine the paths of the Churning Mind and the Storming Fist.

The Churning Mind and the Storming Fist are both fraught with danger. More than once, those trained to harness their rage have turned to the Nameless King, returning to the madness that plagued the early maenads. Thus, only the most disciplined maenads train to use their rage in this fashion.

People of the Sea

For as long as they can remember, maenads have lived on islands and in coastal villages. Thus, it is natural that they have become adept at seafaring. For centuries, the maenads lived primarily as subsistence fishers. As contact with other races increased, many maenads became sailors on trading vessels. Their maritime skills also spawned crews of mercenaries, and a few maenads have hoisted the black flag and terrorized the seas as pirates.

Because they are so involved with the sea, water motifs find their way into many other parts of maenad life. Maenad art often features the ocean, and wave patterns are a common motif in decorations. Many of the most popular maenad songs began as sea shanties.

Sea imagery is also an integral part of the training that maenads undergo to control their emotions. Life as a maenad is like being caught at sea in a perpetual storm. Only through discipline can the maenads learn to ride the waves of their rage and prevent themselves from drowning in their own emotions.

People of War

Because the Way Above includes military-style training, a martial attitude permeates many aspects of maenad daily life.

All adult maenads are trained to use the flail, and the flail serves as a symbol as well as a tool. The flail takes skill to wield, and an untrained wielder is just as like to hurt himself as his enemy. In the hands of a master, the flail is used not only to crush skulls, but also to control the battle by stripping a foe of weapons and footing alike. Advancing their military craft, maenads have further developed a specialized longflail and a martial art to go with it. In the right hands, this style looks more like a dance than a form of combat.

While maenad communities are frequently small, nearly every adult serves in the militia. This, combined with the strange rumors surrounding the race, mean that bandits and conquerors usually leave maenad villages alone.

Despite their training and innate powers, very few maenad settlements hold aspirations of conquest. However, individual maenads living within a kingdom often join the military, and small mercenary companies comprised of maenads frequently hire themselves out to nations at war.

People of Music

Maenads have long musical tradition and, much of their oral history is contained in song. Group singing is

seldom in unison. Maenad music often features tight harmonies and layers of counter melodies. Maenads favor an eclectic range of instruments, including drums, woodwinds, crystal singing bowls, and song staffs.

Unique to maenads, the song staff is a wooden tube attached to a short length of rope. When a maenad holds the rope and spins the tube, air is forced through the tube to create an eerie tone. By spinning the tube at different speeds, singing tubes produce a range of notes (similar to those made by bugles).

The song staff's similarity to the flail is no coincidence. Maenad elders use the instrument to train young maenads to use the flail without the children realizing it. The two have even been unified, in the form of the singing flail, a flail whose head has been modified to produce a tone as it spins. The singing flail is a favorite of many adventuring maenad bards.

Religion

Many who hear the maenad's story

of destroying their creator god expect them to eschew religion completely, but this is not the case. Indeed, many maenads adopt benevolent deities as another tool to rise above their anger and thwart the will of their creator.

Maenads follow whatever gods are prominent in their region. If a diverse pantheon exists, they gravitate to gods of the sea, lawful gods, and those that focus on discipline or self improvement. Many revere the god-slayer Evaga in a form of hero worship, though only a few fringe cults claim that she has ascended to godhood.

The Great Taboo

Traditional maenad culture holds a powerful taboo against drinking alcohol. Many believe this is purely because of the way that intoxication impairs a maenad's rigid emotional discipline. However, others believe that the Nameless King was also a patron of drunkenness and that this taboo is a further act of rebellion.

Maenad Flails

Martial Melee						
Weapon	Cost	Dmg (s)	Dmg (m)	Critical	Weight	Type
Flail, Light	6 gp	1d4	1d6	x2	4 lbs.	bludgeoning

Exotic Melee Weapon

Maenad Longflail	25 gp	1d6	1d8	x2	8 lbs.	bludgeoning
------------------	-------	-----	-----	----	--------	-------------

Flail, Light: With a light flail, you get a +2 bonus on opposed attack rolls made to disarm an enemy (including the roll to avoid being disarmed if such an attempt fails).
You can also use this weapon to make trip attacks. If you are tripped during your own trip attempt, you can drop the flail to avoid being tripped.

Maenad Longflail: With a maenad longflail, you get a +2 bonus on opposed attack rolls made to disarm an enemy (including the roll to avoid being disarmed if such an attempt fails).
You can also use this weapon to make trip attacks. If you are tripped during your own trip attempt, you can drop the flail to avoid being tripped.

A maenad longflail is a reach weapon. If you wield a maenad longflail in one hand and nothing in the other, you can threaten adjacent enemies as well as those 10 ft. away.

Flail, Maenad Singing: This specialized flail head can be built into any kind of masterwork quality flail. Singing flails can be used as musical instruments, even as the wielder attacks with it in battle.
Singing flails adds 150 gp to the price of the flail.

The Nameless King

The true name of the maenads' creator god is lost at the dawn of time. He is known by many epithets, such as the Lord of Madness and He-Who-Must-Not-Be-Named, but most commonly, he is called the Nameless King. According to legend, the Nameless King was killed by his own children. After the god-slaying, the maenad leaders destroyed all holy books dedicated to him, purged references to him from all written texts, and even forbade any maenad from uttering his true name, under penalty of having their tongue cut out.

Despite all their efforts to destroy their lord, some shred of the Nameless King's essence survived, and over the millennia, he has secretly gained strength. Originally, the Nameless King was a less malevolent god as a patron of wine, decadence, and madness. In the ages that he drifted in darkness, the Nameless King evolved into something far more terrible. Once the patron of madness, he became mad himself, and his portfolio took on chaos and destruction.

The Revelry

As the Nameless King's power rises, a small but growing segment of the maenad population has embraced a cult called the Revelry. The Revelry teaches maenads to embrace their inner rage as a gift from the Nameless King. They may kiss you one moment and feast on your still-beating heart the next.

Except for a few maenads living in the wild lands, most Revelers cannot follow all these teachings in daily life. Instead they meet in seclusion once each month to engage in an orgy of alcohol, lust, and violence. Frequently, enemies of the Revelry are captured alive only to be executed at the next gathering, and any who stumble upon a meeting suffer a similar fate.

Maenads in the Real World

In Greek mythology, the maenads were the frenzied female followers of Dionysus (called Bacchus by the Romans), the god of wine and madness. The maenads were wild, intoxicated, violent, and promiscuous. After Orpheus refused their advances, a group of maenads tore the legendary poet to pieces.

Maenads were known to the Romans as bacchae and were the subject of Euripides' play of the same name. In *The Bacchae*, King Pentheus forbids worshipping Bacchus, and as punishment, raving women, including his own mother, rip him apart.

The maenads of mythology bear the most resemblance to fantasy maenads before destroying the Nameless King. If your campaign world bears a connection to earth mythologies, Dionysus may be the true identity of the Nameless King.

Maenad Adventurers

Despite their small population, maenads produce a surprisingly large number of adventurers. Maenads who have completed the Way Above commonly go on a journey of exploration. After spending several years adventuring, most return to their native home or another maenad village to settle down and raise a family.

The adventuring life is popular because it provides an outlet for maenads to channel their racial anger. In the heat of battle against orcs and trolls, their rage can be a powerful asset, and praised by their allies.

Though most maenads return after their period of wandering, not all are so fortunate. A handful perish or simply disappear, and some maenads acquire what is called the "thirst of war." While the danger of combat first serves as a release for the maenad, over time it becomes a necessity. They lose their ability to rise above their rage, and only through battle can they tame it. These unfortunate maenads are doomed to fight at every opportunity. Like any addict, these maenads build up a tolerance, so they seek greater and

greater battles to give them the feeling of control they desperately need. Inevitably, these maenads find foes too great, and their rage is ended by the sword.

Worse, some turn to evil on their adventures. They succumb to the darkness in their heart. Those with the thirst of war still pick their battles, but those who have turned to darkness, however, are wild and impulsive. They take what they want, and woe to those who get in their way. Many take up worship of the Nameless King—in spirit and in name.

Maenads in Golarion

In the *PATHFINDER* RPG world of Golarion, maenads live primarily on the continent of Casmaron, particularly on the coast of Vudra and the archipelagos off its shore. Because of their natural talent as sailors, maenads often serve on the sailing vessels of Vudra, including those that travel to the colony of Jalmeray. Nearly 1,000 maenads live on the island of Jalmeray, and some of them have ventured off the island to explore the rest of the inner sea region.

PATHFINDER Beta Maenad

The following variant maenad is compatible with the *PATHFINDER Roleplaying Game* Beta Edition.

+2 to one ability score: Maenads gain a +2 bonus to one ability score chosen at creation, to represent their varied nature.

Medium: Maenads are Medium creatures and have no bonuses or penalties due to their size.

Normal Speed: Maenads have a base speed of 30 ft.

Energy Ray: Maenads know the power *energy ray* but may only deal sonic damage with this power. It is accompanied by a tremendous scream of rage. Maenads use their character level as the manifester level for this power.

Naturally Psionic: Maenads begin with 2 bonus power points at 1st level and gain an additional power point at every odd level. They can use these power points to fuel their *energy ray* or any powers gained through a psionic class.

Sonic Affinity: Maenads add a +1 to

the DC of any spell or power with the sonic descriptor.

Outburst: Maenads can dampen their mental processes for an increase in raw power called an outburst. As a result, they take a -2 penalty to Intelligence and Wisdom but gain a +2 bonus to Strength. The character must spend one power point at the beginning of each round during an outburst and may stop an outburst at any time.

Inner Rage: Maenads begin play with one rage point and gain an additional point at every even level. In addition to using these points for barbarian abilities, characters may use them to fuel their outburst ability, instead of using power points.

Ordered Rage: Maenads may take levels in the barbarian class even if they are of the lawful alignment.

Natural Sailors: Maenads have a +2 bonus to Swim and Profession (sailor) checks. In addition, they gain a +2 bonus to Acrobatics and Climb checks made on sailing ships.

Weapon Familiarity: Maenads are proficient with flails. Maenads treat any weapon with the word “maenad” in the name as a martial weapon rather than an exotic one.

Languages: Maenads begin play speaking Common and Maenad. Maenads with high Intelligence scores can choose any of the following: Aquan, Draconic, Dwarven, Elven, and Goblin.

Favored Class: The favored class of a maenad is either barbarian or the wilder psionic class. This choice must be made at 1st level and cannot be changed.

Energy Ray

If you do not use psionics in your campaign, replace the maenad's energy ray with the following spell-like ability, useable once per day. The maenad's character level equals the caster level.

Energy Ray (Sp) You create a ray of sonic energy that shoots forth from your mouth and strikes a target within close range (25 ft. + 5 ft./2 levels). If you succeed on a ranged touch attack

with the ray, it deals 1d6-1 points of sonic damage per level. The ray ignores an object's hardness.

4E Maenad Racial Traits

Average Height 6 ft. 3 in.

Average Weight 220 lb.

Ability Scores +2 Constitution, +2 Charisma

Size Medium

Speed 6 squares

Vision Normal

Languages Common, Maenad

Skill Bonus +2 Athletics, +2 Intimidate

Maenad Weapon Proficiency

You gain proficiency with the flail.

Unleash Fury Once per day you can unleash the emotional rage within you. Each time you use this ability, you may choose to release this fury either as a primal scream or an outburst.

Racial Powers

While 4th Edition does not have complete psionics rules, these powers create the desired effects for maenads.

Unleash Fury: Primal Scream

Maenad Racial Power

You release a scream that shatters the bones of your enemies.

Daily • Sonic

Minor Action

Close blast 3 (6 at 11th level, 9 at 21st level)

Targets all creatures in area

Attack Charisma vs. Fortitude

Hit 2d6 + Charisma modifier thunder damage, and targets are dazed and deafened (save ends both)

Increase damage to 4d6 at 11th level, and 6d6 at 21st level.

Miss half damage, targets are deafened until the end of your next turn

Unleash Fury: Outburst

Maenad Racial Power

You channel the anger inside you to deliver a powerful strike. The rage remains within your blood as you fight on.

Daily

Standard Action Melee weapon

Targets one creature

Attack Strength vs. AC

Hit 2[W] + Strength modifier damage
Increase to 3[W] + Strength modifier damage at 11th level, and 4[W] + Strength modifier damage at 21st level.

Effect You gain a +2 power bonus equal to melee attack and damage rolls for the rest of the encounter.
Increase power bonus to +3 at 11th level, and +4 at 21st level.

4E Maenad Monsters

To see the maenad as a monster visit koboldquarterly.com. New monsters posted every Monday!

The Ecology of the Manticore

Manticore lessons—up close and personal

by Spike & Jones

“. . . Then, praying to all of the gods in the Heavenly City, Yi drew back on the bowstring, shut his eyes, and with his last remaining shaft he slew the ninth burning sun, saving the Five Seas and Four Corners from a fiery doom. In peace, Yi married his love and they settled down together, interrupted only by the occasional thankful peasant or nobleman.”

His tale finished, the bard propped his feet on the bench and looked toward the hearth in the corner of the common room, where he would mull his customary flagon of wine before the entertainments of the night began. But before he could either move toward the poker or sink deeper into his chair, a tiny voice burst out from the children gathered on the rush-strewn floor before him.

“Please, Mister Farwanderer, please tell us another story!”

“And make it a real one this time,” cried a second shrill voice.

“A ‘real one,’ little Aidan? And what was it about my last tale that failed your tests of realism?”

“Well . . . it didn’t happen to anybody real. It was only about Yi the Bowman and shooting suns out of the sky. That never really happened! Tell us another story about when you weren’t so old.”

“He means when you weren’t yet a bard, Mr. Farwanderer.”

“Ah, back in the old days., eh, Grainne? Well, then, I do recall one occurrence of some interest from my youth. If one of you would be so kind as to stoke the fire to mull my wine—” he eyed Aidan from beneath his bushy brows “—I’ll recount my adventures in the hills of Bitu.

“As you may know, Bitu is a town that calls itself a city but behaves more like a village. It lies in the foothills of the Imbran Mountains. Now, unlike gloried Mardukan, Bitu has none of the great culture of that civilization; in fact, its name means only ‘house’ in the language of those shave-headed priests.

“I was in Bitu earning a living at a trade that I found most profitable, long before I was forced by circumstance to change careers—”

“You mean—” cried Aidan, before feeling his older sister’s elbow in his side. Sullenly, he merely stared at the stump at the end of the bards left arm, wondering what

circumstance might have caused such a career change.

“As I was saying, I was contributing to the economy of Bitu by stimulating the boring lives of the populace and providing distraction for the authorities of the community from the day-to-day routine with which they dealt. However—”

“I know!” yelled Aidan, not to be put off for long. “You were a thief!”

“It is not polite to interrupt one who is speaking to you, Aidan, and it is rarely prudent if that is to be the content of your outburst. The details of my exploits in that venture I shall leave until such time as you are able to properly understand them. Suffice it to say that I was not as proficient as I had thought myself to be. In due course, I was apprehended by those same authorities and put on trial for some small number of minor indiscretions. Being quite parochial in their attitudes—”

“It means they didn’t believe him,” Aidan whispered to his younger sister, Fiona.

“—they had to decide upon a suitable recompense beyond simple financial restitution. One hothead on the council called for my execution, and another would have deprived me of both hands at a time when I had yet to lose the first. Luckily, I suppose, a voice from the gallery intruded with another suggestion.

“The newcomer was a hunter of some sort who was in Bitu assembling supplies for a safari—and that, dear Fiona, means a hunting trip,” the bard said in a stage whisper while he gave a sidelong glance at Aidan’s reddening face.

“He and his band had all of the equipment they needed to hunt their game—except a suitable lure. And this man, Hengist y Helwr, he called himself . . .”

“I know that one,” cried Aidan, “that’s Hengist the Hunter!”

“It’s heartening to see you’ve paid attention to some part of my lessons, Aidan. Now, as I was saying, this Hengist suggested that I would be eminently qualified for the job of manticore bait.

“The town council debated for a short time but eventually decided that it would be best to leave my fate in the hands of an outsider who was willing to part with a small sum of gold for what they called a transferment fee.

“Having read the standard treatises on

the manticore, the hunters took me to a barren hillside near a frequently used trade path.¹ There they arranged themselves behind rocks and small trees after leaving me tied to stakes in the center of the clearing, stripped of all but a short kilt covered with an odious mixture they had brought with them, a mixture of which human blood must have formed a substantial portion. Their plan, you see, was to attract a passing manticore by way of the scent I now emanated, hoping the beast would recognize the smell of the blood of its ‘favorite prey.’ Then, as the beast gorged itself on my helpless body, they would ambush it in a hail of arrows while using their stones and trees to guard against retaliation from the beast’s missiles. If I should perish by way of the monster’s claws or a misguided shaft, it would be of no concern to them.

“I stank there on that hilltop for all that day and night, and it was high onto noon the next day before I’d managed to work one hand free from its bonds. But, as the fates often have it, it was at that time that my luck seemed to reverse directions.

“A shadow crossing my face caused me to look away from my accomplishment to see what I first mistook for a dragon—but which eventually revealed itself to be the dreaded manticore.

“It landed a few feet from me and proceeded to sniff the air and myself cautiously. Although its countenance resembled that of a bearded man, its senses were those of an animal.² The manticore’s head appeared enormous, a fact that I first put off as an effect of my terror, but which I eventually discovered to be true; its head was nearly twice the size of the largest man’s. Its eyes were like a hawks: very dark and slightly bulged, allowing it to see the movements of a single man from the loftiest heights it could attain. Its hair and beard were dark and matted with blood. Its facial skin was that of a healthy man of middle years, and its nose was wide and flaring as it sniffed about me from head to heel.

“Still, the most impressive feature was its mouth, for only this did not belong on a human face. Its lips were drawn back tightly against its jaw, exposing gums as black as a dog’s. But even more amazing were its teeth. They were neither white as

yours, dear Grainne, nor yellow like your father's, nor even missing like yours, dearest Fiona." Fiona smiled, revealing the gap where her two front teeth had fallen out. "Instead, the manticore's teeth gleamed darkly in their sockets, for they looked all the world like tiny dagger blades forged of darkest iron.

"Finally, after spending only as much time inspecting me as I have spent describing its face, the monster appeared to have made up its mind about me. Having assured itself that I was no threat, it leapt forward and struck the air with its powerful wings, gaining altitude in a surprisingly short time."

"But Mr. Farwanderer, you couldn't have scared it away, even with one hand free! You were still tied down, you had no armor, no sword or spear. You were free to be killed!"

"Exactly, Grainne. The manticore struck off into the air as soon as it discovered that I was shieldless, swordless, and armorless. Hengist and his men rushed to follow the exiting beast, hoping to find its lair. Unluckily for me, one of his band thought to take me along in hopes that I could be used as manticore-fodder at the next opportunity. None of us had any idea at the time why the creature acted this way, least of all myself. Of all of us, I was the only one who had no desire to discover why, but I would be the only one to find out.

"It was not at all difficult to follow the beast, for it glided slowly through the air, always tending toward a certain nearby cliff. We arrived too late to see where it had disappeared, but a pile of scarred bones and other refuse at the foot of the cliff showed Hengist the general area in which to search the cave-pocked cliff.

"A short time after the party had spread out to look for other clues along the base of the cliff, one of the hunters cried out in alarm. We turned to see a smaller-size manticore leaping from one of the highest holes and gliding inexpertly to the forest floor. Hengist quickly decided to ignore this younger specimen and concentrate on the adult we'd followed.

"Now that he knew which cave was our target, Hengist managed to discern a rough pathway leading up the rocky face. It was steep and difficult to climb, but it was evidently sufficient for a manticore with good strong claws but with wings not yet strong enough to allow him to fly back to his roost.

"I was released from my bonds temporarily to ascend the cliff at sword point, for the path was too ill defined for a man to climb with his arms tied behind his back. As I rose, I noted the depth of the claw marks gouged into the stone, and a shiver ran through me. I was still expected to serve as a distraction for the manticore within. As I had been turned down once before by the beast, I feared more the

swords at my back, but I was none too comfortable-with the thought of claws that could easily tear a man in two-especially when I was to be that man.

"Without incident, we reached the cave mouth and proceeded into a long corridor. When we rounded the final corner in the winding cavern, we saw by our lanterns' light a large chamber, littered with human remains, bits of armor, torn clothing, heaps of coins in rotting sacks, and, in the middle of it all, *the monster*." The bard looked deeply into the wide eyes of the children. "The manticore looked even larger in the tight confines of the cave, and its ferocity was obviously increased by our intrusion.

"Faced with certain death both ahead and behind, I was too frightened to do anything but remain rooted to the spot, even as the manticore loosed a volley of iron darts from its tail.³ The spikes flew past me—and struck Hengist, in the lead of his men, an action the monster quickly followed by leaping on Hengist with claws out and teeth bared.⁴

"Knocking me aside as it flew at Hengist, the manticore gave a strange, high-pitched roar completely unlike that of the lion, of which the manticore is a part.⁵ It proceeded to tear at Hengist's armored throat and face. Although there were other members of his party standing about and raining blows on the beast, the monster concentrated all of its attacks on the one

Fantasy, Phantasms and Fright! Science Fiction and Super-Action! High Heroics and Hilarity!

THE ADVENTURE NEVER STOPS!

TEGEL MANOR (GS10454) \$12.00
That mysterious manse of monstrous menace is back—with a vengeance! This Judges Guild classic has been extensively revised and expanded, and now adapts for use with whatever your favorite gaming system. Includes Gamemaster's and players' maps of the haunted mansion and the surrounding countryside, along with layouts of the underground levels, "Universal Format" information, detailed descriptions and even a separate section of Phantasmal Fiends! Evil lives in Tegel Manor—but can your heroes?

THE TOME OF MIGHTY MAGIC (NP 01) \$10.00
This wizardly reference brings you over 270 unique and original spells to expand your campaign and add new dimensions to your world. Detailed descriptions make this a useful addition to any FRP campaign...

SWORDPLAY (GS 10453) \$6.00
The newly revised SWORDPLAY lets you capture the spirit of Ancient and Mediaeval combats in an easy-to-learn, fast-paced game of strategy and tactics. Neither a miniatures game or a boardgame, beginner and veteran alike can enjoy a different concept in playing out conflicts with sword, shield and armor.

THE FIRST DUNGEON-MASTER'S DITTY BAG OF DIRTY LOW-DOWN SNEAKY TRICKS (GS 10452) \$6.00
A clever cache and capricious cargo of cunning conundrums crafted to captivate the clamorous and clandestine companions of your campaigns.

BOOK OF TABLES, Vol. I (GS 10451) \$6.00
Our first 32-page compendium of dice tables and articles to enhance your gaming, featuring: a Generic Dungeon Generator (adaptable to your favorite fantasy roleplay games); the infamous Klutz Kleric Guide to Medical Malpractice and Mistakes; tables and articles on individualized character appearance and talents by John T. Sapienza, Jr.; and much more!

ACTION MAPS, Set 1 (GS 10450) \$6.00
Whether the Giggler has just robbed the bank, Pod People have taken over, or a poltergeist is on the loose—you're on the scene with ACTION MAPS(tm)! This set contains 6 maps printed on three double-sided 22x35" sheets, each with detailed city locations printed with 1" grids for instant adventure in your favorite superhero, secret agent, crimebuster or other modern-setting role-play game. Also includes cut-out vehicles and GM's reference book as play-aids.

RESCUE OLLIE NORTH! (CF 01) \$4.00
An extremely tongue-in-cheek game "liberally" (you should excuse the expression) laced with satire. Your mission, should you decide to accept it, is to rescue Lt. Col. Ollie North from the midst of courtroom proceedings and rabid reporters, in the grand tradition of red-blooded heroism (see also any "Rambo" movie. For solo or 2-player fun.

PIZZA WARS (HTE 01) \$4.00
This zany combat game gives a new meaning to "food fight": Two or more players can engage in brutally omnivorous conquest in the lands of the Imperator. Includes all rules necessary for conducting both basic PIZZA WARS and PIZZA WARS IMPERIUM. You'll need a Pizza and toppings, toothpicks and one or more dice to play.

MACHO WOMEN WITH GUNS (BTRC MW-01) \$4.00
Silly fun in shameless (hussy!) style, lampoons that mainstay and cliché of SF, fantasy and superheroics (not to mention pin-up calendars) and answering the burning question, "How do they run with those @+!\$%*!! high heels"? Now in its 2nd edition, with an even larger map and a full set of spiffy Cardboard Bimbos!

We also manufacture GAME SCIENCE High Impact(tm) Opaque and Gem(tm) Polyhedra Dice, and the ZOCCHI HEDRON(tm) 100-sided Die! Ask your favorite Hobby Shop for these and other fine games and products from GAME SCIENCE and ZOCCHI DISTRIBUTORS, or order by mail from ZOCCHI. (Mail orders please include \$3.00 shipping and handling. VISA, MC and AMEX accepted.) Send \$3.00 for our catalogue.

ZOCCHI DISTRIBUTORS, Dept. DTM 1512 - 30th Avenue, Gulfport, Mississippi 39501 (601)863-0215

man most able to avoid them, for Hengist was the only one of the band equipped with armor adequate to blunt its attacks.⁶ The beast's single-mindedness blinded it to my own movements away from the melee, and I crawled and scrambled for the only corner of the room not threatened by claw or sword.

"When I reached the far wall of the chamber, I became immediately aware of the reason for the monster's anger. Two cubs were hiding there, and they made movements toward me that mimicked their mother's attacks.⁷ In my weak, confused, and defenseless condition, I could have easily been killed by these two if it weren't for a strange thing. While they swung their paws at me, flapped their tiny wings, waved their tails, and hissed through wide-open mouths, I noticed that they had no more than the stubs of claws and tail spikes, and dark, shiny ridges of strange material where teeth should be.⁸

"While I crouched, dividing my attention between the carnage I was escaping and the cubs before me, the mother manticore succeeded in slaying Hengist, but not without suffering a number of wounds of its own. Having finished off its immediate prey, it finally seemed to notice Hengist's retainers, and it turned on them and advanced, looking even more terrifying covered with gore than it had but minutes before. Guessing that the wounded manticore would eventually be brought down by the rest of the Hunter's band, I had to quickly come up with a plan of escape."

"So you snuck out just when they struck the killing blow to the manticore," suggested Aidan.

"No, silly. They blocked the entrance, so he took one of the baby manticores and used it as a hostage and kept it between him and the other guys," corrected Grainne, beaming at her superior grasp of the situation.

"Well, actually, neither of those solutions was at all feasible at the time. The egress was indeed blocked, and I'm not sure that the mother manticore would have understood the bargain implicit in a hostage-taking. Instead, I merely made for myself a disguise that all of the men were willing to believe. I smeared some of the blood and dirt from the floor of the cave over the scratches from the rough treatment at the hands of my captors and the paws of the cubs, then merely 'played dead.'"

"The hunters eventually dispatched their prey but were too badly wounded to make a thorough search of the chamber. They merely took all of the valuables from the room,⁹ their leader's body, the two cubs—which they hoped to sell—and a number of samples and organs from the adult manticore's body to be sold to alchemists and mages, leaving behind my own, supposedly dead, body.¹⁰ Once they were well gone, I got up and made my way out of the cavern and off across the countryside to greener pastures. Now, off to bed with the three of you. Fiona is almost asleep

now, and you should follow her example."

"But that's not a good ending! They got all the money and they killed the manticore and took the kittens and you didn't get anything."

"And I lost all of my belongings that had been confiscated in Bitu, forcing me to start over again with nothing. Yes, Fiona, that's how it ended."

"But the bad guys shouldn't get away with everything. That's not right!"

"Well, in actual fact, they got away with very little. The vast majority of their profits went toward the purchase of revivifying prayers for their leader, from a priest of Anu in Mardukan. And as for the cubs, when they'd brought Hengist back from the Isles Beyond, he had sold one cub to a wealthy baronet with the assurance that it could be raised as a flying mount in but a few years. The other cub was kept by Hengist for the same purpose.

"In less than three years, the two cubs had grown to their full size. Unfortunately for Hengist, they hadn't taken readily to the training of their owners. The baron's manticore (for the baronet had risen to become the thane of Kasayle in the intervening time) had proven so unbreakable that even the expert on manticores that he'd hired could do nothing with it. So, he sought out Hengist and demanded his original investment back, with the addition of all the money spent on raising the beast over the years, and with an additional fee levied merely for spite.

"Hengist had had more success than the baron because he was wary enough to have *charm monster* spells cast repeatedly on his own manticore. He offered to demonstrate that it was merely the other man's incompetence that had led to his failure. After having a number of his retainers lead the manticore out of its stable, Hengist prepared the saddle he'd had made, mounted the beast and strapped himself in, and rose into the air to the cheers of the small crowd attending the event. No cheers, however, came from the baron and his manticore tamer.

"The monster was somewhat startled by all of the commotion, as Hengist had previ-

ously flown it only in isolation for fear of public outcry or an unfortunate accident. As Hengist flew it in sweeping circles and in dives toward the crowd, screams of excitement went up into the air, as well as hats thrown in salute.

"Unfortunately, the manticore's reflexes and instincts took precedence over its training, and the manticore neglected the presence of Hengist riding astride it. It reacted to all of the clamor as if it were being attacked, by arching its tail over its back to send a volley of darts toward the source of the distractions. Three of those iron darts plunged into Hengist's spine, killing him instantly and breaking his bonds to the saddle. The manticore, freed from the commands of its now missing master, turned about and sailed away to the nearby mountains before anyone could string a bow."

"Only seconds after Hengist's body hit the ground, the baron stated to the crowd that this was proof of the legitimacy of his claim against Hengist. Within a few short weeks, he was awarded the greater part of Hengist's estate in compensation from the courts. Not enough money was left to have Hengist raised to life again, so he was buried and so remains today.

"And, of course, the manticore trainer, who had watched the baron's cub grow from a mewling cub to a mighty beast of prey, collected his own compensation from the baron, then moved on to find another job. Positions 'in manticore taming would be almost nonexistent once this incident became public knowledge."

"But what were you doing then?"

"Why, Grainne, I said that I was trying to find a new job, for one can only make so much profit from three years with any type of monster, even one as magnificent as a manticore."

Footnotes

1. The *Monstrous Compendium* states that manticores prefer dismal lairs but that they are usually encountered outside of their caves 'while hunting for humans. The AD&D 2nd Edition *Dungeon Master's Guide* shows that manticores are never

Manticore

Continued from page 29

found in uninhabited areas but that they are most frequently seen over the forests and hills of sylvan settings. To ensure themselves a ready food-supply, manticores will rarely lair more than 20 miles (three hours leisurely flight time) from a human settlement or trade route.

2. The manticore's sensory organs are more efficient to some degree than the human organs that they resemble. Manticores possess eyesight like that of birds of prey, which they use to spot distant movements that could signify human activity. At closer ranges, they use their sense of smell to find metal that they may not be able to see because of poor lighting, clothing, or layers of decorative paint.

3. A healthy adult manticore has a complement of 12 iron darts in its tail that can be flung at prey in four volleys of three darts each. As the darts take about 24 hours per volley to grow back, emerging like shark teeth from a supply within the end of its tail, a manticore will not choose to fire all four sets of darts at any one opponent or group of opponents, preferring to soften up foes with one to two volleys before closing with its claws or teeth. Only in dire emergencies will all 12 darts be used, for it would take four days for the manticore to be fully armed again.

When an adult manticore is encoun-

tered, it will not necessarily have a full set of spikes readied. Roll 1d6. On a roll of 1, the manticore has only one volley of darts at the moment. A roll of 2 means two volleys are ready, and 3 means three volleys. Rolls of 4 and 5 both signify four volleys, and only a 6 means the manticore has no darts ready for use. A manticore is unlikely to attack when at its weakest.

4. Although manticores have teeth tough enough to pierce armor, and jaw and neck muscles strong enough to force these teeth through armor and tear it apart, they rarely use these fearsome weapons in combat because of the human configuration of their facial features, requiring them to twist their heads at an uncomfortable angle to catch upright foes. In extremis, they can bite for 1-8 hp damage, but all attacks with claws or tail in that same round are made at -2 to hit. If the manticore is blinded and using its teeth in combat, it will use them at -3 to hit and all other weapons will be at -6 (which is why they are unlikely to use both teeth and claws when blinded).

5. The voice of the manticore, coming as it does from a strange combination of a man's and a lion's throat, is higher in pitch than either, sounding like a man's falsetto voice. This is compounded by the relatively inflexible lips and jaws of the manticore to greatly reduce the number of sounds it can produce. Therefore, its language is relatively simple but still diffi-

cult to imitate.

6. Iron and steel form an important part of the manticore's diet as their claws, teeth, and tail darts are formed of them. If given a choice between an armored or a bare victim, the armored one will be attacked to provide the beast with both meat and metal, while the other is fairly ignored as it does not satisfy all of the manticore's dietary needs. Although the *Monstrous Compendium* states that they prefer human victims, manticores do so not because of the taste but rather because humans often carry more metal on them than any other creatures.

7. Manticores appear in groups of one to four. If a single manticore is encountered, it is most likely a rogue male or a female searching for food for her young. If two appear, they are probably a mated pair, while larger groups are usually simply mothers with their young (the males leave their females soon after the mating season ends). The female manticore normally fights with the same strength as the male, but if she is protecting her young she will have a bonus of +1 to hit and damage on all attacks, including those from each individual tail spike.

8. Manticore cubs are born in litters of one to three, almost five months after the end of the autumn mating season. At birth, they are almost helpless and must depend on their mother for pieces of meat and ferrous metals that have been torn into manageable sizes for them.

Even with a regular and balanced diet, young manticores do not develop a full set of teeth, claws, and spikes until they are at least a year old. It takes at least another year before their wings are strong enough to carry them. During this year, they are able to glide unsteadily, but no powered flight is possible; their muscles are capable only of holding the wings rigidly open.

Although they are physically able to hunt and survive on their own two years after birth, manticores do not reach their full size until their third year, and they are not sexually mature until their fourth. Once a cub has reached the age of three, it behaves in all ways as a mature specimen described in the *Monstrous Compendium*.

Between the time a cub has claws and spikes and the time its wings grow fully, it can fight as a medium-size, 2 + 1 HD creature doing 1-2 hp damage with each paw, 1-4 hp damage with its teeth, and 1-3 hp damage with each tail spike. Under certain circumstances, it can use its rear claws for 1-2 hp damage at -4 to hit. The cub moves at a ground rate of 6 or at a gliding rate of 12.

At the age of two years, until it attains its full growth and fighting capabilities at three years of age, the cub is man-size, has 4 +2 HD, and does 1-3 hp damage with its front and rear claws (with the rear claws used at -3 to hit), 1-6 hp damage with its teeth, and 1-4 hp damage with its tail darts. It can move at 9 on the ground or 15 in controlled flight.

King's Bounty

Be it decreed that on this eve of the mid-summer festivals, Overlord Ay-Sen, High King over the peoples of the Inner World of Rhan, offers to his subjects a purse of 1750 fingerweights of gold for the capture and return of Jharsvend, half-elven, notorious Blue Thief of Iniali...

Adventurers who enter *King's Bounty* are thrust into the roles of bounty hunters in the mystical Inner World of Rhan, questing for powerful fugitives and riches beyond dreams. Clever sorceries and ably forged weapons are valuable allies to the bounty hunters of Rhan, but final victory is reserved for the hunter who is both most skilled and most daring.

King's Bounty, an exciting new board game for one to eight players by Task Force Games, includes a full color mapboard, 32 full color fugitives, 8 stand-up full color bounty hunters, gold fingerweight certificates, random event charts, fugitive contracts, and a detailed rule book. *King's Bounty* is available at all quality hobby and game stores or directly from Task Force Games (\$24.95 plus \$2.00 shipping and handling within the U.S.).

TASK FORCE GAMES

14922 Calvert St., Van Nuys, CA 91411 Phone # (818) 785-0315

9. Conspicuously lacking in the treasure troves of manticores are any items made of iron and steel, these being used for food. Any items found in their lairs that are made of these materials will be incomplete (e.g., a suit of chain mail with one of the arms chewed off) or mangled so that it is unusable. Enchanted items made of ferrous metal are also eaten. Even if a manticore has a steady diet of magical metals, its spikes and claws do not partake of the magicks, as those special properties are generally destroyed when the articles are chewed and digested.

10. The treasure strewn about a manticore's lair is the primary income to be derived from manticore hunting, but there are many other ways to eek a profit from it. The first of these is by capturing manticores alive and selling them to holders of menageries or the like, where they can attain prices up to 1,000 gp. Less mundane uses of manticores come from the sale of various parts of their freshly slain bodies. Their eyes can be used as ingredients in potions of *clairvoyance*, their blood in the ink of *protection from missiles* scrolls, and the hearts of female manticores can substitute for lion hearts in potions of *heroism*. In addition, the tail spikes can be used by mages to make many forms of magical darts and arrowheads. Finally, all of the metal in the beast's claws, teeth, and tail can be melted together and forged into the finest of steels, good enough to be utilized in magical weapon creation, as all impurities in the original ores are removed by the manticore's digestive system. The value of all of these body parts is usually one-tenth of the value of the product that can be constructed from them.

11. Unlike many other monsters that can be broken and trained to become flying mounts, without the liberal use of *charm* spells, manticores are absolutely untamable. Even with the use of *charm* spells, they are unlikely to remain tamed. If a *charmed* manticore is brought into combat, the strength of its instincts are likely to override the power of the spells so that it may make a saving throw versus spells every round it is in combat, with a successful saving throw breaking the effects of the *charm*.

The ecology of the mimic

by Ed Greenwood

From the *Journals of Maerlun the Scholar*:

The mimic is a curious (and dangerous) creature to most minds — but few know, or care to know, that there are actually several related species of mimic, divided into two groups: a larger, "killer" variety that is of lesser intelligence, attacking all nearby prey, and does not speak; and the more intelligent, eloquent species which will often bargain for food, has a curious (as yet unfathomed by me) language of its own, and often speaks orcish, the common tongue, dwarvish, or other tongues used in the vicinity of the individual creature's hunting ground.

The mimic gains its name from its ability to alter not only its body shape but the color and texture of the outer surface as well. The color and texture changes are accomplished by the shifting of pigmented liquid between interior and exterior body cells, so that the creature resembles wood or stone in color and texture depending on whether this pigmented liquid is brought to the outer surface of the creature's body or stored internally.

A mimic is naturally gray in hue, with a smooth, very hard outer skin that gives it the stone-like appearance. The pigmented liquid, brownish in color (often revealed to adventurers when a mimic is wounded in battle), is held within the body in large, muscular organs that serve as both bags and pumps. When these organs are squeezed by the contraction of

the cavity wall muscles, they squirt their contents rapidly (within 1 round) into the outer skin layer, filling many capillaries that lie just beneath the skin surface. These capillaries then stand out, brownish and wrinkled, in a pattern resembling wood grain.

Reversing the process, from the wood-grain appearance to the natural state, requires a sort of external contortion; a mimic appears to wriggle and twist all over as it empties its capillaries of the liquid. (The creature can, as we all know, alter the external configuration of its form at will, within the limits imposed by the actual volume of its form.) The mimic grows replacement layers of skin beneath the outer one, which is constantly being worn away by the ravages of movement, battle, and feeding.

The mimic is amorphous, and moves in the same way it attacks: by extending strong pseudopods, which exude a sticky "glue," and pulling themselves along. A mimic can "unstick" its own glue at any time, and it never sticks to itself.

Reputedly, this glue is sticky enough that only the strongest of adventurers has a good chance of breaking the mimic's hold without killing the creature first. Some adventurers claim to have pulled themselves free from a mimic's glue, but such tales are rare and often their veracity is doubtful: (To simulate the possibility of breaking free in game terms, held characters may be allowed to attempt an

"open doors" roll based on their strength. Repeated attempts to break free may be made, but no other action — attack or defense — is possible by the victim during the round of attempted escape.)

Mimics are interested only in personal safety and an endless quest for food. "Killer" mimics will attack any living creature, regardless of the number of adversaries or their powers. The more intelligent variety often prefers to bargain with an enemy initially — but the creatures have no moral standards as we know them: If an enemy is sufficiently weakened after a bargain has been struck, a mimic will "change its mind," always seeking a meal first and foremost.

Mimics have very sensitive "eyespot" (patches of pigment that are sensitive to heat; light, and vibration) all over their skin. Bright sunlight overwhelms these sensory spots, effectively blinding the mimic; thus, the creatures are almost always found below ground or in other areas where the sun never reaches. Mimics of all sorts are immune to the deleterious effects of alcohol (but will absorb it if offered, to make use of the inherent nutrients and sugar), and are also unaffected by slime (including green slime), molds (including the brown and yellow varieties), and the corrosive secretions of creatures such as the black pudding, gray ooze, ochre jelly, stunjelly, and gelatinous cube.

It should be remembered that mimics can travel on walls and ceilings as easily as they can on floors. Those of the more intelligent sort are most adept at "hiding" by assuming the shape of a partition wall, overhanging arch, or rough rock wall if they feel threatened. One famous, if somewhat extreme, example: A mimic somehow came into one of the busiest market squares of Waterdeep and assumed the shape of a statue. It remained undetected for two winters, until the chronic disappearance of street derelicts in the square on every dark night prompted an investigation. A sewer beside this strangely unfamiliar (to the sculptor who had "done" the square) statue was discovered to be filled to a depth of more than 60 feet with human and animal bones. (Even after this fact was discovered, the "statue" ate two members of the City Watch who prodded it carelessly with their spears, not expecting to find anything.)

Although the details of the concoction are not known by this scribe, it is generally said that the skin of the mimic is useful in the making of a *polymorph (self)* potion. Also, further investigation is needed to determine the range of travel of an individual mimic over a lifetime, and the precise efficacy of the creature's detection organs, which, based on casual observation, appear to "see" up to 90 feet in subterranean (not total) darkness, and up to 30 feet in the gloom of night, or in darkened areas above ground.

Mimic

“The mimic-beast is certainly legendary for the subtlety of its camouflage, yet I find some discomfort at the realization that so little has been said of its internal life: What alien thoughts must occupy this hunter’s lonely hours in the cold caverns below? What urge compels its shifting, and what genius regulates its rippling mutations? What, indeed, of its inexpert fawning over the smooth dimensions of men and elves, or of its hideous and unnatural aping of the civilized tongue so far down into the eternal black?”

—from the notes of Sage Genovi,
71st Dragon of the Empty-Heart

The mimic is a terrifying apex predator; few natural beasts can match the creature for sheer strength or killing power, and its extraordinary camouflage ability and native intelligence give it a lethal advantage over other Darklands inhabitants.

OVERVIEW

The physical mutability of the mimic is its best-known trait: a mimic’s outward form can perfectly replicate the appearance of nearly any structure or object it has ever observed—shifting color, structure, and shape to exact specifications in an instant—and its vast creativity allows it to improvise new forms of infinite complexity and subtlety at will. Although the average mimic has a repertoire of a few dozen well-established disguises, the variations it can achieve are theoretically limitless.

In its natural form, the mimic combines the qualities of the anglerfish, the rock octopus, and the scorpion: translucent, chitinous plates shift freely around the hulking frame of a distended mass of pale tentacles and eyes, all supported by the strength of a clear, trunk-like pseudopod. Thick gelatin

holds the mass together, acting as blood, digestive system, and skin all at once. The mimic is slow to move over land, but its speed is deceptive—its shape-shifting is startlingly quick, and when hungry and engaged with prey, the slams of the mimic's mutable limbs come fast and deadly.

A mimic's seething hatred of its own kind and its rapacious hunger forces it into new hunting grounds with horrible regularity. The mimic has no understanding of community or companionship, and actively avoids contact with all other beings except within the predator-prey dynamic; even the most clever and manipulative lair-tyrant mimics cannot stand the presence of other beings for more than a few minutes at a time. They are puzzled by human expressions like "pet," "friend," or "love," and often misinterpret the words to mean "food."

Although mimics are not naturally evil, they are certainly alien and incomprehensible, with sudden shocking moments of casual cruelty interrupting otherwise polite conversation. The mimic's reputation for friendliness—or, at least, guarded neutrality—is born out of its intelligence, its desire for food, and a strange, quasi-sexual obsession that mimics have with humans: all mimics believe that they will someday become human, with a fervent certainty equal only to humanity's belief in the gods. Those few mimics who truly attempt to become human are shattered by the failure; transformed into mockeries of that which they find most beautiful, these failed-apotheosis mimics are the bane of all life.

ECOLOGY

Sages posit that the first mimics were created by the ancient aboleths as spies or war-weapons, generated from roper organs mingled with the blood of doppelgangers or some other shape-changing beast. Indeed, the mimic seems from all study and appearance to be a created creature: its abilities, habits, and obsessions are simultaneously too esoteric and too perfectly crafted to have arisen naturally over the cycle of millennia. Regardless, the infinitely adaptive and efficient beings are found across the face of the world, and lair deep within the underground caves in places unknown to any civilized species. Mimics may pass through six distinct life-phases during their centuries of existence: spore, plasmoid, hunter, lair-tyrant, metamorphic scholar, and failed-apotheosis; not all mimics enter into any of the last three phases, and the majority of mimics remain as simple hunters for the duration of their lifespans, unconcerned with the passage of ages around them.

Mimics are asexual, and reproduce via spores. When a mimic controls enough food and territory, it undergoes an involuntary internal change called spatter-spawning, laying out a large, thick glue-carpet of spore-rich protoplasm 30 or more feet in diameter. Having marked the walls and floor of a particular cavern or ruin with this stinking graffiti, it departs, never to return. Immature

MANY SHAPES

In theory, a Large mimic can replicate any solid, inorganic object or structure with the general dimensions of 150 cubic feet, while a Huge mimic can replicate an object or structure encompassing a full 1,200 cubic feet or more. Because they are living creatures with a functioning anatomy—albeit a highly mutable, alien, and incomprehensible one—mimics are subject to the normal squeezing rules. Mimics can squeeze through or into a space that is at least half as wide as their normal space; a Large mimic (which normally takes up four 5-foot squares) can squeeze into a space that is one square wide.

A disguised mimic may choose to occupy fewer than four squares, including occupying only one (by squeezing along two dimensions simultaneously), but mimics cannot make their central body mass thinner than 3 feet in any single dimension. Within these limitations, a mimic has many options: a squeezing mimic could take the shape of a 3-foot-square, 16-foot-tall pillar, for example, or a 7-foot-square platform 3 feet thick. In addition, a mimic can add limitless complex details, including limbs, sensory organs, or elements as fine as human hair.

A mimic might be found posing as a throne, a statue, a fountain, a massive crystal, a tree, a protruding stone doorway with iron-banded wooden doors, a large writing desk with alchemist's lab, a wall, a rocky outcropping, or even a bookshelf stocked with books. Although a mimic cannot divide into multiple pieces or actually become a complex mechanical object such as a wagon or functioning ballista, it can easily take the outer shape of such a thing.

mimics bud out of the whitish glue-carpet, forming multihued, chitin-plated plasmoids the size of housecats; immediately ambulatory and capable of camouflage, these miniature mimics feed upon the glue-carpet, each other, and those helpless scavengers attracted by the stench and subsequently trapped by the glue.

A dozen or so of these plasmoids eventually depart the spatter-spawn pit, but less than 10 percent undergo the metamorphosis into full hunter mimics—the rest are eaten by larger predators or starve to death as their metabolisms accelerate in anticipation of metamorphosis. Each growing plasmoid consumes more than 2 tons of food over the next several weeks. Plasmoids are prone to random mutation, and the results of these changes appear during this transition to the hunter stage, as does their ability to create their own adhesive. In the end, a hunter mimic grows from a small, creeping scavenger into a lurking, intelligent predator larger than a bear. Once it becomes a hunter adult, a mimic isolates itself from others of its kind.

A variety of hunter mimic strains have been identified. The majority of the species—80 percent—forever remain hunters, never encountering humans nor dreaming of becoming like them. With far slower metabolisms than

PLASMOIDS AND SPAWN PITS

Mimic plasmoids have exactly the same statistics as monitor lizards, except that they are aberrations with the shapechanger subtype rather than animals and have the mimic shape extraordinary ability of an adult mimic (limited to Medium size). Mimic plasmoids are immune to the adhesive qualities of the spatter-spawn pit in which they are born.

The glue-carpet of a spatter-spawn pit is incredibly sticky; the organic glue replenishes via some unknown means, slowly generating fresh adhesive material as silt and dust collect upon it. An area covered in spatter-spawn glue is treated as difficult terrain, and any creature that begins its turn in an area coated with the substance must make a DC 16 Reflex save or be held fast. A successful DC 16 Strength check can pry the creature loose. Strong alcohol can temporarily eliminate the adhesive of the glue-carpet, but an affected area becomes sticky again after 1 minute.

The glue-carpet exudes a powerful odor of rotting fish; scavengers are attracted to the smell and often become trapped. Creatures with the Scent special ability can detect a glue-carpet from up to a mile away.

MIMIC PACKS

In exceptionally rare instances, when several dozen tons of foodstuffs are readily available (often in the wake of a large-scale war in a Darklands city), multiple plasmoids from the same spatter-spawn pit survive the metamorphosis into hunters. As they have functionally identical memories, they identify themselves as pieces of the same organism, and quickly organize into an efficient predatory pack. Although their relationships to one another are exceptionally cold and militaristic by human standards, this is the closest a mimic ever comes to family or friends. Those members of the pack who develop unique characteristics or memories are driven from the group, which considers them a cancerous variation on its uniformity.

their youthful forms, hunter mimics patiently wait for days or even weeks for food to stumble past, resting in a kind of hibernation. Hunter mimics also travel extensively, and their mimicry allows them to travel safely almost anywhere. Intelligent creatures, mimics feed off of weaker beings and do not engage obviously superior foes.

Some mimics develop into lair-tyrants: creatures obsessed with the control and domination of a wide-

ranging area of abandoned sewers, keeps, temples, and other places of human engineering or habitation. These mimics are fascinated with the detritus and artifacts of humans, and manipulate both the societies of simple humanoid species around them (often kobolds or goblins who worship them as gods) and raw materials, usually toward the creation of opulent and ever-expanding lairs. Lair-tyrants often build devious and terrible traps to protect their underground palaces. Although still solitary beings, a lair-tyrant often acts as the secret mastermind behind the sudden expansion of a humanoid tribe, directing them always toward the taking of ever further territory. These lair-tyrant mimics sometimes develop psionic abilities, and often grow to enormous size.

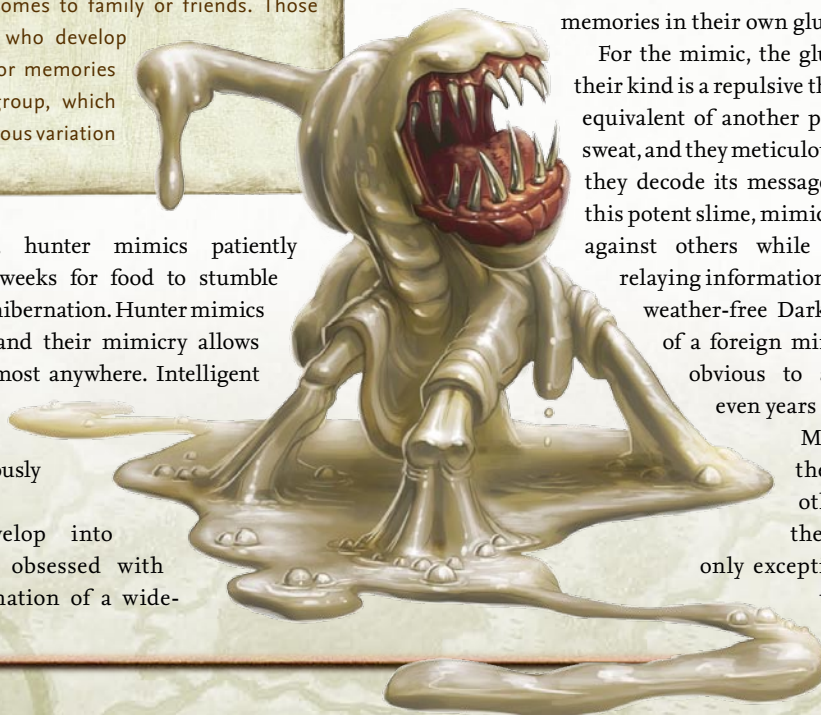

The second-to-last stage of mimic development, the metamorphic scholar, is the natural culmination of the strange, species-wide belief that mimics can someday become human, a racial imperative indelibly woven into the first glue-carpet memories they consume. Although all mimics believe that they will someday learn how to shape-change into men, metamorphic scholars engage in obsessive research on the topic: stealing human children to raise as their own, taking apart human bodies to better understand their construction, and consuming blood from a wide variety of humans so as to learn how to better replicate it.

HABITAT & SOCIETY

The mimic's pseudo-alchemical glue is the key to understanding their odd society. Though clear, odorless, and tasteless to humanoids, to the mimics the slime is thick with information. After gaining the race-memories of their species with their metamorphosis into plasmoids, mimics obtain new instincts from perusing the liquid trails of other mimics and leave behind simple chemical memories in their own glue.

For the mimic, the glue of another of their kind is a repulsive thing, the human equivalent of another person's spit and sweat, and they meticulously avoid it once they decode its messages. By means of this potent slime, mimics mark territory against others while simultaneously relaying information; in the arid and weather-free Darklands, the trail of a foreign mimic's passage is obvious to another mimic even years later.

Mimics despise the company of others, no matter the species—the only exception stems from their obsession

with humans. Because of this instinctive interest, mimics may tolerate the presence of a solitary human for several minutes at a time, though they eventually attack or drive away their visitor. A mimic quickly grows agitated in the presence of multiple creatures, even humans.

The memories of the mimic are as mutable as their forms, and the famous patience of the mimic is due to this very ability: mimics can discard boring or unpleasant memories as easily as a human throws out moldy bread. Mimics casually edit their minds in this way constantly, and think nothing of removing several weeks' worth of "empty" time spent waiting for a meal to arrive. Consequently, they have a hard time judging things like how long ago an earthquake occurred or a certain creature passed by them.

CAMPAIGN ROLE

A mimic can serve as a lurking or alien presence within a dungeon or wilderness site, a sort of living poltergeist that seems to be simultaneously everywhere and nowhere. The mimic certainly delivers an interesting low-level ambush encounter, but as a long-lived, slow-moving and methodical occupant of the Darklands, a hunter mimic could also act as a long-term contact for the PCs, perhaps a neutral party between surface-dwelling humans and underground kobolds or orcs who share a ruin-based border.

As lair-tyrants and metamorphic scholars, the mimics begin to take more active roles in the game: for instance, a Huge mimic might be the godlike puppet-master of an expansive humanoid regime, with the PCs never realizing until it's too late that their enemy is not the hobgoblin warlord on the massive throne, but the throne itself. And once an elder mimic becomes invested in transforming itself into a human and starts abducting townsfolk to study them, PCs will never look at the "friendly" mimic the same way again.

TREASURE

Mimics carry treasure within hollowed-out bubbles inside their bodies; these fleshy pockets serve to keep coins, jewelry, books, and other tantalizing trinkets safe from harm when not in use. Hunter mimics have little use for this treasure, but they well understand the utility of gold and magic as bait for prey. Lair-tyrants and metamorphic scholar mimics take great joy in the acquisition of human-made treasure, decorating their homes in grand style.

VARIANTS

Of the vast multitude of mimic adaptations found throughout Golarion (see the Mimic Mutations sidebar), the failed-apotheosis mimic deserves special mention.

All mimics believe that they will someday transform into humans. Some elders obsess over this and go to great lengths to truly understand humanity before they set their

MIMIC MUTATIONS

As supremely adaptive creatures with truly aberrant physiologies, mimics sometimes develop new powers as they mature into adulthood. A mimic's spawn inherit its powers and may mutate further, resulting in mimics with multiple unrelated abilities (for example, the subterranean mimic has the bioluminescence, gillfoot, and hypersenses abilities). The following represent several options for creating unique and deadly camouflaged hunters of the deep, along with the recommended CR increase for each.

Aberrant Biology (Ex): The mimic ignores extra damage from critical hits and sneak attacks 50% of the time. (+1 CR)

Adaptive Resistance (Ex): The mimic has resistance 20 against any one of the following energy types at any one time: fire, cold, electricity, or sonic. As a move action, the mimic may change the energy type against which it is resistant. (+1 CR)

Bioluminescence (Ex): The mimic can choose to shed light from any part of its body, ranging in intensity from a soft glow like that of a candle (shadowy illumination in a 5-foot radius) to the full brightness of a torch (bright light in a 20-foot radius and shadowy illumination for an additional 20 feet). The mimic may duplicate any color of light it so desires, even creating multiple colors, and may cancel or resume use of this ability at will as a free action. (+0 CR)

Corrosive Glue (Ex): The mimic deals an extra 2d6 points of acid damage with every successful slam attack or grapple check. (+1 CR)

Gillfoot (Ex): The mimic has climb speed 5 and swim speed 5. The mimic may always take a 5-foot step in any combat round, even if difficult terrain or other factors reduce its speed. A mimic may take this 5-foot step whether it is on land, climbing, or swimming. It can breathe water as easily as air. (+0 CR)

Glide (Ex): The mimic can create wings and has a fly speed of 40 feet (clumsy maneuverability). (+0 CR)

Hardy Protoplasm (Ex): The mimic has fast healing 5. (+1 CR)

Hypersenses (Ex): The mimic's entire body is a primitive sensory organ. This gives it blindsense with a range of 30 feet, and it cannot be flanked. (+0 CR)

Mutable Strikes (Ex): The mimic's slam attack deals bludgeoning, piercing, and slashing damage. The damage for its slam attack improves by one die step. (+0 CR)

Otherworldly Resilience (Ex): The mimic gains DR 5/adamantine. (+1 CR)

Supple Shifter (Ex): The mimic can squeeze into a space as small as 1/4 its base size. Its reach increases by 5 feet and it gains Combat Reflexes as a bonus feat. (+1 CR)

Toxic (Ex): The mimic's flesh is poisonous (contact, Fortitude DC 10 + 1/2 mimic's HD + mimic's Con modifier, primary and secondary damage 1d4 Constitution). Creatures hit by the mimic's natural attacks or attacking it with unarmed strikes or natural weapons are subject to this poison. (+1 CR)

bodies into human shape. Mimics who attempt this final transformation instead realize only horror: they become awful parodies of life, composed of aborted human-like limbs and melting faces crashing one over another like an endless wave of corpses. Sages theorize that what the mimic understands in that moment of failure is its true, alien origin, as eternally divorced from humanity as any force or concept could be; this monstrous self-revelation is the only memory a mimic cannot wipe away, and madness consumes them utterly.

Not all failed-apotheosis mimics are former metamorphic scholars: some hunter mimics and lair-tyrants attempt the transformation, only to meet with the same fate.

FAILED-APOTHEOSIS MIMIC

Feats Alertness, Power Attack, Improved Natural Attack (slam), Weapon Focus (slam)

Skills Climb +26, Disguise +15, Listen +10, Spot +10. A mimic has a +8 racial bonus on Disguise checks, a +8 bonus on Climb checks, and a +2 alchemical bonus to Climb checks (due to its adhesive). It can always choose to take 10 on Climb checks, even if rushed or threatened.

Languages Common

SQ bioluminescence, gillfoot, hypersenses, mimic shape

SPECIAL ABILITIES

Bioluminescence (Ex) See page 25.

Crush (Ex) A failed-apotheosis mimic deals 1d12+10 points of damage with a successful grapple check.

Gillfoot (Ex) See page 25.

Horrific Appearance (Su) A failed-apotheosis mimic's natural form is a shifting weave of spurting tendrils, melting human visages, and tortured organs trapped within a web of alien light and slashing bones. This ability functions as a gaze attack; the creature may activate or suppress the ability as a free action. Any creature within 30 feet must save (Fortitude DC 17) or take 1d4 points of Strength drain, 1d4 points of Dexterity drain, and 1d4 points of Constitution drain; a successful save means a creature cannot be affected by the same mimic's horrific appearance for 24 hours. The DC is Charisma-based. When using its horrific appearance, the mimic cannot use its mimic shape ability.

Hypersenses (Ex) See page 25.

Mimic Shape (Ex) As a Huge creature, this mimic can assume the general shape of any object that fills roughly 1,200 cubic feet (10 feet by 10 feet by 12 feet), such as a treasure hoard, a stout cottage, or a vast doorway. The minimum size of any single dimension of a Huge mimic is 6 feet.

MIMICS ON GOLARION

Subtle, shifting hunters lurking beneath the surface of the world, mimics exist in every part of the Darklands, with those living in Orv tending to have the most mutations. Found in higher concentrations in the upper realms, where they prove the bane of svirfneblin, drow, and serpentfolk alike, the Sekamina mimics are masters of picking off lone travelers and escapees; they vanish from the sight of patrols and war parties, only rarely moving near cities to search after prey. Relatively few mimics are found on the surface, but vents from the populous hunting grounds of Nar-Voth have led more than a few of these creatures upward in search of prey less dangerous than duergar and more satisfying than troglodytes. Upon reaching the upper limits of the Darklands, most mimics instinctively keep to isolated areas and range out at night to feed, returning to their caves or ruins every few days. Hunters swiftly adapt into lair-tyrants from these excursions, occupying parts of Varisia, the Mwangi Expanse, the Sudden Lands, the Worldwound, and other wild or sparsely-populated areas.

While most mimics find it hard to overcome their initial desire to pounce, and may still devour humans who come too close, those mimics who encounter humans willing to talk—especially Azlanti-blooded humans—often become obsessed, their fascination marked by a streak of uncharacteristically gregarious behavior and awkward worship. Of course, this is followed swiftly by jealousy and possessiveness, and the end result is often the same for the unfortunate traveler, as the mimic would rather see its new friend destroyed than risk possibly losing it to another mimic.

MIMIC

What appeared to be a simple treasure chest transforms into a freakish monster with ragged teeth, a lashing tongue, and a dozen tentacle-feet. Still looking vaguely like a wooden chest, the melting, amorphous thing makes a guttural roar and flails about with a pair of long, agile pseudopods.

SQ mimic shape

SPECIAL ABILITIES

Adhesive (Ex) A mimic exudes a thick slime that acts as a powerful adhesive, holding fast any creatures or items that

touch it. An adhesive-covered mimic automatically grapples any creature it hits with its slam attack. Opponents so grappled cannot get free while the mimic is alive without removing the adhesive first. A weapon that strikes an adhesive-coated mimic is stuck fast unless the wielder succeeds on a DC 16 Reflex save. A successful DC 16 Strength check is needed to pry it off. Strong alcohol dissolves the adhesive, but the mimic can still grapple normally. A mimic can dissolve its adhesive at will, and the substance breaks down 5 rounds after the creature dies.

Crush (Ex) A mimic deals 1d8+4 points of damage with a successful grapple check.

Mimic Shape (Ex) A mimic can assume the general shape of any object that fills roughly 150 cubic feet (5 feet by 5 feet by 6 feet). A mimic's body is hard and has a rough texture, no matter what appearance it might present. Anyone who examines the mimic can detect the ruse with a successful Spot check opposed by the mimic's Disguise check. The mimic may cancel or resume use of this ability as a free action, and may maintain this shape indefinitely, including while sleeping.

The ecology of the mind flayer

As told by someone who ought to know

by Roger Moore

It wasn't so much the way the visitor looked as the way he appeared — the assembled adventurers had expected him to enter through the doorway like everyone else. The visitor instead faded into being from the very air itself in the center of the room, as hardened warriors and cynical thieves stepped back from the apparition in fear.

It was Melakar the White-Bearded who first recovered his bearing. He cleared his throat and stepped toward the visitor.

"Greetings, and welcome," he began. "We sent messengers into the astral plane asking for those who would, for a price, tell us about the race known as mind flayers, to satisfy our own curios—"

The visitor hissed between thin lips, and the mage stopped and paled.

"Don't play with me," said the visitor. "You and your guests are planning to raid a mind flayer lair you've heard rumor of, and you are desperate to know more about the creature beforehand. Surely, old fool, you didn't think to hide that from a telepath, and especially from a githyanki knight." After a moment the visitor smiled wickedly, and his pointed teeth gleamed. "Ah, you did think you could hide it." The githyanki looked at the adventurers around him. "None of you can hide anything from me! Take your hands from your weapons! Should you do the least harm to me, the vengeance of the githyanki will destroy you all!"

Slowly the adventurers around the room forced themselves to relax. The githyanki warrior also assumed a calmer posture, and then turned back to the mage.

"Speak quickly. The gravity of your world tortures me, and even thoughts of your gold do not give me great comfort."

"Where do the illithids, whom men call the mind flayers, come from?" asked the mage in a trembling voice.

The githyanki's eyes narrowed. "Mind flayers are not of your world. They are not of any known world. They have been traveling the planes for so long, not even they know where they come from. From a secure base underground or from a darkened planet they send out projections of themselves to new prime material planes, scouting and searching for a new realm to conquer and enslave.

"Once a realm is discovered, it is doomed; the mind flayers have one of their number remain projected at the new plane while others use their psionic powers to enter the Silver Realm, that which

you call the astral plane. These others then follow the scout's silver cord to the entry point to the new plane, use psionic science to enter that plane, and begin bringing about its downfall. Our mages believe their lost home plane was antimagical, and that they possess the same nature, for they resist magical influences

so strongly that even the most accomplished wizards are taxed to slay them."

"Why do they live only in darkness?" asked an elf. "I've heard they can walk about in the sun like any other monster."

"Wrong. The illithids cannot tolerate light except in faint intensities. Their eyes are not like those of humans or elves;

they have solid white abominations in place of eyes, with no pupils visible. Our scholars have tested and dissected these eyes, and we find that they focus light in a strange manner, so that a sudden bright light will overwhelm the visual nerves and leave the creature in agony. We have found that a magical light spell cast successfully upon an illithid's eyes will send it into spasms. When blinded like this, it is in too much pain to use its psionic powers, and is helpless and easily slain."

The githyanki suddenly turned to his left. "You are correct," he said to a silent dwarven warrior, who gasped and stuttered.

The githyanki continued, cutting off the dwarf's response. "You were assuming that the mind flayers can see into the minds of others as I can, and you are right. For me, the power came as a gift of fate; for them, it is natural to all. However, they cannot understand the thoughts they receive, and furthermore do not care to understand them. They know only their own secret tongue and the languages of their allies under the earth.

"The power they have to read minds is used only to communicate among themselves, each illithid reading the passing thoughts of the other and thinking its own thoughts to be read in turn, and so forth. They are also known to use this talent to detect the presence of other beings, usually intruders in their cities

and lairs. True speech they save for their rare communications with non-illithids. They may also cry out from the pain of a light in their eyes, or when cerebral parasites drain their psionic powers."

The dwarf's face tightened and looked more grim than usual. "You would do well to confine your prying to others," he growled. "What I think is none of your business."

The githyanki leaned back and shrieked, in what seemed like a laugh. "None of my business? Fools! Everything here is my business — I wouldn't have come if it were not! You sought a being who knew all the strengths and weaknesses of the mind flayers, and you got me. Who better to ask, you thought, than the greatest enemies of the brain-eaters? The githyanki — the people of Gith, who led us out of slavery and into the Silver Realm, out of the claws and tentacles of the mind flayers! We know more of mind flayers than you would learn yourselves in a lifetime."

A skeletal finger stabbed out at the audience; jeweled armbands jingled and loose brown wrappings swayed from his arms. "I read blind stupidity in all of you. Half of you believe that you need only rush up and hack at them with your pitiful swords, and the rest of you think that your magic will turn the trick."

The githyanki glanced toward the ceiling, then leveled his head again. "I'll tell

you what I saw. I saw a mind flayer hit directly with a wizard's fireball spell, and the spell died out! Lightning and cold are almost always wasted on them, as though the attack was never made. They shrug off magic as one of you would brush away a bothersome insect. I saw a githyanki warrior older than any of you here, even you elves, charge a mind flayer — and in seconds it ruined his brain with blasts of mental energy. Three times it hit him — three times! The warrior was dead before he took ten more steps. It took five warriors more to bring the brain-eater down, and I was the only one of the five to come away with my brain and mind still intact."

The room was silent, and the githyanki continued. "Yes, *brain-eater*. That's what I said. Illithids relish the brains of humans and similar beings the way you eat the meat of cattle and fowl. To them, eating brains is a symbolic gesture. All illithids believe that they are the master race, the true and rightful rulers of all sentient creatures. They have no kinship to humanity or any other known race. They worship no gods, because they deem themselves the ones who should be worshipped.

"Being as intelligent as they are, endowed with psionic powers, and as physically weak as they are, the illithids believe that the mind is everything and all-important." The githyanki tapped the

yellowed skin of his temple with a bony finger. "To eat the brain of another race is the ultimate symbol of dominion over that race. They consume that which is important to them. Their tentacles have bony ridges that cut flesh and bone with ease, exposing the inside of the skull. Many collect the skulls of their victims and adorn their bodies with the trophies.

"They have a psionic power that especially helps them achieve their evil ends — a power of domination that they use with pleasure on their victims and those who would attack them. This domination power allows the mind flayer to control every movement of a single victim, to an unlimited extreme. Once, on a raid to an illithid lair, I saw a githyanki captain run himself through with his own sword while under the control of one of them. They would have a far easier time doing the same thing to one of you." The githyanki stopped and scanned the room with an expressionless gaze.

No one spoke when the warrior paused. His golden armor glinted in the torchlight, and dazzling gems of a dozen pure colors flashed from his rings, bracelets, and armor as he stood waiting.

"Come, come," the knight prodded. "I can read a hundred questions in your minds. Ask them out, so I may be paid."

A halfling shifted in his chair. "You said that the . . . illithids . . . live in cities?" he whispered.

The githyanki nodded. "Cities buried deep under the earth, in caverns wider than you would imagine. Each world has only one major illithid city, but many smaller outposts are set up elsewhere in the underlands. The mind flayer lair you intend to assault is but one of many this world supports, and you are nowhere near the major city."

"Where is their major city in this world?" called a priest, taking a step toward the githyanki.

The warrior shifted slightly, perhaps a shrug. "Later. Ask again when you have more gold."

"Please, at least tell us more about their cities," beseeched Melakar.

"I can tell you what I have seen. The great cities of the mind flayers are nothing like those you inhabit. They force slaves to carve the structures out of living rock, and then slay all the workers afterward. They use few stairways or ramps because each one can float its body by psionic means and use another psionic power to slow its fall. With these powers they can raise themselves up to escape enemies, and cross underground rifts and rivers without slowing.

"An illithid city is a sight no one forgets. Out of the darkness of a great chamber rise their stone towers, outlined by patches of softly glowing spores that have attached themselves here and there. No sound can be heard from within,

except the chittering of their wererat friends and the deep, echoing growls of other creatures who roam their streets.

"They keep terrible guardians. Wererats, beholders, and grimlocks work with them — the beholders on somewhat of a more even basis than the other two races, which are used as fighters in the illithids' wars. Their cities are open to some devils and the rakshasas, but these are rarely seen. Hellcats will serve them, mites will inhabit the ruins around them, and they are known to sometimes employ ogre magi.

"All of these horrible allies have one thing in common — they are not creatures an illithid would eat. Beholders are protected by their armor. Ogre magi can heal their own wounds, wererats are poisoned with the disease of lycanthropy, grimlocks are scaled and foul to the taste, mites are all but brainless, and the rest of their cohorts are all spirits from other planes.

"Why do they keep allies if they are so powerful? Because illithids prefer others to do their fighting and their physical labors, and wish to have a delaying force to hold off intruders while the cowards flee further into their city. A mind flayer city has many surprises, especially in the remote interior."

Melakar pulled at his beard and said in a conversational tone, "I've heard that githzerai also work—"

The githyanki screamed. Melakar shrank back, aghast.

"Githzerai! Mad, traitorous wretches! Rot their souls in eternal flame! They claim kinship with us, the true people of Gith, yet they betray us all by allying themselves with the slavers! Blind they are, and mad for thinking the illithids will not deceive them. If the illithids are good for one thing, let it be for eating the brains of the githzerai — and yours as well!"

Enraged, the githyanki unsheathed his sword faster than anyone could react. Melakar barely had time to jump back as the sword-point swished in an arc at the level of his neck. In the next instant, the warriors around the room drew their weapons and hefted them for a charge at the mad visitor . . .

. . . who was no longer there. Just as quickly as he arrived, the githyanki was gone, the sound of his battle-scream lingering briefly after his body disappeared.

"Has he gone for good?" the halfling said anxiously, looking around the room. "He didn't even get his gold."

Melakar sat down, trembling. The questioning had not gone at all the way he thought it would. No one else spoke, and he looked up at the halfling.

"I wish I knew, my friend. We may not sleep well for many nights to come." Or, thought Melakar, perhaps for many nights more than that. Time passes slowly in the astral plane, and githyanki memories are long. . . .

"If he's dead by noon

the money is yours," the hooded man growled across the filthy table at the Hanging Man Tavern. "None if he lives."

San Diego, CA 92123

The ecology of the Minotaur

by Anthony Gerard

It was on the fifth of Fishspawn, in the year 425 of the Dancing Unicorn, when my caravan was attacked and taken by a large band of orcs. Amongst this horde were several ogres and minotaurs serving as mercenaries in the pay of the orcish chieftain, Garkun Three-Fingers, who was slain in the following month in the elven lands. After the caravan's defeat, several other unfortunates and I were given over to a large bull minotaur as part of the plunder, and thus began my captivity among the horned ones.

As I, more than any other human I know, have spent more time in the presence of minotaurs, I have taken it upon myself to write this brief narrative of their lives and habits. During my captivity, I observed in detail the society (such as it is) of these bestial folk, and was able to prolong my life by using this information to its best advantage in dealing with my lord and his monstrous people.

Of their appearance

For the benefit of the masses, I shall here note the obvious. The minotaur is a large, bipedal creature; a manlike beast with a bull's head, hooved feet, human hands, and thick, wiry hair on the head, forearms, lower abdomen, chest, and lower legs. Bull minotaurs often attain nine feet in height; females are generally somewhat shorter, perhaps seven feet on the average, but of no less savage a temperament.

The lower body and torso are similar in general appearance and build to those of ogres, although hairier. Females have breasts and broad hips similar to those of most humanoid types. The minotaur's hands are massive and have thick yellow nails, which occasionally serve as claws, though they often break.

As is common knowledge, the head is bovine in appearance, but there are many differences to the careful observer. The snout is thicker and more drawn out than that of an actual ox. The teeth, particularly the canines, are large and pointed, for minotaurs are carnivores of the most fell sort and regularly bite at their enemies and prey. Occasionally, the canine teeth protrude even when the mouth is closed. The eyes are set more forward and closer together than those of actual cattle, granting minotaurs depth perception.

The head is heavily furred, with the hair color ranging from black to a light red-brown tone. Bodily hair is the same color as the head hair, although somewhat shorter and stiffer. The large, deep eyes are generally a dark brown. The horns of the minotaur are structurally similar to an ox, consisting of a horn sheath over a central bone core. Both sexes possess horns, although those of the male are larger and heavier. The horns normally curve slightly forward, although they may

be broken or bent at an odd angle from old injuries. I have heard that some minotaurs possess the tails of cattle, but those I knew had no tail at all.

The horns of a bull minotaur are his pride. Certain free moments of his leisure time are spent polishing their length with old furs or rags, or sharpening their tips with stones. The color of the horn varies with the color of the hair, although bi-color and tri-color horns are not uncommon. Dark-haired minotaurs generally have dark yellow or yellow-brown horns. The minotaurs I was among seemed to favor darker horns for cultural reasons — and to this end, they oiled and stained their horns to achieve a dark tone. The horns were often decorated in one manner or another, being often studded with decorative brass or silver tacks and spikes. I saw one minotaur whose left horn had apparently been severed by an axe blow; the horn had been rejoined and secured by an etched band of brass, through the artifices of a gray dwarf who served as the band's blacksmith.

Other than horn ornamentation, minotaurs wear little in the way of decorative jewelry. A few of my acquaintance wore studded gauntlets or waistbands, which obviously showed ogriish influence. Minotaurs are hardly above copying a style or mannerism used by other races, since they have so little to contribute on their own save their native barbarism. If a said decoration is seen to enhance one's fearsomeness, every minotaur who sees it will adopt it at the drop of a hoof.

Of their growth

Minotaurs breed and give birth throughout the year, and their society favors replenishment and increase of their numbers. A single minotaur is usually born to a cow; twins are rare and regarded as holy. By its second year, a young minotaur has fully developed horns and can fight an orc on equal footing. By its fifth year, a minotaur is larger than a man, and by its tenth year, it has attained adult size and mannerisms. Sexual maturity comes early, even by the third year in some, and breeding likewise begins quickly for them. To bear a warrior son is the highest act to which a cow may aspire; to father a great many warriors is merely another social ornament for the male.

Young bulls are tutored in the use of weaponry by their sires and other males. The youths spend much of their time wrestling and fighting among themselves, as rivalry between bulls is fostered virtually from birth. Few cruelties are spared in their battles, and the scars from horn and tooth of one's early battles with other minotaurs serve to strengthen the warlike charisma that the bulls prize so highly.

There is little maternal affection among minotaurs. A young bull shows respect to a female, even its mother, only as long as she is physically superior to him. The world of the minotaur is rooted in brutal-

ity and force of might, and females are barely more than slaves among them.

When he reaches maturity, a young bull may wander widely to avoid contact with older, stronger bulls. Solitary minotaur encounters are usually of this type. My master was fond of boasting about his exploits during this time of his life; he cared little for civilized marvels, being intent upon showing his mastery over the world at large through acts of wanton violence and destruction of the basest kind. No barbarian warlord has known the utterly bestial worship of a minotaur for that which we call wickedness.

The minotaur's lifespan may be as long as eighty years, but because of the violence inherent in their life-styles, few live to even a ghost of this age. My master was a veteran of perhaps thirty winters, past his prime but still one to be feared and reckoned with by anyone of reason.

Of their society

To speak of minotaur society is perhaps as senseless a remark as to speak of the art of the orcs, yet certain traits become obvious to anyone even crudely familiar with this species. Particular practices vary to extremes between tribes of minotaurs, being snatches of other cultures and beings, adopted by minotaurs for a short time — only to be discarded as soon as a new practice is seen. I witnessed the sudden appearance, spread, and disposal of a hundred practices during my captivity, borrowed from every source within imagination — even from mortal enemies.

Polygamy suits minotaur bulls well; a strong bull may maintain a harem of up to six or seven females. Infanticide is rarely practiced by minotaurs, save for deformed births, despite their desire for more bulls. I have mentioned their concern with constant breeding and increase of their numbers. Even the birth of twin cows (considered an evil portent by some tribes) is better than no births at all. A cow, at least, can take her frustrations out upon the slaves kept either in common or by a particular bull. I have been too well acquainted with this practice myself, though I found ways of avoiding such unwanted attentions from the harem kept by my own master. I dwell more upon the lot of slaves elsewhere.

Bull minotaurs engage each other in combat over plunder, females, positions of authority, and any other possible point of friction that may be imagined. The leader of a raiding party or the dominant bull in an area is always the largest and strongest, but not necessarily the most intelligent. In such combat, the antagonists grapple weaponless, seeking to kick, bite, or gore each other into submission or an early grave. One or both of the opponents in such a duel may end up fatally wounded — which is often what was intended by the victor. A minotaur killing another in combat typically takes the left horn of his victim as a trophy. The tip of the horn is

then removed so that it can be winded in battle or celebration. Such horns are highly prized; my captor owned four.

Slaves are usually supervised by females or young bulls and are employed in enlarging and adding to the labyrinthine minotaur lair. Minotaurs are not especially vigilant in overseeing their slaves. Escapes, at least temporary ones, are commonplace. The chief recreation of bull minotaurs (when not out raiding or drinking) is tracking escapees through the lair or overland. Perhaps one slave in two makes the escape a permanent one; of the one who fails, little can be said, save that perhaps it is better that minotaurs do not share the love of torture that other monstrosities (human and otherwise) relish. I digress, but here I shall note that a minotaur regards death as a holy thing that should come quickly, cleanly, and in combat. If the opponent has no weapons, at least the fight is ended much the sooner, and the victor can enjoy the status of another kill (though it will be of little worth, as they give more honor to kills against powerful and dangerous foes). A minotaur who has slain thirty men or orcs in a battle would not be held in half the respect accorded one who killed an ogre or another minotaur fighting for the opposition.

Minotaur favor twisted mazes in places underground or in dense forests for their lairs. My captor was lord of an area commonly referred to as the "Forest of Thorns," which was reputedly once an elven woodland burned by orcs. In this place, great thorn trees, thick as a man's thigh, grow and intertwine to the point that they block the very sun. Through this dismal wood, the minotaurs had chopped a great maze of tunnels and chambers, forming a nightmarish dwelling that seemed to have no end.

Yet, this series of passages, hopelessly confusing to a civilized mind, is navigated by the minotaur with surreal ease. I believe this ability is due largely to the minotaur's acute senses (especially the olfactory one), though perhaps an inborn trait is present which allows the minotaur to puzzle out geometry with the skill of the eldest mathematical savant of any university. A minotaur can retrace its own trail through an unknown area with uncanny accuracy, its nostrils flared and snorting at the scent that it leaves — yet I heard of a minotaur called Faceless, which had suffered a severe facial wound that destroyed any sense of smell which it must have had, but was capable of the same feat.

In armed combat, minotaurs favor weapons that kill by concussion — a crude strategy, but one appropriate to their nature. Their favored weapon of choice is by far the two-handed poleaxe. Stoutly functional, these axes are rather crudely made. During my captivity, I never saw any means by which the minotaurs might have produced these themselves; I believe they obtained their weapons in trade from orcs or hobgoblins. Minotaurs also employ

massive two-handed hammers, clubs, or flails. Occasionally, they use stout, thick spears, although only as thrusting weapons; I have never seen a minotaur throw a spear or other weapon, save in frustration.

Minotaurs prefer the company of ogres or other minotaurs. They have a grudging respect for trolls and, one would assume, also for giants. They look down on the human, humanoid, and demi-human races, making little distinction between them, save as individual combatants whom the minotaurs must fight and conquer. True monsters, like dragons, are merely opponents.

Minotaurs are exceptionally fond of alcoholic drink, especially strong "hard" liquors and wines. Three times in the company of visiting ogres, I observed my captor drink himself into a stupor that lasted for several days (as, indeed, his brutish guests did as well).

The language of the minotaur is very similar to that of the ogre. As I was somewhat familiar with ogrish, I was soon able to overcome the differences between the two tongues. Aside from their actual spoken language, there are a few vocalizations common to minotaurs alone. When enraged or excited, a minotaur bellows in a manner reminiscent of an actual bull. When pursuing prey or searching for a hidden enemy, a minotaur gives out a snort every few seconds, in an attempt to acquire possible scents.

The majority of minotaurs worship the demon lord of their kind, Baphomet, to a greater or lesser degree. A Jovite high priest has since told me that he believed them to be a special creation of Geryon from original ogrish stock, but I harbor my doubts. Other creatures mix the natures of two or more basic beasts, such as the centaur and the pegasus, yet we have no sure knowledge of how they came to be so, either. The gods will have their way. I never heard the name Geryon mentioned by any minotaur, though they freely called out the name of their own lord in curses, oaths, and taunts.

Minotaur bull-priests are easily recognized from other minotaurs. Their horns have series of crude pictograms carved into them; these "runes" are then darkened with blood, and the horn is coated with a dull yellow stain so that the carvings stand out in vivid contrast. In addition, the bull-priests have themselves painted with natural stains from earth and plant matter, and splash the blood of slain enemies upon themselves after battle. Gnoll blood is favored for some reason that I cannot explain, though some sage who has other knowledge of these beings may know the answer. Sacrifices are generally conducted in a central chamber of a bull-priest's labyrinth, usually before battle. Humans are the most common sacrifice, as they are the most easily available. It is reputed that if such a sacrifice is especially pleasing to the lord of mino-

taurs, it is consumed by a "cold flame." The passageways leading to such sacrificial chambers are decorated with the bones of previous victims in curious, intricate patterns.

Minotaur bull-priests are given some measure of grudging respect by other minotaurs, but this is always dependent on the physical strength of the priest himself. A battle horn made from a carved bull-priest's horn is highly regarded by minotaurs, so I assume the bull-priests may be slain by their fellows with the same facility as any other minotaur.

Overall, minotaurs are ignorant in the ways of magic. They are not curious, awed, or even amused by the ways of spell casters; magic is either a threat or arrogantly ignored. For this reason, minotaurs may be easily duped by even the simplest of magic, although illusions must be of the most superior sort to trick the minotaurs' keen senses. Minotaurs place no special value on magical items in a treasure hoard, although they may be aware of the items' value to other creatures. Magical items are soon traded for liquor or other prizes (unless the item is a weapon), so a minotaur's hoard rarely contains many such dweomered things.

Of my escape

For two years and two-hundred seventy-one days, I dwelt amongst these bestial creatures, and I came to know them as well as perhaps any could. I knew their smell, their curses, their triumphs, and their rage. I can close my eyes now and see my old master, doubtless now a mere skeleton on a forgotten battlefield, his offspring raiding and looting with their own savage tribes.

Many slaves were taken by my master's folk, but only I was favored enough to be kept alive, even when food was in short supply and my master's massive frame shrank from starvation. I could not have run from him, having a disabled knee from the day of my capture, and I had no muscles with which to fight him directly — but I was a student of spatial geometry before I took up my father's business and became a merchantman, and my teachers said that my ability at drafting was uncommonly sharp.

Thus, I survived by teaching my master puzzles. From the first, trembling moment when I handed that evil beast-lord a scrap of parchment with a maze drawn thereon, to the next thousand nights that followed, my life was wholly dependent upon my ability to create a fresh, new maze for my master to solve. He could not use his nose to solve it, you see, so only his eyes and brain were of use — truly a challenge for any of his kind. No man can imagine how slender a thread held me from destruction, save for my own terrorized ingenuity at creating brain-teasers, one per night, to keep that bull amused. Though he told me that he would slay me outright if any of

my designs failed to challenge him, I believe that toward the end he came to be rather fond of me, and even kept other minotaurs who would have slain me for my poor meat away from my person at risk of his own life.

Such are the ways of the gods. When the scout force for Lord Darduin's dwarven legions rescued me in the heat of a pitched engagement, I had bettered my own understanding of mathematics to the highest degree, and now spend my days at this university, a teacher and scholar — and a free man.

Perhaps I should be grateful, but surely you understand if I wish it had been otherwise. When the weather changes and my knee aches, I sit and remember those days at my master's hooved feet, and wish I could forget.

Additional notes

1. Minotaurs are very adept at tracking and trailing. They have a base 50% chance to trail a man-sized creature. This base is modified upward 5% for each additional man-sized creature in a tracked group. The base is modified downward for environmental and terrain factors, or a pursued party's effort to conceal its scent trail (see *Unearthed Arcana*, page 21-22, for possible additional factors). A minotaur has a 20% chance to trail prey without the use of smell, using its other senses alone —

especially its 90' infravision. This base chance is decreased 2% for each melee round elapsed since the creature passed. The base is also modified (at the DM's option) for environmental and terrain factors.

2. Due to its keen senses of smell and hearing, a minotaur has a 20% chance to detect invisible creatures. The base chance is increased upward by 3% for each additional man-sized creature present.

3. A base 75% chance is given for a minotaur to retrace his trail through an unfamiliar area using all senses; without the use of smell, the base drops to 45%.

4. A base 25% chance is given for an individual fluent in ogrish to correctly interpret anything said by a minotaur.

5. Minotaur clerics reach a maximum of 3rd-level clerical ability. Such clerics cannot cast healing spells. At 3rd level, they gain a spell identical to the second-level magic-user spell *strength*.

6. A minotaur's contempt of magic can work to its disadvantage. For example, a minotaur would be loath to retreat from a magic-user — even in the face of major offensive spells such as *fireball*. Its conceit for its ability would force it to withstand the blast.

7. A minotaur, in addition to biting and goring, may kick with one hoof for 2-7 hp damage or may strike out with one nailed fist for 2-5 hp damage per round. †

PSI WORLD™

ROLE PLAYING GAME OF PSIONIC POWERS

An exciting new role playing game in which characters use or deal with awesome psionic powers in a near future setting. **PSI WORLD** offers over seventy-five different skills, twenty-five psionic disciplines, and over ninety specific psionic abilities.

The Gamemaster chooses the nature of the near future society, and with the input of the players, selects the style for their campaign. There are two options:

- The Government has attempted to gain dictatorial powers and uses the Psis as scapegoats to distract public attention from the Government's illegal grab for power.
- The Psis are a true threat to democratic rule as they use their powers to gain unfair advantages in business, politics, and all aspects of daily life. Players take the roles of members of the Psi Police to protect the public from this psionic menace.

Be a Psi and control awesome powers of the mind! Protect the innocent from those with great powers as a member of the Psi Police! The choice is yours. Seek adventure in this fast paced game of action and excitement in a near future setting. The only limits are your own imagination!

FANTASY GAMES UNLIMITED

PSI WORLD includes complete and easily understandable rules, the **PSI WORLD ADVENTURE** with introductory adventures to get your campaign started, Gamemaster's Screen, and master character sheet suitable for photocopying. Everything needed to begin your **PSI WORLD** campaign is included in the boxed set. All of this is yours for only \$12.00.

Available from better shops or direct from Fantasy Games Unlimited at P.O. Box 182, Roslyn, New York 11576.
Please add \$2 for postage and handling. N.Y. residents please add sales tax.

Minotaur

“It is said that the endless maze has but one exit. Those who become lost in its twisting corridors face far worse than starvation. A hunter stalks the maze—a hunter born of fury, with a hunger for the flesh of those who would scorn him.

“The beast is in the hunter’s blood, and no man can match his ferocity. Rage girds the hunter’s limbs, and no warrior can match his strength. Two horns does the hunter carry, but not to call for aid. His horns are used to rip and tear, to crush and kill. He is the minotaur, and the maze is his domain.”

—Etched upon the gate of Charizduin, the Forbidden Labyrinth

Few monsters are so strongly rooted in mythology as the minotaur. Part man and part beast, the minotaur serves as both the cunning hunter and the feral monster, lurking at the fringes of society, preying on those whom it once hoped to join.

Overview

It is said that no one holds a grudge longer than a minotaur. Scorned by the civilized races in ancient times, minotaurs have been taking their vengeance for untold centuries. For those who run afoul of a minotaur, the fear of death comes second only to the fear of becoming the beast’s next meal. For the minotaur, there is no greater meal than the flesh of its still-living foes.

Although traditionally said to dwell in mazes, these bull-headed humanoids are just as comfortable dwelling in any complex subterranean system of tunnels and chambers, be it a sewer or cave system. It is the complexity they desire—one that they can easily navigate, but that their prey cannot. They delight in stalking the hapless foes who wander into their domain, taking perverse pleasure

in charting their quarry's failed attempts at escape. Only when despair has finally set in does the hunt truly begin. Picking off lost victims one by one is their preferred means, with each victim more succulent than the last. Only when the minotaur has slain all but the last man does it relent, allowing the prey to escape so that his wide-eyed tales might lure another meal to the maze.

In battle, few can match the ferocity of a minotaur when its ire has been stirred. Prone to intense bouts of rage, minotaurs have been known to tear their foes apart and destroy much of the surrounding area before finally calming. When peaceful, however, some minotaurs might treat with those who approach them with the proper respect. Rumors hold that some have even given aid or advice. The reality of the matter is that the minotaur is both a civilized man and a feral beast, blended together and in constant conflict. While the beast is almost always in control, the man sometimes gains the upper hand, if only for a brief period of time. Those who receive advice from a minotaur should beware, for they might learn that the price for a minotaur's aid must be paid in flesh.

Ecology

Minotaurs are typically born to a pair of minotaur parents, although, rarely, minotaurs are sometimes born to human parents as the result of a powerful curse. When it comes to mating, minotaurs engage in a complex courting ritual. This courting involves an interested male challenging any other males to competitions in a maze, ranging from a race to claim a lone victim to outright combat. Gifts are also lavished upon the female, including battle trophies and beautiful weapons. After a period of 1 or 2 months, the female chooses a suitor, while the others move on to other prospects. The couple remains together until a child is born and weaned, at which time the parent of the same gender as the offspring takes to rearing it until adolescence. Upon reaching adolescence, these growing beasts forge out on their own, looking for a new place to inhabit where their hungry urges can be sated. This typically causes them to take up homes near human settlements—preferably close to mountainous terrain, where cave systems are common. Starting out cautiously, young minotaurs immediately go to work preying on nearby communities, slaughtering lone travelers, farmers, and trappers before moving on to larger groups. When found together in a small community, there are few targets a clan of minotaurs avoids. As minotaurs age, they are often slain in battle, due to diminished prowess. Rarely, a minotaur might become an elder, its fur turning almost entirely gray. Such minotaur elders lose some of their ferocity but gain a great deal in wisdom and cunning.

Minotaurs typically stand about 8 feet tall and weigh around 600 pounds. Although their torsos and arms are those of powerfully built humans, a thick shaggy brown

USING MAZES

Mazes are notoriously difficult to adjudicate as part of a game. Describing them is difficult and mapping them often ruins the point, or even worse, turns them into a tedious time-waster. Unfortunately, to fully utilize the minotaur, a labyrinth needs to be part of the encounter.

When incorporating a maze into your game, there are a couple of steps you can take to make them a more vibrant and puzzling component. First, make sure to set all of the encounters in a chamber contained within the maze. Fights in the corridors require you to draw complicated layouts and make for poor tactical situations (especially for the minotaur). Second, try to include plenty of interesting elements and landmarks in the maze, from old bones to crumbling fountains. Feel free to duplicate one or two of them to confuse the characters unless they can make the correct checks to realize the trick. Finally, only describe the turns and intersections. While players can use this information to sketch out a rough map, without the actual dimensions, they are bound to make mistakes and false assumptions, mimicking a real labyrinth experience. Finally, when the players have had enough, make sure they find their way out. Mazes can be very frustrating. Don't let that bleed into your game.

fur covers their waist, legs, and neck. Their head is that of a snarling bull, with a pair of forward-thrusting horns flanking their brows. With the lips and tongue of a cow, their speech tends to include a great many snorts, rumbles, and snarls. Minotaurs possess roughly 2-foot-long tails covered in brown fur that end in shocks of coarse black hair. Their legs are covered in a longer fur and end in great cloven hooves. The sound of hooves and the occasional snort might be warning that a minotaur is nearby, although the unwary often mistake them for horses or other beasts of burden.

The effects of a minotaur on its surroundings are quite noticeable to those who know the signs. Aside from missing travelers and explorers, many of a town's cattle and beasts of burden might go missing or turn up slain. Minotaurs have great pity for cows, horses, and other livestock used for manual labor. As such, they typically free such beasts, or slay them when no other option presents itself. Close to their lairs, minotaurs tirelessly work to shape the environment to one more suitable to their unique talents. They drop trees to create natural mazes through the woods, cause cave-ins to complicate their cavernous homes, or even go so far as to build walls to create artificial mazes. This last task is usually undertaken by a clan of minotaurs when they find a suitable home with plenty of prey nearby. Not surprisingly, minotaurs who stumble upon an existing maze go to no end to gain control of it, hoping to use it as a lair or trap.

MINOTAUR DOUBLE CROSSBOW

Minotaurs have a love of complicated things, and the double crossbow is one of their favorites. This heavy weapon fires a pair of iron-tipped bolts with deadly accuracy. Due to its size and weight, however, non-proficient wielders suffer a –8 penalty on their attack rolls. Even proficient wielders take a –2 penalty on their attack rolls. If the attack is successful, the target takes the listed damage twice, although critical hits and precision-based damage are only applied to one of the bolts. Reloading a double crossbow takes 2 standard actions (one for each bolt), although the Rapid Reload feat reduces this to 2 move actions (meaning that it can be accomplished in 1 round).

Exotic Weapon	Cost	Dmg (S)	Dmg (M)	Dmg (L)	Critical	Range	Weight	Type
<i>Ranged Weapon</i>								
Double Crossbow	300 gp	1d6	1d8	2d6	19–20/x2	100 ft.	18 lb.	Piercing

Habitat & Society

Perhaps no other creature has a greater affinity for its home than a minotaur. When not actively hunting or baiting prey, they spend a great deal of time maintaining and adding to their mazes. Since prey tends to get frustrated in the twisting corridors and dead-end chambers, many try to break through walls or otherwise mar the surfaces. After dealing with these intruders, the minotaur must spend days and weeks repairing the damage and laying false trails so the next victim is just as befuddled as the last. While most prefer to live in stone environments, some turn to metal and plants to build their labyrinths, such as giant fungus mazes and complex three-dimensional iron cubes.

While many minotaurs prefer to live alone, those that don't instead organize themselves into small tribes, often made up of unrelated individuals. A minotaur who wishes to join must bring an improvement or innovation to the maze as a gift. If the existing clan members deem the gift worthy, the minotaur is made a part of the tribe through a communal hunt. Those deemed unworthy are driven off immediately.

Minotaur society is far from rigid, and status is derived by prestige and battle-prowess. Members of a minotaur tribe are very competitive with one another, with contests being held frequently to determine rank. Such challenges include races through the maze and competitions to see who can claim the most victims in a limited period of time, from a single hour to an entire week. These competitions often turn to bloodshed between the minotaurs, but are rarely fatal. Those who are shamed, either through a failed hunt or by showing compassion to prey, are sharply chastised and forced to wear a harness and perform the duties of a pack animal for a length of time. Some are even made to go about on all fours, pulling stones from

one place to another—one of the greatest degradations a minotaur can suffer.

The elderly are respected in minotaur society, so long as they can still hunt and aid the community. Those who can are used to plan raids and organize the defenses of the maze. Those who cannot are given the title of Builder and are in charge of designing the expansion of the maze and the placement of its many traps. No tribe allows more than one Builder. When another elder desires the position, the two must fight, with the loser being slain or exiled.

Minotaur tribes do not usually work together, instead competing with one another for choice hunting grounds and mazes. Displaced tribes sometimes attempt to eliminate rival groups to take over their lairs, so long as they feel confident of victory. Conflicts between tribes quickly turn bloody and continue until it becomes obvious that one side has the upper hand. The loser in such a situation either quickly flees the area or is absorbed into the victorious tribe. Such transplants are common and sometimes occur in the middle of a fight, with individuals shifting alliances quickly when the tide of battle turns.

Minotaurs maintain no relations with any of the civilized races. To them, humans, elves, and dwarves are cruel slavers fit for little more than the dinner plate. In return, such races view minotaurs as horrid monsters, devouring the flesh of friends and kin with reckless abandon. Sometimes, a minotaur might free a captive in exchange for services (usually of a grim variety). While this relationship could be viewed as an alliance, it is one coerced through fear and threats. Those seeking revenge or cultists who venerate beasts sometimes contact minotaurs or even entire tribes in the vain hope of bartering for their aid. While most beseechers end up paying with their lives, minotaurs have been known to enter such arrangements for as long as they

remain beneficial to the minotaurs. Agreements usually involve the tribe eliminating an individual or small group in exchange for treasure or a living sacrifice.

Minotaurs are sometimes found in league with other powerful evil creatures, such as medusas, rakshasas, or giants. Such alliances are held together through the power of the partner, with the minotaurs gladly joining in on evil schemes as long as they are allowed their independence in choosing their roles in the plots. Minotaurs dislike following the orders of others and have been known to attack their unwary allies over such slights.

Campaign Role

Minotaurs work best when used as primary antagonists. While they can certainly serve as minions to greater powers at higher levels, their penchant for mazes and preferred diet make them into great focal points for adventure. They are the monsters that lurk in dark places, who abduct the villagers only to serve them up in a grim banquet. The minotaur's desire to cause fear in the hearts of its prey only adds to the story. Perhaps townsfolk disappear, only to have their bones returned the following night, with a trail that leads back to the minotaur's lair. Remember that minotaurs prefer to fight and do not avoid confrontation—they just like to face their foes on favorable terms. They are brutes, but they have the cunning of hunters. These same principles can be applied to a group of minotaurs, making for a challenging encounter against higher-level characters.

Treasure

Minotaurs value treasure that is both decorative and functional. So while they might trample and ruin a fine tapestry or discard a dented magical shield, a gem-studded battleaxe is a prized possession. Despite this, minotaurs stockpile other valuables in their lairs in the hope that the treasure might lure the unwary into their mazes.

A typical encounter with a lone minotaur might net a masterwork battleaxe, a pair of golden bracers worth 200 gp, a diamond-studded nose ring worth 300 gp, a *potion of cure moderate wounds*, and a handful of coins.

When dealing with a group of minotaurs, each might only carry half the normal amount of treasure, while the rest is stockpiled at the heart of their maze. To ensure further victims come calling, such a tribe allows a single victim to glimpse the hoard before setting him free to spread rumors and legend. For example, a group of six minotaurs has set up a cunning maze in the Menador Mountains. While each individual minotaur carries assorted treasure worth about 200 gp, the center of their lair holds much more: a +1 *light steel shield*, a *scroll of fireball*, a *hand of the mage*, a crystal goblet worth 100 gp, a battered golden helm worth 150 gp, a jade statue of a gorgon worth 125 gp, and a mound of coins worth 500 gp.

NEW FEATS

MINOTAUR'S CHARGE

Your charge sends foes reeling away, knocking them to the ground.

Prerequisites: Str 13, Improved Bull Rush, powerful charge.

Benefit: When you hit an opponent with a charge attack, you might also initiate a bull rush as a free action. This does not require you to move into your opponent's square and does not provoke an attack of opportunity. If you successfully push your opponent 15 feet or more, he is also knocked prone.

IMPALING CHARGE

Your charge impales opponents on your deadly horns.

Prerequisites: Gore attack, powerful charge.

Benefit: When you hit an opponent with a gore attack as part of a charge, you might also start a grapple as a free action. You do not need to make an additional touch attack to start this grapple and you do not provoke an attack of opportunity. Do not add your size modifier (if positive) to the initial grapple check made to start the grapple. Your size modifier applies as normal on all subsequent checks.

Variants

Minotaurs tend to distinguish themselves through the classes they take, with most favoring barbarian. Some minotaurs take the ranger class to enhance their hunting skills and gain bonuses against their favored prey. Minotaurs who take the cleric class almost exclusively choose Lamashtu as their patron, although minotaur clerics who serve Rovagug are not unheard of.

Still, physical differences do manifest themselves. Rarest of all are albino minotaurs, referred to as Ghost Bulls, who are greatly feared by their kin. These stark-white beasts are all male and possess Charisma scores of at least 18. They favor the sorcerer class instead of barbarian and possess certain divination spell-like abilities as well (3/day—*augury*, 1/week—*divination*).

Minotaurs also vary in their choice of equipment. Many favor using the double crossbow (+3 ranged attack, replace Great Fortitude with Exotic Weapon Proficiency) to deal with foes at range before charging in with their horns. Others wear armor (especially breastplates) when it can be made to fit them.

Minotaurs who grow very old find that their fur begins to gray and their furies begin to wane. These minotaur elders learned a great deal over the years and, through their devotion to Lamashtu, gained a number of powerful abilities. Minotaur elders frequently draw a number of their younger brethren to their call, organizing devastating raids and luring powerful adventurers into their incredibly cunning mazes.

Spell-Like Abilities (CL 9th):

3/day—*fog cloud*, *glyph of warding* (DC 16), *stone shape*

1/day—*maze*, *wall of stone*

TACTICS

Before Combat Minotaur elders use their spell-like abilities extensively before combat to prepare the area for the coming battle, littering the surrounding area with *glyphs of warding* and using *stone shape* to create pits and traps.

During Combat Like ordinary minotaurs, minotaur elders begin combat with their terrifying charge attacks, using Power Attack and Impaling Charge to cripple one target. Once combat is truly joined, the elder uses *wall of stone* to divide his foes and Cleave to cut them down as quickly as possible. *Maze* is reserved for the most deadly opponent or the last foe, so the elder might toy with the trapped foe.

Morale Minotaur elders flee when reduced to 5 hp.

SPECIAL ABILITIES

Maze Mastery (Su) Minotaur elders possess a supernatural cunning when in the confines of a maze or labyrinth. In such areas they receive a +4 bonus on initiative checks and a +8 racial bonus on Hide and Move Silently checks. In addition, a minotaur elder might enter a *maze* spell as it is being cast along with the intended target so long as the target is within 30 feet. This includes *maze* spells cast by the minotaur elder. Once inside, the minotaur elder can leave the *maze* as a move action. The minotaur elder and the target appear at opposite ends of a 30-foot-square chamber where all exits lead to the maze itself (and the only way out for the target).

Natural Cunning (Ex) This ability is identical to the minotaur ability.

Powerful Charge (Ex) When a minotaur elder charges, it can make a single gore attack with a +21 attack bonus that deals 4d6+10 points of damage.

Minotaurs in Golarion

In the ancient days, before the Earthfall that shattered the continents and brought about the Age of Darkness, the first of the humans, the Azlant, brought the curse of the minotaur down upon themselves.

Minotaurs hold that these first humans were a cruel and arrogant lot, believing themselves more important than the gods. Lamashtu, the goddess of monsters, tried to impress people of Tulo, and gifted them with a sacred birth—a great two-headed cow. In their horror, the people of Tulo did not see the gift for what it was and put the sacred animal to the sword. Within a month, all the women of Tulo came to realize that they were pregnant. Taking this as a sign of favor, excitement grew as the time of their birthing drew near. The cries of joy quickly turned to terror as the first minotaurs were born. Afraid to anger the gods further, the people raised the minotaurs—at first. As other children were born, the people once again scorned Lamashtu, favoring their “normal” children and shunning the young minotaurs. Over time, the town elders decided to be rid of the minotaurs once and for all, imprisoning them in a gigantic maze.

As the years passed, the people of Tulo hid the truth about their terrible offspring, striking all record of them. Only Lamashtu remembered her chosen, and as the minotaurs aged, they came to know the injustices done to them. On the eve of the tenth anniversary of their imprisonment, the minotaurs surged out of their maze, having long since mastered their prison. In one night of bloodshed, the entire town of Tulo was devoured. Its children had come home for dinner.

Today, minotaurs have spread far and wide across the surface of Golarion. They lurk in the shadows, preying upon the civilized races. While they are rarely encountered in groups aboveground, there are a few isolated minotaur tribes in the Five Kings and Menador Mountain ranges. While most are simple hunters, preying upon travelers and explorers, a rare few rent their services as mercenaries or scouts. Such contracts almost always include the right to eat the quarry.

Names

Minotaurs take the names of their elders, taking on the moniker of departed family members and ancient heroes.

Male: Adgar, Boldun, Dramen, Erros, Grund, Hadol, Kollam, Lorgem, Maddar, Ner, Reven, Tutton, Vrabo, Zoth

Female: Aelli, Bosa, Duria, Enyad, Gorrin, Hebe, Hilise, Ilnuf, Kosa, Miris, Neki, Oddu, Sinna, Thadisa, Urga

MINOTAUR

The glazed bovine eyes of this bull-headed humanoid betray a feral cunning. With the torso of a muscular human, this beast is covered with thick, shaggy fur from the waist down. Its gnarled and callused hands grip the haft of a massive axe, the edge stained from the blood of its previous victims. With a furious snort and a stamp of its hooves, it lowers its deadly horns.

SPECIAL ABILITIES

Natural Cunning (Ex) Minotaurs possess innate cunning and logical ability. This gives them immunity to maze spells, prevents them from ever becoming lost, and enables them to track enemies. Further, they are never caught flat-footed.

Powerful Charge (Ex) When a minotaur charges it can make a single gore attack with a +9 attack bonus that deals 4d6+6 points of damage.

*Impossible to reason with,
impossible to escape.*

THE ECOLOGY

The Mongrelman

by Johnathan M. Richards

illustrated by Steve Bryant

Knuckledragger limped toward the forts gate, an empty wooden bucket in his left hand. He hurried to catch up to the small party gathering there, not wishing to be left behind. This was a momentous occasion for him: for the first time in his four years¹, he was to be allowed outside the four walls of the wooden structure that had been his whole universe. His father, Scale-face, had convinced the others that he was old enough to take part in the duties and responsibilities of an adult.

Karg, the scarred old orc that kept watch at the gate, motioned for the two other guards to open up. As they pulled open the heavy doors, Karg gave the mongrelmen their orders. "Be back in two hours. Don't be late. Remember your families." This last, Knuckledragger knew, was a thinly-veiled threat—any who took the opportunity to escape did

so with the knowledge that their family members back at the fort would be put to death slowly. The orcs were not known for their mercy, and to date no mongrelman had ever failed to return from these excursions outside the fort.

Knuckledragger fell into line behind his father as the mongrelmen shuffled through the gate of the orc fort. Ahead lay the wide world. Who knew what wonders it held? Knuckledragger had heard the stories, of course, and could already reproduce the sounds of many forest creatures, animals he had never seen, but whose calls he had heard imitated by others.²

Once beyond sight of the fort, Knuckledragger sensed a change in the adults around him. They walked with a proud bearing not stooped and hunched as if they wished to shrink into as small and unnoticeable a ball as possible.

Knuckledragger was well accustomed to the posture, having witnessed it day in and day out during his lifetime as a thrall among the orcs. It was always best to escape notice, especially when living with cruel masters. A slave unseen was a slave not being beaten or tormented.³

Ah, but now sweet freedom! Knuckledragger drank in a deep breath, tasting the exotic fragrances as they passed through his muzzle. A dozen different wildflowers tickled at his shiny black nose, vying for his attention. How different things smelled out here, when compared to the stench inside the orc fortress!

Knuckledragger pricked up his ear—his left one, the one covered with a soft, downy fur—as he became aware of the sounds of the forest ahead of him. Birds chattered in the trees, insects droned, and somewhere, a woodpecker drilled a tree in search of dinner.

"What are you thinking, *robin chirp?*" asked Scale-face, looking down at his son and calling him by his true name.⁴

"This, its all so beautiful!" gasped Knuckledragger. "If only we could stay here forever!"

"If only," agreed Scale-face. "But you know that we cannot. The orcs are our masters; still, perhaps someday this will not be so."

The small band trudged into the forest. There were six of them in all: besides Knuckledragger and his father, there was Half-Human, so named because, by the whims of fate, he had been born with human or human-like features along the entire left side of his body; Crab Leg who also had a crabman's eyestalk growing out his face, and who could therefore look in two places at once; One-Horn, who always held his head sideways because of the weight of the minotaur horn growing from the right side of his head; and Little Shorty, whose predominantly ogrish facial features looked very out of place on a body supported by stubby little goblin legs.

Once several hundred feet into the shade of the forest, the band stopped.

1. Mongrelmen, like many other short-lived races, grow quickly. They reach adulthood around age four or five, and they live to a maximum age of 40. Of course, those held as slaves by other races rarely live that long, counting themselves lucky if they live to see 15 or 20 years.

2. Regardless of their facial appearance, mongrelmen enjoy a wide variety of vocal abilities and can precisely imitate just about any noise they hear. This includes noise heard secondhand, so once a single mongrelman hears a particular animal call, he can pass that call on to all other mongrelmen in his tribe. Animal calls make up a large part of mongrelman "music."

3. Mongrelmen prefer not to be seen. They are well aware that their appearance causes disgust and fear (and often ridicule). For this reason, mongrelmen are abnormally fascinated with the concept of invisibility, for it not only hides their twisted bodies from sight but also aids in their pickpocketing abilities. To many, becoming invisible is the ultimate goal, and the quest for a *ring of invisibility* has launched a few mongrelmen on the path of the adventurer.

4. All mongrelmen have two names: their "true name" and their "slave name." Their true name is most often an animal noise. A mongrelman is given his true name at birth, and it is this name by which other mongrelmen call him.

Other races, unable (or unwilling) to perfect the animal mimicry necessary to pronounce a mongrelman's true name, often come up with a name for the mongrelman that they can pronounce. Referred to by mongrelmen as their slave names, they are the names by which they are known by other races. Such names are usually derogatory but somewhat descriptive of the mongrelman's physical appearance. Mongrelmen do not give themselves slave names, but they often adopt the first slave name given to them by others, no matter how derogatory. After all, a mongrelman doesn't really care what other races call him—he knows his true name.

"Give your bucket to ~~wolverine growl~~," advised Scale-face. Puzzled, Knuckledragger looked at Crab Leg, who reached out expectantly. "But I thought I was going to pick berries with you!" he complained.

"~~Wolverine growl~~ will pick your berries for you. You will come with ~~owl hoot~~ and me."

"Where are we going?"

"You will see when we get there. Now, give ~~wolverine growl~~ your bucket."

Reluctantly, Knuckledragger handed his bucket over to Crab Leg. What was going on? Knuckledragger had looked forward to the experience of picking berries with the adults, and was disappointed that this was not to be. Still, he was in a forest, experiencing all kinds of new sensations. He decided to look on the bright side and just be glad that the adults were allowing him to accompany them.

Crab Leg, One-Horn, and Little Shorty went off in various directions, gathering berries and other edibles in their buckets. The other three, however, went in a different direction altogether, heading deeper into the forest.

"There is much you need to know," said Scale-face as they walked. "Things that cannot be said in front of the orcs."

"What kind of things?" Knuckledragger wanted to know.

"The story of our heritage. The tale of our beginnings. The legend of our Hidden God."

Knuckledragger had not known that they had a god, hidden or otherwise. He well knew of Gruumsh, the one-eyed god of the orcs, as well as a few other, lesser gods his masters respected. But still—a god of the mongrelmen? Was such a thing possible?

"Long ago," Scale-face began, "our people were not as you see us now. They were smooth of skin and uniform in appearance, much as all orcs look like

orcs, or all humans look like humans. We were created by the Hidden God in that form and had magical powers: we were able to take on the shapes of other races. If you wished it, you could look like an orc, or an ogre, or an elf, merely by wishing it.

"But our ancestors angered the Hidden God, and he cursed them. Their children were born looking not like them, but like us, with bits of this creature and bits of that. Furthermore, they could not change their shape as their parents could, so they were forced to stay in the misshapen forms in which they were born. So it is today."

"What did they do to anger the Hidden God?"

"That, no one knows. But there is hope. Perhaps one day, the Hidden God will revoke his curse, and your children, or perhaps your children's children, will regain the power that is their birthright. Ah, we are here."

Knuckledragger looked around but saw nothing unusual. They had been walking through the forest and were now in another part of it. What made this part of the forest so special?

Then he saw it, as if a veil had been lifted from his eyes. That clump of trees over there, with the fallen branch—it was actually a small dwelling! Knuckledragger had looked right at it for several seconds without realizing what it was.⁵

"What is it?" he asked his father, his voice dropping to a whisper.

"This," replied Scale-face, "is the temple of the Hidden God."

A flap opened in the side of the structure, and an ancient mongrelman appeared from inside the temple. "Greetings ~~owl hoot, lizard hiss~~. Is this your son?"

"Yes. ~~Robin chirp~~, this is ~~cricket song~~, the Priest of the Hidden God."

"Pleased to meet you, ~~cricket song~~,"⁶ said Knuckledragger, noting that the

priests right hand was covered in scales the same color as those on the left side of Scale-face's head. Perhaps it was because of this similarity between the elder priest and his father, but Knuckledragger took an instant liking to him.

"Come inside, ~~robin chirp~~. We have much to discuss."

"~~Owl hoot~~ and I will be back for you soon," said Scale-face, holding up his bucket and smiling. "We must fill these for the orcs, lest they grow suspicious." With that, he and Half-Human trudged away from the temple, leaving Knuckledragger and the priest by themselves.

Knuckledragger followed the priest through the camouflaged flap and inside the temple. It was dark and gloomy, but exciting to the young mongrelman, for it was a secret place of which his masters, the orcs, did not know.

"How long have you lived here?" Knuckledragger asked.

"Twelve years," replied the priest.

"Twelve years! How old are you?"

"Thirty-seven. There are a few good years left in me yet!" Knuckledragger's mouth dropped. He'd never heard of anyone living to be so old. Maybe the Hidden God gave his priests the gift of long life. Knuckledragger asked if this was so.

"No, no," chuckled the priest. "So far, the Hidden God has remained as hidden to me, his priest, as to anyone. He has given me no powers, granted me no visions, provided me with no spells. Given me absolutely no indication, in fact, that he's even there at all."⁷

"Is he?" asked Knuckledragger. "I mean, what if he's dead or something?"

"No, my son, gods cannot die. He is testing us, and we must be patient. He will present himself when he is ready, and not before."

"How long must we wait?"

"As long as it takes."

5. The mongrelman knack for camouflage is an instinctive one. Some sages speculate that it is a logical extension of their desire to hide away from others, a method by which the slow-moving mongrelmen can escape those who would do them harm. In any case, most mongrelmen are able to camouflage themselves in one turn with materials at hand—usually twigs, branches, leaves, dirt, and mud. The base chance of success for their camouflage is 80%, and this increases by 1% per additional turn devoted to the task (to an upper limit of 95%). Mongrelmen are not squeamish about disguising themselves, thinking nothing of rubbing mud all over their bodies if it helps.

In addition to themselves, mongrelmen can camouflage stationary items up to the size of small buildings, which are usually undetectable at ranges greater than 50'.

6. Perhaps because mongrelmen all tend to be on the lowest end of any social scale, they take pains not to have levels of status in their own society. All

mongrelmen call each other by their true names, regardless of station. Priests, elders, and even the leaders of free mongrelmen do without fancy titles—no "sir," "madam," or "my lord" is ever spoken by one mongrelman to another. Indeed, mongrelmen see each other as true equals, as perhaps only the lowest of the low can truly see themselves.

7. The sad reason for this is that the Hidden God does not exist. Rather, the legend of the Hidden God is a corrupted version of the mongrelmen's history, after being passed down verbally from generation to generation.

The Hidden God was actually an ancient wizard (whose name, alas, is lost to the ages) who, desiring a doppelganger-like race able to adapt the forms of others, created beings he called "infiltrators." The infiltrators were thin, wiry beings with large black eyes, who could absorb the genetic properties of beings whose flesh they consumed. Undergoing a ritual known as "the Feast," they would eat humanoid flesh, digest it in

specialized organs within their body, and thereafter be able to transform their bodies into copies of the humanoid forms on which they had feasted. Utilizing this ability, they were able to infiltrate many humanoid societies and serve as spies for the wizard.

However, the wizard unknowingly created the Infiltrators without the ability to breed true to their forms. The offspring of two infiltrators was always a misshapen humanoid form showing various, random features of the humanoid forms "feasted" upon by its parents. Thus was born the mongrelman race.

Alas, mongrelmen today still worship the Hidden God and pray for the day he will return them to their "days of glory." Each mongrelman society has a single Priest of the Hidden God (in slave societies, the priest is often as hidden as their god) whose duties are to pray for betterment of their lot in life. The Hidden God, of course, never answers these prayers, but the mongrelmen are a patient folk, and they are willing to wait.

Knuckledragger hid his disappointment. "So what do you do? As a priest, I mean."

"I pray, mostly. I pray for the Hidden God's forgiveness for whatever sins our forefathers committed. I pray for a return of the powers it is said our ancestors possessed. Mostly, I pray for the patience to continue on as I have for these thirty-seven long years."

"Why do you live out here, by yourself?"

The elder priest smiled down at Knuckledragger. "I could not live with you, among the orcs. The Priest of the Hidden God must devote his time to prayers and supplication, time I would not have as a slave. Here, I have all that I need: a small stream nearby for my water, forest plants in abundance for my food,⁸ and plenty of solitude in which to pray for our people."

"Cricket song? Could I ask you to say a prayer for my mother?"

"Of course, my child. What is your concern?"

"She's going to have a baby soon. Could you ask the Hidden God to see that the baby survives?"⁹

A look of pain flickered across the old priest's face for a fleeting moment. Then, in a voice full of weariness and hope, he said, "We will pray together."

Fidgeting in a torn leather bag that had been tossed into a corner, the priest pulled out an old piece of flint and steel, and worked his mismatched hands at starting a spark. After a few moments, he managed to light a yellowing taper candle and pulled back the curtain from a small

alcove cut into the wall. "Behold, the shrine of the Hidden God," he intoned.

The alcove, of course, was empty.

Nonetheless, he placed the candle in a notch before the alcove. Together, he and Knuckledragger prayed to their god for an intercession in the fate of Knuckledragger's unborn sibling. They were still kneeling in position before the empty altar when Scale-face and Half-Human returned.

"It's time to go, robin chirp," he said quietly.

Knuckledragger got up, thanked the priest, and walked back toward the forest edge in silence with his father and his friend.

"You are quiet, robin chirp," Scale-face observed.

"Yes, I've been thinking. If the Hidden God returns our powers, what form will you take?"

"I don't think it will happen like that, my son."

"You don't?"

"No. The Hidden God took away the power not from the generation that angered him, but from their children. I'm sure that when he sees fit to return our power, it will be the same way. One day, our children will be born as they once were, and the race will be as it once was." He looked down at his son. "So do not waste time hoping to change your body someday.¹⁰ Accept it as the one you will have for the rest of your life, and move on to other things. Besides," he said, smiling "you're not particularly ugly."¹¹

They walked along in silence for awhile longer, then Knuckledragger

blurted out, "I think I would like to serve the Hidden God."

"You would? But, you're much too young to be a priest. Perhaps in fifteen or twenty years, when you're much older. Right now, you are a strong young man in the prime of your life. You are needed by the rest of the community.¹² Ah, here come the others."

Crab Leg, One-Horn, and Little Shorty came hobbling up from out of the forest. "Great news, lizard hiss! Frog croak found a dead body in the forest, of a species unknown to us! A small humanoid, with blue skin."

"How small?"

"Only about three feet, but we don't know if he was fully grown. We took his arm, just in case."

"Where is it?"

"Strapped to wolverine growl's leg." Crab Leg passed Knuckledragger's bucket back to him, now filled with hunks of mushrooms and tubers, and lifted up his rotting, filthy robe¹³ to show a small blue arm strapped to his inner leg by strips of cloth. He smiled, showing reptilian teeth. "We'll Feast tonight."¹⁴

"Come," said Scale-face. "We must not be late." Together, the six shambled off toward the orc fortress.

"Humph!" snorted Karg at their arrival, sounding as always, a bit disappointed that there'd be no torturing the hostages in retaliation for an escape attempt. As the mongrelmen shuffled single file back into the fort, he grabbed Scale-face by the shoulder. "You! Scale-face! Your woman is giving birth. You may go to her."

8. Mongrelmen are omnivorous. Free mongrelman grow fruits and vegetables and often supplement their diet with domestic game, partially because they tend to be below-average hunters. While many mongrelmen sport teeth designed for eating meat, they are perfectly happy living a vegetarian existence if necessary.

9. Another sad fact of mongrelman existence is their high infant mortality rate. Even in free mongrelmen societies, only about 50% of infants born live more than a week. In slave societies, where the mongrelmen live under much harsher conditions, the infant mortality rate can be as high as 80%. For this reason, a healthy baby mongrelman is a cause for great rejoicing. Mongrelmen have a stoic attitude toward those that don't survive; considering the lives they lead, they often consider them "the lucky ones."

10. Although appreciation of beauty is an important part of mongrelman society, and they have a fascination with polymorph magic, no mongrelman would willingly alter his appearance to hide his ugliness. Mongrelmen take their hideous appearance as a fact of life, something over which they have no control, and while their ugliness shames them and causes them to seek to hide from others, they nonetheless believe it is their duty as mongrelmen to remain in the forms in which they were born until the Hidden God deems otherwise. To take matters in their own hands, they fear, would anger their god and prevent him from returning their shapeshifting powers. No mongrelman would put the improvement of his own appearance ahead of the betterment of his entire race.

Incidentally, the mongrelman love of beauty is much deeper than that of most other races, perhaps because they themselves are so far removed from it. A mongrelman is just as able to find and appreciate beauty in the smooth, even features of a female goblin as in the most delicate elfen princess.

11. "You're not particularly ugly," is a high complement among mongrelmen. They are truthful enough not to insult each others' intelligence by calling one another "beautiful," and "not particularly ugly" is about as high as they can honestly go.

12. Call it fatalism, rationalization, or just simple realism, but mongrelmen, while insisting on having a priest (or priestess) of the Hidden God in every mongrelman community, tend to reserve the post for those elderly members of the community who are unable to work at jobs requiring heavy manual labor.

13. Mongrelmen tend to wear dirty, ragged clothing. Because of their oddly-shaped bodies they prefer their clothes to be loose, and robes (especially those with hoods that can conceal their faces) are popular among both sexes. Dirty clothes don't bother mongrelmen as they aid in their attempts at camouflage.

For similar reasons, mongrelmen have difficulty fitting into standard armor. Only rarely will a mongrelman be lucky enough to be able to fit into a set of armor; usually they must make do with bits and pieces of different types. Players with mongrelmen PCs who wish to wear armor should consult *The Complete Fighter's Handbook*, page 111, for rules on piecemeal armor.

14. Mongrelmen today retain the ability to "feast." However, all "feasting" does is store the humanoid form in the mongrelman's genetic code and passes that form on to its offspring. Thus, a mongrelman with no ogreish features "feasts" upon a slain ogre's flesh. Later, when he mates, his children could end up with body parts resembling those of an ogre. Only humanoid forms from four to nine feet or so can be successfully "feasted" upon, so the mongrelman makeup will never include halflings or kobolds (too small) or giants (too big).

Mongrelmen continue to "feast" for many reasons. Some believe that the Hidden God requires it of mongrelmen so that when he restores their ability to shapechange, they will have that many more forms they can adopt. Others believe that only when a set number of humanoid forms have been "feasted" upon will the Hidden God restore their power. Some simply like the flavor of humanoid meat.

In any case, "feasting" is a private act that mongrelmen will not share with others not of their race. "Feasting" is always done in private, and not everyone in the mongrelman community will partake. Usually, only those who do not sport features of the humanoid to be "feasted" upon will take part, so that the flesh can be used only by those able to benefit from it. Children are not allowed to "feast" until they have been initiated into adult society and have learned the secret history of the mongrelmen and their Hidden God.

Scale-face passed his bucket of berries to Crab Leg and bowed before the orc guard. "Master, I thank you for your kindness," he said, then scurried off in the direction of the slave huts.¹⁵ Knuckledragger hid his concern and went with the others to prepare the food.

The next hour went by quickly, as Knuckledragger was caught up in the daily routine of his slavery. There was the food to prepare, the war-beasts to groom, the fires to be tended to, and the weapons to sharpen.¹⁶ Knuckledragger went about his duties in a daze, worried about his family, and thinking about his prayer to the Hidden God. Perhaps this will be the time, he thought. Perhaps my little brother or sister will be the first of the new race and be born with skin all the same color and texture. He was shaken from his reverie by Not Half Bad, a female mongrelman who was fortunate enough to

have predominantly orcish features on her face and most of one arm and leg. "Your mother and sister are fine, ~~rob in~~ ^{chip}. Perhaps you would like to see them."

Giving a silent prayer of thanks to the Hidden God, Knuckledragger hurried over to the ramshackle hut where his family lived. Entering the open doorway, he saw his mother, Frog Lips, lying back in exhaustion on the pile of damp straw that made up her bed. Scale-face was holding a small bundle in his arms, wrapped in the cleanest scraps of cloth to be found. Seeing his son, he smiled down at him. "You have a sister," he said softly, and lowered her so Knuckledragger could see. Silently pleading with the Hidden God, Knuckledragger looked at his new sister with a heart filled with hope.

She had green scales covering the top of her scalp and halfway down the right side of her head. The left half was

a sickly yellow, with large tan warts. Ogre-sized lips on the left side merged into human-sized lips on the right, giving her an artificial sneer. From the dark hair covering the back of her head, Knuckledragger sensed the same gnoll blood in her that was responsible for his own muzzle and left ear.

"What do you think?" asked Scale-face.

Knuckledragger looked up at his father, and smiled sadly. "She's not particularly ugly," he said, then turned to finish his chores.

Johnathan M. Richards says he's somewhat of a mongrel himself, being aware of English, German, Scottish, and American Indian (Potawatomi tribe) blood. So far, no shapeshifting abilities have manifested.

15. There is almost no end to the amount of abuse a mongrelman slave is willing to take. Among mongrelmen, mere survival is the greatest accomplishment one could hope for. They remain courteous and obedient to their masters no matter what the provocation, wishing only to avoid trouble. Sadly, this makes them excellent slave material, a fact not many humanoid tribes are liable to overlook.

16. Mongrelman passivity is so great that humanoid tribes need not fear allowing mongrel-

men access to weapons. There is no chance that the mongrelmen will use the weapon to try to free themselves from slavery in a bloody revolt, as such a concept is foreign to them. Many humanoid tribes even go so far as giving their mongrelmen slaves piecemeal armor and weapons and training them for battle, using them as "cannon fodder."

Mongrelmen can be trained to use just about any weapon, but prefer simple ones such as swords and clubs. Free mongrelmen often use blowguns;

besides being a simple weapon to make and use, it is silent and can be used by a camouflaged mongrelman without giving away his location. In addition, it is easier for a mongrelman to remain still and hidden and use a blowgun on prey that comes within range than to track and chase down prey, given the standard mongrelman's limping gait. The blowgun darts are usually coated in a mild poison that causes paralysis for 1d4 rounds unless a save vs. poison is made at +2.

Appendix: Designing a Mongrelman PC

With most PCs, the character's physical appearance is up to the player, who can decide such things as whether or not his PC is a blonde or a brunette and what color his eyes are. After all, such details don't usually make a difference in how the PC will be played, or alter any of his capabilities.

Unfortunately, the same does not hold true for the mongrelman PC, made available in *The Complete Book of Humanoids* (see pages 43-46). As its very name suggests, a mongrelman is made of differing body parts from a wide variety of creatures, and no two mongrelmen are apt to look anything like one another. The player wishing to run a mongrelman PC is going to have to know just what his character looks like before he can even decide on his character class. After all, some physical traits are going to hamper, if not preclude altogether, various career possibilities. A mongrelman with two crab claws in place of hands is not likely to have much of a future as a mage, if he can't

even perform the simplest of somatic gestures. Similarly, pickpocketing isn't likely to be possible to such a mongrelman; he'll probably end up as a warrior, and a pitiable one at that, as he'll be unable to wield the coveted magical swords and similar enchanted weapons a party is sure to encounter eventually.

A system is needed to generate the physical appearance of a given mongrelman. This appendix provides one way to do so, by means of **Table 1: The Random Mongrelman Appearance Generator**. It also gives some notes on what additional capabilities and detrimental attributes accompany the mongrelman's specific physical makeup. These notes should be useful even to those who opt not to randomly roll their PCs' appearances, but prefer to design them piece by piece themselves.

The "Mongrelman" entry in the *MONSTROUS MANUAL*® rules states "mongrelmen are a mixture of the blood of many species: humans, orcs, gnolls, ogres, dwarves, hobgoblins, elves,

bugbears, bullywugs, and many others." Since the creatures specified range in size from 4' to over 9' in height, only humanoid creatures within that size range were added to the table, specifically, the crabman, goblin, lizard man, minotaur, and satyr. If DMs wish to add other creatures to this list, it is easy enough to modify the table to suit their individual campaign worlds.

Randomly Determining Your Mongrelman's Appearance

A mongrelman's body makeup is generally split into nine different areas, each of which might be patterned after a different creature. Each of a mongrelman's arms and legs tend to be predominantly patterned after a single creature, while the head and torso are usually an amalgamation of several different creatures blending into each other. A diagram of these areas appears as **Illustration 1**. Mongrelman bodies are seldom symmetrically divided; often the torso body type might run partway

THE ECOLOGY OF THE

MOONGODS

Massive and alien, rumored and feared, where the shadow of a mooncalf falls, tragedy follows. The living tools of beings distant and unfathomable, these flying terrors—masses of wings, tentacles, and sopping rubbery flesh—possess great intellect and even greater powers. Beholden of philosophies, goals, and motivations incomprehensible to any humanoid race, they cling to the highest reaches of the world, watching and waiting, malformed voyeurs and harbingers of doom.

HISTORY OF THE MOONCALF

It is no surprise that mooncalves seem otherworldly, for their racial origins trace back to beings beyond any world. From the airless voids between worlds, titanic things of immense power known only as “moongods” came into being.

While other races first developed awareness on worlds nurtured by water, air, and earth, only endless expanses of cold and darkness nursed the moongods. Learning from the motion of the stars, their thoughts formed in ways utterly alien to any creature bound beneath a single sky, harmonizing them to the secrets of heavenly motions. Thus, the moongods developed astrology before any other art, holding the constellations themselves as deities of a kind.

Guided by their sacred stars, the moongods drifted through the void, eventually coming upon whole worlds of other beings. Fascinated by these blue-green orbs, the moongods sought to explore them but discovered they could not survive in the thick chemicals of air and water. Overly curious, though, many moongods peered too close, being drawn to their deaths like moths to a flame.

"Tonight I witnessed a dread omen—something foul descending through the nighttime skies as though from the moon itself."

—Galiel the Astrologer, *The Last Journal of Galiel*

Thus, the moongods created mooncalves—lesser aspects of themselves—better suited to explore these worlds. The mooncalves were given wings to fly through the thick resistance of air, as well as forms enabling them to survive and experience these new expanses of soft wetness. Birthed into the upper reaches of each world the moongods wished to explore, these creatures—half children, half living tools—were left to make whatever discoveries they could. As such, the first mooncalves came to ground, fully aware of their racial quest, the orphans of great powers that they only instinctually understand and can never reach.

PHYSIOLOGY OF THE MOONCALF

Winged, tentacled masses of muscle, cartilage, and mucus, mooncalves are horrors to behold. Bulbous and uneven, their bodies resemble large brains fixed with dead white eyes, two thick tentacles longer than their wingspan, and a protective cluster of numerous smaller tentacle arms. Nestled at the base of this mass of smaller tentacles is a razor-sharp beak similar to a squid's, within which coil a pair of long, whip-thin tongues.

KNOWLEDGE OF THE MOONCALF

The following table shows the results of a Knowledge (arcana) check as it relates to mooncalves. Diviners, astologists, and others who study omens and the stars might possess this information.

Knowledge (arcana)

DC	Result
15	A mooncalf is an intelligent, flying monstrosity that prefers high, solitary places and is often seen as an omen of ill fortune.
20	Mooncalves have keen senses and can see without the need for light. They hold control over storms and can command animals. Their strange flesh proves resistant to all but magical weapons.
25	Mooncalves are drawn to witness epic disasters. If they cannot find one occurring on their own, they are willing to manipulate events to create one. Thus, spotting one is not just an omen, but likely evidence that something cataclysmic might soon happen nearby.
30	Mooncalves believe themselves to be the tools of strange, otherworldly beings known as the moongods.

The flesh of a mooncalf is much denser than most terrestrial creatures, making it strangely resistant to nonmagical attacks. Awkward flyers, mooncalves jerk about like bait dangling on an invisible lure, but their powerful wings allow them to move like this at great speeds. Ill adapted to ground movement, earthbound mooncalves seem vulnerable. In truth their long tentacles have more than enough strength to drag their bodies

about in swift, yet ungainly twitches and wet flops. A typical mooncalf's core body measures 8 feet in diameter, with a total body weight of approximately 600 pounds.

Mooncalves don't have dietary needs like other creatures. Rather than requiring certain materials and minerals to survive, mooncalves flourish by consuming any substance—organic or inorganic. While they still starve if they don't consume

THE MOONGODS

Demigods (Neutral Evil)

Although distant, uncaring deities, the moongods do attract a small number of humanoid worshipers. Mostly, these worshipers are those seeking power through knowledge—evil diviners and astrologers who form small cults, revering the secrets the moongods possess as much as the deities themselves. Occasionally, a mooncalf forms a cult to aid it in sowing dissent and disaster.

The moongods are symbolized by a moon shrouded by the shadows of tentacles. They have no true enemies, and no driving goals, making them unusually apathetic for deities.

Portfolio: Astrology, disasters, hidden knowledge, mooncalves.

Domains: Darkness*, Evil, Knowledge, Travel.

Favored Weapon: Tentacle (for creatures that possess them) or spiked chain.

Clerical Training: Worshipers must learn all the constellations, and witness at least one major disaster during the course of their training.

Quests: The moongods are uncaring and unhearing, so they do not give their followers specific quests.

Prayers: Silent intonations of events the cleric has witnessed, which must be done while open to the night sky.

Temples: Windswept peaks far from any other habitation, with astrological signs and constellations carved into great circles of rock.

Rites: A major event, one that impacts no fewer than a thousand living, thinking creatures, must be witnessed at least once a decade. If such an event does not occur naturally, the cleric is required to arrange for one.

Herald and Allies: The moongods' herald is a massive 60 Hit Die moonlord known only as the Endless One. It has appeared over numerous epic disasters, many of which it is thought to have manipulated in their masters' names. The moongods have no planar allies, and clerics often summon common fiends with *planar ally* spells.

*Detailed in the *Book of Vile Darkness* (mature audiences only).

mass birth. Only slight color variations, differing numbers of tentacles, and size distinguish between individuals. Size variation among mooncalves also proves strange, as it appears to relate to experience, events witnessed, and variety of creatures consumed. In short, every tidbit of information a mooncalf gathers seems to imperceptibly add to its

bulk, eventually adding up, increasing its size as well as its already considerable powers as a moonlord.

PSYCHOLOGY AND SOCIETY OF THE MOONCALF

Mooncalves were spawned fully knowledgeable and aware of their uncaring gods. Each inherited the drive to observe and the dispassionate

superiority its parents hold over all other living creatures. As such, they often seek homes upon high mountains or spires—comforted by the nearness of the stars—close to areas densely populated with animals and sentient creatures, between which they make no distinction.

Thus, mooncalves spend their lives in research and observation, but they are rarely unobtrusive onlookers. Mooncalves seek to witness major events—particularly conflicts. While a small skirmish or minor fire might sate their curiosity for a few days, mooncalves seek truly epic battles, natural disasters, and upheavals of broad scope. As they come to understand the beings they observe more thoroughly, they grow in cunning and power, learning to engineer such

events. Some even turn to divination magic and astrology to predict such catastrophes, ranging far to witness titanic calamities. Regardless of their methods, those who know of mooncalves know them as harbingers of dreadful events.

With no need for tools, equipment, companionship or dwellings, mooncalves have no need to develop a society of their own, never seek companionship, and are not known to mate. Rarely, more experienced mooncalves build cults or networks of spies to help them find or create the disasters they seek. Besides such exceptions, however, the only company mooncalves long for is the return of the moongods and the cold embrace of the stars above.

MOONLORDS

Although all mooncalves begin life as large creatures, as long as they continue witnessing and experiencing new events they never stop growing.

ADVANCED MOONCALF

Most commonly, mooncalves advance by Hit Dice, gaining power as they witness more and greater tragedies, becoming titanic moonlords. Sometimes, however, they take levels of cleric, worshiping the enigmatic moongods, or adopting the path of the diviner to magically learn of impending calamities.

MOONLORD

Space 20 ft.; **Reach** 20 ft., 50 ft. with tentacle rake

Base Atk +28; **Grp** +53

Attack Options Cleave, Power Attack

Special Attack bite, improved grab

Spell-like Abilities (CL 9):

1/day—*call lightning* (DC 13), *control weather*, *control winds* (DC 15), *dominate animal* (DC 13), *greater magic fang*, *protection from elements*, *quench* (DC 13), *resist elements*

Abilities Str 36, Dex 14, Con 32, Int 22, Wis 22, Cha 11

SQ Tentacles

Feats Alertness, Blind-Fighting, Cleave, Combat Expertise, Improved Critical (tentacle rake), Improved Initiative, Improved Trip, Iron Will^B, Lightning Reflexes^B, Omen of Crows, Omen of Storms, Power Attack, Toughness^B

Skills Concentration +39 Hide +26, Knowledge (arcana) +36, Knowledge (history) +36, Knowledge (local) +36, Listen +36, Spellcraft +36, Spot +36

Bite (Ex): With each successful grapple check a mooncalf automatically hits a grabbed opponent with its bite attack, dealing 4d8+6 points of slashing damage.

Improved Grab (Ex): If a mooncalf hits an opponent of Gargantuan size or smaller with a tentacle rake attack, it deals normal damage and attempts to start a grapple as a free action without provoking an attack of opportunity. If it gets a hold, it automatically hits with its bite attack in the same round. Thereafter, the mooncalf has the option to conduct the grapple normally, or simply use its tentacle to hold the opponent (–20 penalty on grapple check, but the mooncalf is not considered grappled). In either case, each successful grapple check it makes during successive rounds automatically deals tentacle rake and bite damage.

Tentacles: An opponent can attack either of a mooncalf's tentacles as if they were weapons (see Sunder on page 158 of the *Player's Handbook*). Both of a mooncalf's tentacles have 20 hit points. If the mooncalf is currently grappling a target with a tentacle, it usually uses another limb to make its attack of opportunity against the sunder attack. Severing a mooncalf's tentacle deals damage to the creature equal to half the limb's hit points. A mooncalf regrows a severed limb in 1d10+10 days.

Keen Senses (Ex): A mooncalf sees four times as well as a human in low-light conditions and twice as well in normal light.

Spell-like Abilities: A mooncalf's spell-like abilities are Charisma based.

* Includes adjustment for 10-point Power Attack.

Some mooncalves have been documented as having grown to nearly 20 feet in diameter with tentacles more than 50 feet long. As the creature grows, it becomes more and more like the unknowable moongods that spawned it, gaining a touch of their otherworldly abilities. Many mooncalves turn to spellcasting at some point in their lives, channeling their innate power into magic. Those that don't, however, eventually become Gargantuan and are considered moonlords, creatures that challenge even evil dragons as threats to the world around them.

HARBINGER FEATS

Upon advancing to 28 Hit Dice, a mooncalf becomes a moonlord and gains the potential to actually bring about evil omens. These are acquired in the form of harbinger feats, motes of otherworldly power moonlords use to tap into their moongod heritage. All harbinger feats are supernatural abilities, and require an hour to use, creating an aura centered on the moonlord that lasts for 24 hours. A moonlord can only use one harbinger feat per week. Characters within an affected area may make a DC 25 Knowledge (arcana) check to realize the omens they are seeing point toward a single, magical source for the ill fortune befalling the area.

MIXED OMENS

Multiple bad signs appear throughout the land.

Prerequisite: Any three harbinger feats, mooncalf, 28 HD.

Benefit: A mooncalf with Mixed Omens can use two different harbinger feats in one week. The feats may be used concurrently.

Normal: A mooncalf can only use one harbinger feat a week.

OMEN OF BONES

A faint breath of rot pervades the land.

Prerequisite: Mooncalf, 28 HD.

Benefit: A mooncalf with this feat taints the region in an aura of death. All undead within a 50-mile

radius gain turn resistance +2. This stacks with any turn resistance the creature might already possess.

Ghostly glimpses, distorted reflections, and eerie mirages haunt an area under an Omen of Bones.

OMEN OF CROWS

The land seems dark, as though it were but one vast graveyard.

Prerequisite: Mooncalf, 28 HD.

Benefit: A mooncalf with Omen of Crows can create an aura that dampens healing magic. Within a 50-mile radius, all *cure* spells heal one less hit point of damage per casting.

An area under an Omen of Crows is often infested with crows or similar scavenging birds.

OMEN OF FLIES

Pestilence spreads through the land.

Prerequisite: Mooncalf, 28 HD.

Benefit: A mooncalf with Omen of Flies can create an aura that strengthens diseases of all kinds. Within a 50-mile radius, all saving throws against disease take a -2 penalty.

An area under an Omen of Flies is often infested with flies, maggots, and other insectile vermin.

OMEN OF LOSS

Memories become lost and history fades away.

Prerequisite: Mooncalf, 28 HD.

Benefit: A mooncalf with Omen of Loss can create an aura of forgetfulness. All creatures within a 50-mile radius take a -2 penalty on all bardic knowledge rolls and Knowledge skill checks.

A thick mist and haunting lights settle over a land afflicted by an Omen of Loss.

OMEN OF SNAKES

Poison becomes more virulent.

Prerequisite: Mooncalf, 28 HD.

Benefit: A mooncalf with Omen of Snakes can create an aura that strengthens poisons and venoms of all kinds. Within a 50-mile radius, all saving throws against poison take a -2 penalty.

An area under an Omen of Snakes is often infested with snakes.

OMEN OF STORMS

A feeling of dread settles over the land.

Prerequisite: Mooncalf, 28 HD.

Benefit: A mooncalf with Omen of Storms can create an aura that spreads fear and unease. Within a 50-mile radius all creatures with an Intelligence score of 3 or lower must make a DC 15 Will save or be shaken for the whole day.

An area under a Omen of Storms has cloudy, stormy weather.

ALTERNATIVE MOONCALF ORIGINS

The idea of mooncalves being spawned by a race of alien gods that exist in the void between worlds isn't appropriate for all cosmologies. Without changing their basic behavior, it's possible to use an alternative origin for mooncalves to bring them more in-line with any campaign world. A few examples are presented here:

Aberrant Creations: Although mooncalves believe themselves to be the spawn of otherworldly deities, they might in truth have been constructed as servants of illithids, grell, or any number of other aberrant creatures. Mooncalves might have escaped their original masters, or they might be unknowingly vulnerable to the magic or psionic powers their progenitors use to secretly control them.

Alternatively, within recent memory the illithid god Maanzecorian was destroyed. The moongods might embody the lingering fragments of that deity's sundered divinity, or be the remnants of Maanzecorian's orphaned herald.

Fiendish Origins: The moongods might actually be a single evil deity who uses mooncalves as its primary agents in the mortal realm. Alternatively, mooncalves might be a new breed of fiendish inhabitant belched from the pits of Carceri, Gehenna, or Hades.

Other Planes: The unknowable creatures that created the mooncalves

ORIGINS OF THE MOONCALF

The otherworldly mooncalf first appeared in *DUNGEONS & DRAGONS* in the opening scenes of the adventure *Heart of Nightfang Spire*. Alien and unknown, this monstrosity graced the module's cover with its pseudonatural presence.

Besides merely being a creation of D&D, however, the word "mooncalf" appears in many dictionaries, defined as a fool, a freak, or an deformed embryo, afflicted by the corruptive influence of the moon. The word also appears most notably in the works of Shakespeare as an insult leveled toward the character Caliban in Act III of *The Tempest*.

The mooncalf currently appears in the *Monster Manual II* and has statistics updated to D&D 3.5 available at wizards.com/dnd/files/DnD35_update_booklet.zip.

might actually be natives of the Astral Plane. It's not the space between worlds they inhabit, but the space between realities. Mooncalves seek high places because the rarified air is more like astral space, which they have no innate way of returning to.

Alternatively, mooncalves are inscrutable, alien horrors, making them perfect vanguard agents of some intelligence from either the depths of the Ethereal Plane or the Far Realm (see *DRAGON* #330).

DEATH

The Ecology of the Mummy

by Terry Edwards · illustrated by Wayne Reynolds

They were the stuff of legend in lands half a world away. It was unheard of that a mummy should exist in the tropical southern continent, but there I was in the cavern tombs of the Mazteceta, frozen in fear as the undead monster pounded the life from my companions. At the time I didn't realize that the creature, with painted black skin stretched over clay molded in the shape of a man, was a mummy. When my wits were about me, I fled the cavern alongside the guide who had led our company to the tombs. He was injured, struck by the mummy, but nothing beyond my ability to heal, or so I thought. Within two days, the young man turned to dust before my eyes, cursed by the ancient guardian of an extinct civilization.

Years later I would return with the knowledge and power to master the monster. It now stands on display among my own creations and mummies collected from around the world.

—Uleram Zehad, Author of *You Live Again, Forever*

Ecological Notes

Mummification is the state of a corpse in which bacteria and fungi are unable to grow and cause decay. This preserved state can occur naturally in the proper conditions or can be imposed upon a corpse artificially. Whether a mummy is created by natural or artificial means, there are only two ways to animate it into as undead: an act of the gods or a create greater undead spell.

Three natural settings consistently mummify a corpse given enough time. The hot climate and salty sand of the desert are ideal conditions to preserve a corpse. Buried in the sand, a corpse loses all moisture in a matter of weeks. Another ideal condition combines the freezing temperature and dry winds found in many glacial and mountain regions. The bitter cold prevents decay as the dry wind slowly dehydrates the corpse, leaving a "freeze-dried" mummy. A corpse can be frozen without being dehydrated, but a mummy created in such a fashion is subject to decay if temperatures rise above freezing. One last natural mummy type that bears mention is the bog mummy. Peat bogs, found in most temperate coastal regions, are ideal for mummy creation. Peat bogs are highly acidic beds of decaying moss. A corpse left in the cold, wet peat is preserved as its muscle dissolves and its skin cures to a leathery texture. Buried in the acidic peat, the bones of a corpse lose calcium, leaving them spongy; the result is often a deformed mummy.

Many methods have been established to preserve the dead. The best known of these comes from an ancient desert civilization. Following the guidelines perfected over millennia, the first step in creation is to wash the corpse in palm wine, although any disinfecting alcohol suffices. The brain and internal organs of the corpse are then removed, leaving only the heart, which is said to be a vital organ for rebirth of the body. Canopic

jars are used to store the preserved organs, one jar each for liver, lungs, stomach, and intestines. It is believed that each jar represents a different god, and they are faced in one of the four cardinal directions. Some sages claim these jars store an animated mummy's life force much like a lich's phylactery. This is a misconception that has cost many a tomb robber his life.

After removing the organs, the skull is rinsed with palm wine and the abdominal cavity is stuffed with bags of incense and spices. Salt is then packed around the body to dehydrate the corpse (an average human corpse requires 400 pounds of salt to dehydrate). The corpse is left in a hot, dry room until mummified, a process that generally takes 35 days. According to the ancient method, the mummy is rubbed with frankincense and myrrh and wrapped with strips of linen held in place with a liquid resin. These linens are often inscribed with spells to protect the mummy in the afterlife. Gold caps on the fingers and toes are the finishing touches prior to the rituals and spells allowing the mummy to live again.

Clay mummies predate even the earliest wrapped mummies, and their creation process is very different. For this type of mummy, the skin is carefully removed from the mummy to be used later, and the internal tissues (fat, muscle, organs) are discarded. After being stripped of all flesh, the skeleton is meticulously cleaned and then reassembled with support sticks

THE SKULL: the brain is removed through the nasal passage and the skull rinsed with palm wine.

AFTER DEHYDRATION OF THE BODY: the skin is rubbed with frankincense and myrrh. Spells (in the form of scrolls) are often inscribed on the mummy's wrappings.

ABDOMINAL CAVITY: All internal organs are removed except the heart. The chest and abdominal cavity are then stuffed with bags of herbs and incense.

ORGAN JARS: Canopic jars are used to store the preserved organs. Unlike a lich's phylactery, these jars give the possessor no ability to harm the mummy.

tied to the bones where needed. Reeds are stuffed into the skull, and clay is molded around the skeleton to replace lost tissues. Skin is then reapplied over the clay and painted black with a water-resistant pigment.

These are just two examples of preparing a corpse for animation as a mummy. As long as the basic elements of preservation are present, a mummy can be made. For instance, in a tropical climate, one could wrap special plants around the corpse to dehydrate and cure it. Smoking a corpse could be another way to preserve the dead for animation as a mummy. In a futuristic campaign, a corpse could be soaked in a formaldehyde-like concoction, preserving the corpse with a more life-like appearance.

Mummies are most often found in ancient ruins, the strongholds of powerful clerics, and areas conducive to natural mummification. When created, mummies serve primarily as guardians of tombs, temples, and other important religious sites. Natural mummies tend to wander aimlessly, destroying all life that crosses their path. Most mummies do not actively collect treasure, but their lairs might accumulate treasure left by slain intruders. Ancient cultures often entombed their dead with treasures collected throughout the deceased's life, believing that you could take your belongings with you into the afterlife. Depending on the wealth the mummy possessed in life, tomb robbing could be a very profitable endeavor.

Society Notes

Mummies usually have a close spiritual connection to the people who created them. Many cultures mummified their dead to protect the deceased's spirit in the afterlife. Others placed the mummies of family members in the home so that they could be together forever. In all cases, the mummy is a link between the living and the dead.

In cultures that mummify their dead, an animated mummy might be venerated as a living god. In this case, the mummy could be housed in a temple and placated with offerings and sacrifices. The mummy would likely be very important to its people, representing the vengeful wrath of the gods when worshipers were unable to please it or serving as a protector of the village in times of attack.

To appease the gods, some cultures resort to human sacrifice, either leaving the exposed corpse of the unfortunate victim on a frozen mountain peak or submerging it in a swamp. These sites become important religious locations, oracles where those in need can breach the veil between worlds and petition the dead. The dead are mummies animated by the god to whom they were sacrificed, serving the living as ancestral advisors or in other ways as the deity decrees.

A mummy's relationship with humanoids is dependent upon how the humanoids view death or the undead. Creatures without negative cultural views of the undead generally find the mummies beneficial to their existence.

Killer Creature Combos

Mummies are known to associate or share lairs with many different creatures, both living and nonliving.

Mummy and Will-O'-Wisp: Bog mummies are prized companions to the swamp-dwelling will-o'-wisp. When seen at a distance, this pair looks like a lantern-bearing traveler having difficulty navigating the swamp. The will-o'-wisp can even call out to potential victims to lure them closer. By the time their victims are near enough to discern their real appearance, the will-o'-wisp is feeding on the emotions of those who have succumbed to the mummy's despair ability. While the mummy engages combatants, the will-o'-wisp can appear where most needed to deliver its shock attack.

A single will-o'-wisp and one mummy is an EL 6 encounter.

Mummy and Mimic: Mummy tombs are often stuffed with treasures, offerings, statues, and sarcophagi. Mimics are sometimes sealed in tombs to protect the deceased's wealth from grave robbers. A mimic hidden among the tomb's contents is almost impossible to spot until it is too late. A foe paralyzed by the mummy's despair ability is easy prey for the mimic's grapple, and a grappled opponent is an easy target for the mummy's slam attack.

A single mummy and two mimics is an EL 8 encounter.

Mummy and Brown Mold: Brown mold is often found growing abundantly in a mummy's lair. A mummy is immune to the mold's cold subdual damage, and when PCs employ fire against the mummy, the mold doubles in size.

Two mummies and a patch of brown mold is an EL 6 encounter.

Mummy and Zombie: Other undead are immune to the mummy's despair ability, which is essential if one plans to share space with them. While the abilities of these monsters don't make for a fantastic combination, the strength of pairing these two undead lies in deception. With a little work prior to animating the zombies, their creator can disguise them as mummies. A zombie corpse can undergo the same mummification process as a true mummy and then simply be animated as a zombie instead of being the recipient of a *create greater undead* spell. With any luck, the deception will lure PCs into using unnecessary resources they would never waste on foes as weak as zombies.

A single mummy and two zombies is an EL 4 encounter.

Vs. PCs

The information below describes how best to use a mummy's abilities and is intended to help a DM run a mummy NPC. Players should skip this section and instead read the Vs. Mummies section later in this article for information on battling mummies.

Despair, Use It or Lose It: A mummy's despair ability can only affect a given creature once per day and only for 1d4 rounds. To put this ability to its best use, make sure the mummy is in melee with the PCs when they first see it. If any of the PCs are paralyzed with fear, the mummy should move in for a coup de grace, even if it must risk attacks from other foes to do so.

Trigger Your Traps: A crafty rogue can all too often find and disable the traps that litter a mummy's lair. The best way to prevent this is to have the mummy set off the traps. A mummy is completely unaffected by poison gas and takes little to no damage from most other traps after factoring in its resistance to blows and damage reduction.

No Holds Barred: If a particular PC is giving the mummy trouble, start a grapple. If successful, the mummy will still be able to deal damage with its slam attack, but the grappled PC will be forced to break the grapple or use a light weapon. Grappling also places severe restrictions on what spells a PC can cast and requires the caster to make a Concentration check. The loss of the mummy's Dexterity bonus to AC while

grappling is inconsequential since the mummy has no bonus.

A Helping (Magical) Hand: Generally used as guardians of tombs or treasures, a mummy's creator usually invests a little time crafting traps and casting spells to aid his undead sentinel. Magic traps such as *glyph of warding*, *greater glyph of warding*, and *symbol* are favorites of the evil clerics who animate mummies. Common choices for glyphs include *bane*, *circle of doom*, *desecrate*, and *doom*. For areas that are maintained, *unhallow* is a very effective spell, and if *protection from elements (fire)* is the spell effect tied to the site, the mummy's biggest weakness is practically eliminated.

Tactics: If possible, initiate combat when the mummy is in melee range of the PCs. The mummy's slow movement and lack of a ranged attack leave it vulnerable if spotted at a distance. Spellcasters are the biggest threat, so charge the cleric, sorcerer, or wizard, overrunning other PCs if necessary.

Vs. Mummies

If your party runs into a mummy, don't despair—there's plenty you can do to overcome a mummy's abilities.

Do Not Despair: If the party fails to overcome a mummy's despair ability, the resulting paralysis could give the mummy enough time to pound them into dust. A paladin's aura of courage is the best defense against despair. Paladins of at least 2nd level are immune to fear effects and grant all who remain within 10 feet of them a +4 morale bonus to their saving throws against fear effects. If you have no paladin in your group, you can still bolster Will saves with spells or bardic music. *Bless*, *protection from evil*, *remove fear*, and *aid* all improve saves against fear effects. If a party member has already succumbed to despair, the *remove fear* spell allows a new saving throw with a +4 morale bonus. *Remove paralysis* negates the effect for one person or allows a new save with a +4 resistance bonus for two people or +2 for three to four people.

This Guy's Tough: Mummies are resistant to blows, taking half damage from physical attacks. After damage is halved, the remaining damage must exceed the mummy's damage reduction to actually harm it. There is no way around the mummy's resistance to blows, but you can increase your damage to

compensate. Weapons with high damage capability are an obvious choice. Using weapons two-handed allows you to add one-and-a-half times your Strength bonus to damage, making the most of each attack. Power Attack is also a good option; don't be afraid to use this feat to maximum effect since a hit that deals little damage won't harm the mummy anyway. To overcome the mummy's damage reduction, it is wise to have a weapon with at least a +1 enhancement. If you do not have a magic weapon, try the *magic weapon* or *shillelagh* spells.

Fire and Magic: Mummies are particularly vulnerable to magical and non-magical fire-based attacks. Although expensive at low levels, alchemist's fire is a great weapon against the dry husk of a mummy. Damage spells are good, but fire spells are better. The most effective low-level spells include *burning hands*, *flame blade*, *flaming sphere*, and *produce flame*. Keep in mind that cure spells damage undead, so feel free to dump useless spells for spontaneous cure spells. *Disrupt undead* can come in handy, dealing just enough damage to finish off a badly wounded mummy.

Rotten Mummy: Mummy rot is arguably the most devastating disease known. Successful saving throws do not allow a character to recover, and the DC of 20 makes preventing damage a hard task at best. A *remove disease* spell is the best cure for mummy rot, but at low levels you might be relying on the local temple for help. Remember that a Heal check can replace a saving throw to buy time until the disease is removed.

Tactics: When combating undead, a turning attempt should always be the first action. If the cleric is successful, the party should follow up with fire-based attacks to destroy the mummy.

A rogue is often most useful searching for and disabling traps that are all too often present in a mummy's lair. Bolster the Fortitude saves of melee combatants; the best defense against mummy rot is to not contract it. Mummies move slowly, so take advantage of their speed with hit-and-run tactics. If you expect to fight mummies, have the party druid rig a *fire trap* on a door through which you can lure the mummies.

NPC Mummies

The standard mummy as presented in the *Monster Manual* is great for challenging

low-level PCs or as a random encounter in ancient ruins or isolated dungeons. However, when faced with PCs of higher level, the mummy needs a few more tricks to challenge the group.

Advancement in Hit Dice is an option, but adding a character class increases the mummy's power and can provide a good story for an adventure. Below are some example adventure scenarios:

Sorcerer: A naturally mummified corpse animated by an evil god is a horrid villain. It's even more of a horrid villain when the mummy is granted the power of a sorcerer to help carry out whatever plans the animating god has.

Since mummies generally have high Charisma scores, they make good sorcerers. Mummy sorcerers animated by a deity, as in the above scenario, know the spells that will best aid the mummy in its particular mission. In general, mummy sorcerers prefer damage spells, especially from the Necromancy school, but they never use spells with the fire descriptor.

Blackguard: Great heroes and champions of war are highly revered by the people they fight for. Often immortalized through mummification upon their demise, the preserved icon serves as a symbol of hope to the living. Unfortunately, conflict on the Material Plane tends to have repercussions in other planes. A powerful outsider wronged by the deceased hero could take vengeance by animating the mummy of the hero.

Under the tutelage of an evil outsider, such a mummy can become a foul agent of evil, a blackguard. The blackguard's abilities are based on Wisdom and Charisma, both of which are typically high scores for mummies. A mummy blackguard's aura of despair combines well with its despair ability, paralyzing enemies for an advantage to its smite good and sneak attacks. Preferred mummy blackguard spells include *inflict spells* (to heal its wounds), *bull's strength*, (to boost its combat abilities), and *protection from elements* (to offset its fire vulnerability). A mummy blackguard who was a paladin in life might gain the fallen paladin blackguard abilities as though it retained its paladin levels.

Cleric: The religious leaders of ancient civilizations were often perceived as the physical manifestation of the gods. These clerics were the bond between their people and the immortals they served,

so they were the representation of the gods if not the true manifestation. Some clerics wish to continue leading their people as a divine conduit even beyond death. These clerics ensure that after death, their flesh is preserved and their spirit "reawakened."

Mummy clerics are fearsome creatures, usually commanding a group of lesser undead and fanatic acolytes. Common domains of mummy clerics include Death, Destruction, Evil, Law, and Protection, but this is dependent on the deity worshiped. Mummy clerics prefer spells that weaken opponents (*bane*, *doom*, *bestow curse*), protect or strengthen their immortal bodies (*deseccrate*, *resist elements*, *spell immunity*), or spells that cause suffering (*blindness/deafness*, *contagion*, *poison*).

Monk: Within secluded monasteries, monks strive for perfection of body, mind, and spirit. The road to perfection is a long one, requiring discipline and patience. Those seeking a shortcut can find it among some unscrupulous orders that use mummification to attain perfection of the body. Free from the demands of the flesh, the monk can focus exclusively on the balance of mind and spirit.

This might seem an odd class for undead creatures to take, but the mummy meets the alignment qualification, and the abilities of the monk compliment, or compensate for, the mummy's. Flurry of blows and the monks unarmed base attack bonus provide the mummy with potent pummeling power along with a stunning attack and more chances to spread disease. The monk's unarmored speed makes up for the mummy's poor mobility, and evasion provides protection from fire spells.

Magic Items

Many mummies are preserved with the belief that the deceased will require its body in the afterlife. To aid mummies in their journey to the next life, they are often entombed with items of protection. *Rings of protection* and *rings of elemental resistance* are common, as are *scarabs* and other magical jewelry. Scrolls offer protection to spellcasting mummies, and jewels in the form of *ioun stones* can be found in the tombs of wealthy individuals. Tombs are often filled with guardian statues, some of which can serve the mummy as *figurines of wondrous power*. Mummies highly prize

any treasures they possessed in life and do not take lightly the theft of their belongings.

Mummy Variations

All mummy variations presented are identical to the mummy found on page 138 of the *Monster Manual* with the following exceptions:

Clay Mummy: Clay mummies do not have the fire vulnerability special quality. Instead, they have the bludgeoning vulnerability ability described below.

Bludgeoning Vulnerability (Ex): A clay mummy takes normal damage from bludgeoning weapons. The mummy's immunity to blows does not apply to bludgeoning weapons.

Ice Mummy: A creature that succumbs to an ice mummy's rot freezes and shatters, melting into nothing at the first thaw. Ice mummies have the cold subtype ability described below.

Cold Subtype (Ex): Cold immunity; double damage from fire except on a successful save.

Bog Mummy: A creature that succumbs to a bog mummy's rot breaks down into a moist, compost-like substance, washing away at the first rain.

Lair of the Ice Mummy

This lair is fairly typical of mummy tombs presenting common traps, enchantments, and monsters. In this case, the lair is the guard station to the

secret treasure rooms of Dem Hazed, glacial stronghold of the evil cleric Ameran of the North.

Frosty white mist hangs lazily in the chill air of the room, which is carved from solid ice. The floor is covered with a thin layer of sand, providing some traction on the slick surface of the ice. A dim light glows softly through the mist from the room; it emanates from an altar of dark ice in the center of the room, upon which sits a black skull.

The altar is carved from a block of frozen unholy water and glows due to a *continual flame* placed within it. The black skull atop the altar is enchanted with an *unhallow* spell and trapped with a *greater glyph of warding*. As per the *unhallow* spell's description, there is a spell effect tied to it. In this case, the site provides *protection from elements (fire)* to undead within the spell's radius. Destroying the skull has no effect on the *unhallow* spell but does trigger the glyph.

The temperature within the room hovers around 23 degrees Fahrenheit. While undead are immune to subdual damage caused by the cold temperature, unprotected PCs are subject to cold effects (see page 86 of the *DUNGEON*

MASTER'S Guide) if they stay in the area too long.

Trap (EL 2): An ice portcullis is triggered when either of the mummies steps on a trigger stone directly in front of their alcoves. The portcullis is a 2-foot-thick wall of ice (72 hp/10 ft. square) that falls directly in front of the door.

Ice Portcullis Trap: CR 2; +10 melee (3d6/x2 crit); Search (DC 20); Disable Device (DC 20). Note: Damage applies only to those underneath the portcullis. The portcullis blocks the passageway.

Trap (EL 6): *Greater glyph of warding* has been cast on the black skull that rests upon the altar in the center of the room and is set off when touched or otherwise disturbed.

Greater Glyph of Warding: CR 6 spell, no reset, 20-ft-radius burst; *circle of doom* (1d8 + 15 points of damage, Fortitude save DC 17 halves); Search (DC 30); Disable Device (DC 30). Note: The negative energy released by *circle of doom* cures undead rather than harming them.

Creatures (EL 6): The undead guardians of Ameran maintain a ceaseless vigil over this area. They wait in their alcoves until they see or hear the

PCs, at which point they attack. Two ice mummies are mixed in with a group of zombies. The zombies and mummies are indistinguishable from each other since the corpses were all mummified by freezing prior to animation.

Ice Mummies (2): CR 3; Medium-size undead; HD 6d12+3; hp 42 each; Init -1 (Dex); Spd 20 ft.; AC 17 (-1 Dex, +8 natural), touch 9, flat-footed 17; Atk +6 melee (1d6+4, slam); SA despair, mummy rot; SQ undead, resistant to blows, damage reduction 5/+1, fire vulnerability, cold subtype; AL LE; SV Fort +2, Ref +1, Will +7; Str 17, Dex 8, Con —, Int 6, Wis 14, Cha 15.

Skills: Hide +8, Listen +9, Move Silently +8, Spot +9. **Feats:** Alertness, Toughness.

Zombies (6): CR 1/2; Medium-size undead; HD 2d12+3; hp 16 each; Init -1 (Dex); Spd 30 ft.; AC 11 (-1 Dex, +2 natural) touch 9, flat-footed 11; Atk +2 melee (1d6+1, slam); SQ undead, partial actions only; AL N; Fort +0, Ref -1, Will +3; Str 13, Dex 8, Wis 10, Cha 1.

Feats: Toughness.

SQ—Partial Actions Only (Ex): Zombies have poor reflexes and can perform only partial actions. 

Of Gods and Henchmen

TWO NEW COLLECTIONS

Livin' La Vida Dorka!

Ask your game or comic retailer to carry your favorite titles from Dork Storm Press!

www.dorkstorm.com

HUIZ- FREAKIN' -ZAH!

The Nodwick Chronicles, Volume Two continues the saga of Nodwick the Henchman and his adventurer employers! Thrill as they battle evil deities, unravel the mysteries of alternate dimensions, grapple with cosmic power and delve into the darkest dungeons! Collecting issues 7 through 12 of the fan-favorite comic book, this volume is a must-have for hench-heads everywhere! Only \$15.95, on sale this summer!

LIVIN' LA VIDA DORKA

BY JOHN KOVALIC

The complete DORK TOWER comic strip collection, Vol. 1

The Nodwick Chronicles, Volume Two continues the saga of Nodwick the Henchman and his adventurer employers! Thrill as they battle evil deities, unravel the mysteries of alternate dimensions, grapple with cosmic power and delve into the darkest dungeons! Collecting issues 7 through 12 of the fan-favorite comic book, this volume is a must-have for hench-heads everywhere! Only \$15.95, on sale this summer!

At last! ALL the DORK TOWER comic strips from Scrye Magazine, Gamespy.com and Interactive Week, collected together for the first time in a beautiful trade paperback that just screams "IT MUST BE MINE!" Most of this collection has never been reprinted before! As *USA Today* said, "Lighten up with some fun 'toons courtesy of the prolific John Kovalic!" Just \$15.95 for this tome of hilarity!

Chapter Seven

MUMMY

AND SO BEAUTEOUS WAS MY QUEEN THAT I REFUSE TO BE WITHOUT HER. SO BESIDE ME FOREVER SHALL SHE LIE, A SPRIG AMID DUST, A LOTUS AMONG ASHES. THOUGH THE SKIES BREAK, AND THE OCEANS GROW PARCHED, AND THE MOON FALLS AS TEARS FROM THE SKIES, FOREVER IN OUR PARADISE BEYOND THE DAWN'S HORIZON SHALL WE KNOW BOUNTY, AND SPLENDOR, AND SERENITY. AND WOE TO THOSE WHO, EVEN IN DEATH, WOULD TEAR US FROM OUR ENDLESS EMBRACE, FOR OUR LOVE WILL KNOW NO MORTAL DISTANCE AND OUR WRATH WILL NOT COME GENTLY. I HAVE PROMISED MY QUEEN ETERNITY. AND MY QUEEN IS NEVER DENIED.

—TRANSLATED FROM THE EMPTY SARCOPHAGUS OF SHIELSEIS III,
THE QUEEN OF ASPS

In forgotten tombs and prisons of nature lie the preserved corpses of the ancient and honored dead. From such crypts spring the warnings of scholars and poets, cautionary tales of terrible curses and the vengeance of souls interrupted in their eternal rest. Much has been made of the depredations of the dead, the hunger of those that feast upon the quick and make prey of the living. Yet, in the case of the deathless princes misleadingly generalized as “mummies,” their curses rarely come undeserved and their predations carry the justice of those who themselves have faced the ultimate judgment.

The very term “mummy” in reference to the vengeful dead is a gross misnomer. While cultures that practice mummification do often inadvertently aid in such beings’ creation as a result of their preoccupation with the afterlife and the increased importance they place upon physical remains, the spontaneous reanimation of corpses might be witnessed among the ancient dead of numerous societies, including those with no complex burial rites. Unfortunately, terms like “vengeful souls,” “ancient dead,” or “terrestrially obsessed animates” prove misleading in their own rights and far less understood, so the inaccuracy regrettably stands.

To a large degree, the confusion regarding mummies relates to the popularization of a single description coupled with the scholarly difficulty in finding uniform physical characteristics between individuals. In other words, one cannot identify a mummy based on linen wrappings alone. Even an undead being that bears no resemblance to a stereotypical enshrouded cadaver might in fact possess the powers and prowess of a mummy. The vagary proves frustrating in research and potentially life-threatening in the field. As countless adventurers can doubtlessly attest, many mummies appear just as popular fiction and theater describe: dry, withered corpses bound in age-haunted wrappings and prayer strips bearing appeals to long-forgotten gods. But not all. Skeletons fleshed in mud and primeval ichor, frozen ancients more beast than man, and corpses buried in the furs of revered chiefs, the holy feathers of high priests, or the jade-inlaid armor of imperial lords—these, too, might all be mummies. Thus, a mere glance cannot be relied upon to identify these undead. Rather, it is by its curse and the vigor by which it wreaks its revenge that a mummy makes itself known.

Fortunately, even among the accursed dead, these horrors prove exceptionally rare, as the circumstances necessary for such beings’ resurrection prove elaborate and, in many cases, quite expensive. Also, should one discover a mummy and find himself the target of its wrath, the creature’s immortal ire likely comes deservedly—few such beings make the spiritual return to the mortal world lightly, typically only doing so in response to a trespass or desecration of the most fundamental and vulgar kind.

GENESIS

Like all sentient undead, mummies possess a chthonic vice, one that proves so powerful that it might stretch beyond the veil of natural death. In this case: covetousness. This might seem like a strange distinction, for what undead creature is not possessed by powers or obsessions that act beyond death? Yet in numerous cases involving mummies, the uncovered corpses were not animate upon discovery. No mere trickery, in such situations not only were the remains not animate, but they were not undead before being disturbed. Although research into dark lore reveals that mummies might be created through necromantic magics, those that spontaneously manifest do so as a result of some outside influence—typically the desecration of a burial place, violation of physical remains, or conveyance of some terrible revelation. As such, the attachment between a departed soul and its immortally coveted remains, possessions, or—most intriguingly—philosophies proves so strong that the undermining of these fundamentals draws the spirit back across the gulf of mortality to defend that from which its life and death took meaning.

What might provoke a mummy’s resurrection varies widely, though cultural generalities exist. The most important requisite appears to be a lifelong preoccupation with death, typically held by an individual and compounded by his society. Populations who believe in the finality of death or the dissolution of the mortal spirit rarely produce mummies. Even believers in more traditional myths of the afterlife and the one-way progression of souls to a final reward or punishment infrequently breed such horrors. Those societies who tie their eternal rewards to the state of their physical remains or other monuments to their lives and believe that departed spirits might return to interact with the living unwittingly inflict a self-fulfilling curse upon themselves. Should one spend an entire life convinced that death does not sever his connection to the mortal realm, a belief compounded by his survivors who seek to elaborately placate his spirit, events that compromise the individual’s interests in the living world make it possible for the soul to return to seek retribution. As such, the animating spirits of mummies retain a fixation on the world of the living, coveting aspects of their long-ended lives far past the point of reason—and prove all the more dangerous for this dementia. Fortunately, just as the resurrection of a mummy might prove swift, so too might its return to peace should the animate corpse or another party restore or correct whatever disturbance provoked the deathless zealots in the first place. Even mummies restored to peace still harbor potential for great danger, though, as once it’s been provoked, time and greed rarely leave a corpse to rest peacefully forever.

Aside from mummies obsessed with their past lives, a second classification exists: the cursed. Not drawn back to the world by their own vices, these beings have their undead state forced upon them. In the most basic form, necromantic

magics empower a corpse with the traits of a mummy, granting such a creature the abilities of such ancient dead but without the fanaticism that make the most legendary examples so deadly. These creatures prove hate-filled but bestial, knowing only the will to destroy and the whims of their masters. Other cursed mummies typically spawn from excruciating deaths, curses of immortal suffering, and the wrath of ancient deities. On several occasions, such afflicted mummies have been unleashed from tombs meant to serve as eternal prisons, dusty vaults scored with damning confessions and vengeful prayers for eternal torment. These mummies lack the perverse protectiveness of their self-resurrecting cousins, replacing it instead with ancient plots, murderous obsessions, or ages-induced madness. The release of such vile beings, shunned even in the era of their creation, never proves kind to the modern age, time and insanity increasing the deadliness of these cursed dead countless times over.

NECROLOGY

Regardless of the way in which these horrors come into being, all mummies share two common traits: the horror they inspire in the living and their terrifying disease.

Power over irrational fear is not unique to mummies, though it is a trait more typical of spectral undead. Although these corpses vary in appearances—as do most bodied undead—the sight of a mummy provokes an overwhelming sense of dread and despair. While encountering the walking dead might reasonably shock anyone, the horror provoked by these wandering cadavers typically proves disproportionate to their appearance, especially when compared to similar and arguably more unnerving creatures. Such is this unnatural, unreasonable fear that only the most iron-shod souls might tamp down their horror and face a mummy with control of their faculties. In most cases, though, witnesses freeze with terror, becoming prisoners of fright and ready victims for the undead's whims. Such paralyzing unease appears to have less to do with what a viewer sees and more with a pervasive aura of negative emotions or an instinctual perception of the being's foul intent. Perhaps this mortal fear stems from the creature's ability to force its dire will upon the living or the exploitation of some power gleaned in its soul's travels beyond mortality. Or perhaps this is not a power of the dead, but rather a weakness in the living. Maybe a viewer understands on some level that before him treads a being that has seen the other side of death, knows its secrets, and through force of will alone has managed to return—and so, like a child abandoned before a runaway carriage, the witness stands slack-jawed and uncomprehending, preparing for what must seem an inevitable end. In any case, even the most courageous cannot hope to rely upon their bravery in the face of such potent horrors, for mummies are masters of fear and foul truths mortal minds balk to comprehend.

A more understandable fear rises from the horrific, magical malady that mummies carry. Blurring the distinction between disease and curse, the legendary affliction known as mummy rot is aptly named, as victims face a swift, grotesque, and notoriously incurable wasting ailment. The specifics of the disease vary from mummy to mummy, seemingly based upon cultural lore retained from the creatures' lives. While many victims of mummy rot waste away as if beset by disfiguring dehydration and blistering sunburn, mummies from non-desert climes might afflict their victims with illnesses that gradually reduce flesh to ooze, cause chilling water to leak from the body, mimic the effects of rapid aging or rotting, or any of a myriad of other terrifying fates. In the end, however, most who suffer from this dreadful curse meet a grotesque end, being reduced to little more than ashes and muck, components too insignificant for any but the most accomplished clerics to restore.

Only the intervention of a deity or significant magics can save one afflicted with mummy rot, as victims are not simply infected by the disease, but rather cursed by it. Such misunderstanding of the ailment's origin has led dozens to waste away even under the ministrations of the most accomplished healers. Only by first removing the curse might one then treat the ailment, though even banishing the afflicting curse is no assurance that the disease might naturally release its host. Only the combination of potent abjurations and healing magics can assure recovery from a mummy's touch, though such treatments often prove too rare and expensive to be reliably obtained before the affliction finally metes out a mummy's dreadful justice.

HABITAT & SOCIETY

While mummies notoriously haunt the hidden pyramids and buried necropolises of ancient cultures, such locations are not requisite to their resurrection. Most mummies created by powers other than foul magic possess connections to their resting places, perceiving such places as sanctuaries or prisons granted to them by their descendants. The form of such places means little; it is the spiritual connection and the importance the deceased places on such locations that hold significance. Thus, mummies are just as likely to rise from hidden barrow mounds, ancient catacombs, or acres of holy mud as from more majestic tombs. That being said, cultures that place such importance on the dead as to monumentalize the resting places of the deceased predispose themselves to the curse of mummies.

Upon reawakening, mummies typically retain a sense of the roles they occupied in life—such as fallen pharaohs, interred champions, or disgraced priests—and seek to carry out either their vengeance or their reawakened ambitions in fashions reminiscent of those from their past lives. Thus, a mummy's *modus operandi* proves more a product of its life than its undead form, its unpredictability adding to the difficulty in

both identifying and combating such a horror. For most such undead, no time seems to have passed since their deaths, and the secrets of their age remain fresh in their rotted minds. Thus, mummies often carry with them the knowledge, weapons, and magic of ages lost to history, yet even the most sage of these resurrected figures rarely shows any interest in passing along the lore of its era. Understanding what tools an ancient mummy has at its disposal may often be the key to defeating it.

Just as a mummy might utilize trappings of the past against which present-day cultures have little defense, they also possess the frustration of individuals out of time, of powerful figures made weak by the dissolution of all that once granted them esteem. Thus, many viciously seek a return to death, as they are god-kings of empires reduced to dust, high priests who have outlived their deities, or the great otherwise made weak by the irreconcilable passage of time. The most maniacal of the ancient dead might overcome their histories or seek to recreate them anew, establishing mockeries of eras past with themselves occupying their former positions of power. As mummies draw their power from their moot obsessions, none can merely accept the loss of what they once had, driven forward with all the vigor of deluded yet immortally powerful fanatics.

CAMPAIGN ROLE

History, not linen wrappings, separates mummies from more anonymous undead. While the most blasphemous necromancers might raise mummies from any corpse, those cursed to their fate by ancient punishments or who rise in response to modern violations bear with them not merely the powers of the ancient dead, but the full might of resentful traditions, gods, and determination.

The introduction of a mummy villain allows a GM to bring the world's history to deadly life. Garbed in the raiments of fallen societies, mummies are time travelers of a sort, carrying with them the trappings of their past lives—treasures, sorceries, and weapons forgotten or abandoned in modern day. The ancient dead also retain their memories, methods, and expectations, many conflicting violently with the truths of a world that has moved on. Their attempts to recreate the world they held power within might unleash all manner of forgotten dangers, from mythical summoned creatures to servants and beasts buried along with their masters. Such maniacal undead might even attempt to bring the past back to life in their new time, possibly through elaborate recreations, the resurrection of dead cults and

power structures, or even magic gates to ages past. Such machinations resurrect the past more significantly than mere ruins and ancient treasures, allowing epics long forgotten to invade the present through the plots of their most notorious and fanatical villains and masterminds.

Aside from using mummies as a method to revive whole histories, they also give GMs the opportunity to throw PCs into the role of the invader. Most corpses with the potential to be mummies lie quietly until outside forces disturb them. Treasure hunters, tomb robbers, and explorers—all typical roles for adventurers—who steal from or otherwise upset ancient vaults run the risk of awakening and unleashing a mummy intent on restoring what has been spoiled and punishing interlopers. In such cases, the PCs are put in the role of offenders facing severe yet righteous wrath. Such might also lead to a party's choice of setting right its offenses—possibly meaning abandoning some fantastic treasure—or doing battle with a being seeking only what is its by right.

KNOWN MUMMIES

Several mummies are known to walk the lands of Avistan and Garund, and from the deserts of mysterious Osirion to the frosty reaches of the Crown of the World, no land is safe from the avid desires of the ancient dead.

Alexayn the Miser: When Jhandorage Vaulnder Alexayn finally died, he did so a fantastically wealthy man. One of the founders of the now-notorious Aspis Consortium, Alexayn spent nearly half his considerable, unscrupulously gained fortune during his waning years, assuring his remembrance through construction and memorials across his home city of Ostenso. When the miser died, as per his wishes, he was interred in a towering mansion of a mausoleum along with his renowned collection of exotic objects d'art. Yet in the 108 years since his death, most of Alexayn's works have been overshadowed, and the business he founded has forgotten him. When an attempted grave robbing roused the mogul's corpse—covetous even in death—the discovery that his memory had already faded infuriated the newly risen mummy. Now, clad in the dated finery of a Chelish nobleman, the corpse Alexayn works to remind the world of his deeds, and assure that his name will linger for all time—in infamy if needs be.

The Harlot Queen: This creature is the only known mummy created from the mortal remains of a goddess. In life she was Arazni, warrior-herald of Aroden, who ascended when she passed the test of the *Starstone*. The Whispering

FACETS OF FEAR

The horror of the mummy springs from more than merely its state as a walking corpse, its existence intrinsically tied to matters ancient and mysterious. Creatures born of faith in cultures, divinities, and traditions that, in many cases, undeath has cursed them to outlive, these ancient dead carry with them the secrets and powers of ages past, inscrutable plagues and righteous curses from which the living have little defense. Their terror is the fear of the dark and forgotten, of bitter cultures crumbled to dust, of vengeful deities and atrocious worship, and of a sacrosanct path to death upon which the living have no right to interfere. Grave robbers intruding upon the resting places of these ancient dead face not just the dangers and traps associated with forgotten crypts, but immersion in a realm of death intended to be sacred and inviolable—a home not just for a corpse, but for an immortal soul. Should such trespasses rouse the fury of the tomb's resident, in their final moments interlopers realize the blame for their own deaths falls not entirely on foul magics or the curse of unlife, but upon their own hubris for intruding upon the kingdom of the dead.

Tyrant killed her during the Shining Crusade, and though her allies the Knights of Ozem buried her with full honors, the necromancer-ghost Geb stole her remains and animated her as a mummy, believing her the only creature worthy to rule beside him. He rarely manifests in the world anymore, and she is little more than a figurehead. None can say how much she remembers of her former life.

Ossa Stormseer: At a young age, the raider princess Ossa nearly died from frostbite, losing six of her fingers and her right eye, which her chieftain father replaced with a brilliant blue iolite. This eye was said to grant her the power to see storms, and as she rose as a priestess among her people, she became known as a favorite of, even kin to, the spirits that stir the depths of the seas. After a long life devoted to her people's brutal gods of the oceans, Ossa fell in battle, her funeral barge sent to sail to the horizon to rejoin the revered denizens of the sea. But the fickle tides claimed the priestess's ship and swept it north, where it wrecked upon a glacier, never to sink into the depths. Her body frozen amid the rich offerings of her longship, Ossa's spirit returned, animating her corpse as a mummy. Having been trapped for centuries, the raider witch has gone mad with frustration, believing herself punished for some spiritual dishonor. She now lies imprisoned, seeking only to redeem herself in battle so she might be granted another, honorable burial at sea.

Walkena: In an odd reversal of Arazni's story, Walkena was a mortal boy prince of the original Mwangi society. Now the undead prince's followers worship him as a god, and the cruel boy-mummy is somehow able to grant spells like any deity.

AWAKENING THE DEAD

Not just any corpse can spontaneously manifest as a mummy. GMs interested in creating mummies resurrected “naturally” (rather than by spells like *create undead*) should consider the passion and force of will of the would-be mummy. By and large, a corpse should be of a creature with a Charisma of 15 or higher and possessing at least 8 Hit Dice. In addition, it should have a reason for caring about the eternal sanctity of its remains in excess of normal mortal concern. As such, priests of deities with the Death or Repose domains, heroes expecting a champion's burial, lords of cultures preoccupied with the afterlife, or individuals otherwise obsessed with death or their worldly possessions all make suitable candidates for resurrection as mummies—though countless other potential reasons for resurrection exist.

AN ACCURSED FATE

Easily the most feared ability of mummies is their notorious curse: mummy rot. Both a disease and a curse, this affliction proves exceptionally difficult to cure, even for accomplished healers. Part of this blight's infamy comes from the specifics of its symptoms. While many mummies cause a curse that gradually withers away its victims till nothing but desert sand remains, the affliction itself proves highly variable and unique to many atypical individuals. In each case, the effects prove the same, but the symptoms can be wildly distinctive.

Corpse Chills: Those cursed with this form of mummy rot find themselves afflicted with an intense cold and a spreading frostbite that proves resistant to all nonmagical treatment. This curse usually originates from bodies mummified by extremely cold, dry conditions or buried in ice.

Grave Ichor: Someone cursed with this form of mummy rot finds his skin loosening and slipping as if over-soaked with water. Eventually, in its most fatal stages, the victim's flesh begins dripping from his body.

Phantom Infestation: The victim of this form of mummy rot bears the marks of one whose flesh is beset by worms or parasitic vermin. Though the skin breaks with scars, verminous trails, and minute bites, no infestation is ever witnessed, at least until the body bursts in an eruption of scarab beetles upon the victim's death.

Swamp Crumble: Typically transmitted only by mummies created by bog burial, victims of this affliction take 1d3 Dex, 1d3 Con, and 1d3 Cha instead of the normal effect of mummy rot. The disease causes the victim's bones to become brittle and dissolve; upon death, only the skin, internal organs, and other soft tissues remain. A side effect of swamp crumble is the victim's hair becomes tinged with red, with light-colored hair turning as red as fresh blood.

SAMPLE MUMMY

The tale of Pharaoh Sharsqa II and Shielseis, his dedicated concubine, is one of the greatest and darkest love stories of

ancient Osirion. Beautiful beyond words and vain beyond measure, Shielseis was accused of slowly poisoning her lord's first and second queens as well as his entire harem, leaving herself the sole recipient of his affections. When her murderousness was revealed by the pharaoh's chief advisor, the harem girl was condemned to death by a hundred snake bites. With her final words, she dramatically professed her love for the pharaoh before leaping into a pit of asps. Yet, despite her being waist deep in vipers, the asps refused to bite. Overwhelmed by the miracle and moved by her devotion, Sharsqa fell madly in love with the girl and lifted her from the pit, pronouncing her his new queen. When the pharaoh's advisor spoke out against Shielseis's low birth, a tiny asp slithered from her gown and struck the aged counselor, killing him instantly.

Eight years ago, grave robbers discovered the tomb of Sharsqa II and haphazardly plundered it, leaving behind the sarcophagus of Shielseis. Rising soon after as a elegant mummy clad in a beautiful ivory mask, the queen now seeks out both those who despoiled her beloved crypt and the unawakened mummy of Sharsqa II. Her search has led her across northern Garund, where she has fostered a network of agents and informants who know her only as the Queen of Asps.

SPECIAL ABILITIES

Despair (Su) All creatures within a 30-foot radius that see Shielseis must make a DC 19 Will save or be paralyzed by fear for 1d4 rounds. Whether or not the save is successful, that creature cannot be affected again by her despair ability for 24 hours. This is a paralysis and mind-affecting fear effect.

The save DC is Charisma-based.

Curse (Su) *Mummy Rot*: slam—injury; *save* Fort DC 16; *onset* 1 minute; *frequency* 1 day; *effect* 1d6 Con and 1d6 Cha; *cure* —. Mummy rot is both a curse and a disease and can only be cured if the curse is first removed, at which point the disease can be magically removed. Even after the curse element of mummy rot is lifted, a creature suffering from the disease cannot recover naturally over time. Anyone casting a conjuration (healing) spell on the afflicted creature must succeed on a DC 20 caster level check, or the spell is wasted and the healing has no effect. Anyone who dies from mummy rot turns to dust and cannot be raised without a *resurrection* or greater magic. The save DC is Charisma-based.

The Ecology of

The Neogi

The demons of the Flow

by Jon Winter

Artwork by David O. Miller

"Ship ahoy!" The sharp cry from the crow's nest launched the crew into a flurry of frenzied activity; loading ballistae, hoisting sails, grabbing hand weapons, and lashing barrels to the decks.

"Raise the cloaking helm!" Captain Orlando shouted down to the bridge. A shimmering, colorless wall of magical force materialized around the *Blue Jay*. To an onlooker, the shriekship and her elven crew would have simply vanished, blending perfectly with the starry backcloth of space.

Red and wicked, a massive neogi deathspider cruised effortlessly toward the smaller ship. Web-like sails glistened between its huge grappling claws, scattering silver-orange light below. *Blood Glory* was the name daubed in black on the deathspider's hull.¹ Slowly, ominously, silently, the claws parted. The forward shell of the 'spider retracted, exposing the deck beneath. Even from this distance tiny figures could be seen, swarming about the weapons platform between the catapults, fol-

lowed by lumbering, hulking monstrosities.

"They've spotted us!" At the shout from above, Orlando's heart sank. A catapult stone from the 'spider whisked past, dangerously close.

"Hard a-port!" The shriekship suddenly rolled onto one side, throwing the gravity plane out of line for a brief instant. The deathspider spun, and the stars spiralled across the void. The *Blue Jay* lurched forward, doubling its speed as it passed the shell of the 'spider.

"Fire at the hulks!" Three ballista bolts shot whining from the shriekship, then their scream was abruptly silenced by the void. A barrage of missile fire followed from the elves, their arrows streaking toward the larger ship. Cheers from the crew greeted the sight of two of the massive hulks falling from the 'spider, pierced with arrows and ballista bolts.

Slowly, almost ponderously, the deathspider turned on the shriekship. With the attack the *Blue Jay's* cloak had fallen, and the neogi were upon them. . . .

Crunch! The whole ship shook violently under the impact of a huge catapult stone. As Alvirath watched the battle unfolding from her position at the helm, sharp flashes of white pain stabbed at her mind; jettison fire crashing onto the upper deck.

Wheeling around, the shriekship dove beneath the *Blood Glory*, which hung motionless in the void, impossibly huge, defying gravity. Numerous ballistae fired their lethal bolts at the *Jay*. The small ship heaved as cracks appeared in the hull and one wing was torn away.

"Return fire!" Captain Orlando's voice rang out clear above the surviving crew's cries of alarm. Simultaneously the shriekship's three ballistae fired. Three bolts sped toward the 'spider, crashing silently into her crystalline hull. The elves cheered raggedly, but their dwindling courage evaporated as the 'spider mercilessly bore down upon the crippled *Blue Jay* once again.

Bright signal lights flared from lamps at the bow of the shriekship. Red, yellow, yellow; the code for parlay. Orlando crossed his elven fingers, praying the stories he had heard of the neogi were exaggerated.² He did not breathe until a returning flash came, seconds later. He mouthed the words silently as he translated them:

"Surrender or die."

Before Orlando even had time to order a retreat, the *Blood Glory* moved. Colossal grappling claws crashed onto the *Jay's* deck, ripping through the rails and crushing the hull. Already figures swarmed down the grappling legs; weak, pale human slaves shambling vaguely as if they were undead, and hulking blue-black creatures with swirling, mesmerizing eyes.³

The next few minutes were chaos. The *Jay's* crew hacked randomly at anything that moved, but the neogi's slaves quickly eliminated resistance. Four of the spider-like neogi scuttled down the legs of the deathspider and stood on the edge of the *Jay's* deck, dancing and chanting strange hissing words of arcane power in their foul language.⁴

Orlando shouted to his crew to attack the spell-casting neogi, but most were already bewitched by the hulks. They slashed at each other, the hulks, or anything else that was near. Feeling a stabbing pain in his lower leg, Orlando recoiled in horror as a neogi sank its fangs into his flesh. Lethargy coursed through his veins and, almost in slow motion, he stumbled backward. A sharp cuff over the head sent Orlando reeling toward the deck and into darkness.⁵

Within five minutes the ship was overrun; the hulks began stripping the shriekship of anything even remotely valuable. The bodies and surviving crew of the *Blue Jay* were bound by the mindless zombie-slaves, and dragged back into the 'spider. Leaving the shriekship a drifting wreck, the *Blood Glory* turned and left the gruesome scene, 'jamming off into the depths of the Stellar Main.⁶

In the distance, a dim star changed its course and began to follow. . . .

Allowing his sensitive elven eyes to adjust to the dim light, Orlando sat up

slowly. His head was still throbbing from the blow he had received. As the room came into focus, he could see he was in a dark, dismal cell.⁷ The stench of death was nauseating. Low, agonized groans of pain from nearby cells identified his surviving crew—they were not many. Orlando tried to stand, but his throbbing legs would not support him.

"Rest my son, you are still weak."

Orlando giddily turned to face the unseen speaker, fumbling for his sword—it was gone! An old man stood behind him, eyes as black as the void. Cocking his head slightly, the stranger smiled a little, as if amused. His voice was strange, almost lifeless.

"Do not worry, I mean no harm. I too am a prisoner here. Forgive me for startling you." The man placed a cool hand upon Orlando's forehead, muttering something under his breath. Warmth and vigor flowed through his hand into Orlando—he felt refreshed, healthy even.

"You are a priest?"

"Yes, my son. I am Feldar, of Ptah. Drink this. It will help." He held out a half-full waterskin. Orlando stood, took a swig, and spluttered as the powerful brandy burned inside him.

There was a pause before Orlando spoke again. "How long have you been here? What do they want with us?"

"I do not know, my son. These neogi are attacking all ships within range. I fear they wish to provoke the elves into another war. I suspect they will want to interrogate you."⁸

Orlando shuddered. He had heard many tales of those "questioned" by the neogi losing their limbs, eyes, nose, or ears to the vile creatures. His throat tightened as fear gripped him. Something approached the cell. Striding clumsily down the corridor was the dark form of an umber hulk, a neogi cradled in its arms. The pair stopped outside one of the cells opposite his own. The hulk bellowed a deep growl, and Orlando saw Alvirath—his wife—scrambling to her feet in the feeble light.

"Ga'kah'ki'zid am I," hissed the foul neogi. It paused, as if it expected the poor elf to be impressed. "Priest of Thrif'ki I am. Master hungers for meat. Meat with me will now come to Overmaster."⁹

There was a sharp creak as the hulk heaved open the massive cell door, and a cry of pain as the lumbering monstrosity grabbed Alvirath by her silver hair and pulled her from the cell. Protesting frantically, Alvirath was roughly shoved along the corridor. She beat her fists against the hulk's stony chest, but it ignored her angry blows.

Frustration and anger welled inside Orlando. "No!" he shouted, reaching through the bars in a vain attempt to save the elf, "You can't do that to her!"

Ponderously, the hulk turned about, clacking its huge jaws. From its cradle in its lord-servant's arms the neogi grinned a cruel, toothy smile. "Want you to come too?" it snickered gleefully. "Master-lord pleased to meet this Meat will be."

On command, the hulk lurched forward and unbolted Orlando's cell door. Rudely seizing Orlando by the neck, the huge hulk pushed the two prisoners in front of it. Feldar shook his head in despair as the cell door slammed, hoping Orlando's death would be a quick one.

Perched atop the hulk's massive head, the neogi flexed its legs eagerly, anticipating a great feast for its Overmaster. The loathsome creature's eyes glittered evilly in the dim light. Orlando struggled in vain to escape the iron grip of the hulk, but his neck was just squeezed more tightly. He reached across the hulk's broad chest, to touch Alvirath. Mute with fear, she could not speak, but her eyes said farewell.

The party left the cell block and stumbled along a narrow corridor deeper into the ship. The air became putrid and uncomfortably warm as the group emerged into a low-ceilinged hall. A set of double doors filled the south wall of the room. Orlando guessed from the two hulk guards on either side of the doors that whatever was inside was important.

Their neogi captor, from its vantage point on the hulk's head spoke again. "Now to meet Broodmaster we go." On a sharp command the hulks heaved open the huge doors. The fetid odor of stale air and

death washed over Orlando. His stomach lurched.

Slowly and deliberately, their hulk captor dragged them forward, its colossal strength no match for two elves. The neogi on the hulk's head danced with a bloodthirsty furor, its sharp talons clattering on its lord-servant's iron-hard skin.

The stench worsened as they advanced into the huge room. Orlando could now see that the floor in the center had been cut away, revealing a gaping pit below into the cargo hold. His heart clenched in horror as he saw movement in the darkness below. Something huge twitched, glistening in the dim light with thick slime. A great watery eye appeared in the mountain of rotting flesh, its hideous gaze washing over the group. Another eye flicked open, and with a rumble, a cavernous mouth widened. Wickedly-sharp teeth gleamed as a deep bellow erupted from the monster.

There was movement across the room, and from the shadows scuttled more of the foul neogi. Hissing and spitting they advanced, circling the pit. The two captives stood inches from the edge of the chasm, still held firm by the hulk. From the pit the massive beast rose, squelching and growling hungrily. A humanoid creature across the pit caught Orlando's eye. His squinted to make out its form.

Greetings and *farewell*. The voice slithered through Orlando's mind as he strained to see. Sibilant and cool, it was quickly evaporated by the heat of Orlando's rage. An illithid! He had always suspected the slimy devils worked with the neogi, and here was proof.¹⁰ Struggling with renewed vigor, he tried desperately to escape from the grasp of the hulk.

Escape is *futile*. Orlando felt his muscles suddenly seize up, and an agony of cramps shot through his body. He knew Alvirath felt the same pain. Mentally cursing all illithids, Orlando prayed to the elven gods to save him.

They cannot hear you out here. The illithid seemed amused by Orlando's futile efforts.

"The time of the broodmaster is nearing! Slake its thirst for meat we shall now! For

the glory of Thrig'ki!" the small neogi screamed, spittle flying from the corners of its mouth. The hulk moved to throw Alvirath over the precipice.

"The glory of P'kk!" another of the small creatures shrieked. "The glory of T'zen'kill!"

"All the Holy Ones glory have!"

A sudden explosion rocked the ship, and searing flames erupted across the chamber. Terrified by the intense fire, the neogi scattered, screaming. The hulk holding Alvirath and Orlando reflexively shuffled backward, away from the pit, dragging its prisoners with it.

Orlando's fear and anger forced the illithid from his mind as he struggled against the iron grasp of the hulk. With grim satisfaction he noted the mind flayer's robe was burning, and he felt its shrill mental screeches of pain.

The far wall of the room suddenly collapsed, pierced by the barrel of a massive gun. The thunderous force of the ram threw Orlando and the hulks to the floor. Through the breach swarmed giff marines, brandishing cutlass, pistol, and all manner of outlandish weapons. The hulk holding the elves cropped his captives to enter the fray. Striking his head on the deck, Orlando once again fell into unconsciousness. Alvirath's tears splashed warm on his cheek as she kneeled next to him.

Below them the broodmaster was

afire, cracks opening in its warty sides. Young neogi erupted from its decaying flesh, spilling across the floorboards.¹¹

Footnotes

Neogi look like a foul cross between a spider and a moray eel, and are about the size of a small dog. All neogi and their slaves are tattooed; the garish and intricate patterns announce name, age, number of slaves owned, and social status. Neogi are covered in coarse brown hair, which is frequently dyed bright colors as a status symbol. Their eight spidery legs are long and thin with sharp nails and flexible joints. Their heads are those of serpents or eels, with two forward-facing eyes and a mouth of sharp teeth for rending flesh. More information on neogi may be found in the *Lorebook of the Void* from the original SPELLJAMMER® campaign boxed set. They also appear in the MONSTROUS MANUAL™ hardcover book.

1. The names of neogi ships show little imagination. Most involve the words "slave," "blood," "death," or "pain." Neogi ships tend to be painted red, black, orange, or purple with silver and gold highlights also being popular.

2. Neogi brutality is legendary, for they have no morals and less sympathy. Weak or injured neogi are killed and devoured. All slaves are eventually eaten, except the umber hulks that are too valuable. Any

who surrender to the neogi are enslaved or placed in a lifejammer helm. Any slave refuses to or is incapable of working is eaten. Kender, halflings, and gnomes are not valued slaves because of their irritating habits; they are usually just tortured and eaten. Most other races are considered prime slave material, especially humans, elves and ogres.

3. Each mature neogi has an umber hulk slave, valued as its most treasured possession. Most neogi insist upon being carried everywhere by their hulks since they themselves can scuttle around only slowly. Powerful neogi own two or more hulks.

The neogi have an overdeveloped concept of ownership—everything is the property of a neogi. They consider themselves the supreme race in the universe and therefore own everything in it. This superiority complex leads to the strange titles they use: umber hulks are called “lord-servants,” other neogi “kinsmen-slaves,” the ship’s master “captain-owner,” and all others are “servant-slaves” or simply “meat.”

4. Roughly one in 10 neogi has magical ability as a wizard of levels 1-8. Some neogi have aptitude enough to rise to 14th level, and rumors persist of magic-using neogi liches. Specialist neogi mages may choose between the schools of Necromancy, Conjuraction/Summoning or Invocation/ Evocation; other schools are unavailable or

considered too weak to be of consequence. The foul creatures have developed many new spells of their own (see DRAGON® issue #184’s article, “Magic with an Evil Bite” by Jason M. Walker for examples).

Neogi speaking human tongues over-emphasize the letters s, z, and k, making their voice sound harsh and guttural. *K’azz’jak’n*, the neogi language, is reminiscent of snakes hissing and the whirring of thri-kreen. The structure and word order of the neogi tongue is very complex, but when speaking Common neogi do not bother with grammar.

5. Neogi possess a poisonous *slowing* bite that they use infrequently, because they must be close to their victim to administer the poison. The cowardly neogi are reluctant to place themselves in danger for the goods of others, preferring instead to send their slaves into combat.

This *slowing* poison also acts as a *charm* agent when administered over an extended period of time, helping to brainwash the slaves so they will not rebel. The effects are hard to reverse, requiring dispel *magic* and *neutralize poison* spells.

6. UMBER hulks are trained to loot ships, and they enjoy this task immensely. They can recognize valuable metals, gemstones, and weapons, and usually can locate spelljamming helms. Food and drink often is devoured on the spot, as are any dead defenders.

When an enemy vessel has been stripped, neogi always leave the shell behind as a warning to other spacefarers—who can recognize the work of the neogi from its sheer brutality.

7. Neogi eyes are sensitive to light. Although bright light causes them no harm, neogi prefer to keep their ships in dismal darkness. They possess infravision to a 60’ range. Neogi are not clean creatures, and the filth and smell of their quarters aboard their ships is quite nauseating. DMs should feel free to impose Constitution checks the first PCs encounter the stench.

8. Neogi torture methods are the stuff of fearsome tales. The pain that victims are forced to endure is hideous enough to make human torturers’ stomachs turn. Neogi eat flesh, preferably alive and screaming, be it human, neogi, or illithid. Their normal diet is one pound of meat per day, although neogi may live without food for up to two weeks. Torture is their favorite method of “preparing” it.

9. One in 20 neogi has priestly abilities, and each spelljamming vessel is overseen by at least one priest. Priests are permitted to add the word *ki’zid* after their name, meaning “favored of deities.” The Powers of the neogi are referred to as “deity” and not “god” or “goddess,” as there is no distinction between male or female amongst the sexless neogi. Deities are viewed as servants by the insolent neogi, who continually demand favor and good fortune. Neogi never pray, and rarely offer sacrifice, since they see themselves as more important.

Pronouncing the name of a neogi deity incorrectly is an invitation to be killed slowly and painfully. Humans, who tend to find neogi pronunciation difficult, are advised not to attempt saying deities’ names. There are five neogi deities:

Thrig’ki (lesser power), Align: NE, Plane: Karish (Abyss), Portfolio: “love” (envy/jealousy)

Although the deity of “love,” *Thrig* is better translated as jealousy or hatred. To neogi, jealousy and love are the same. Thrig’ki appears as a neogi with writhing snakes for hair and twelve spidery legs.

P’kk (lesser power), Alignment: LE, Plane: Ki’pik (Baator), Portfolio: fear, tyranny.

P’kk is the favorite deity of captains and neogi in positions of power who enjoy bullying and manipulating their lessers. P’kk is seen as an umber hulk with the head of a neogi.

T’zen’kil (lesser power, Alignment: NE, Plane: Karish, Portfolio: torture, pain, suffering).

The name of T’zen’kil is invoked by neogi torturers and those in charge of the slave pens. Worshippers are tattooed with grotesque black symbols of pain. T’zen’kil looks like a black neogi with a whip for a tongue.

Kr’tx (lesser power), Alignment: CE, Plane: Jik’qu (Gray Waste), Portfolio: war, brutality, strength.

PLUS FIGURES BY:

CITADEL, GRENADIER, MITHRIL, MINIFIGS, RAL PATHA, RAFM.

Kr'tx is the neogi deity favored by umber hulk slaves, who delight in brutality and wanton destruction. The favor of Kr'tx is always demanded before a major battle. Kr'tx is seen as a red neogi with continually burning claws and hair.

Kil'lix (lesser power), Align: LE, Plane: Karish, Portfolio: death, murder, poison.

Kil'lix is the patron of murderers and assassins in the neogi world, and is seen as the darkest of shadows. Its horrid laugh is high-pitched and whining, yet also deep and booming, and is said to be heard by those who are about to die.

All neogi priests gain access to the same spheres of spells. **Major access:** All, Astral, Charm, Combat, Elemental, Healing (reversed only), Necromantic, War. **Minor access:** Protection, Summoning.

10. The neogi have no allies except for corrupt mind flayers, and this alliance is tenuous at best. Even the foul drow loathe the neogi, branding them blasphemers against their Spider-Queen Lolth. Illithids work for large profits as intermediaries between the neogi and the Arcane, who are unwilling to deal with the neogi directly.

11. Neogi reproduce asexually by poisoning old, frail captain-owners with a variety of toxic chemicals. The victims rapidly collapse into coma, and slowly expand into Great Old Masters" or "Broodmasters."

These foul creatures grow fat on the flesh of slaves, all the while being eaten from the inside by developing young neogi. When broodmasters near the Time, their flesh begins to split. In a final ritual they burst, spilling out live young neogi. The young fight over the remains of the broodmaster until it has been devoured, then attack each other. From a litter of forty, only six or seven will survive, but these will be the toughest, most brutal neogi of the group. Natural selection therefore helps the race to remain powerful.

This violent reproductive process has a number of repercussions on the race. Neogi are sexless, and they cannot understand the concept of gender or love in other races. Many consider human women to be a different race from human men. The viciousness of their early lives leads their evil and hateful natures. Dominant neogi emotions are hatred, jealousy and fear, and it is these which keep lesser neogi in place under their masters.

Captain-owners become broodmasters when their underlings grow tired of senile rulership. If left to live their full lifespan, neogi die at about age 45, but most are assassinated before they reach 30.

The only neogi fable of interest to sages details the neogi creation myth. Their legends claim the universe was created by a Being named Ka'jik'zxi. This deity con-

structed the Planes, Spheres, Flow, and the planets. Finally it created five more deities, each like itself only weaker. The five, named Thrig'ki, P'kk, T'zen'kil, Kr'tx and Kil'lix, each represent one of the desirable aspects of the neogi race. These deities squabbled over their areas of control until Ka'jik'zxi grew tired of their bickering and punished them. Furious, the five hatched a plot to kill Ka'jik'zxi. Concocting a fatal brew with the "foulest ingredients" (including friendship, mercy, and compassion) they poisoned their Creator.

Ka'jik'zxi swelled up to a huge size, and the young deities hid, fearful of Ka'jik'zxi's wrath. Suddenly, Ka'jik'zxi burst, spilling its entrails across the spheres. Some landed in the Outer Planes—the parts containing mercy and compassion became the gods of good. Some of Ka'jik'zxi landed in the Lower Planes and became the evil gods. Ka'jik'zxi's brain landed in a forgotten Crystal Sphere.

After much searching, the neogi deities found the brain. There they were amazed to discover life—the first neogi had been "born." The deities taught the neogi of the multiverse and their destiny to conquer. The neogi built ships and left their homeworld—referred to in legends as Ka'jk'z. They have never returned, but the neogi know their mission: to conquer all the Spheres.

Telephone (01223) 355188.

Dreelix pounded the gavel three times on the table and said those magical words of power, the words that silenced the conversations of those around him and brought all eyes facing his way. These were quite easily his ten favorite words in all the languages known to man:

"This meeting of the Monster Hunters Association is hereby opened."

Satisfied that his colleagues were giving him their undivided attention, Dreelix continued. "Tonight Zantoulios will debrief us on the results of our little forest expedition. Grindle will report the status of our current funds and will be collecting dues from those of you who failed to pay last month. Let me remind you all, here and now, about the ten-percent late fee! Finally, Willowquisp has come across a formula for a *potion of longevity*; he'll describe the necessary ingredients, and we'll start planning a Hunt accordingly."

Suddenly, the door to the meeting-hall swung open, and into the room stepped a beautiful young woman. "Mister President," she said in a husky voice, closing the door behind her, "I have a point of order: I seek admission into your illustrious organization."

Dreelix, irritated by the interruption of his meeting, was further annoyed to see that he was no longer the center of attention; all eyes were upon the young woman. Scowling, he opened his mouth to rebuke her, but then he got a good look at her himself.

By the gods, she was beautiful! Dreelix was never one to let his emotions run wild, but he felt his heart actually skip a beat as he looked upon her. Brown hair flowed-no, cascaded-over her shoulders, framing the most angelic face he'd ever seen. Large brown eyes, slightly almond-shaped and not a little mysterious, managed to project sensuality, aloofness, and mystique all at the same time. Her lips, her radiant skin, her sleek figure, her—were they? yes!—dimpled cheeks.... Dreelix's eyes didn't know where to focus as he tried to absorb the totality of this intense creature.

A small *hmmph!* caught Dreelix's attention, dragging him from his reverie. It was the Conjurer Ablasta, sitting at his right, who was frowning in jealousy at the young woman. Lady Ablasta enjoyed the position of being the only female member of the Monster Hunters Association, and she apparently didn't think much of sharing the role with a gorgeous young woman at least thirty years

THE ECOLOGY OF

The Nymph

her junior. As she stared at the newcomer, she wore an expression of distaste usually mastered only by spinsterly head librarians when confronting a young patron with several overdue books.

Realizing his mouth was still hanging open, Dreelix snapped it shut and swallowed, his throat suddenly dry. He had lost control. How had this happened? Blast it all, he was in charge here!

"Look here, Miss . . ." he managed to blurt out, before realizing he didn't know her name.

"Azurielle," the young woman supplied.

"Azurielle, thank you. There is a certain protocol about these things. First of all, to gain admittance, you must be able to provide information on a specific creature that can be used in the fashioning of magical spells, items, and the like. There is the matter of the admittance fee, of course, and you must be sponsored by a current member. Until you can provide those ..."

"I believe I have the entrance fee right here," the young woman replied, reaching to untie a small sack from her belt. Dreelix couldn't help but notice how the simple movement accentuated the curves of her body, and he swallowed hard again. "As for a sponsor, perhaps one of you kind gentlemen ..."

She couldn't finish her sentence. Immediately, Grindle the Coin-Counter leapt to his feet, blurring out "I'll sponsor her!" He wasn't the only one to rise to the occasion. With a scraping of chairs, both Zantoulios and Buntleby jumped up as well, voicing their willingness to serve as sponsor, the former bumping his table as he did so, knocking over his drink.

"Well, it appears that we have no shortage of sponsors," admitted Dreelix. "But what about a monster? Do you have information on a specific monster useful to the Association?"

"I do indeed," replied Azurielle. "I have detailed information on the nymph."

Dreelix smiled. "You're a little late, I'm afraid. We only just last week returned from a successful nymph Hunt. In fact, Zantoulios was just about to brief us all on the results."

"Perhaps I might listen in, then?" asked Azurielle. "My knowledge is quite considerable; I might be able to add to your list of useful nymph by-products."

"By all means," replied Dreelix with a smile.

Looking upon Azurielle, Buntleby thought it seemed almost as if she was even more beautiful than when she first

entered the meeting hall. He was fortunate enough to have an empty chair next to him, and with a grand flourish and a beaming smile he ushered her into it. As she took a seat, he detected a scent like wild flowers about her.

"Now then, Zantoulios, if you're quite finished there ...?" Dreelix asked with a raised eyebrow.

Zantoulios had a sopping wet cloth napkin in his hand, with which he had been mopping up his spilled drink. "Certainly," he replied, dropping the napkin on the table and approaching the lectern on Dreelix's left.

Zantoulios cleared his throat, looked at Azurielle, smiled, and began his briefing. "Last week, after hearing of the presence of a nymph in the forest nearby, three of us went out in search of her. We had, of course, studied up a bit on the magical abilities of nymphs and pretty much knew what to expect."

"If I may ask, what magical abilities were you aware of, and how did you plan on counteracting them?" asked Azurielle.

"First of all, it is well known that even a glimpse of a nymph can cause blindness.¹ We countered that by wearing black gauze blindfolds. These allowed us to make out figures around us, but not in any detail. Thus, the nymph appeared as no more than a silhouette and could cause our vision no harm."

"Very clever," commented Azurielle.

"Next, we knew nymphs can cast the dimension door spell once per day.² Not wishing her to escape so easily, we assigned Grindle the task of keeping her in one place. As you can well see, Grindle easily weighs more than a *dimension door* spell can transport; once he got his arms around her, she was unable to teleport away."

Looking at Grindle, Azurielle could indeed see how the man's weight would prevent the use of the spell. Sensing her eyes upon him, Grindle beamed, flexed, and added "It's all muscle," a statement belied by the folds of flesh wobbling under his upper arm.

"But how did you approach her undetected?" asked Azurielle. "Surely the nymph would have seen you stumbling up to her, wearing gauze blindfolds and waving your arms about in the air?"

"Not so," replied Zantoulios. "It was only necessary for us to get Grindle within striking distance. While the rest of us stayed well out of sight, Grindle *polymorphed* himself into a mole. Thus, he was able to walk right up to her — nymphs often pet forest creatures that approach, and she certainly wasn't going to suspect a mole of being a man just because he kept his eyes closed.

"Once Grindle felt the nymph stroking his mole-pelt, it was simplicity itself to cancel the spell and overpower her. When Grindle called out that he had the nymph, the rest of us approached, and as he held her steady, it was easy enough for us to cut off a few locks of her hair—useful in the production of *sleeping potions*³—and coax a few tears out of her."

"Oh? And how did you manage that?" asked the young woman.

"It was simple, really, she was very obliging. In fact, she began leaking tears as we began cutting her hair—something about diminishing her beauty, I think. Dreelix kept the tears flowing by describing what would happen if she tried to escape—you know, burning down the forest, stomping on baby bunnies, that sort of thing. He's really very good at it, you know."

"I have always had the gift of eloquence," admitted Dreelix.

At his seat next to the beautiful newcomer, Buntleby frowned. A quick look at his friend Willowquisp the Zoophile, seated across the room from him, confirmed that neither man thought much of their leader's tactics. Apparently, neither did Azurielle, for Buntleby thought he could sense repressed anger building beneath the calm exterior of her lovely young face.

"How much did we acquire?" asked Old Gumphrey, the oldest of the Monster Hunters and a sage of well renown.

"I'd estimate enough hair for a good dozen or so *sleeping potions*," replied Dreelix. "I haven't begun distilling the tears into *philters of love* yet, but I'd guess we should have enough for at least four, maybe five. I'll keep you posted."

"Well, Azurielle, as you can see, I'd say that we did our homework on the nymph. Thank you, Zantoulios, you may step down." Returning his gaze to the young woman seated by Buntleby, Dreelix asked, "Is there anything you'd care to add?"

"There certainly is," replied Azurielle, standing up and approaching the lectern. All eyes were upon her as she walked, including those of Zantoulios, who nearly tripped over his chair as he attempted to take his seat.

"First of all, your study and research of the nymph seems a bit one-sided: it seems you bothered to study only how to capture and use a nymph to your own benefit. And, I must say, even that list is not all-inclusive. I know of at least one other use to which you can put those locks of nymph's hair."⁴

"By all means, let's hear more!" said Dreelix, always eager to learn of more ways to plunder magical creatures of their properties. He nodded to the Conjuror Ablasta, who began her spell of recording. Instantly, a feather quill poised itself over a book of blank pages, ready to copy down the words that would lead the Monster Hunters Association into new avenues of exploitation.

"Before I take up those matters, I would like to say a few words in general about the nymph," said Azurielle. Dreelix rather grumpily agreed; he was eager to get to the important facts, but found it hard to say "no" to such a beauty. Besides, he could always just daydream through the boring parts.

"Nymphs are not normal, flesh-and-blood creatures of the ordinary world. They are spirits of nature, the physical embodiments of loveliness. They appear as perfectly formed human or elven women; there are no male nymphs. Nor,

1. Not only men but also women are susceptible to being blinded by looking at a nymph, as are demihumans of either sex. Furthermore, one need not look directly at a nymph in order to be blinded: viewing one through a scrying device like a *crystal ball* or *reflecting pool* has the same effect. The image of a nymph in a simple mirror can cause blindness; even seeing a nymph's reflection in a pool of water can do the job (although a saving throw at +4 is probably in order due the distortion caused by ripples on the water).

Perhaps because satyrs are thought to be linked to dryads (who in turn are nature spirits), they can gaze upon a nymph with no danger of losing their sight. In fact, chasing wood nymphs is one of a

satyr's favorite pastimes. For their part, nymphs are fond of satyrs because of their musical ability — nymphs greatly enjoy music and dancing. It should be noted that nymphs are immune to the magical effects of a satyr's piping.

2. Although the MONSTROUS MANUAL™ tome indicates that nymphs can cast *dimension door* spells, it does not state at what level the spell is cast. Treat nymphs as 12th-level wizards when casting *dimension door*; this value gives them a spell range of 360 yards. This range is comparable to the distance dryads (who are able to use *dimension door* to teleport back to their trees, and to whom nymphs are closely related) will stray from their tree homes,

3. A *sleeping potion* made from—among other things—a lock of nymph's hair will cause imbibers to save vs. poison at -2 or fall into a deep sleep lasting 2d4 hours.

4. If the nymphs hair is enchanted, woven into a cloth and sewn into a garment, the wearer adds 1 to his or her Charisma. Creating such a garment requires the use of an *enchant an item* spell but no further spells—the Charisma boost is powered by the magic from the nymphs hair and works as long as the garment is worn. At least 20 strands of hair from a single nymph are required to create such a garment. The types of such magical vestments are many, but popular ones include robes, capes, and shirts or blouses.

I should say, need there be, for nymphs do not reproduce as you understand it. Wherever there is a place of exceptional natural beauty, there you will find a nymph. They are, I suppose you would say, 'spontaneously generated' by the beauty of the natural world. Similarly, when a place of great beauty is marred, when an ancient grove of trees is chopped down for firewood, or an ocean grotto is used as a dumping-ground for waste, then the nymph inhabiting that place fades away and dies.

"Nymphs, being nature spirits, need not eat, sleep, or even breathe.⁵ They will not fight, seeking instead to flee from danger by using their *dimension* door ability and by use of druidical magic.⁶

"Since they are so closely tied to with the forces of nature, nymphs are not creatures to be trifled with. True, they disdain physical combat, but that does not make them powerless. Nature's way is not always the gale force of a hurricane; often it is the stealthy, patient encroachment of a tiny plant growing between the cracks of a rock."

Dreelix cleared his throat to interrupt with a question, but the young woman cut him off at once.

"In a minute," snapped Azurielle, which gave Dreelix pause: he was not used to being spoken to in that fashion. Before he could open his mouth to object, though, the young woman had continued.

"Nymphs despise evil and will often go to great lengths to defeat it. And I must say, Dreelix," and here she looked at the President of the Monster Hunters Association with a look of intense personal hatred, "I am not pleased with this Association of yours."

Buntleby saw in his mind what was about to happen next and tried to shout out a warning, but he was a fraction of a second too late. He got out the words "She's a—" before everything went crazy.

The young woman removed a ribbon from her hair, and immediately her features altered. Like a serpent sloughing off a skin to reveal its glistening new scales, Azurielle's human features were cast off and replaced with those of a nymph-as perfect a physical specimen

5. Indeed, nymphs are immune to the *sleep* spell and similar magic, as well as to spells altering the ability to breathe (such as *water breathing*). Nymphs are occasionally found underwater in places of exceptional beauty, and they are not discomfited by the lack of air or the pressure exerted by the waters of the deep.

6. The MONSTROUS MANUAL® tome (and both the MONSTROUS COMPENDIUM® and 1st-Edition *Monster*

as any assembled in the room had ever seen or could ever hope to see. The ribbon, now in the form of a hat, slipped from her fingers to the floor.

The results were instantaneous. Old Gumphrey the sage cried out in rapture,⁷ his nearly-toothless mouth held drooping open as tears streamed down his face from eyes that saw no more. Lady Ablasta, jealous enough at Azurielle's human disguise, could not handle this next step up in beauty, and her vision shut itself down almost as a defense mechanism. *No one can be that beautiful!* she thought to herself as her world went black. Willowquisp, eyes bugging out from their sockets, fell over backward in his chair and sat staring sightlessly up at the ceiling.

"—nymph," ended Buntleby quietly, for it was too late, and the damage was done.

Manual book before it) states that nymphs "can employ druidical priest spells at 7th ability level," then errs on the number of spells available to nymphs. Like normal 7th-level druids, nymphs can cast three 1st, three 2nd, two 3rd, and one 4th level spell each day. Unlike human druids, however, they do not require material components for their spells, and their magical nature also gives them a 50% resistance to all magic.

Looking around the room, Buntleby took a quick damage assessment. Over half of their ranks had gone blind, from the looks of it. Dreelix, remarkably, was unaffected—perhaps because he doesn't place as great a value on beauty as he does on personal power, thought Buntleby.

But Azurielle was not finished with the Association yet. While Buntleby was scanning the room to see who had survived the visual onslaught, the young nymph had been loosening her robes. As her single garment slid to the floor, Buntleby had a quick glimpse out of the corner of his eye, felt his heart explode in his chest, and fell over backward in shock.

He felt his head crash against the hardwood floor and thought to himself that this was a good thing. *I can't be dead if my head hurts*, he reasoned.

7. Those blinded by a nymph are often caught up in a magical, rapturous condition in which the brain becomes overloaded by the beauty it has just beheld and is unable to process any other inputs. This state lasts anywhere from 2-20 minutes, during which time the victim is completely unaware of his surroundings. A successful saving throw vs. paralyzation indicates that the victim's mind is strong enough to avoid entering such a state.

MAFINS 97

"You care only for your own selfish desires," continued Azurielle. "It matters not who is hurt in the process, so long as you collect your precious magical items. You took your nymph's hair all right, Dreelix. I ask you, was it worth the price?"

Dreelix, however, didn't answer. He stood staring straight ahead, as in shock, and then slowly, slowly, started tipping over to his right, landing in a heap on the floor. His eyes remained wide open, but he saw nothing, for he was stone cold dead.

Cautiously, Buntleby rose to his feet. He dared a quick look around. Zantoulios lay slumped over at his table, his face in the wine-soaked napkin he had used to clean up his spill. Several others lay dead on the floor, including mighty Grindle. In the middle of the circle of tables stood Azurielle, wrapping her robe back around her and tying it in place. "It is done," was all she had to say.

"Indeed it is," remarked Buntleby. "But was it necessary?"

"Necessary?" shrieked the nymph, running her hand through her hair, exposing several different lengths, where it had been haphazardly hacked away. "They assaulted me! They threatened me! They cut my hair!"⁸

"And you are no less beautiful because of it. Azurielle, I agree with you, what they did was wrong and it shames me to be associated with their actions, but your vengeance was equally wrong. You killed the three that did you harm, but at the same time you killed several people who had nothing to do with it, as well as blind-ing quite a few innocent bystanders."

"Think nothing of it," piped up Willowquisp from his perch on his overturned chair on the floor. "It was well worth the blindness to see such beauty just once in my lifetime."

Azurielle stared at her surroundings as if seeing them for the first time. "Perhaps you are right," she admitted. "But nature can be very unforgiving at times. I was overcome by disgust for the greed inherent in your Association. The things Dreelix said to me, just to force my tears!"

"True, there are those who are in it just for the greed, and I'm sure Dreelix himself heads that list. But that's not true of all of us. Willowquisp and I enjoy learning about the creatures around us; my friend and mentor Spontayne shares our views. And, greed or no, this Association does have its uses: the red dragon armor worn by Sir Parnifax, Paladin of the Order of the Bleeding Rose, was fashioned from the hide of a wyrm we slew for its blood, and that armor has saved his life on many an occasion. Zantoulios, when he isn't blowing up his lab in untested experiments, does sometimes come up with something new; just last month, he increased the efficacy of a *potion of healing* by altering the amount of powdered troll's blood used, and his troglodyte bladder tests proved conclusively—"

"All right," conceded the nymph. "I see your point. I must admit, I acted impulsively. Perhaps I should go."

"Perhaps that would be for the best," agreed Buntleby quietly. "But before you do, I want to say that on behalf of the Monster Hunters Association, I'm sorry for what was done to you. I'm afraid that's the only apology you'll get; Dreelix won't likely have much to say on the subject."

Azurielle's eyes narrowed. "You'll have him returned from death?"

"Yes, I'm afraid I must. It's the right thing to do. Besides," Buntleby added with a chuckle, "the money will come out of the Association's coffers. After paying to have everyone here raised or their sight restored, we'll be close to broke. And that is a much better revenge on Dreelix than just killing him." He gave her a quick wink. "This will get him even madder."

Azurielle smiled a sweet smile. "You are a remarkable man," she noted. "I notice that you're the only one able to face me in my true form. Not many can do so. The human mind is such a frail thing; it cannot often stand up to absolutes. You should be proud."

"Alas, I must say that I wish it were not so. Seeing you will always be one of

my most treasured memories; I just hope that your unearthly beauty hasn't spoiled the appeal of the women I shall encounter hereafter."

"Let us hope not," replied the nymph, picking up her hat from the floor and placing it on her head. Instantly, her features altered to those of the lovely young woman who had entered the meeting-hall and caused such a disturbance, such a short time ago. The hat resumed its previous form of a hair ribbon.

"A *hat of disguise*," remarked Buntleby with appreciation.

"Yes, a gift from an admirer."⁹ Azurielle approached the Conjurer Ablasta, staring straight ahead at nothing. Grabbing the feather quill even now writing down every word spoken, the nymph broke it in half and tossed it to the floor. Then she approached Buntleby, and whispered in his ear.

"Off the record, I'd like you to do me a favor, if you would."

Buntleby beamed. "Certainly."

"See to it that your Association does not bother me again. It is for their own good; I have alerted Moonsilver of their deeds, and he will be keeping a watch out for them."

"Moonsilver?"

"The unicorn who guards that part of the forest."¹⁰

"Of course, Azurielle. But then, on second thought, I don't think I'd better mention Moonsilver specifically. You never know, Dreelix might want to try some experiments with a unicorn horn."

Azurielle nodded toward the broken quill on the floor. "I thought as much."

"Still, I'll make sure that they don't trouble you further."

"You're a dear." She blew him a kiss, said a single word in her own musical language, and disappeared.

Johnathan Richards has recently moved from California to Nebraska, where he and his sons, Stuart and Logan, have resumed their AD&D® game campaign.

8. Nymphs, being physical manifestations of loveliness, care a great deal for their looks. They take special care to present themselves in the most appealing fashion, often weaving fragrant flowers into their hair. This is not all vanity and pride, however, as they are intimately entwined with the areas of natural beauty which gave them life. If a nymph is attacked and suffers damage, the area with which she is associated is likewise diminished in beauty. Killing a nymph is a sure way to cause her special area to become despoiled, and possibly even cursed. Specific curses are left to the DM, but those seeking inspiration should check out "Defiled and

Cursed Groves" on pages 115-116 of *The Complete Druid's Handbook*.

9. Most of a nymph's treasure consist of objects given to her by lovesick admirers. A great deal of these gifts are gemstones; a nymph will typically have 10-40 such gems stored in a safe place somewhere in her domain. Stored in the same location will usually be several potions, which the nymph makes herself using only natural ingredients from her domain. These potions are usually restorative in nature, such as potions of healing, sweet water, and vitality, as well as antitoxins and *elixirs of health*.

These potions are administered to those in need, most often the animals living in the immediate vicinity.

10. Those nymphs living in sylvan forests share a special relationship with unicorns. As the nymphs are nature spirits and do not normally fight, and unicorns are self-appointed guardians of their forests, unicorns go to great lengths to protect any nymphs inhabiting their woodlands, often fighting to the death. They are each able to speak the other's language.

The ecology of the ochre jelly

by Ed Greenwood

"Old favourites' time, is it?" Elminster asked, draining his cocoa and reaching for his pipe simultaneously with practiced ease. "I know that ye folks that play at the sort o' things that happen for *real* in the Realms are overly fond of pitting yer characters against witless giant amoebas! Just about their style, eh?"

I regarded him over the uplifted bottom of my mug. "Witless giant amoebas?" I asked, with the proper amount of deference in my tone.

"Ochre jellies, ye dolt!" Elminster shot back, expelling puffs of green smoke like a testy dragon. "Ye just asked about 'em — don't ye know anything to start with?"

"They're blobs, they ooze along looking for food — like adventurers — and they're always hungry," I offered. "I hoped you'd fill in the rest."

"'Course ye did! 'Course ye did!" Elminster replied, drawing on his pipe. "And," he sighed (Ever see someone sigh while drawing on a pipe? Spectacular!), "I suppose — as usual — ye're right. Pay attention, then — and no questions, mind, till the tale's done."

I did as I was told, and Elminster related the tale of "How Grymmar Held the Pass":

"Now, in the days when the Sea of Fallen Stars was new to men, and the lands still wild and unsettled, bands of lawless men rose about scavenging and slaying and pillaging. Kings were hard put to it to pay and train fighting-men to guard themselves, to say nothing of their kingdoms. And when a king rode to war, it was likely to be with another king, over some insult or spurned daughter or an uncertain line on a map. Kings did not spend time or men chasing after a few brigands who would flee and leave traps behind, or set an ambush, and in the end melt away before searchers as though they had never been — until the searchers turned their backs, of course.

"The King of Cormyr was one of these monarchs, and a man with a problem. After spending a hot summer fighting all across his realm, from the Wyvernwater to Eveningstar, he had few men indeed left to call the Royal Host of Cormyr — some sixty-five stouthearts, to be exact. Then his weary ears heard news of an incursion from the east into Arabel, a merchant city too precious to give up without a fight.

"This was bad enough in itself, but compounding his plight were local cries rising in Eveningstar about bandits on the roads and a huge brigand army somewhere in the

mountains to the west. Nowadays, with the great fortress of High Horn looming over the west pass, such news would be of little concern. But in these early days of Cormyr's sovereignty, no such fortress existed to impede the progress of enemies from the west. Clearly, the king's men could not be in both places at once, and dividing the force could mean failure for both halves. But the king dared not disregard either threat. He called his men together to give them the facts of the matter and told them to be ready to travel the following day.

"Later that evening the king called for Grymmar, the oldest of his stalwarts, and asked for the grizzled lieutenant's counsel on how to divide soldiery and supplies so as to meet each threat. The king was surprised to hear that Grymmar had formulated a plan to deal with the brigands — a plan for which no soldiers would be needed, save Grymmar himself and a couple of strong men. The monarch gave his approval to the plan and his blessing to Grymmar, supplying him with documents that would enable him to acquire the goods and services he would need, and on the morrow the king led his army eastward.

"Grymmar spent part of this first day gathering supplies. With the king's authority to lend weight to his requests, he procured an unused stone coffin, placed within it three grunting and squealing pigs, and with the aid of his strong assistants loaded it into a cart along with a barrel of pitch and several torches. Then Grymmar and his curious entourage set out — not directly for the pass, but on a northerly route to a place not far from Eveningstar.

"Only days earlier, some of the king's men had cleaned out this place, an old dwarf-delve that had served as a hiding place for a group of bandits. A dozen ruffians there were in all, no trouble — but Grymmar and the others with him had all taken a fright when, as they leaned on their swords afterward in a deep and freshly bloodied chamber, something moving and shapeless and alive, ochre in color and horribly hungry in motion, had oozed in under the door.

" 'A flesh-eater!' one of the warriors had warned, and they all had backed away hastily as the jellylike thing advanced. It flowed over stone and corpse alike, and left only bones and metal in its wake. The soldiers circled toward the exit, rushed through the doorway, slammed the portal, and sealed the space between door and floor with loose dirt.

"Now Grymmar made a return visit to the bandit hold, and with the help of his companions transported the contents of the cart down into the chamber where the flesh-eater was last seen. The coffin was set out, its lid awry, and the men sat nearby inside a circle of pitch they had smeared on the floor. Fairly soon the flesh-eater appeared, attracted by their presence, flowing eerily along a wall. Grymmar set the ring of pitch aflame, and the jelly shrank away from the men and went for the pigs in the coffin.

When the thing was entirely inside the coffin, the men leapt forward, put the lid back in place, and sealed the container with more of the pitch. Then they carried the coffin back to the cart. Grymmar and one of his helpers headed directly for High Horn Pass, and the other man veered toward the druids' grove in the forest to the south and east of the pass.

"By the time Grymmar reached the pass at sunset of the following day, he could see the bandits in the distance, approaching from the other direction. He and his cohort unloaded the coffin, storing it under a ledge where it would not be detected in the darkness, and watched from an elevated hiding place as the brigands made camp in the pass itself — an expanse of land broad and flat enough to house all of their tents at once, although they had to keep rather close quarters.

"Then the druids arrived in the dark of night, responding to the summons of their king as conveyed by Grymmar's helper, and it was time to put the last stage of the plan into action. Grymmar crept back down to the coffin, scraped away the pitch, and loosened the lid. At the same time, the druids began their enchantments. Massive, threatening clouds formed in the sky above the pass, and before too long the air was rent with driving rain, booming thunder, and crackling bolts of lightning. The bandits were protected from the elements inside their tents, and they slept unafraid, but tent-cloth could not keep them safe from the real danger.

"To this day, some folk still tell of how the druids saved Eveningstar by bringing down the awesome storm that decimated the brigand army and forced the survivors to turn back. But others know better, for they have heard the real tale. The storm abated after a time, and at first light the next morning when Grymmar and the druids looked down upon the bandits' campsite, they saw scores of flesh-eaters — born of the lightning strikes — and dozens of corpses, many of them already nothing more than skeletons. The few bandits fortunate enough to escape death from the jellies now could see the carnage that had been wrought during the night, and they ran for their lives back the way they had come. . . .

" . . . And that was how Grymmar held the pass."

At this point Elminster sat back and re-ignited his pipe, satisfied with the way he had told the story. I thanked him — and indeed it was a good tale — and then set about quizzing him as to the practical (to adventurers) details of the ochre jelly. Elminster related the following information, much of it drawn from the *Bestiary* of Hlammech the Naturalist:

An ochre jelly is amorphous in form, having an outer elastic "skin" or bag of tough, translucent cells, ochre in color. Inside the skin is a large mass of fluid — the main bulk of the creature. This fluid is thick, soupy stuff — stabbing an ochre jelly

won't cause the stuff to drain away quickly, like the way a wineskin loses its contents if punctured; fluid will ooze from the wound until excess skin cells (produced from the cellulose the creature devours, and carried around in little globules inside the fluid) arrive to "patch the leak." In this fashion, an ochre jelly can heal any wound it suffers from an edged weapon within 5-12 rounds ($d8 + 4$). A wound from a blunt weapon is more traumatic, rupturing a greater number of skin cells and taking 11-20 ($d10 + 10$) turns to close. In either case, the hit points lost when the wound was suffered are regained when it is healed.

Because of its construction, an ochre jelly can squeeze through any crack large enough to permit a thin "wafer" of skin cells (both sides) and internal fluids to pass — about an inch in width is required for an average-sized jelly. The creature's movement rate is only 1" when it compresses itself to travel through an opening smaller than the jelly's normal thickness. When at rest and under normal conditions, an average-sized ochre jelly is 3 to 6 inches thick and occupies a surface area equivalent to a 6' -diameter circle; however, the term "at rest" is theoretical in this case, because an ochre jelly never stops moving except to devour prey. When it moves, it does so by extending one or more pseudopods of skin and fluid, becoming elongated in the direction of movement, and setting up a rippling motion that enables it to "slosh" forward by means of inertia.

Ochre jellies can adhere readily to walls, ceilings, glass, and so forth — they do not seem affected by water, wine, oil, grease, and the like, and have never been observed to slip — but their grip on surfaces is not strong enough to enable them to pull open chests, armor, closed doors, etc., and they can be readily scraped or shoved off of a surface by a creature of at least average strength.

The creatures are non-intelligent and have no visual organs as we know them. They can detect heat, vibrations, and the scents of organic substances, and will move in the direction from where these stimuli come (in the order given; ochre jellies apparently "prefer" live humans or animals as prey, but can "smell" wood or plant growth, or corpses, if no live creatures are in the vicinity). They can sense the heat of a torch flame at a range of 500 feet, and the body heat of a living animal from 100 feet away; their sensitivity to vibrations (such as those caused by footsteps) or scents has a range of at least 500 feet, and often much farther depending on the severity of the vibration or the intensity of the odor; for instance, an ochre jelly can detect a troglodyte, by its scent, from several hundred yards away.

Ochre jellies will move mindlessly toward any stimulus, but will not voluntarily come into direct contact with any stimulus (such as a flame) that can damage them. In the absence of any detectable stimulus, an ochre jelly will continue to flow in the direction it

is heading until forced to turn or double back on its path because of an obstacle; Grymmar and his companions were bound to eventually encounter the ochre jelly in the closed-off chamber, because the creature had nowhere else to go.

When an ochre jelly comes into contact with any consumable (i.e., living or once-living) substance, a number of one-way valves in the creature's skin surface will open, and globules of the corrosive digestive fluid inside will be expelled onto the prey. This fluid seems to be a sort of acid-based enzyme which first eats away and then breaks down (by chemical reaction) the flesh or cellulose. The ochre jelly then reabsorbs the digestive fluid at the same time that it ingests the nutrients, through a set of similar one-way valves that work in the opposite direction. These valves are very selective, only letting in the fluids that the ochre jelly "intends" to absorb; the creatures have been encountered in coastal salt waters, and in order to subsist in such an environment, they must be able to prevent the taking in the water with which they are surrounded.

As so often happens with the unique body fluids of certain mysterious creatures, the acid-enzyme secreted by an ochre jelly becomes inert if the creature is killed or the fluid is somehow prevented from being reabsorbed by the body. This neutralization of the fluid takes place immediately upon the death of an ochre jelly, or if the creature is forced to abandon partially consumed prey (which is why a victim's flesh does not continue to "dissolve" if the jelly is killed or pushed off). Similarly, the skin of an ochre jelly loses its distinctive properties after the creature is killed and cannot be salvaged for any useful purpose.

An ochre jelly can and will instinctively flow over or around its prey, enveloping it so as to retain contact if the target moves or struggles. If the creature is attached to a wall or a ceiling, it can send out pseudopods to contact something edible that is below or beside it. Once having made contact in this fashion, the jelly can detach itself from the wall or ceiling and flow onto the victim.

An ochre jelly can be damaged by cold- or fire-based attacks. Severe cold (freezing temperature or lower) of a lasting nature will further impair the creature, slowing its movement rate to 2" and adding 2-5 rounds to the time required for it to heal a wound, since its internal fluids cannot flow as freely to reach the affected area. (Note that a *cone of cold* spell, to name one example, is not cold "of a lasting nature," since the spell's duration is instantaneous.) Any single fire-based attack that does damage equal to at least one-quarter of the creature's maximum hit points will cause a wound that takes 16-25 ($d10 + 15$) rounds to heal, and for 4-7 rounds following the attack the ochre jelly will lose 3 hit points per round as fluid continues to leak from the wound. Fire damage of less severity will take 11-20 rounds to heal, the same as for a blow with a blunt weapon.

The sudden application of intense electri-

cal energy (such as a lightning bolt or magical or natural origin) does not damage an ochre jelly; instead, this serves to increase the creature's metabolism and cause it to divide immediately (within the round following the electrical contact) into a number of smaller jellies, each identical to the original creature in all respects except for size and damage; they are capable of doing 2-6 ($d4 + d2$) points of damage per attack. The number of "offspring" created is usually (75%) 2-4, but occasionally as many as 5-8 are produced. These smaller jellies will grow into normal-sized creatures (doing the usual 3-12 points of damage) within 1-3 months after the split occurred.

In rare instances, an ochre jelly will split "voluntarily" into two equal-sized creatures (each doing normal damage), but only when the original creature is of huge size. Ochre jellies grow slightly every time they feed, but do not shrink when they go without food — and they can survive for several weeks on little or no nourishment. No example is known of an ochre jelly that died of "old age"; perhaps they do not age (as we understand the term), or perhaps they decompose quickly when they die in this manner, thus leaving no evidence of their passing.

An ochre jelly cannot be poisoned or intoxicated or otherwise adversely affected by attacks with *purely* fluids (including acid but not including flaming oil). It will absorb all such fluids, "walling" them into globules surrounded by excess skin cells, suspending them within its internal body fluid, and holding them harmlessly until it is not feeding on prey or involved in combat, whereupon it will expel them through the same openings that release its digestive fluid. A physical attack upon a jelly that ruptures a globule of this stored fluid may cause its contents to squirt out at the attacker.

Astute students of biology will note that ochre jellies are not precisely "amoebas" as we know them — but when I mentioned this to Elminster, he merely fixed me with a cold eye and grunted, "Hah! And what do your scientists in this world know of *anything*?" And that is all I learned from him about the ochre jelly.

Guidelines

If you're interested in contributing an article to DRAGON® Magazine, the first thing you need is a copy of our guidelines for writers. Send a self-addressed, stamped envelope to "Writer's guidelines," c/o DRAGON Magazine, P.O. Box 110, Lake Geneva WI 53147; and we'll send you back a sheet with all the basic information you need to make sure your manuscript has the best possible chance of being accepted.

Ogre

“Hungry eyes peer down from craggy hills. They fix their feral gaze on twisting plumes of smoke rising from the homes of men. They wait for the dark. Brutish giants with obscene appetites for flesh and unnatural desires, ogres commit unspeakable acts on wind-blown peaks. They waylay travelers on whom they slake their fury and claim the skulls in remembrance of nights well spent. In the dark, they prowl the woods and dance their wild jigs on rocky mountainsides. The echo of the ogres’ freakish cavorting shakes the shutters of far-off homesteads in the misty hours before the morn, reminding men to treasure every sunrise, for peril lurks close at hand when darkness falls again.”

—Harlo Mardacci, *On Giants and Giantkin*

While orcs, hobgoblins, and bugbears are a threat to civilized man, they are predictable in their actions, and easily dealt with individually. The same is not true with ogres. These brooding menaces lurk on the fringes of society, striking out with terrific rage against those who can hardly hope to defend themselves. They are brutal children, prone to violence and completely lacking any sense of morality. For an ogre, cruelty is a sport and murder is a game.

Overview

Ogres are a sickness on the world. Horrific half-breeds of men and greater giants, these outcasts turned to unnatural ways and soon became twisted things. Malformed in body and psychotic in mind, ogres breed horror wherever they roam. They have plagued the realms of men since time immemorial, becoming legendary monstrosities whose ghastly reputation ensures even those who’ve never laid eyes on one fear them.

The savagery of ogres is especially terrifying, if for no other reason than they hold a distorted mirror up

to mankind. Many monsters tear men limb from limb and devour them, but few enjoy it as much ogres do, or play with their prey in the manner a morally deficient sociopath might. Heinous torture and slow, painful consumption await those who fall into ogres' clutches. Death comes slowly and only after a victim is broken in mind, body, and soul.

The most terrifying thing about ogrekind is their malignant sense of humor. What men call horror launches ogres into fits of oafish laughter. The look of anguish on a dwarf's face as his limbs are torn off, and the horrid sounds he makes, elicit wild guffaws from nearby ogres, and more than one no doubt mocks the poor victim, imitating his pained grunts with drooling glee. The sight of an elf with his back broken and his torso bent to force the back of his head to touch the small of his back is high comedy to an ogre.

In general, ogres possess no appreciation for anything beyond these evil torments, wild revels, lusty exertions, and the taste of savory, barbecued human meat. While some giants are known for cave paintings and other achievements in artistry, most ogres find such pursuits a contemptuous waste of time. They are not proficient at much beyond wholesale murder, although most tribes are industrious enough to forge basic tools and weapons, and many enjoy whittling wood pipes and fashioning crude twangy lutes and banjos to thumb around a blazing bonfire late into the night.

Ogres fear things larger than themselves, and they find it difficult to view smaller creatures as threats. They are gluttonous beasts prone to obesity and often eat themselves into a stupor when victims are plentiful. These lazy, cantankerous monsters make unsuitable minions for greater villains unless the masterminds can keep the ogres toiling with the constant threat of extreme physical violence. Still, when roused to anger or on the hunt, there are few sights more terrifying than a charging ogre.

Ecology

Ogres are giants. Even the smallest among their brood towers 2 feet over the tallest half-orc, and the biggest ogres top out at a terrifying 14 feet in height. On average, they weigh 800 pounds, but a well-fed ogre's mass can reach a staggering 2,000 pounds. An ogre can survive off any food, although it always prefers man flesh. Most ogres are woolly brutes, their chests like dark forests, and their arms matted with sweaty swaths of black or brown hair. Their heads are flat and most of their noses pug. Ogres' eyes tend to be too small for their bloated faces, hiding in the folds of their sloping fleshy brows. Their legs are stumpy and too short for their massive hulking frames, causing them to hobble about in a fashion that would be comical if not for the rusty gore-soaked hooks they wave about menacingly.

MIG-A-MUG-TUG

Ogres love a rousing bout of Mig-a-Mug-Tug. It's a simple pastime for their brutish minds: Two competitors grab each other by the ear, nose, or other sensitive spot and then squeeze and wrench them about as hard as they can. The first to collapse yowling in agony loses. Both competitors make Strength checks every round and then make Fortitude saves (the DC equals the opponent's check). A competitor who fails the save collapses, stunned for a round, and loses the contest. Ogres love other vicious games, too, like "Hatch-a-Catch" (in which they hurl rusty hatchets back and forth to each other, and the first to shed a finger or other bit loses), and "Man-Dueling." In the last, two ogres pick up living humanoids by the ankles and swing them at each other. When the "man-swords" are reduced to pulpy messes, the ogres discard them for fresh ones.

Ogres breed kin to kin and favor large families. Their bloodlines sullied by incest, these monstrosities are cursed by the gods with hideous deformities and madness beyond measure. Some ogre tribes eventually degenerate into drooling diseased progeny, barely capable of speech after 20 or so generations. These sick, blind abominations scorn the kiss of daylight, claw at the hills for worms, and feed on anything that crosses their paths. Most bloodlines prove resilient and retain a sinister cunning.

Female ogres are nearly always pregnant, although when they are not near the end of their terms, ogre women prove as fierce in battle as their male relatives. If male ogres are prone to obesity, females are even more so. Most ogresses outweigh males by a few hundred pounds. Some grow to mind-boggling girth, with their disgusting rolls of flesh hanging in gooey dollops on their arms, legs, torsos, and face. This excess of fat is extremely attractive to males of the tribe, who like their women big.

Freakishly hardy, ogres develop faster than most other creatures, topping out in height and girth at only 6 years of age. Females keep steady supplies of young coming to replace the ones murdered by their jealous siblings, beaten to death by their male kin, or slain by the arrows of humans and elves. Most ogres' lives are cut short by violence long before nature takes its course, and one who reaches 30 is considered a wizened elder.

Although they prefer to breed within their own family, ogres do occasionally force themselves onto other creatures. They revel in their basest desires, which sometimes leads them to assault those unfortunate enough to cross their paths. Few of their victims survive to bear the fruit of these exertions, but those half-breeds that live are occasionally kept by the ogres as children. These ogrekin are horribly malformed, their inbred genes mixing sourly with other stock and resulting in extreme aberrations. Ogre genes destroy a blood line. Ogrekin can mate with humans, but

DANCING FEET AND JABBER JAWS

Ogres love a good hootenanny. They often build huge bonfires and madly cavort about the flames deep into the night. They particularly enjoy skull-jigs, adorning themselves with their favorite skulls, which clack and clatter away as the ogres jump and frolic obscenely. As a special treat, when captives are handy, the ogres hog-tie them and dance out their jigs atop the victims' bodies, pulping organs and crunching bones with each stomp.

Music might soothe the savage beast, but it makes the ogres wild. They love cacophonous sound, and often howl and hoot out "songs" they call Jabber-Jaw to accompany their jigs. They also love to coax grunting, yowling songs out of captives by brutal and often base means.

nothing in their family tree ever again resembles a natural human man or woman.

Ogre musk is vile and particularly pungent. A creature with the scent ability that has smelled it before can detect the reek of ogre at twice the normal range, and animals grow skittish when an ogre draws near. Ogres are fiercely territorial and use their spoor to mark their stomping ground. Piles of reeking waste are the first hints a party is entering ogre territory.

These contemptible creatures favor the night and lair in dark caves on lonely mountainsides. Although the sun does them no harm, ogres shun it when they can. Ogres flee a songbird's morning call and the cries of roosters as if they were cavalry trumpets, lurching back to their inky caves and waiting for the dark night before returning to their grim business. Some ogres go as far as to worship the night and howl mournfully at the moon. The sounds of their savage cries are so terrifying they silence wolves and coyotes. Moonless nights are for killing, and those are an ogre's favorite time to hunt. During the new moon in lands where ogres lair, even the bravest souls do not willingly walk the roads after sundown.

Habitat & Society

Ogres are fierce predators, laying waste to other species once they infest a territory. Their gluttony is only overshadowed by trolls, whom ogres envy and hate but fear too much to oppose. The only saving grace of ogrekind is their highly fractious nature. They murder each other as often as they do others, eating their own as readily as any

other repast. Ogres never organize into groups larger than a few families loosely connected in a tribal fashion.

Tribes are highly patriarchal and are ruled by a Pappy, who earns this title by fathering as many brood as possible and keeps it by killing any contenders. Only virility and strength are respected among ogrekind. Wisdom, canny thought, and abilities such as craftsmanship are completely indeterminate in establishing an ogre's place in their society.

When male ogres reach puberty, they are sent on lone hunts for skulls. These hunts traditionally take place during full moons ("so's prey can see ya comin', got's to hunt good"), and the young ogres are sent down the mountain to menace the closest settlement. They know better than to return empty-handed, as the punishment for failing this rite of passage involves a number of torments culminating in terrible mutilation with rusty hooks. Even those who return with skeletal trophies in hand are not safe. Their skulls must satisfy the Pappy of the tribe, and if the elder

ogre finds one lacking, the same grisly fate awaits the hopeful young giant who brought it.

Oftentimes, an ogre's performance on its lone skull hunt goes a long way to determining its place in the tribe. Stories of Jaagrath

Kreeg's lone hunt are proof of this—when the oversized ogre boy returned with 16 gore-slick skulls on a rope, including that of feared hunter Kalgoras and his four hardy sons, Kreeg's high rank in the clan was cemented immediately.

Ogres often raid in small groups or hunt small caravans of travelers, but on occasion, usually in the weeks of early spring, an entire tribe descends on a community to wreak utter havoc. Springtime anywhere near ogre territory is a time of great trepidation. Communities with nearby ogres hold none of the customary spring festivals common to most countryside villages, instead holding off on such revels until summer shows its bright sun and the ogres' wild season of mayhem abates. These springtime full-scale attacks are the stuff of pure nightmare. If help arrives too late, it finds only headless gore-spattered corpses spitted on rusty hooks and left hanging from trees to twist in the wind, with the choicest bits of flesh cleaved away.

After an evening of slaughter, ogres dance late into the night, the jawbones and bleached pates of their kills jangling obscenely. The echo of bones clattering can be heard up and down the mountain when ogres are at play. Ear-splitting howls of beastly fury echo through the hills, and the aroma of the cooked flesh rides the wind down the mountain.

Ogres are slothful by nature and more easily bored than most races. They can't pay attention to anything for very long unless it's squealing in pain or humiliation. They make poor sentries and even worse craftsmen. The only way a Pappy coaxes hard work out of these lazy brutes is to constantly threaten them with horrible pain and violence, and even this fails to motivate the slobbery giants to do more than pretend to work most of the time.

Ogres laugh at little things. They find creatures smaller than themselves hilarious. The sight of a human adventurer brandishing a sword sends most ogres into hysterical fits of grunting guffaws. They don't take humans, dwarves, elves, halfings, gnomes (especially gnomes), orcs, or goblinoids seriously at all, often laughing themselves to tears when such teensy foes challenge them. It's not until they are harmed by these miniature enemies that the ogres fly into sputtering rages and spit their foes on their rusty hooks. Ogres' underestimation of smaller enemies is often used to great advantage by wily adventurers.

Religion varies widely from tribe to tribe. Some have no interest in the divine, others are devoutly spiritual worshippers of Lamashtu, a few pay homage to idols of the wild, and many pray to various moon gods (real and invented). Most of their rituals involve bonfires (the only kind of light ogres seem to enjoy), drumming or other simple repetitive music to induce trancelike states, wild dancing, and "feeling the presence of the gods"—a savage gyration of the body, sometimes a dance, sometimes little more than a foaming seizure. Ogre tribes who bother to worship usually build shrines to whatever entity they revere, offering sacrifices of fresh kills to their chosen patron.

Campaign Role

Ogres are the savage heart of darkness. They are man turned monster by inbreeding, cannibalism, and offense to all things natural. Ogres allow a GM to show a party what depravities monsters can sink to for no other reason than amusement. Some villains commit horrors for the sake of sustenance (trolls, ghouls, vampires), or for the pursuit of knowledge or power (liches), but ogres do it out of a perverse sense of pleasure and because it makes them laugh. This folly is something all civilized races, at their darkest moments, are capable of.

An adventure against ogres is a trip into savagery in every sense. Ogres live in the wild untamed heights of unforgiving mountains. To battle ogres or avenge their malignant raids on communities, PCs leave the civilized world at their back and venture into places where brutality and animalistic fury are the only means of survival. Even the most principled heroes might surrender themselves to the wild and find dark places inside their souls they never wanted to know existed when they are faced with an enemy as savage as ogrekind.

OGRE FEATS

NIGHT STALKER

Ogres are big brutes, but some among them excel at hunting human prey in the dead of night and murdering them quietly.

Prerequisites: Stealthy, darkvision, Large or larger.

Benefit: While you are in areas of shadowy illumination or natural darkness, you ignore all size penalties to Hide checks and gain a +2 to Move Silently checks.

QUICK AT HAND

When enraged, ogres tend to grab the closest heavy objects and bring them to bear.

Prerequisite: Ogre.

Benefit: You may use any item as an improvised melee or ranged weapon without penalty.

Treasure

Ogres have little use for sparkly things. They hate the sun and all bright light. They hate the glitter of gold and blinding shimmer of diamonds. They use these trappings of civilization only when it suits their purpose—such as lures for man-traps, or to barter for slaves with species more powerful than themselves (otherwise they just take the slaves) to play with as they please. Ogres abhor money, viewing it as a weakness of tiny man-things, who count their coins when they should be lustily feeding and murdering their way through life. Such treasure found on their victims is usually discarded at the site of slaughter.

The only treasures ogres truly appreciate are good pelts. They love the smooth feeling of a fine speckled wolfskin cloak, or the velvety caress of a bear rug underfoot. In an ogre's lair, an adventurer likely finds exquisite pelts of all manner of creatures (including the leathery skin of humans and demihumans). Ogres also love vices: good pipe smoke, narcotics of any kind, and moonshine and other potent spirits are treasured by these monsters as well. Ogres sometimes raid communities known for their wineries or stills just to claim casks of inebriating man-drink. Some tribes ferment their own repugnant concoctions, but these can hardly be considered treasure.

Variants

Some ogres' inbreeding results in different appearances than the standard one described above. One tribe in particular, called the Thickuns, is recognized by its gigantically oversized heads and huge mouths that take up more than half their puffy faces (these ogres gain a secondary bite attack). The ogres of the Pickins tribe grow tall and lean like dead trees, and their fingers end in bony protrusions (they have natural claw attacks).

The Shaggras are a bizarre band of forest-dwelling ogres covered in dark fur that reeks of musk. Their fur has a freakish life of its own, undulating and even grabbing at enemies (these ogres have the improved grab special ability). The bushy thick fur also entangles weapons and cushions blows (the Shaggras have damage reduction 5/piercing).

Other tribes inbreed with such tenacity and enthusiasm that their already fragile gene pool buckles under the strain. Over time, these degenerate ogres turn feral, go blind, and develop grossly bulging limbs and chests. They rarely survive longer than a few more generations once their bloodline degenerates to this point, but these psychotic monstrosities always wreak plenty of terror on nearby populaces before they die out. Incapable of speech or even using simple weapons, degenerate ogres make up for these drawbacks with a bestial tenacity in combat. They rip, mash and pummel any prey they detect, often swinging smaller foes about by the ankles and dashing the unfortunate's brains against a tree trunk or boulder. Their deranged minds cannot grasp concepts like pain or fear and they fight well after most other creatures would have succumbed to their wounds.

SPECIAL ABILITIES

Pummel (Ex) If a degenerate ogre succeeds on both slam attacks against a single foe it may immediately pummel the target into oblivion, dashing him on the ground like a rag doll or savaging him with fists and a head butt. The victim takes an additional 2d6+8 damage and must immediately make a DC 20 Fortitude save or be dazed for 1 round.

Utterly Psychotic (Ex) A degenerate's inbreeding results in its mind abandoning any semblance of rational thought. They are immune to any mind-affecting effect and know no fear. Also, anyone attempting to commune with a degenerate's mind either through telepathic communication or similar magic immediately takes 1d6 points of Wisdom damage. Additionally, degenerates do not register pain and ignore any effect that stuns or dazes them. They also fight unhampered until reduced to -10 hp.

Ogres in Golarion

Ogre tribes infest many mountains throughout Golarion but are most populous in Varisia. Here they cavort and raid at their leisure, unopposed in most areas, except by particularly powerful orders of rangers such as the Black Arrows. The ogres scorn other giants, who tend to bully them into hard labor.

Hook Mountain holds claim to the most bloodthirsty ogres in Golarion. Many tribes infest the place, but the most noted of these are the terrifying Kreegs. The Kreeg ogres swear they are descended from the Mage Kings of the Wyvern Mountains, powerful ogre mages who claimed those forlorn peaks and ruled them for an age after the Runelords fell. They inhabited grim wonders of Thassilon, such as Skull's Crossing, but their obsessive inbreeding saw their decline into atrocity and self-destructive madness. Today's Kreegs aren't much better.

In the Mwangi Expanse resides a tribe of jet-black-skinned ogres, called the Mutangos, whose talent for stealthy murder is widely touted. The Mutangos are purportedly less savage than their northern kin, even offering their services as mercenaries on occasion, and sometimes lending their poisoned spears to other jungle peoples in efforts to push back expeditions by explorers and those seeking to gut the rain forest for resources.

Names

Ogres take characteristically simple names, either bestowed upon them by their unimaginative parents or fiercer monikers they give themselves.

Male: Biggun, Bogros, Chackajack, Chucky, Crunch-Bones, Fuddle, Groof, Gruggapug, Kimil, Kletus, Loppo, Ogsaw, Ripper, Saulmo, Yabbers

Female: Briarsnatch, Chips, Debb, Dorella, Ellargin, Heggra, Jully, Kandy, Karah, Leer, Matrag, Raea, Shinka, Snaggle, Ugg

OGRE

This creature's python-thick apish arms and stumpy legs conspire to drag its dirty knuckles through the wet grass and mud. The stooped giant blinks its dim eyes and an excess of soupy drool spills over its bulbous lips. Its misshapen features resemble a man's face rendered in watercolor, then distorted by a careless splash. It snarls as it charges, a sound the offspring of bear and man might make, showing flat black teeth well suited for grinding bones to paste.

On the evening of our third day we came upon a caravan that had been ambushed by a band of ogres. They were doing terrible things. We managed to drive them off, but of the survivors... they would never be the same again.

the Ecology of the OGRE MAGE

Physically powerful, viciously cunning, and incredibly egotistical, ogre mages number among the most cruel and intimidating of the mortal races. Possessing an array of potent unnatural abilities, these lesser giants' terrible appearances and fearsome natures seem more akin to fiends than the crude ogres of the Material Plane. In truth, ogre mages hold connections to both their brutal namesakes and darker powers, rising from pits of savagery to forge barbarism and brutality into a weapon pointed at the heart of civilization.

HISTORY OF THE OGRE MAGE

While the libraries of sages and the lore of civilized peoples hold varied

suppositions on the lineage of ogre mages, members of this cruel race refute all claims penned by humanoid hands—dismissing them as fearful lies and jealous insults. Through their varied bloodlines ogre mages carry their own tale, claiming it as the sole truth of their sorrowful history. Only one written copy of this tale is rumored to exist, tattooed upon the petrified skin of a gigantic primordial ancestor they call Muaj, the Last Immortal.

In those eldritch times, when man was closer to beast, many barbarous mortal tribes revered Vaprak the Destroyer above all other gods, as pain and violence served as the only absolute laws of existence. It was a time of

ceaseless war, and Vaprak's followers called upon his favor with dark rituals and bloody sacrifices. In turn, the Destroyer rewarded his devotees with unholy blessings. His disciples birthed great warriors, hulking brutes twice the height of ordinary men with great claws and thick skin. For centuries, Vaprak's tribes remained locked in brutal and bloody conflict while deep in his Abyssal realm he greedily feasted upon the souls of the fallen.

Having endured ages of blood, many of the weaker tribes slowly turned from Vaprak and sought the salvation of more merciful deities. Over time, thousands abandoned the Destroyer, converting to benevolent faiths and—to Vaprak's disgust—they prospered.

"Oni wa soto! Fuku wa uchi!" —Setsubun festival incantation

Eventually, only those tribes descended from Vaprak's blessed warriors remained devoted to him, creatures the emerging civilized races reviled and called ogres and trolls—driving them to the harshest and most remote places of the world.

Still Vaprak refused to accept defeat. Deep in the Abyss, from the ranks of his demonic spawn, Vaprak summoned his three most powerful sons—Anori, Hakuni, and Muaj. He promised to make them feared and worshiped and raise them as gods in his own bloody pantheon if they'd perform a solitary task for him: be born as mortals for a single lifetime and lead his armies to victory over civilization. Greedy and destructive, the bloody-minded siblings bowed to their father's will.

Soon after, the shamans of Vaprak's three greatest remaining tribes received a vision. In it, each foresaw a champion born unto his tribe, a terrifying creature whose leadership would usher in a new age of conquest. The vision proclaimed that the three tribes were Vaprak's chosen

KNOWLEDGE OF THE OGRE MAGE

The following table shows the results of a Knowledge (nature) check as it relates to ogre mages. Barbarian tribes, border guards, and other residents of savage frontiers are most likely to possess this information. The ogre mage appears on page 200 of the *Monster Manual*.

Knowledge (nature)

DC	Result
18	More intelligent than normal ogres and with strangely colored skin, ogre mages possess great physical strength and a number of potent magical powers.
23	Ogre mages rely on a variety of spell-like abilities to charm and confuse their enemies. They are more lawfully minded than normal ogres.
28	Ogre mages possess the uncanny ability to fly, as well as the ability to take many forms. They generally live in cold mountainous regions alone or in small clans.
33	Ogre mages quickly regenerate lost limbs and other physical damage, although fire and acid affect them normally. They also often prove resistant to magical attacks. Ogre mages can typically speak Common and Giant.
38	At will, an ogre mage can unleash a blast of flensing ice. Many ogre mages worship the cruel god Vaprak the Destroyer, patron of ogres and trolls. This respect often comes grudgingly, however, as many ogre mages believe their god holds them in disfavor.

ones, and under the tyranny of his own sons they would spill forth from the mountains and swamps to slaughter the weak and reclaim the world in the Destroyer's name.

Shortly thereafter, under the light of a full, blood-red moon, the sons of

Vaprak were born to each tribe. Strange creatures of demonic appearance, they grew with unnatural quickness, supplanting the chieftains of each tribe within a month. Great armies of trolls and ogres formed around these fiendish warlords and, as the Destroyer

prophesied, hoards of savage giants raged forth from the broken places of the world.

Vaprak's war did not, however, proceed as the Destroyer has foreseen. Although the savage legions left countless dead and untold ruin in their wake, the devotion, invention, and magic of the rising civilized races ultimately drove back the beastlike hordes. Thus, even under the leadership of Vaprak's own once-immortal sons, the ogres and trolls were routed into the wilds where they have ever since remained, persecuted and hunted.

Witnessing this staggering defeat, Vaprak flew into an unending rage. In his fury, he blamed the hated civilized races for his defeat, but his damnation fell most directly upon Anori, Hakuni, and Muaj. Stripping them of their greatest powers and their immortality, he cursed his three failed sons and exiled them from the Abyss forever.

From these outcast, semi-divine lines the first ogre mages were spawned, belched up from the bowels of the planes, possessing the ambition of their godlike heritages yet eternally lacking the power and time to give their profane wills form.

PHYSIOLOGY OF THE OGRE MAGE

Much speculation occurs over the fearsome and seemingly fiendish forms of ogre mages. As giants, they loom more than 10 feet tall and weigh upward of 700 pounds, their tremendous size only augmenting the terror of their grim forms and strange coloring. Hints of fiendish heritage seem evident in much of the race's gruesome physicality, such as their strong, curved horns, blackened teeth and nails, and stark white pupils. An unnaturally fast healing rate and metabolism provides these creatures with their regenerative properties as well as a notably high body temperature, offering a possible explanation for their preference for settling in colder climates. As trolls possess a similar physiology, some suspect that ogre mages might evidence some primal connection between both the ogre and troll races.

THE REAL HISTORY OF THE OGRE MAGE

While no tales exist about creatures specifically called ogre mages, stories about ogres are pervasive throughout Western folklore. Although the word "ogre" has French roots, the name is thought to be derived from the Latin name *Orcus*, the Roman god of the Underworld. The ogre mage, however, finds its origins more closely tied to the *oni* of Japanese folklore—spirits, some dangerous, some benevolent, with great strength, strangely colored skin, and sharp horns. Even today, during the Spring *Setsubun* festival, some people toss soybeans out their door, chanting "*Oni wa soto! Fuku wa uchi!*" ("*Demons out! Luck in!*")! In *DUNGEONS & DRAGONS*, the ogre mage originally appeared in the first edition *Monster Manual* (subtitled "Japanese ogre" therein), and recently appeared in the *D&D Miniatures: Angelfire* set.

sometimes resulting in the growth of spiky protrusions of bone armor and weaponry. Regardless of such exploitation, ogre mages' regenerative abilities are not absolute, as fire and acid burn and scar them just as they do natural creatures.

The other abilities of ogre mages, such as their ability to fly without wings or produce a number of spell-like effects, have no evident relation to their physiology, marking some lingering supernatural or extraplanar connection.

PSYCHOLOGY AND SOCIETY OF THE OGRE MAGE

Believing themselves forsaken by Vaprak, many ogre mages hold that their physical bodies are mere vessels for ancient, outcast souls. Upon death, one of these immortal souls passes from the ogre mage to its most powerful offspring. The soul thus remains trapped in a state of slow transcendence. With each new life it tries to attain a state closer to the foul divinity it lost—ever striving to appease a fickle, savage god. In this regard, the spirit or self proves of utmost importance, with many ogre mages worshiping themselves as divine vessels—in addition to the grudging respect they offer Vaprak. These beliefs fuel great acts of savagery and destructiveness as they seek to regain their fabled lost immortality.

Ogre mage culture is strictly patriarchal, with males seizing dominant roles over spouses and offspring. Within their small clans, adult males allot few rights

Occasionally, mutations occur among ogre mage bloodlines, producing variants of different coloration and with subtly different powers. For the most part, though, consistent attributes indicate the stabilization of the race, and even a possible decline in their supernatural power. If ogre mages can in fact trace their lineage back to the Lower Planes, millennia of inbreeding and interbreeding with the native ogres of the Material Plane would likely be responsible for just such a gradual waning.

Ever seeking physical perfection and an edge over opponents, a striking number of ogre mages experiment with the manipulation of their regenerative properties, breaking or severing their limbs in personal displays of power and then reattaching in preferable ways,

DESCENDANTS OF THE THREE

The ogre mages described in the *Monster Manual* represent the descendants of Muaj, the most commonly encountered scions of Vaprak's forsaken sons. Although less common, the lineages of Agmori and Hakuni are equally powerful, dangerous, and evil.

Cereborg

The fearsome descendants of Agmori live far to the north in castles carved from solid ice. Common folk refer to them as cereborgs for their renowned mastery of the psionic disciplines and identify them by their seemingly frost-bitten blue skin. Cereborgs typically progress as psions, psychic warriors, or soulknives, some advancing into the psion incarnate, thrallherd, and warmind prestige classes (*Expanded Psionics Handbook*).

Cereborgs replace the spell-like abilities of normal ogre mages with the following psionic-like abilities (see *Expanded Psionics Handbook*):

Psionic-Like Abilities: At will—*cloud mind* (DC 15), *empathy* (DC 14); 1/day—*death urge* (DC 17), *dimension swap* (DC 15), *mental disruption* (DC 15), *psionic dimension door*. Manifest level 9th. The save DCs are Charisma-based.

Ogre Umbramage

The banished demigod Hakuni excelled in the ways of deception and assassination. Ogre mages tracing their lineage to him make unusual use of stealth and many dye their already darkly pigmented skins deep black. They often progress as rogues, ninjas (*Complete Adventurer*), and even shadowcasters (*Tome of Magic*), some advancing into the ghost-faced killer, master of shadow, or shadowblade prestige classes (*Complete Adventurer* and *Tome of Magic*).

Ogre umbramages replace the spell-like abilities of normal ogre mages with the following spell-like abilities:

Spell-Like Abilities: At will—*darkness*, *invisibility*; 1/day—*detect thoughts* (DC 15), *enervation* (DC 17), *scare* (DC 15), *shadow walk* (DC 19), *waves of fatigue* (DC 18). Caster level 9th. The save DCs are Charisma-based.

to weaker individuals and in many instances treat them little better than slaves. When an elder dies, he bequeaths his wealth and social position to the oldest son. Because males define themselves by social status, the eldest son changes often, and infanticide is both a culturally acceptable and expected method of ruling out potential threats. Still, strength is what is valued in the society, and many female ogre mages notoriously rise against their spouses, slay them, and assume their wealth and tribal position. Rather than ruling the

clan, these matrons hold their position in escrow until such a time that a son reaches maturity and seizes it.

The responsibility of child-rearing falls upon the male clan leader's spouses or consorts. Male offspring are typically named after Vaprak's mythic sons, Anori, Hakuni, or Muaj—or variations thereof—while females garner demeaning titles, if any name at all. Mothers often raise their offspring in secret locations to prevent males from observing their children's growth. Typically, mothers lie about a male

child's gender, raising him as a female to limit murderous culling. In this environment, females, consorts, and children form close alliances, with the relationship focusing on survival and defeating the father. The strongest bonds occur between the mother and the eldest son, or between male and female siblings. Young males become particularly devoted to whomever sheltered and provided for them in earlier years and many choose spouses incestuously. Regardless, once a male reaches maturity, he displays a violent eagerness to prove himself. Provided his father still lives, he seeks to hunt down and kill his elder in order to assume his position. Those with little hope of besting their fathers or elder siblings often flee their clans and seek power elsewhere—although many die trying to escape.

Outside of their clans—and regardless of their strong lawful tendencies—ogre mages rarely associate with others of their kind. They might briefly form alliances to fight common enemies, overthrow the threat of a more powerful ogre mage, or to barter for wealth and slaves, but such associations are rare and often end in betrayal.

Self-absorbed by their nature, ogre mages possess an unyielding sense of personal entitlement and rarely view other beings as anything more than commodities. They rapaciously take whatever they need, specifically preying on those weaker than themselves, whom they force into slavery or subjugate into worshipers—dual states with little real distinction. Ogre mages spend enormous effort cultivating groups of followers and slaves. Such minions are kept for both their menial uses and as a quantifiable way for their master to measure his power and influence.

ADVANCED OGRE MAGE

Ogre mages typically advance as sorcerers, their favored class. They prefer to rely on their inborn talent and only rarely pursue the more scholarly path of the wizard. Because of their natural regenerative powers, ogre mage

spellcasters focus on prestige classes that allow them to manipulate their bodies, such as the acolyte of the skin or blood magus (*Complete Arcane*). Those of a more martial disposition become fighters, monks, or samurai (*Complete Warrior*). Other classes hold little appeal to them. Given their history, clerics are exceptionally rare among ogre mages although some become ur priests (*Complete Divine*).

Although rare, fiendish and half-fiend ogre mages exist. Revered by others of their kind, they often become great leaders or warriors. Ogre mages view such individuals as proof of their immortal ancestry and females sometimes secretly

breed with fiends in order to give their offspring a higher status.

SIMPLE ADVANCED OGRE MAGE

A sadistic mercenary, Muaj-Ruhlor lives only to watch lesser beings die. He seeks out wars and conflicts, indiscriminately hiring himself to either rival. He arrogantly takes pleasure in battlefield dramatics, cutting down both allies and enemies to sate his bloodlust.

Flight (Su) Muaj-Ruhlor can cease or resume flight as a free action. While using *gaseous form*, he can fly at his normal speed and has perfect maneuverability.

Regeneration (Ex) Fire and acid deal normal damage to Muaj-Ruhlor.

Signature Weapon (Su) Muaj-Ruhlor's greatsword is his signature weapon. This ability grants his +1 *Large human bane thundering greatsword* a +3 enhancement bonus.

Power Surge (Ex) As a move action, Muaj-Ruhlor can make a DC 15 **Concentration** check. If he succeeds, he gains a +8 bonus to his strength for 1 round. Each time after the first that he successfully uses this ability in a 24-hour period, the check DC increases by 5. 

Orc

“The first sign we had was the blast of a war horn, blown from the hills not one mile outside town. By the time the militia was forming up in the center of town, the horde was already at our wall, bashing down the gate with a crude wooden ram, its head shaped like a snarling wolf. The battle raged for hours, but the horde could not be stopped. By dusk, the orcs had overrun our defenses, killing nearly all the guards and many of the townsfolk besides, including my wife and both my sons. I swore I would pay them back for what they did, but how do you take vengeance against a formless rage?”

—Final report from Rett Thalmis,
Trunau Watch Captain

Mad marauders in the dark of night, these terrors descend on the unsuspecting and leave naught but slaughter and burning ruins in their wake. Although beaten back in epic wars again and again, these raiders always seem to return to visit their wrath upon the weak and helpless. No frontier settlement or traveling merchant is ever completely safe from the depredations of the orcs.

Overview

Orcs are aggressive, brutish humanoids that exist by the strength of their arms and sinews. They are the cockroaches of the humanoid races, proven to survive and even thrive in conditions where others would fail. They were at their height in the dismal days in the darkness of prehistory, as all other humanoid races quailed in the cold darkness. As a natural outgrowth of this, they are extremely warlike, seeing the acquisition of new territory as their only path to survival. They are a race that has passed its primacy but refuses to give in to the judgment of fate and simply disappear—not, at least, without taking as many of their rivals with them as possible.

Orcs live in a patriarchal society that sees little value in their females other than to produce and raise broods of their brats. Mortality is high, and male children are of small importance until they have survived long enough to begin their training in arms. Female children that do not survive are not mourned at all.

Bestial and brutal, orcs vent their rage and prove their strength against any who fall within their reach. They are wanton in their violence and often turn to cannibalism and eat other intelligent races even when resources are otherwise sufficient, just to indulge in their thirst for violence and degradation. A prisoner who survives being captured by orcs is seldom ever the same again.

Orcs are fond of collecting trophies from those they kill and take a victim's severed head whenever possible. These they use to decorate their lairs, mounting them in crude attempts at taxidermy to savor the victory, or impaling them upon pikes outside their lairs to warn away intruders. These grisly trophies are often used as traps as well. Tribal shamans sometimes animate them to serve as alarms or even to attack. The nerves of even the most resolute invader might become shaken when some third cousin or old friend is recognizable as a gibbering undead thing.

As a race whose existence is based entirely on the bullying and intimidation of others, orcs take great delight in showing their personal strength and bravery through the extensive use of ritual scarring. This scarring is not done just for decorative purposes, but as rewards for feats accomplished and victories won. A grizzled orc veteran's face might be little more than a lump of scar tissue with both ears lopped off and one eye put out, all self-inflicted as a visible history of his deeds, allowing him to bask in the awe and admiration of his fellows. The scarring of a witch doctor is legendary among orcs and enough to make even their cast-iron guts a bit queasy. The ritual scarring for witch doctors is not limited to just the face, with different kinds of scarring patterns used on their arms, chest, and back, but facial scarring is certainly the most prestigious.

In battle, orcs sometimes wear hoods and masks. This is partly because a foe is not worthy to look upon their scarred badges of honor, but also because orcs find that masked attackers are more terrifying than even disfigured ones—the victim's mind is allowed to fill in the blanks with something even more horrible than the reality of the orc's features. Orcs prefer masks and half-masks of hideous, bestial design and are especially partial to executioner-style hoods, some leaving the lower half of the face and snarling maw exposed. When such resources are unavailable, however, a simple burlap sack with eyeholes cut in it seems to produce the desired effect. A particularly well-outfitted orc champion might

ORC GRAFITTI

Orcs are almost compulsive vandals. This is exhibited not only in the wanton destruction they spread upon their enemies but also in the near ubiquitous grafitti that decorates the walls of their lairs. This grafitti exists not just as crude symbols, pictograms, and images of their tribal totems etched—sometimes quite brilliantly—in charcoal, soot, or colored clays, but for the literate among them manifests in grafitti slogans in the form of insults and boastings of virility or strength. Some samplings seen in various orc lairs include phrases such as, “Grod take bath,” “Vog is goblin,” “Dwarves wear dresses,” and “Krunck's mate smell like old cheese... Krunck lucky.”

Orcs enjoy producing their creative writing in Common when they are able to ensure the maximum appreciation of it, so alert adventurers happening upon such slanderous scribbles on the wall of a dungeon are forewarned that an orc lair is nearby even before the howling fiends ambush them from the darkness.

wear a great helm that covers his entire face save for a narrow eye slit, and that is set with all manner of wicked hooks and barbs.

Orcs wear cured hides, furs, and whatever ragged clothing and armor they can lay their hands on. They are rarely uniform in attire beyond their tribal colors, which are emblazoned on standards, crudely painted on shields, and worked into their clothing and armor whenever possible. The colors they choose are always garish and unpleasant, sickening combinations of blood red, rust red, mustard yellow, putrescent yellow-green, vivid purples, and, of course, black.

Ecology

Orcs are heavily muscled humanoids who stand roughly 6 feet tall and who have particularly bestial faces. Skin tones range from sallow pink to grayish to dark green. They have vaguely porcine features with flat noses and teeth that resemble the tusks of a boar. Their hair is likewise wiry and coarse, like a boar's bristles, and they have red, bloodshot eyes and large, lupine ears.

Orcs possess small beady eyes so sensitive to bright light that they experience great difficulty in full daylight. Their eyes do, however, provide them darkvision out to a distance of 60 feet. As a result, orcs favor dark places and cling to the shadows above ground whenever possible. In their lairs, when they must have light (such as from heat sources) orcs prefer the dim red glow of hot coals in a hearth or brazier to the crackling brightness of an open flame. The fact that coals have excellent secondary uses for heating branding irons and other implements of torture serves as a bonus of sorts in their eyes.

Orcs are not long-lived, reaching maturity by the age of 12 and rarely living past 40 if they don't meet violent

TRIBAL STANDARDS

Any orc fighting within 60 feet of his tribal standard gains a +1 morale bonus on attack rolls and Will saves against fear effects, just as if he had been the recipient of a *bless* spell. Conversely, the quickest way to rout an orc army is to capture or destroy its standard.

deaths sooner. This short lifespan is more than made up for by their natural—some would say legendary—fecundity. Orc males often don't last long, but orc females rarely join in battle and thus enjoy a much higher survival rate through adulthood. In addition, orc females remain capable of reproduction from the time they reach maturity until death, and multiple births are not uncommon. Orcish culture allows a male orc to take as many mates as he can dominate and feed, so even a relatively depleted tribe can replenish its warriors in little more than a decade from only a handful of orc families and their prodigious broods. Furthermore, orcs are extremely fertile among other humanoid species, with very few unable to cross-fertilize. As a result, half-orcs of human-orc, goblin-orc, and hobgoblin-orc heritage are not uncommon where orcs are found. The orc strain is invariably dominant, so all of these crossbreeds share the traits of typical half-orcs. Elves are one of the few humanoid races with which an orc crossbreed is simply impossible. This is something for which elves are thankful, and they enjoy rubbing it in the faces of other humanoids.

Habitat & Society

Despite their inherently chaotic natures, orcs adhere to a hierarchy of sorts: the strong rule the weak. The weak begrudgingly serve the strong until they can find an avenue of escape or the means of overcoming their overlords. Orcs are true bullies, lording over anyone they can until met by sufficient resistance to cause them to seek dominance elsewhere. This extends not only to their own kind, but to other races as well. Any nearby goblins are likely to serve as battle fodder and menial labor to an orc tribe, while giants in an area naturally dominate the orcs. Any such

alliance eventually falls apart thanks to treachery or desertion if someone other than a charismatic or extremely powerful orc is in charge.

The organization of the orcs is most readily apparent in their hierarchical system of tribes. All orcs are either affiliated with a tribe or are outcasts from a tribe. Outcasts have little effect on the social order and exist as brigands at the periphery of their culture. The tribes themselves, however, exist in an ever-changing ranking of dominance and subservience. Strong tribes rule the weak and owe fealty to still more powerful tribes. The subordination is not as direct as in a feudal society, where the tribes of serfs labor for their masters. Where tribes are forced to live in close proximity due to limited resources, one tends to take on the superior position and assign all the menial or distasteful jobs to the other. This status can change with the fortune or misfortune of one tribe or the other, however. This flexible system of ordering is actually quite complicated in its ramifications of who defers to whom, yet the otherwise intellectually limited orcish people seem to grasp it with a natural aplomb. Only in the case of a particularly charismatic or vicious leader, or the sudden elevation of a tribe's status, does it ever come to a contest of arms between two tribes to determine who shall lead.

Because of this strong tribal affiliation all orcs share, the tribes themselves are ancient, with storied (and often completely fabricated) histories that reach back into the mists of time. As such, each tribe must have a powerful name that captures the proper spirit of the orcish way. Tribes universally have violent and visually descriptive names that translate well into the Common tongue. In fact, orcs often refer to their tribes by their Common names in order to elicit the proper response from observers who are likely not fluent in the vagaries of the Orc tongue and its many dialects. Even if a tribe is utterly destroyed, it is inevitable that its name arises again among a group of orcs who claim to be truly descended from the line of its heroes and great chiefs. Some of the more infamous tribes that have plagued the other races of Golarion for centuries are the Broken Spine, Cleft Head, Dead Eye, Death's Head, Defiled Corpse, Gnarled Fist, Gouged Eye, Rotten Tongue, Severed Hand, Shattered Skull, and Vile Blade. Along with each tribe goes its tribal standard, bearing the vivid image of the tribe's totem in full gory and disturbing colors.

The importance of these tribal standards is not to be underestimated. The orcish sense of self is so strongly

tied to its tribe and tribal symbol that they take on almost mythical qualities to the orc. The standard is always kept either in the presence of the chief (while in his lair) or in the most-heavily defended portion of the army (when out on campaign—which is also usually in the presence of the chief, unless he is powerful enough to have a warlord to lead his tribe into battle for him). A tribe might have many lesser imitative standards and images of its standard, but the standard itself is a thing of sacred power.

Orcs hate the light, not only due to their light sensitivity but also because they partially blame it for the loss of their ancient empire. The sun is anathema to them. As a result, orcs typically dwell in caves or tunnels they have excavated themselves. About a quarter of orcs, however, live above ground. These habitations can be anything from a small crude settlement consisting of a few ramshackle huts to a large city of iron and stone extending both above and below ground. Even in these aboveground settlements they stay out of the light as much as possible—daytime guard duty usually falls to the orcs of the lowest rank or who have fallen out of favor. Such communities are often built in the shadows of a nearby cliff, in the depths of a canyon, beneath the eaves of a dense forest, or even on the lee side of an active volcano, where the rising smoke and fumes can provide them with nearly perpetual shade from the sun's glare.

Orcs have a strong sense of identity as the rightful rulers of the world and all of its peoples, largely because at one time that was very nearly the case, at least from their point of view. They believe they were unfairly displaced and cheated out of their racial heritage. Because of this, they are always on a war footing toward those who dwell around them, ever seeking to shift the balance of power in their favor. Even when sorely outmatched by their neighbors, orcs continue to plan for and dream of a time when they can turn the tables and resume their rightful station. In their minds, they are the only "True People," and all other humanoids are merely lesser beings, grasping and pawing for a share of the orc legacy. All of this makes them uncomfortable neighbors, at best, and often leads to their settlements being wiped out or driven away by those who know that a weak orc tribe today might be the rallying point for an orc horde tomorrow.

As a result of the orcs' inherent sense of superiority over all other beings, they make natural slavers, having no qualms about their cruel and abusive treatment toward other races. As bullies, they believe they need not do the work if they can make somebody else do it for them. Almost any race can be found among the slave pits of orc tribes. If the orcs can capture it, they'll enslave it, with a notable exception of the hated elves. If an elf is captured, it is always tortured and executed, and is often eaten in a communal banquet. The orcs see elves as little better than skulking assassins, flitting unseen through the forests

ORC NUMBERING

Known to few is the orc system of numbering. Orcs count by groupings of twenty rather than the more common tens employed by other races. Called a vigesimal system, its use by orcs clearly stems from the use of fingers and toes by the often unshod orcs in their figuring and calculations. A group of five is known as a "limb," based on the number of digits on one limb, and a group of twenty is referred to as a "pot," signifying all four limbs that are placed in an orcish cook pot along with the rest of the victim. Unfortunately, as a byproduct of both the orcs' subnormal intelligence and propensity to be missing a digit or two due to mishap, most orcs don't have a true idea of what a group of 20 actually looks like and regularly refer to groups of 19 or even 18 as a full "pot" as well.

and attacking from hiding with their slaying arrows. Even a captured elf is a danger, so orcs do not suffer them to live long enough to become troublesome.

Also of note is the strong tradition of witch doctors among orcs. These practitioners of both arcane and divine magic might or might not follow the orcs' primary deity, Rovagug, but they command the respect and even awe of their fellow orcs for their strange powers and stranger ways. Witch doctors always live at the outskirts of the tribal area, with some boundary between them to designate the differences between them and their kin—sometimes in a side cave, atop a hill, or just across a small stream. They are usually served by a handful of orcs—either willing apprentices or reticent servants assigned to the position by the tribal chief in order to appease the witch doctor's wrath. Witch doctors always don exotic fetish masks when among the rest of the tribe and, when occasionally glimpsed without these adornments, have ritual scarring on their faces to such an extent as to make them nearly unrecognizable even as orcs. These magical practitioners cast spells, read omens, and experience frenzied outbursts and visions that help them guide and warn the tribe. Even the most powerful chiefs fear and dread the words of witch doctors. Orcish shamans who follow Rovagug despise witch doctors for the power they wield over the tribe, but the shamans are powerless to act against them, bound as they are by millennia of tradition and taboos.

Campaign Role

Although of obvious use as battle fodder, the role of orcs transcends this stereotype. Orcs are the masked bandits on the outskirts of town who waylay the lone traveler. They are the thugs of the wilderness who make people long for the mean streets of the most crime-ridden cities. Orcs form the wrathful horde that levels villages and instigates entire campaigns to undo the deeds they have wrought. They are the bogeymen that mothers of misbehaving children warn

will come and take them for the cook pots if they don't straighten up—and all too often the mothers are right.

In a low-level campaign, the orc is the adversary—a worthy foe equal to the PCs and a dark reflection that must be faced and overcome. At higher levels, they are the foot soldiers who waylay travelers on the highways and the band of mercenaries tasked with hunting down the PCs. At the highest levels of play, orcs form the hordes that descend from the mountains and threaten the very kingdoms of humans, dwarves, and elves. They are not only the flood of destruction striking the defenses of the civilized nations in endless waves, but also the assassins, brutes, and warleaders of hordes. At their most formidable, orcs have character levels equal to those of the PCs, and are the ultimate foils of player characters.

Treasure

The treasures of the orcs are portable and can easily be captured, carried, or traded for valuable tools. Orcs never mint their own coinage but readily take whatever currency their victims might possess and use it in a combination of commerce and barter within their own tribes. Treasure caches usually consist of chests of coin and crates of trade bars in precious metals the orcs took from caravans they sacked. In addition, they might have notes of credit issued by banks and guilds. Such blood-stained monetary vehicles are of no further use to their former owners, and even although the orcs themselves gain no value from them, they know that they were prized by those they killed.

Variants

Other than advancement through character levels, orcs are physiologically fairly homogenous although they have great variations in their appearance, ranging from skin tone to facial features. It is in their facial features that they exhibit the greatest differences. They always appear bestial, and their faces can look like slightly barbaric or primitive-looking humans (for those who have some human blood in their line) or have flattened noses with prominent lower teeth, or even possess piglike snouts with true tusks.

It is believed among orckind that the more porcine the features, the closer to the original orc bloodlines. Particularly isolated tribes with little to no interbreeding with lesser races have largely piglike appearances and are afforded great respect among their peers. In fact, other than martial strength and amassed wealth, the quantum of this ancient orc blood as it manifests in an orc's appearance is really the only thing that can add to his status. The flatter an orc's nose and more prominent its lower canine teeth, the higher esteem in which it is held. The other humanoid races find this appearance and notion of status ridiculous, but the orcs don't much care and are likely to kill and eat anyone who says so—so most observers just keep it to themselves.

Orcs in Golarion

The orcs of Golarion were originally a strictly subterranean race involved in an age-old war with the dwarves. In the course of the war, as the dwarves themselves drew ever closer to their destiny on the world's surface, they drove the orcs before them, until finally these feral humanoids broke forth into the open air for the first time. What the orcs found was a cold land of darkening skies and scudding layers of dust clouds all but choking out the feeble glimmer of the sun, for this was the time after the fall of the *Starstone*. Finally free from the relentless pressure of the dwarves from below, they scattered in a free-for-all of bloody destruction and claimed the dismal new lands from the wretched inhabitants they found in crude shelters and small settlements.

The brute force of the rising orcs cut a swath of conquest across the face of Golarion. Over time, the winds died down and the dust settled, and the cursed light of the sun showed through in strength again. The sun forced the orcs into the shadows to hide from its unaccustomed brightness. When they recovered from their initial shock, they realized their empire had spread much further than they had known and they had lost contact with its scattered parts. They also discovered that the hated dwarves had followed them from the lightless depths to the surface, renewing the war with the isolated orc-holds. A new enemy, humans, inhabited the surface and fought with a tenacity that nearly equaled their own. By the time they had sufficiently gained their bearings, it was already too late: the overextended orc empire collapsed into separated tribes. What they had conquered with steel in the dark, they lost with blood in the light.

The time of orcs is long past on Golarion, and they now exist as little more than marauding bands on the outskirts of civilization. Still a danger to travelers and small settlements in the wilds, they rarely pose a threat to larger populaces except during the raising of orc hordes every generation or two that inevitably make some small gains before smashing themselves apart against organized, well-entrenched foes. In all of Avistan, only in the wildlands of the Hold of Belkzen do the orcs exist in any real concentration or semblance of their former glory.

Names

Orcs take fearsome names drawn from the sharp, strong words of their guttural tongue or derived from the names of past warlords.

Male Names: Bruk, Drith, Elvar, Grom, Ilkusk, Javad, Krug, Krunk, Reltag, Skald, Targ, Ukwar, Vog, Zerab

Female Names: Belzin, Dryath, Elkama, Gumar, Jasik, Kalkas, Lethra, Lukash, Ninkeen, Polta, Saba-Thu, Sakab, Urkla, Vlib, Wanta

ORC

This barbaric humanoid bears ragged equipment and armor in sullen colors. It has coarse body hair and a stooped posture like some primitive man but with a grayish-green skin tone and bestial facial features beneath a black hood. Burning red eyes peer below a low, sloping brow, just above a flattened nose, and prominent tusk-like teeth.

TACTICS

Before Combat Orcs make few preparations before combat, preferring to charge headlong at any foe that presents itself.

During Combat Orcs prefer to use two-handed weapons to maximize the effectiveness of their great strength. They attack in ambushes from concealment to take an enemy off-guard and cause as much fear and confusion as possible.

Morale Orcs are bullies and cowards. They flee when the odds have turned against them and any nearby leaders are dead—or have already fled. They are prone to surrender and truces if such actions save their skins, although they honor such terms only as long as it is to their benefit to do so. Exceptions to this are dwarves and elves, from whom they neither ask nor give quarter.

Light Sensitivity (Ex) Orcs are dazzled in bright sunlight or within the radius of a daylight spell.

The orc is the antithesis of civilized man. They think nothing of tomorrow, knowing only whatever warlike passion possesses them at the moment, taking what they want and despoiling what they don't. Never be mistaken: they're not men, they're monsters.

Traps and tactics for your favorite humanoids

by John Baichtal

illustrated by David Sutherland

There was a time when an orc was a deadly foe for a PC—even an experienced adventurer. Now, with specialization, style specialization, maximum hit points at 1st level (a norm in many campaigns), and other perks for PCs, orcs are little more than a nuisance. Part of the problem is that the average humanoid's repertoire of tactics can be summed up in three words: scream and charge. This old cliché is silly, because most humanoids have an Intelligence rating of at least Average, and some (kobolds in particular) are considered extremely cunning tacticians.

To solve this problem, here are 101 ploys and stratagems for supposedly stupid orcs, goblins, and other humanoids. Facing them, perhaps even high-level PCs will come to sweat at the sound of goblin drums. Though only orcs are mentioned, these tactics work admirably for virtually any humanoid foe.

1. The orcs are mounted. Worgs are good choices as are horses. The orcs use lances if they are available.

2. The orcs, hidden in the bushes, throw a skunk into the PCs' midst. Depending on the party's behavior, the skunk could simply run off or spray them, with results described on page 242 of the *MONSTROUS MANUALS™* tome. If there is a druid or ranger in the party, this ploy could be spectacularly unsuccessful.

3. The orcs roll boulders down hills at the PCs. Normal attacks rolls do not apply; each PC must make a successful Dexterity check to avoid the rocks. If a check fails, the PC suffers 4d6 hp damage, save vs. paralyzation for half damage.

4. A human-appearing half-orc is hired as a guide and leads the PCs in to an ambush.

5. The orc chieftain wears a *medallion of ESP* and thus knows the PCs' every move. The DM can roleplay this situation by having the orcs see through all of the PCs' tricks and taking advantage of their weaknesses.

6. An orchish shaman casts *animate dead* on orcs previously killed by the party.

7. The orcs wave torches at the PCs' mounts to spook them. This tactic forces a Morale check for the horses, but war horses are immune, thanks to their training. If a PC's horse is spooked, he must make a riding proficiency check or be thrown, suffering 1d6 hp damage. To regain control of the mount, the PC must make a second check. In the meantime, all of his actions are at -4 due to the horse's bucking.

8. The orcs have dug spiked pits in the vicinity of the fight. These are about 10' deep, and a failed save vs. death magic means a PC falls in during melee. Each victim suffers 1d4 hits, and each hit

inflicts 1d6 hp damage. The DM should reduce this damage for low-level PCs.

9. The orcs have nets that they sling in the trees, ready to drop them on the party. Alternatively, they carry the nets to throw at individual PCs.

10. Orc footbowmen fire at the PCs from long range—200 yards or so—to soften up the PCs before melee begins. Footbows are huge bows bent by the strength of the legs. Thanks to the long range, accuracy is poor, but only PCs with similarly long-ranging weapons can retaliate.

11. The PCs' trail passes through a narrow ravine, and the orcs attack from above—the ambush. The orcs gain the following bonuses: 75% cover, +1 to hit for higher ground, and possible surprise.

12. The orcs lure the PCs into a charge, then greet them with set spears, which inflict double damage.

13. Grease has been spread on the floor (if indoors) to make the PCs' footing extremely slippery. Each round, a PC must make a Dexterity check or fall, negating all actions that round.

14. The orcs throw sacks of pepper throw into the PCs' faces. Each PC must make a save vs. poison or be incapacitated for 1d2 rounds, sneezing.

15. Concealed in the grass by the road are pits with orcs inside; the hiding orcs jump out to surprise the party. The PCs suffer a -2 penalty to their surprise rolls.

16. The orcs have poisoned weapons. Of course, the DM should make the poison's strength commensurate to the PCs' level. It might be interesting to run a high-level campaign with orcs as foes, armed with weapons envenomed with giant scorpion poison.

17. The orcs are armed with man-catchers. See the *Player's Handbook* for more information on these weapons.

18. Orcs sneak into camp while the PCs are asleep. This may seem like a simplistic ploy, but it has the potential to be quite effective. The orcs doff all metal armor and cover themselves with black mud to blend into the night and foil infravision. While these commando orcs attack, the regulars charge in to support.

19. The orcish shaman has a *sleep* spell memorized, making him a substantial threat to PCs of 4th level and under.

20. The orcs harry the party for many days, perhaps weeks, occasionally shooting an arrow at them or feigning a charge. If the orcs are not dissuaded, the party becomes worn out for lack of sleep. For everyday without proper rest, all of the PCs' d20 rolls suffer a -2 penalty. Eventually the PCs may collapse from sheer exhaustion.

21. The orcs have hostages whom they use as (demi-)human shields. Any PC using a missile weapon against orcs so protected has a 75% chance of hitting the hostage instead.

22. A number of orcs pretend they're shamans, dressed in robes and waving their arms as if they were spellcasters. The effectiveness of this depends on the PCs, but Intelligence checks might be in order.

23. The orcs have a pet rust monster, and they attack the PCs armed with clubs, hide armor and wooden shields. For more information on the rust monster, see the *MONSTROUS MANUAL* tome, page 305.

24. The orcs have human allies and pretend to fight them; when the PCs charge to the rescue, they are attacked by both groups. Treat the allies as 1st-level fighters with 5 hp each.

25. An orc has a *potion of giant strength* and hurls rocks from far away. This scenario is a good challenge for mid-level PCs.

26. There are tripwires in the underbrush all around the party, so if the party charges or flees, their movement is hampered. Each PC who becomes tangled in a tripwire must make a successful Dexterity check or fall down, losing all actions for 1d2 rounds.

27. A squad of orcs consisting of light horsemen with bows attacks the PCs. Their plan is to shoot at the party, retreat beyond the range of the PCs' missiles, then return to fire again. They continue this tactic as long as they can.

28. The orcs have acquired some smoke powder, which they use to make crude bombs. Information on smoke powder appears in the

DUNGEON MASTER® Guide.

29. The ground seems muddy, but it is actually soaked with oil, which the orcs set alight. Flaming mud causes 2d6 hp damage the first round, then 1d4 the next two rounds before burning out.

30. One of the orcs is a champion, possessing higher-than-normal fighting skills and hit points. Orcish champions are described in the *MONSTROUS MANUAL* tome, page 282.

31. Casks of drugged wine are left for the PCs to find. If they drink the wine, they must make a save vs. poison or fall asleep.

32. Green leaves are thrown onto a fire upwind of the party, with the hope that the dense smoke blinds the PCs. Each affected PC must make a save vs. paralyzation each round or be incapacitated by the choking blinding fumes. This effect lasts until the PC leaves the smoky area.

33. The orcs have hired mercenaries, human or some other race. These individuals should be about as tough as a PC—so a 10th-level party might fight mercenary giants.

34. The orcs are concealed in low water, breathing through reeds. When the PCs pass by, the orcs leap out of the water. Surprise checks are rolled at a penalty of -3.

35. The orcs are mounted on trained war horses, which are not afraid of fire or startled by combat, and which often attack opponents on their own. See the *MONSTROUS MANUAL* tome, pages 194 and 195, for more information on war horses.

36. One of the orcs is actually a shaman, a wizard/priest of level 1d4+1 in each class.

37. The orcs are unusually proficient with a particular weapon; this skill is equal to specialization.

38. An orc uses a *potion of polymorph self* to assume the form of a cute puppy. Then he wanders into the PCs' camp one night. After the PCs have fallen asleep, the puppy reverts to orc form and distracts the PCs while his fellows attack.

39. The orcs have heavy weapons, such as two-handed swords or halberds, which cause more damage than the usual orcish armament.

40. The orcs are armed with several crossbows each, allowing them to keep up a steady rate of fire from a distance.

41. The orcs hide behind wails or mantlets, shooting their bows through arrow slits. This protection is equal to 90% cover to missile fire.

42. The orcs have an ogre with them for "heavy artillery."

43. The orcs, who understand the common tongue, attack at night. If the PCs try to coordinate their actions verbally, the orcs hear and compensate. If the PCs fight silently, the players must write their PCs' actions instead of announcing them aloud. This technique should hinder cooperative tactics.

44. The orcs have prepared an avalanche over a mountain trail. PCs may make save vs. poison to avoid being covered in snow; those who fail must be rescued within one minute per Constitution point or smother to death.

45. The orcs hide near a spring, which has been doctored with a tasteless drug that makes the drinker sick. PCs failing a save vs. poison lose 6 points of Strength and 2d4 hit points. Meanwhile, the orcs attack.

46. The orcs found a couple of *potions of heroism* and use them when fighting the party. This simple trick is good for mid-level PCs.

47. The orcs have pet dogs that serve as guardians and trackers. Thieves trying to sneak around will be detected unless they are downwind of the dogs or have covered their scent somehow. See the *MONSTROUS MANUAL* tome, page 57, for more information.

48. The orcs are mounted on flying animals (hippogriffs are good), or perhaps crude hang gliders.

49. Anticipating the PCs' invasion of their lair, half of the orcs hide in barrels, then jump out and attack from the rear. PCs suffer a -1 penalty to surprise rolls.

50. The orcs dress as human peasants in order to get close to the PCs. This works only if all the PCs fail their intelligence checks.

51. The orcs have some *potions of healing* and make use of them during the fight.

52. The orcs fire flaming arrows to start fires in the PCs' tents and other possessions, before they charge. This could be a particularly deadly tactic if the party has many flammable items (bolts of cloth, kegs of lamp oil) or if they are situated on a raft or boat.

53. The orcs form a shield wall. Archers fire from behind the wall. The wall offers the archers 90% cover and the shieldbearers 75% cover. The only down side is that they are vulnerable to melee attack . . . but see #8 above.

54. The orcs have erected a palisade the party must cross. The palisade grants the defenders at least 50% cover and is high enough that a PC needs a ladder to reach the top.

55. The orcs try to trick the party into wasting missiles by offering themselves as targets. Any arrows, bolts, etc., shot are broken or stolen. The orcs try this only if they are far enough away to avoid incoming missiles (by hiding behind trees, for instance), but they abandon this tactic immediately if the PCs' aim is true.

56. The orcs are archers firing from a boat in a nearby river or lake, preventing the party from charging them.

57. The orcs pretend to flee but scatter caltrops behind them. Caltrops cause 1d4 hp damage, and a PC dashing through must make a successful Dexterity check for every 10' of trapped ground or step on 1d4

58. Logs soaked with flaming tar are rolled down hills at the PCs. A PC must either make a successful Dexterity check to jump over or else outrun a log, which attains a top speed of MV 15. A PC who is run over suffers 1d8 hp damage for the log and 1d6 for the fire. Ouch!

59. The orcs are berserkers, as described in the *Complete Fighter's Handbook*.

60. Sacks filled with angry rattlesnakes are tossed into the PCs' camp at night. See the *MONSTROUS MANUAL* tome, pages 320 and 321, for more information on snakes.

61. The orcs have narrow (2-3' diameter) caves through which to retreat if they are charged. PCs crawling after them had better be good with daggers.

62. The orcs stretch a rope across the party's path to knock them off, their horses. This is especially fun if the party is chasing them. Each PC in the front of the group may make an Intelligence check to detect the ploy. Characters who don't see it coming must save vs. death

or suffer 1d10 hp damage and be automatically unhorsed.

63. The orcs stake out a watering hole and attack while the party is bathing.

64. The orcs have spread bear traps throughout the underbrush. Snap! A bear trap inflicts 1d8 hp damage and requires a Strength of at least 15 to free the PC. An unaware PC must save vs. paralyzation to avoid stepping on one.

65. The orcs have dug an earthen cave underneath the trail, and they collapse it when the PCs cross over. The result of this trick is that the party tumbles into a 6' deep pit with loose earthen walls.

66. The orcs wield daggers in their left hands (perhaps badly) and use them to parry or strike.

A kind DM can give the orcs the usual -2/-4 penalty; a ruthless DM can decide that the orcs have enough practice to eliminate some or all of these penalties.

67. The orcs are clad in rusty but functional plate mail, making them hard to hit for low-level PCs. This may seem like not much of a ploy, but when you consider that orcs normally have nothing better than ring mail . . .

68. There are orc longbowmen in a grove atop a nearby hill, and each archer has a stuffed dummy next to him to make the troop look twice as large. A PC unaware of the ploy has a 50% chance of targeting a dummy.

69. The orcs have a pet or mascot, such as a bear. Take a look through the *MONSTROUS MANUAL* tome and be creative.

70. The orcs whirl bullroarers as they approach; these noisemakers make horses nervous (non-war mounts must make a Morale check), and PCs must make a riding proficiency check or the animals bolt away. Stupid and/or low-level NPCs must make a Morale check or flee, unless a strong PC leader orders them to stay put.

71. The orcs have the advantage of numbers and try to tackle and overbear the PCs rather than fence with them. This simple "trick" is a huge advantage that humanoids usually enjoy, but one that is almost never utilized by DMs.

72. The orcs form a spear hedge to keep the PCs at bay. A PC must endure at least two attacks to come within

sword range, and if either attack hits, the PC is forced back and must try again next round.

73. The orcs paint themselves black and slip through the underbrush with knives, rather than fight toe to toe. The DM may give the orcs a Hide in Shadows and Move Silently score or simply decide when and where the orcs are detected.

74. The orcs have a ballista or catapult that they use to attack the party from a distance. A ballista bolt inflicts 4d4 hp damage, a catapult rock 4d6 hp damage.

75. The orcs' shaman casts invisibility on their champion.

76. A nearby ditch has been filled with tar, then set on fire to form a barrier or divide the party. Any PC entering the ditch suffers 2d8 hp damage.

77. An orc with pig blood all over his face and dressed in a merchant's clothes lies by the roadside begging for help. If a PC leans over to help him up, the orc lashes out with a concealed, poisoned dagger. The PCs surprise roll is at -3, and the poison is Type O (paralytic) venom. Other orcs are in hiding nearby.

78. The orcs pick a dark, rainy night to attack when humans cannot see and torches are doused by the torrent. Also, all missile fire suffers a -4 attack penalty, and bows and arrows may be ruined by the damp, at the DM's option.

79. The champion has had a *stoneskin* spell cast on him.

80. One of the orcs is a lycanthrope. This is a mean trick for low-level PCs, who most likely will not have any silver or magical weapons. Wereboars, werewolves, and wererats are the most appropriate types of lycanthrope.

81. The orcs are disguised as ghouls or other undead. PCs' failing their intelligence check believe them to be the genuine item.

82. One of the orcs has thieflike abilities—moving silently, backstabbing, opening locks. Consider the orc to be 5th level.

83. The orcs pretend to be drunk. When the party approaches, the orcs invite them over for a pint, acting as friendly as can be.

84. The orcs have pilums (light spears) that they stab into the PCs' shields and armor to slow them down. The recipient of this attack must stop and remove the spears (taking a whole round) or suffer a penalty to movement and AC equal to 1 for every spear so

imbedded. Another advantage to pilums is that the shafts bend when they hit, so they cannot be thrown back at the orc.

85. The orcs have a huge keg of Greek fire that they roll into the party's midst and detonate. Anyone within 20' of the keg when it goes off suffers 3d6 hp damage the first round, 1d8 the second, and 1d4 the third and fourth rounds. Also, any flammable material in the vicinity (trees, hair, clothing) is likely to be set on fire.

86. Some of the attacking orcs climb nearby trees during the fight, firing missile weapons from the safety of a high branch.

87. In especially dry weather, the orcs set brush and forest ablaze. This one is a very orcish tactic.

88. The orcs are hiding in a wagon, which they move by pushing it from inside (there is no floor). There are arrow slits in the walls (providing 90% cover) and wet hides tacked outside to resist fire.

89. The orcs attack at night. The PC humans must use lights or fight at a disadvantage.

90. The orcs surround the PCs with a flaming barricade of brush and oil, then attack those trapped inside with missile weapons. Anyone trying to jump over the barricade must make both a Strength and a Dexterity check or be burned for 1d8 hp damage.

91. The orcs have a cage full of stirges and smear themselves with a stirge-repelling herb. Then they open the cage. Stirges are described fully in the *MONSTROUS MANUAL* tome, page 332. (See this issue's "Ecology of the Stirge" for variations of the monster.)

92. The orcs wear the armor (including full helmets) and emblems of a friendly group. In order to move close enough to attack.

93. The orcs keep a patch of quicksand between them and the party, then hurl insults and shoot arrows until the PCs charge. Any PC landing in quicksand must make three successful Dexterity checks, one per round, to escape. Every failed Dexterity check causes the PC to sink a little deeper; three failed checks and he is in over his head. Don't forget that the orcs are still there.

94. A number of orcs are actually ogrillons. See the *MONSTROUS MANUAL* tome, page 275, for information on ogrillons.

95. A false treasure map lures victims into an ambush.

96. The orcs festoon themselves with leafy twigs and plant fronds as camouflage. This concealment gives the PCs a penalty of 1 on their surprise rolls and penalizes their missile fire by -1.

97. An orc throws a hornets nest into the PCs' midst. The hornets collectively inflict 1 hp damage per round to everyone in the swarm.

98. The orcs cause a herd of cows or other animals to stampede in the party's direction. The stampede lasts for 1d4+1 rounds. PCs caught in the stampede must make a successful Dexterity check every round to avoid being trampled. Any PC trampled suffers 2d4 hp damage and suffers a -4 penalty to his next round's Dexterity check.

99. A friendly wizard casts *massmorph* on a group of orcs to aid them in ambush. See the *PHB* for more information on this spell.

100. There are twice as many orcs as PCs, and the orcs fight in pairs, with one parrying, the other fighting. Whichever orc the PC attacks parries, and the other attacks. For best effect, use the parrying rules presented in the *Complete Fighter's Handbook*.

101. As the PCs are traveling down river in a boat or raft, orcish knifers attack from underwater and archers from the banks of the river.

John Baichtal is an aspiring freelance writer whose interests include beer, football, and spending way, way too much time in the role-playing game areas of America Online. He recently wrote his first short story, which his Mom said was "perfect," but which everyone else hated. What would we all do without Mom?

Dreelix pounded the gavel on the head table three times and liked what he heard. This is the sound of power and authority, he thought.

All eyes turned his way, as wizards and sages ceased their muttered conversations and gave him their undivided attention. Dreelix cleared his throat and prepared his best speaking voice. "This meeting of the Monster Hunters Association is hereby opened," he intoned.

He shuffled a few papers in front of him as if consulting them, but in fact he knew exactly what he would say next. "Tonight we'll hear a status update on preparations for this spring's planned troll's-blood-gathering expedition, and Zantoullios will brief us on some fascinating new uses he's found for troglodyte bladders. But first, we have a new application for membership."

Excited whispers passed throughout the room, as the members looked around the tables to see if they could spot the new member.

"Buntleby, please approach the lectern."

A thin figure in gray robes stood up from his place at a table in the back, then walked up to the podium, at the right of the head table. He faced Dreelix, who was back to shuffling papers. The whisperers fell silent, eager to hear what followed.

"Buntleby of the Western Grove, you have applied for membership in the Monster Hunters Association."

"I have."

"Before allowing you entry into our illustrious organization, there are certain questions we must put to you. First of all, have you paid the entrance fee?"

"I have."

Dreelix looked over at Grindle the Coin-Counter, who gave a terse nod.

"And have you a sponsor?"

"Spontayne the Studious does me that honor."

Dreelix scanned the crowd of faces, and found Spontayne sitting in the back, his arms crossed in their usual position and his bearded face in its usual near-sowl. "Is this so?" asked Dreelix.

THE ECOLOGY OF

The Osquip

Rats!

by Johnathan M. Richards

illustrated by James Holloway

"It is," Spontayne replied.

"Very well then, Buntleby. Tell us, of what creature do you bring us knowledge? How might your inclusion into our hallowed ranks benefit the Association?"

"I bring you detailed information on the osquip, its habits, tactics, and usefulness—"

"Osquip?" interrupted Dreelix. "You mean that little rat with the extra legs?"

"The same."

"That's the 'monster' you've studied? A rat?"

"Not just a rat, no. The osquip is far more dangerous than any mere rat. And its potential for—"

"Still, its not much of a 'monster,' is it? Are you sure this is worth our time?"

"I believe it is. Perhaps you will hear me out and decide for yourselves."

"Let him speak," grumbled Spontayne from the back row.

"Very well. You may begin your presentation," said Dreelix, with a nod to the Conjuror Ablasta, who began her spell.

Immediately, a feather quill rose from the table and sat perched above an open book of blank pages at Dreelix's right, ready to record the new applicant's words.

Buntleby turned and addressed the audience. "The osquip, as I will show you, is much more than a rat with an extra set or two of legs. It is an enigma, a puzzle, but one that perhaps holds the key to a question that has plagued many a naturalist over the centuries."

At a table on the left, Willowquisp the Zoophile pricked up his ears, his curiosity obvious to anyone looking his way.

"To begin with, the osquip, while definitely belonging to the rodent family, is more closely related to the beaver than to the rat. This is most obvious in the size and structure of the front teeth, which project outward several inches from the jaw. However, while most rodents have four prominent incisors, two on top and two below, the osquip has twelve. This gives it a fearsome bite, enabling it to cut through solid rock and do terrible damage to its enemies.¹

"Unlike the beaver, though, the osquip has no fur and lacks the beaver's flattened tail. The tail, when present², often closely resembles that of a rat, a fact that no doubt contributes to the commonly-held misconception that the osquip is some sort of mutant rat." With

1. As with most rodents, the osquip's teeth grow constantly and must be worn down through chewing. As the osquip's teeth are strong enough to chew through solid rock, nothing less than rock can wear them down. For this reason, osquips are almost always expanding their tunnel networks, not only to increase their living space (and hiding spots) but also to wear down their teeth.

Occasionally, an osquip's incisors will not be correctly aligned, and it will have either an overbite or an underbite. This occurrence, called malocclusion, prevents the teeth from being worn down properly, and eventually the teeth will grow to such a size that the creature cannot eat and will starve to death.

2. Osquip tails are almost as variable as the number of their limbs. Most are equipped with a rat-like tail a full 12 inches in length, but some (20% or so) have no tail, while others (5% at most) have a short, stumpy tail, rat-like in appearance but with a tail-to-body ratio similar to that of a bear.

this, Buntleby stole a quick look at Dreelix, but the leader was toying with his gavel and made no comment.

"Perhaps its most odd feature is the number of its limbs. All osquips have multiple pairs of legs, ranging from three to five, with three pairs being the most common. The number of limbs varies from individual to individual, and often baby osquips from the same litter will differ in the number of limbs they possess. I have been involved in raising osquips in captivity for close to eight months now, and I have often seen eight- or ten-legged osquips born of six-legged parents, so this doesn't seem to be an inherited trait.

"The osquip makes its home underground and will often be found in sprawling, complex labyrinthine tunnels of their own making. They live in a family-based pack structure, consisting of a mated pair and their various offspring. Osquips breed four or five times a year, producing litters of three to five whelps at a time. The young reach maturity in a matter of a few short months and are often breeding at about six months of age.³ They live for about nine years.

"Osquips are strictly carnivorous, feeding mostly on other small mammals. There have been instances of cannibalism, but these acts are usually against enemy osquip packs; an osquip will never attack a member of its own pack, although they will eat their own dead if they happen upon the body." Buntleby noticed several members making faces of disgust, wrinkling their noses or putting their hands up over their mouths. *Odd reaction from a bunch of self-professed Monster Hunters*, he thought.

"While usually found alone, osquips occasionally make alliances with intelligence subterranean creatures, such as jermlaine. I myself have seen such an alliance in effect, during some field research involving frequent use of *invisibility* and *polymorph self* spells. Such alliances are often dangerous to the jermlaine, not to mention expensive, for

the osquip must be heavily bribed with food and shiny objects, or it will turn on the jermlaine and devour it. However, to a jermlaine, the expense is worth it, for in exchange he receives a riding mount, beast of burden, and watchdog, all roiled into one."

Buntleby cleared his throat and looked around the room. "There is one additional benefit a jermlaine receives in a partnership with an osquip, but it is rather unusual. Nonetheless, it is true, and I report it to you now only in the interests of completeness.

"As I have said before, osquips can, and often do, chew through solid rock. However, their stomachs are not quite up to the level of ability as are their teeth, and the stone is only partially digested. In effect, what passes from an osquip's digestive system has a consistency similar to wet cement, and this substance is used by the jermlaine in a variety of interesting ways."⁴

Dreelix slapped his hand down on the table in front of him. "Buntleby!" he sputtered. "Do you really think we are in the least bit concerned about the alleged uses of... such a substance?" Dreelix was actually turning red in the face.

"I allege nothing; I merely report a fact. If you doubt me, I invite you to see for yourself." He motioned towards Spontayne, who reached beneath the table and brought out a cloth-covered cage. Placing it on the table in front of him and pulling off the cloth, he revealed a barred cage of shining metal. Inside was a hideous creature of pale yellow-gray, leathery skin.

Spontayne opened the door of the cage, and out skittered the osquip. It was of the "standard" variety; that is, it had the most common features of its kind — six legs and a long, rat-like tail. It sniffed the air curiously and squinted out at the surprised members of the Association.⁵

"Gentlemen — and Lady Ablasta — allow me to present Ozzie. Ozzie, be so good as to approach Dreelix at the head table, if you would. He doubts my claims;

perhaps he requires a sample...?"

The creature scuttled across the table⁶ and jumped nimbly to another, making his way toward the head table. As he passed, grown men, wizards and sages alike, backed up their chairs in order to let him by without having him brush against them. The sound of many voices filled the hall, as varied men of learning were simultaneously repulsed, fascinated, or amused by the spectacle.

"Look at that thing!"

"Ugly little sucker!"

"Fascinating! It obeys him!"

"Dreelix will have a fit."

"Most amusing!"

Dreelix pounded noisily with his gavel. "Order! We'll have order in here! Buntleby, call off your beast. I don't want it anywhere near me."

"As you wish. Come here, Ozzie. Good boy!" The creature jumped down from the table and crawled over to the gray-clad wizard, who stooped down and rubbed its leathery head. Ozzie, for his part, sighed contentedly and curled up at Buntleby's feet, rat-tail curled around his master's right ankle.

"Now then, if you're done with your little spectacle," Dreelix said with a grimace, "kindly get on with your briefing. And I would thank you to consider the dignity of those in whose company you find yourself. We are not concerned with tales of the properties of... well, dung."

"But of course, Dreelix. Forgive me, I forgot my surroundings. And let me say that I look forward with great anticipation to the discussion of troglodyte bladders later this evening." The young mage nodded in Dreelix's direction, and received only a scowl in return.

A voice was raised from the side of the room. "Excuse me, Dreelix? A suggestion, if I might, yes?" The speaker was Old Gumphrey, a sage of no small renown. "Perhaps we might dispense with the briefing format at this time and simply put questions to young Buntleby here. Yes?" He looked about the room at his compatriots. "Agreed?"

3. Once at the age of sexual maturity, osquips tend to mate with the nearest available partner, regardless of relationship. Thus, parent and offspring often produce a new generation of offspring, some of whom might end up mating with the original parent. There is a good chance that the odd appearance of the osquip and the variety of tail size and limb quantity is a result of long-term chromosomal damage to the gene pool.

4. Osquip dung hardens after about an hour's exposure to air, at which time it maintains the hardness of stone. For this reason, jermlaine often use osquip dung as mortar to make stone walls, seal off tunnel entrances, and even to fashion sling stones and crude stone implements like axeheads. As for the osquips themselves, they apparently do not have either the intelligence or the inclination to come up with creative uses for their droppings.

5. Osquip vision is somewhat poor, and bright lights, while causing no harm (nor causing any combat penalties), do tend to make them somewhat nervous. They have an excellent sense of smell, somewhat akin to that of a dog, and relatively good hearing.

6. When walking, osquips move rather like insects. A six-legged osquip moves its front and rear legs on its right side and its middle leg on its left side forward at the same time, then follow with its front left, rear left, and middle right legs. Osquips with eight or ten legs walk similarly, moving alternate legs simultaneously so that half of their legs, however many that may be, are on the ground at the same time.

"Yes, an excellent suggestion," piped up Spontayne, looking squarely at Dreelix. "That way you may approach only those subjects you find of interest and avoid those you deem inappropriate."

"Very well," agreed Dreelix. "So be it. Buntleby, perhaps you haven't grasped this idea quite yet, but this association is founded solely for the purpose of obtaining rare and valuable body parts from strange and unusual creatures, useful in the production of magical spells, items, and the like. Look about you, what do you see? Wizards and sages, every one of us. We're not a bunch of mindless warriors, eager to pit our muscles and weapons against the newest monster to come along, just to say we did it. Neither are we cloistered scholars, seeking out knowledge for the sake of knowledge. So, Buntleby, I put it to you: What good is your information about osquips? How might we use the osquip to our advantage?"

"If you wish to limit yourselves in such a way, then so be it." Buntleby cleared his throat. "In a magical sense, the most useful part of an osquip is his teeth. Osquip incisors can be used as substitute material components for the *dig* spell, allowing it to be cast as normal, or it can be used to affect an amount of solid stone equal to half as much dirt normally affected. The teeth are, naturally, consumed in the course of the spell."

"How many teeth per spell use?"

"Two: one upper and one lower incisor from the same creature."

Dreelix rubbed his hands together, and glanced over at the feather-quill to be sure it was getting all of this down. It scribbled away, apparently catching up on what was said, then resumed its upright stance, waiting for further conversation to record. "Now we're getting somewhere. What else have you got?"

"I have found that osquip dung is a perfectly usable substitute for clay in the use of the *stone shape* spell."

"Again with the dung, eh? And are there any benefits to be gained by substituting the dung for the clay?"

"None whatsoever. The spell performs exactly the same way no matter which substance is used. I mention it only to point out there may be times when the spell is required and clay is not at hand."

"And osquip droppings are. And I suppose you suggest that we all start carrying droppings with us for such an emergency."

"Not at all. I merely thought to report a use for what to me, at least, is a common substance."

Dreelix snorted. "A common substance. Do you bring that beast with you everywhere you go?"

"I try not to let him stray too far."

A voice from the back piped up. "Must you bribe him, as would a jermlaine?"

"Were he just my pet, then yes," replied Buntleby. "However, Ozzie here is my familiar, and as such requires no constant bribes for his loyalty."

That comment started up a whole new round of whisperings and mutterings around the room. Buntleby noticed that the feather-quill did not bother recording ail of the side-comments made by the gathered members, but rather it concerned itself solely on who "had the floor" at the time. Duly impressed, he made a mental note to himself to have a talk with the Conjurer Ablasta at a later time.

"Let's move on," suggested Dreelix. "Tell us about combat with the creatures. Is there anything we should know about fighting these things?"

"Only that they are very cunning and will attack any threat to their territory. As I have said, their tunnel networks are very elaborate; and, in a mine or dungeon corridor that contains an osquip nest, there are bound to be many secret tunnel entrances at the floor level from which the osquips can spring on intruders. In addition, most osquip networks contain at least one passage that slopes upward to a height of at least eight or nine feet and opens out onto the main cavern or mine shaft. The osquips use this as an ambush point, where they can leap down upon unsuspecting prey. Then, if the victim puts up a struggle, they scurry off into one of their holes for safety and attack with surprise from a differ-

ent direction, out of a different hole.⁸

"So what is the best defense against the beasts in such a situation?" asked Dreelix.

"If at all possible, get to a position with your back against a wall, where the osquips must attack you from a facing direction. This is not as easy as it sounds, however, as you must ensure there are no ambush points above you, or hidey-holes at your feet, and these are hard to spot in the midst of heated combat. Of course, the optimal place, in terms of defense, is in a pool of water."

"Why so?"

"Osquips are terrible swimmers. Partly this is due to their large number of legs, which tend to hinder smooth swimming strokes. I believe the biggest reason, though, is their diet: with bellies full of partially-digested stone, most osquips tend to sink straight to the bottom."

"Very well then, Buntleby, I believe I've heard enough. You've picked an odd 'monster' for study, but it seems you've researched it well enough." He turned his attention to the members, and formally intoned, "I call now for a show of hands: who supports the nomination of Buntleby of the Western Grove into our esteemed ranks?" After a quick scan across the hall, he said, "Very well, let it be noted that a full majority of members voted in Buntleby on this day. Buntleby, I hereby welcome you into the Monster Hunters Association. Please take your seat, and put your... familiar back in its cage."

Buntleby gathered up Ozzie, snoring gently at his feet, and took his seat next to Spontayne. "Nicely done," said the bearded man to his younger colleague.

"And now, on to the next order of business," intoned Dreelix, in what he considered his most effective and business-like voice. Zantoulios, do you have those bladders ready?"

As they filtered out of the meeting hall, Buntleby felt a hand on his shoulder. He turned, and saw Willowquisp the Zoophile. "A word, if I might, Buntleby."

"Yes, of course," replied the young mage, shifting his position in order to

7. Osquip familiars tend to be a rather rare occurrence. They almost never respond to a *find familiar* spell unless the wizard is specifically attempting to establish a link with an osquip (as was the case with Buntleby). In order to do so, the wizard must include at least 5,000 gp worth of shiny objects — usually coins and gems, and the more highly-polished the better — as material components for the spell. These components are not consumed as part of the spell, but must be turned over to the osquip if it answers the summons. As "bribes" go, this is the only one required to maintain loyalty, for once the osquip accepts the role as the wizard's familiar, loyalty from then on is assured.

It should be pointed out that the above addition to the *find familiar* spell in no way guarantees that an osquip will answer the summons. It is possible that a different creature will arrive to serve the wizard as a familiar, or that nothing at all will appear. DMS, of course, have the final say, but it is worth mentioning that an osquip is more powerful than the average familiar (3+1 HD, with a 2-12 hp damage attack), and might be more appropriate for a higher-level wizard.

8. Osquips impose a -5 penalty to their opponents' surprise rolls when they attack in this fashion.

better balance the weight of Ozzie's cage, inside which the osquip was snoring contentedly.

"Earlier, in your briefing, you said something about the osquip holding the key to a puzzle that has intrigued naturalists over the years. Being a naturalist, I find myself eager to hear more."

"Certainly. It's the matter of the variable number of legs each osquip has. I'm not certain what factor decides how many legs an osquip will be born with, for it doesn't seem to be an inherited trait, but it seems to me that such a limb-variability might help explain a few things taken for granted in the natural world."

"Such as?"

"Take the dragon. It, like most lizards, has four legs, and yet it has wings as well. Anyone taking a close look at a dragon's wings will see that they are a specialized form of limb, much like a bat's. Notice that the bat managed to grow its wings by adapting its forelimbs to that function. But what about the dragon? For a dragon to grow wings, it seems reasonable to me that at one point in its lineage, there had to be a spare set of limbs available to evolve

into wings.

"Another example: look at the kobold and the urd. Are you familiar with the urd?"

"Not at all."

"It's basically a winged kobold. Unlike the bat, however, an urd still has functional arms, and independent wings. Again, those wings had to come from somewhere. Or, take the displacer beast. There is no doubt that the displacer beast is a member of the cat family, is there?"

"None at all, to the best of my knowledge."

"And yet it has two extra sets of limbs: one extra set of legs, and a pair of tentacles. Somewhere down the line, it had a common ancestor with, say, the tiger. So where did it get its extra limbs?"

"I believe the osquip holds the answer. I think that perhaps its unusual limb-number variability is something that has occurred before, in other species. I think that the cat family, at one point, had four, six, or eight limbs, and that eventually the species evolved into your normal four-legged varieties, as well as oddities such as the eight-

limbed displacer beasts and the six-legged cantobele. Yet, none of these creatures today has limb-number variability."

"So you think, over time, this variability stabilizes?"

"It must. I would venture to guess that, many years from now, the osquip as we know it today will be no more, that it will have produced new breeds of creatures, some with six limbs, some with eight, and some with ten. Furthermore, I predict that these three strains of creatures will be separate life-forms of their own, in the same way that a displacer beast is distinct from a tiger."

"And what will the extra limbs become?"

"Who can say? Wings, perhaps, like the dragon? Tentacles? Something new altogether? Only time will tell."

"Time, indeed, will tell."

Otyugh

“Something lives down here beneath the streets, and it’s a lot more dangerous than the rats and spiders. Some say it wanders the slimy sewer tunnels, feeding on whatever happens to fall into its clutches, be it filth or flesh. Our garbage is its sustenance, but that does not mean that it would turn down finer fare. You might make a tasty morsel for such a ravenous beast. Now why don’t you come and join me in the dark... and never mind the stench.”

—Mysterious voice calling out from a darkened sewer tunnel

Anyone who has ever ventured into the sewers of a great city knows to watch out for two common creatures: dire rats and otyughs, although with the latter it has not always been so. Today, these lumbering monsters root around in the refuse of civilization, perfectly happy to consume that which others throw away.

The average otyugh spends most of its day wandering around the sewers, looking for tasty garbage to hoard and devour. While not particularly territorial, rival otyughs sometimes fight over an especially tasty garbage pit or dumping ground. When at rest, an otyugh buries itself in trash and filth, leaving only one of its tentacles on the surface to keep an eye on its surroundings. As a creature that lives underground, otyughs are active whenever they are hungry, but those encountered on the surface (such as in a swamp) are usually nocturnal.

Those who meet an otyugh often do so while exploring a sewer or swamp. In such an instance, the otyugh usually attacks without bothering to communicate, being fearful of outsiders who likely view it as a monster. Those who regularly dwell in their native environment can often

strike up an uneasy truce with these lumbering garbage eaters, agreeing to leave their filth alone in exchange for safe passage. Some even make agreements to provide the otyughs with tasty garbage in exchange for their protection. Such individuals are usually hiding something of little interest to otyughs but that would be considered obscene or profane by surface folk, such as an infernal cyst or an evil artifact.

Otyughs can speak a broken mix of Common and Undercommon and have a generally foul disposition. They know that others see them as monsters, and do not really care so long as they are allowed to feed in peace. Otyughs communicate with one another through a series of tentacle gestures and the release of faint smells into the air. Because otyughs are most often encountered in a sewer, most creatures would never detect their olfactory communication, but to other otyughs, the scents are quite clear. Although less accurate than most languages, an otyugh can communicate basic messages and emotions via scent up to a mile (or more if the receiver is downwind), even through a twisting maze of passages.

ECOLOGY

Despite their odd shape and disgusting diet, otyughs are a naturally occurring creature, not created by magical experimentation or deliberate crossbreeding. Ancient texts speak of large creatures wandering the swamps on three stumps, waving as many tentacles above a crocodile-like maw. Some even theorize that the otyugh is the primordial relative of the crocodile, due to their similar features and environments. Such swamp-dwelling otyughs feed off decaying plants and animals in the swamp. When the sewers of cities became prevalent, many saw these locations as a bountiful feast, owing primarily to the rich fare of the city's inhabitants. Since this migration, otyughs have thrived. There are few predators in a city's sewer greater than the otyugh, placing it at the top of this subterranean food chain. The otyughs are aware of this, and are more than willing to make bargains with their surface-dwelling neighbors if necessary to ensure this security.

Otyughs are born in the same environment that they live in, usually sewers or swamps. After mating, a female otyugh carries the growing young internally for approximately 30 days, at which point the barely mobile, leech-like young crawl into a pouch located on her back. There they live for 6 months, parasitically feasting on her blood, until she expels them from the pouch in a particularly messy process. The independent young are nursed on sewer water and food chewed by the parents until their own teeth emerge 1 month later. A young otyugh spends the first year of its life living with one of its parents (with parents taking turns rearing children), learning the relatively simple skills it needs to survive.

ROLEPLAYING AN OTYUGH

Unlike most creatures that clearly look like monsters, an otyugh can speak. Although otyughs are not too smart, and are generally driven by hunger above all else, roleplaying an encounter with one of these lumbering beasts can make for an entertaining event. Here are a few simple tips to help you with an otyugh encounter.

Treat it like a monster first: When the PCs first encounter the otyugh, treat it like an ordinary monster encounter, emphasizing its inhuman nature, nasty tentacles, and gaping maw, dripping with saliva. Don't forget to mention the horrible stench that follows it like a cloud. If you treat it like a monster first, the characters will be twice as shocked when it actually speaks.

Once wounded, surrender: After the PCs have hit the otyugh a few times, have the otyugh surrender. Merciless characters might cut it down anyway, so be prepared for this possibility, but otherwise it throws its tentacles up in the air and shouts, "Me give up!"

Use broken language: Otyughs are not too bright, and their grasp of language is simple. Avoid large words and long sentences. Make sure to speak in a deep, grumbly voice.

Give it some human characteristics: Although monstrous, an otyugh still has some things in common with the characters. It might ask for a snack or complain about its children. Be careful not to take this too far. After all, a snack for an otyugh might be a rotting leg, and its children might try to eat careless adventurers.

It is also during this time that an otyugh first learns to speak. This event is important to otyughs and is celebrated annually with a feast of the most delectable morsels the otyughs can find. After 1 year, the young otyughs leave their parents' dens to find their own. These first dens are usually close to their parents' at first, but as their food intake grows, they move farther away to avoid competing for resources.

At 5 years of age, an otyugh is fully grown and begins to search for a mate by releasing a cloyingly sweet scent into the air. Courtship is a lengthy affair, with both otyughs offering progressively nicer gifts to the other (all of which are made up of garbage and refuse). After a month of courtship, if both partners are sufficiently impressed, they exchange half of their assembled trophies with each other to seal the bond. Most otyughs mate for life, but they maintain separate lairs, joining one another daily to hunt and spend time together. Most surface dwellers find this behavior truly odd in something so monstrous, but otyughs genuinely show affection for their mates and will take terrible revenge on those who harm their spouses.

Many cities consider otyughs to be a pest at worst, while some even value their presence in the sewers as a sort of

OTYUGH TREASURES

Otyughs place a great amount of value in objects that most other creatures would find worthless. When a group of adventurers explores an otyugh's lair, use the following chart to randomly determine a few objects that can be found on display.

d20	Object
1	Broken weapon
2	Bent shield
3	Rotting barrel
4	Basket full of fish heads
5	Sack of rotten apples
6	Half-used candle
7	Human skull
8	Severed arm/leg
9	Decaying corpse
10	Tarnished silver plate (5 gp)
11	Bent golden spoon (2 gp)
12	Half-empty wine bottle
13	Soiled tapestry
14	Rotting meat
15	Collection of broken glass shards
16	Cracked stone lid of a sarcophagus
17	Length of chain
18	Used torches
19	Rusted kettle with a hole in it
20	Soiled minor magic item

wandering clean-up crew. Otyugh population is controlled entirely by the food supply (or rather, garbage supply). When their population grows too high, otyughs begin to starve and take more drastic measures for food, including foraging outside their normal habitat. In a city, this usually means that the otyughs are hunted by the local militia or adventurers until the population is sufficiently trimmed. In the wild, this overpopulation often leads to groups splitting off to find new locations to feed.

HABITAT & SOCIETY

Whether in a sewer or a swamp, otyughs tend to live a relatively solitary existence, meeting up with others of their kind infrequently. They do not even share a lair with their mates, instead preferring to meet while foraging for choice garbage. Such forays are usually done in

silence, with the only communication occurring through scent. Although they live alone, otyughs do consider themselves part of a loose community of sewer dwellers (or swamp dwellers), which may include non-otyughs.

Whenever there is a threat to their habitat, the eldest otyugh in a community calls for a moot, or gathering. The moot is called by releasing a rather acrid scent, one that all otyughs recognize. Despite any differences or rivalries, all otyughs respond to this call and gather together to discuss the problem and come up with a solution. These moots are chaotic affairs, with each member shouting over the others, trying to get its ideas heard. While not particularly intelligent, otyughs are relatively crafty and can usually come up with a solution to most problems. Most moots are called to discuss a new, and possibly dangerous, inhabitant to the area or to determine what is to be done when the food supply dwindles. Occasionally moots are called to discuss an alliance with a local group or to resolve a territorial dispute before it gets too violent. Although it is a very rare practice, moots are sometimes convened to elect a leader in times of crisis or war. Such a leader is called a lord by the other otyughs and is usually obeyed by other members of the community until the crisis is over.

Otyughs frequently use such gatherings as a time to settle grudges and disputes over territory. Such matters are always decided through physical combat, with the opponents squaring off in a large, open space, while the rest of the community observes and shouts advice. During these bouts, each otyugh is given a single object by the community elder that the otyugh must hold onto throughout the fight. The victor is the last otyugh to maintain possession of his item. As a result,

most disputes are solved in what looks like a wrestling match, with tentacles flailing and huge bodies slamming into one another. The objects used are usually identical, although they vary from match to match (such as a single flower, crumbling brick, or rotten apple).

An individual otyugh maintains a small lair somewhere near its feeding grounds. In a sewer environment, such lairs usually take the form of unused cisterns or basements. In a swamp, lairs are usually made in shallow bogs, surrounded by dense swamp reeds, allowing only one means of entry. In either case, otyugh lairs are by no means tidy. Garbage, refuse, and scraps of food litter the area, making the place smell as bad as it looks. As an otyugh wanders

the sewer, it often finds treasure that it brings back to its lair, piling it up in a place of honor. There are some who believe that anything of value that is thrown away eventually ends up in one of these hoards, but there is little truth to this legend. Otyughs value items differently than most other creatures, and the items they collect are rarely of any worth. This is not to say that an otyugh's treasure never contains anything of value, but those hoping to find riches must first sort through a mountain of trash. For those dealing with otyughs, it is unwise to insult their "treasures," and outright deadly to refuse a gift.

CAMPAIGN ROLE

Outside their obvious roles as a sewer and swamp monsters, otyughs make for fascinating roleplaying encounters. They are frequently aware of all the happenings in their environment and can make for interesting information-brokers. Convincing an otyugh to part with its knowledge is no simple task, as an otyugh does not value money, magic items, or other conventional treasure. Instead, those wishing to deal with an otyugh must often bring it a list of unusual items. While rarely expensive, gathering up a cart full of rotting pumpkins and hauling them into the sewer might lead to the local townsfolk asking some embarrassing questions.

In addition, otyughs collect strange and unusual items, meaning that if something gets thrown away, it might very well find itself in one of their treasure hoards. Locating and retrieving such an item should be difficult, especially if the local community of otyughs is large enough to pose a serious threat to would-be thieves. Characters might find themselves being forced to undertake unusual missions to garner their reward. Clearing up a clogged sewer drain or convincing a butcher shop to dump its leftovers into a particular trash heap might not seem like the work of an adventurer, but it does make for an interesting encounter or side quest.

TREASURE

Otyughs collect items that last, as few things do in their damp environment; the bigger, the better. Metal and wooden objects are the favorites, regardless of their condition. An otyugh might pass up a small gold ring in favor of a metal shield with no straps, valuing such an item based on its size and overall condition, as opposed to its material. A clever adventurer might be able to trade an ordinary helm that is in good shape to an otyugh for a crushed golden crown.

Otyughs also value objects with strong odors, as these are things that stand out in their stinky environment. A basket of rotting fish is worth a lot to an otyugh, but they know that over time, such things lose their stench as they decompose, and value such items accordingly.

SCENT MESSAGES

Otyughs can communicate through scent, although the messages are very rudimentary. The following guide shows some common messages, and what they smell like.

Scent	Message
Rotting fish	Danger is near
Smoke	Come quickly
Flowers	Stay away
Sour apples	I am hungry, got food?
Rancid meat	No food here
Wet fungus	Delicious food here
Rotten potatoes	Bad food here
Ammonia	Time for a moot
Overripe fruit	Looking for a mate
Vinegar	Intruders
Onion	I am lost
Old wine	I am injured and need help

The true treasure of an otyugh's lair can be found on the bodies of their victims. An otyugh will often bring the bodies home to feed on them at their leisure, stripping off their gear and leaving it in a heap. Such items are rarely valuable to an otyugh and can usually be found tossed in a corner or trampled underfoot.

VARIANTS

Otyughs sometimes dwell in environments with dangerous hazards and strange food sources. As a result, some exhibit odd mutations and other physical deformities.

Corpsefeaster: Some otyughs develop a particular taste for the flesh of dead creatures, preferring it above all other sources of food. Corpsefeaster otyughs possess a particularly heinous ability that allows them to vomit forth a shower of rotting meat and bones in a 20-foot cone. Anyone caught in this cone must make a DC 14 Fortitude save or be nauseated for 1d4 rounds. Creatures caught in this cone must also make a save against the corpsefeaster's disease, as if it had bitten them. Corpsefeaster otyughs lose the constrict ability.

Mutant: An otyugh might be born with an extra tentacle (adding one tentacle attack), another leg (increasing speed by 10 feet), or webbed feet and gills (granting a swim speed of 30 and the amphibious subtype).

Oozing: Otyughs that dwell in caustic environments, or those that dine on alchemical refuse, may develop the ability to secrete an acidic toxin through their hide. Any creature that is struck by an oozing otyugh's tentacle or bite takes an additional 1d6 points of acid damage. This additional damage is also dealt on a successful grapple check. Oozing otyughs do not transmit disease through their bite.

Plaguebearer: Considering where they live, otyughs make for natural disease carriers. Otyughs are immune to filth fever, the most common ailment for those visiting the sewers or swamps, and every otyugh is a carrier of the disease. Sometimes, however, an otyugh can become infected with so many ailments that it becomes a plaguebearer otyugh. These disgusting creatures are covered in lesions, boils, and rashes, and anyone in combat with them risks contracting a truly terrible sickness. Among their own kind, plaguebearers are regarded as prophets, and make proclamations (of dubious wisdom or veracity) to others of their kind, who accept these statements as truth. While other otyughs are smart enough to keep their distance, they often help to feed their stricken cousins and use them to punish those who intrude upon their domain.

Plaguebearer otyughs are in constant pain, leading many to believe they are in a sort of rage. Because they lack the proper appendages to sooth their wounds, these wretched creatures spend most of their time mindlessly bashing at anything that moves, desperate to distract themselves from the pain.

SPECIAL ABILITIES

Constrict (Ex) A plaguebearer otyugh deals automatic tentacle damage with a successful grapple check. Creatures that take constrict damage are also subject to the plaguebearer otyugh's disease ability.

Disease (Ex) Sewer Madness—bite or constrict, Fortitude DC 21, incubation period 1 day, damage 1d4 Dex, 1d4 Con, and 1d4 Wis. The save DC is Constitution-based.

Improved Grab (Ex) To use this ability, a plaguebearer otyugh must hit with a tentacle attack. It can then attempt to start a grapple as a free action without provoking an attack of opportunity. If it wins the grapple check, it establishes a hold and can constrict.

Skills A plaguebearer otyugh has a +8 racial bonus on Hide checks when in its lair, due to its coloration.

OTYUGHS ON GOLARION

Otyughs are present in many of the sewer systems throughout Avistan and northern Garund. They are most prevalent in the sewers of Korvosa, where they are used as sewer cleaners in some city quarters. This is due to a lack of proper drainage, forcing the city's leaders to turn to an alternative means of waste disposal. Although efficient, the number of otyughs in the city is growing quite rapidly, leading to a number of breakouts, with hungry otyughs turning to the streets above for sustenance. It is only a matter of time before this situation becomes dire. For more information, see *Pathfinder Chronicles: Guide to Korvosa*.

In the ancient Taldan city of Zimar lives a self-proclaimed otyugh king, lording over the entire undercity. Known as Gulreesh, Lord of Filth, this massive otyugh holds court in a gigantic cistern, and those wishing to enter his domain had best treat him with respect, for it is rumored he devours those who offend him. It is unclear what connection Gulreesh has with the actual rulers of Zimar, but one thing is certain: the rulers aboveground take no actions against Gulreesh or his otyugh servants, leading some to believe that he is hiding some terrible secret about the rulers of the city, and they fear moving against him because of it.

The swamps and crumbling ruins of the Sodden Lands have become a breeding ground for otyughs. All of the rotting plants and bloated corpses of these ruined kingdoms make for a bountiful food supply. In addition, there is something about the area that causes aberrations (such as otyughs) to migrate there. Those otyughs that are born there are more feral than their kin, and many do not have the ability to speak. Not surprisingly, plaguebearer otyughs are relatively common in this rotting wasteland. The hurricane and constant rainfall does not seem to bother the otyughs, some of which may be found upon occasion standing at the shore watching the storm rage. If the otyughs know why this area is so fascinating to them, they are not telling.

OTYUGH

The strong scent of rotting garbage precedes this walking horror. It stumbles on three massive legs that end in flat stumps with broad toes. Atop these is a gigantic mouth full of crumbling teeth that seems to stretch from one side of its broad body to the other. Extending from its trunk is a trio of muscular tentacles that wave menacingly, each one ending in a hooked pad.

THE ECOLOGY OF THE OWLBEAR

**Part bird, part bear,
altogether deadly**

by Johnathan M. Richards

Artwork by Scott Rosema

The two men traipsed through the forest, a study in contrasts. The older man, Griff, had the weather-worn skin of a man who had spent his life exposed to the elements. Gray was starting to show at his temples, yet he strode forward with a confident air, barely feeling the weight of the heavy crossbow he carried over his shoulder or the sword belted at his hip. Colin, on the other hand, was a young lad, cursed with a baby face and insatiable curiosity. He struggled to keep up the pace set by Griff, weighted down by the large pack on his back, nearly tripping over the walking stick he carried with every step.

They were nearing their prey, an owlbear that had taken up residence in the Spinewood Forest and had taken to attacking travelers on the King's Road.

"We're getting near," Griff said. "Take a look at that."

Colin looked at what the older man was indicating, a tree whose bark had literally been shredded in parallel grooves, vertically.¹ He stood staring at it for a while, marveling at the strength of a creature able to dig an inch into a tree with one swipe of its paw, then hurried to catch up to Griff, who had started off again.

After a few minutes' travel, Griff stopped, pointing ahead. "There," he said in a whisper. A cave was visible in the clearing ahead,, its dark interior cloaked in

shadows and mystery. "Quietly now, unpack the gear."

Colin set down his walking stick, lowering his pack to the ground. Opening it, he pulled out a large earthenware jar of honey. Prying off the sealed lid with his knife, he left it in the middle of the clearing, not 20' from the mouth of the cave. Then he backed his way to where Griff stood, at the base of a huge oak, his eyes never leaving the cave for fear that if he did, he would be taken unawares by the beast that dwelled inside.

"Hold this," commanded Griff, passing Colin his crossbow. Dutifully, Colin held the weapon, impressed by its weight. Someday, he thought, I'll wield a weapon like this, and be a fighter like Griff. He often entertained such thoughts, but deep down, doubted that they would ever be more than dreams. His gawky, spindly frame seemed more suited to the life of a sage or wizard, and his insatiable hunger for reading had given him the nickname "Bookhead."

Suddenly realizing he had been daydreaming again, Colin snapped out of it to see Griff on a branch above him, reaching down for his weapon. Colin passed it up. "Leave the stick, and climb on up here," the older man whispered. Colin leaned his walking stick on the far side of the oak, and clambered up next to his mentor.

"How much time do we have?"

"Better part of an hour, I'd say. Owlbears like to sleep 'til noon or thereabouts. Part of their mixed-up heritage."

"Why don't we just go in there, then? Kill it while it sleeps?"

Griff just chuckled. "Kid, you want to live as long as me, you gotta learn not to take chances. Up here, we're safe. Owlbear can't reach us, but this," hefting the crossbow, "this lets us reach him."²

"And we're using honey as bait? I thought owlbeats were strictly carnivorous. Their heads are all owl, according to the illustrations I've seen."

"Yeah, and their bottoms are all bear, but they still lay eggs. Just trust me on this, there's enough bear in an owlbear that it can't pass up honey."³

The two were silent for a while, as Griff readied his crossbow for firing. He had a perfect vantage of the honey jar from his perch in the oak, and yet was reasonably sure that he wouldn't be noticed by the owlbear, even taking its superior senses into account.⁴

The minutes passed, and neither resumed their whispered conversation, not wanting to take the chance of being overheard by a creature that could hear a mouse rustle in the grass across a field.

And finally, their patience was rewarded.

The creature shuffled out of the cave,

reared up on its hind legs, and stretched. Colin was overcome with awe at the massive beast. Seeing it in person was so much greater than studying the inked sketches that were available in the Scribe's Library. The creature stood a full 8' tall, the brown feathers of its owlsh head merging seamlessly into the fur of its body, somewhere past its shoulders and back. The owlbear looked around, and Colin noticed that it did so by turning its head instead of moving its eyes.⁵

Colin held his breath, afraid of being heard up in the tree, but he apparently avoided the owlbear's notice, for it dropped back down on all fours and approached the honey. Soon, it was lapping intently at the jar, seemingly oblivious to all else. Griff took aim, drew a short breath, and let out with a quiet "hoot." Immediately, the owlbear reared up, and Griff tightened his finger on the trigger. There was the quick twang of the crossbow, and the bolt went lightning-quick into the owlbear's right eye.

The screech was incredible. Colin covered his ears with both hands, amazed at the sheer intensity of the creature's death-throes. After what seemed an eternity, but was probably closer to a few scarce minutes, the owlbear dropped to its side, dead.

Griff jumped down out of the tree, landing like a cat. Colin, less sure of himself, climbed down. "And that's that," said the grizzled veteran.

"How'd you know one shot would kill him?" asked Colin. I would have expected it to have taken more to bring down something that big."

"And it would have, too, if I hadn't coated the bolt in poison," replied Griff. "As it was, did you see how long it took to die? He was dead as soon as the bolt hit, it just took him a while to realize it."⁶

Colin was shocked. He had always dreamed of being a hero, and idolized Griff as the epitome of everything he hoped to be himself, someday. But somehow, shooting at a creature with a poisoned crossbow bolt just didn't seem, well, heroic. Sadly, he realized his respect for his mentor had just dropped several notches.

While Colin was overcoming his shock, Griff had pulled out his long knife, and was beginning to skin the carcass. "Meat's not worth much, not the best eating, **but** a bearskin's a bearskin, even if there's only half a bear,"

"What's this?" asked Colin, picking up a tight oval bundle the size of his fist. It seemed organic, and had little bits of bone sticking out.

Griff glanced up from his skinning. "Owlbear pellet. The beasts spit them up like a cat with furballs." Colin dropped the pellet and wiped his hands on his pants.⁷

The enraged screech of an owlbear split the air. Colin jumped and turned to Griff, half expecting to see the beast he was skinning sit up and continue its attack. But

no, the beast was dead, no doubt about it. The ear-splitting call was coming from behind them, from the cave mouth. As the two looked on with growing horror, another owlbear shambled forth on its hind legs, then dropped on all fours and charged.

"Run!" cried Griff, as he grabbed up his crossbow and hurried to load it. Colin was back at the oak and about to scurry up it into safety, when concern for his mentor made him look back. There was a twang from the weapon, and Colin grimaced when he saw the bolt fly past the head of the enraged beast. Then the owlbear was upon Griff, sending the man and the crossbow flying off in different directions with one swipe of its paw.⁸

Colin stood transfixed by the scene before him. Griff lay on the ground, obviously stunned, and the owlbear loomed above him, rearing up, blood dripping from one set of claws. Colin could run, either to the safety of the tree or back the way he came, but either way, his mentor and personal hero was dead.

Or, he could face the owlbear himself and buy Griff some time.

Grabbing up his walking stick, Colin yelled at the great beast, catching its attention. The giant head snapped in his direction, and it came toward the new threat.

Gotta even the odds, Colin thought. If I can blind him . . .

The boy dropped to one knee and scooped up a handful of loose dirt. He flung it straight into the creature's face, and leapt to the side. To his surprise, the owlbear matched his move, not bothered in the least by the cloud of grit and sand.⁹

"Griff!" Colin shouted, as he narrowly dodged a swipe of wicked claws. Sparing a quick glance in his mentor's direction, he saw that Griff was starting to come around. He also saw the crossbow lying in the dirt, its string severed by the owlbear's attack. Swinging his walking stick like a staff, Colin managed to land a blow to the side of the owlbear's head, but the attack didn't seem to bother it in the least. Colin did his best to keep out of the creature's reach, backing up in a circle.

"Griff! You okay?" Sweat was starting to pour into Colin's eyes, but he didn't have the time to wipe it away. Keeping the owlbear at bay was taking every ounce of his concentration.

"Fine," Griff replied, as he staggered to his feet. Out of the corner of his eye, Colin got a look at his mentor. Three long gashes scarred the side of his face, and one eye was covered in blood. Whether the eye itself was damaged or not, Colin couldn't tell, but he couldn't possibly see out of it in his present state. "Keep him busy," he said, pulling out his sword.

Colin tried, but as Griff approached from the side, the owlbear suddenly spun and attacked. Griff did some furious backpedalling to avoid its grasp, and tripped over the carcass of the first beast.¹⁰ Colin jabbed his stick against the creature's head

like a spear, managing to do little damage, but at least drawing the beast's attention away from Griff as he scrambled back up to his feet.

Colin was tiring rapidly. He sensed there was little hope that the two of them could overcome the owlbear; it seemed to sense their every move, and knew that the greatest weapon it faced was the sword, for it turned its attention to Griff every time he approached. The older fighter was weary as well, and it was only a matter of time before one or both of them went down. If I could only keep its attention, Colin thought.

And then an idea sprang to his head. Before he had time to think too much about it, he held his walking stick horizontally out in front of him, and charged the owlbear.

The beast reared up, but Colin dodged between the raised forelimbs and pressed himself against the owlbear's chest, forcing his stick into its open beak. Immediately, he felt himself in the crushing grip of the owlbear's hug, and even though he started to see blackness in the periphery of his vision, he held onto the stick, keeping the monster's beak from snapping at him.¹¹

Colin could feel his ribs starting to crack. "Hurry," he tried to say, but couldn't get the word out for lack of breath. Fortunately, the advice was unnecessary, for Griff had leapt onto the owlbear's back and stabbed down with his sword at the base of the creature's neck. The sword went in deep, and Colin felt the monster's grip slacken a little, even as he felt consciousness slipping away from him. The owlbear bit down in pain, finally snapping Colin's stick in half, and it spun its head around, almost 180 degrees, until it was staring at Griff with its huge, yellow eyes. Griff snarled back at it, and sawed with his sword at the creature's wound. The owlbear dropped Colin's limp form and spun in circles, trying to reach the man on its back, but finally, the beast fell to the ground itself, done in by loss of blood from its neck wound. Griff collapsed next to the dead beast.

Sometime later, Griff managed to crawl back to his feet, and stumble to the backpack. There, he unwrapped the single **potion of healing** he always carried. Staggering back to the boy, he poured it down Colin's throat, and he awoke, choking and sputtering.

"You okay, kid?"

"Yeah, I'm okay. How about you? Your eye!"

"I'll be fine."

"But the potion! You should have—"

"Forget it, kid. You deserved it. That was just about the bravest thing I've ever seen. Bravest, or stupidest, I'm not quite sure just yet. But I'll be okay once we get back to town, and to a healer."

"Should we go, then?"

"Yeah, we should. But first we'd better check out the cave. Just to make sure."

"But if there's another one, we're in no shape..." Colin protested.

"No argument there, kid, but it should be okay. Owlbears might settle down with a mate, but you'll never find more than one mated pair in the same den. Now, cubs, that's another matter, and we'd best have a look to be sure, but owlbear cubs are a curious bunch, and I'm sure they'd have come out to see what all the noise was about."

Cautiously, the two entered the cave. Colin stopped to light a torch from the pack, and by the light it provided, they could see the cave interior was for the most part empty. Over in one corner, though, was a small pile of twigs and leaves, and mixed in with the pile were several white spherical objects two feet in diameter. "Bingo," said Griff. "Eggs. We're in luck, kid. These things go for 2,000 pieces of silver each."¹²

"We'll never carry them all off in our condition."

"Yeah, true, but do you think you could manage one? We can always come back for the others."

"Okay."

On the long way home, Colin hefting the owlbear egg, and Griff shouldering the broken crossbow and backpack, Colin asked his mentor a question that had been puzzling him.

"You know, I read that the owlbear was created by a wizard, a long time ago, as a guardian. And that he combined the strengths of both owls and bears to make his creation as formidable as possible!"

"Yeah, so?"

"Well, I've always wondered about that. You'd think that he'd have created the owlbear with wings. I mean, owls are practically silent when they fly. It just seems odd that he'd have missed so obvious an advantage."

"Let's just be glad he did, kid. Can you imagine if we had flying owlbears around here? I don't even want to think about it."

"I guess you're right."¹³

Notes

1. This is a common sight in owlbear-infested areas. The creatures claw at selected trees with their front paws. This not only keeps their claws sharp, but marks off an owlbear's territory.

2. Because of their great size and weight, owlbears are not good tree climbers. Anyone treed by an owlbear is not completely safe, though, because the beasts are just nasty enough to wait it out, and are often strong enough to knock over the tree, depending on the size of both the owlbear and the tree.

3. This appears to be the only exception to the owlbear's otherwise carnivorous diet. It remains well-adapted to honey-gathering, as its thick coat of fur and feathers protects it from bee stings, and it retains the long tongue of a bear, perfect for lapping up the sticky substance.

4. Like the owl, an owlbear has double

normal infravision, and quadruple normal hearing. In fact, the owlbear's hearing is so finely developed that it can attack normally in total darkness, and similarly can attack *invisible* creatures without penalty. Of course, this can be nullified with a *silence* spell.

5. Indeed, the owlbear's eyes are fixed in its head, looking straight ahead. It compensates for this by being able to turn its head a full 270 degrees, as compared to a human's 180. The owlbear has twice as many neck bones as does a human (fourteen to our seven) which allows for this flexibility. In addition, an owlbear can snap its neck from one position to another almost instantaneously.

6. The rugged constitution of an owlbear allows it to fight on for 1-4 rounds after it reaches 0 to -8 hit points. Once brought to -9 or fewer hit points, however, it is immediately slain.

7. Like owls, owlbears tear their food into chunks and swallow the chunks whole. Inside the stomach, much of the prey is digested, but bones, fur, feathers, and insect shells are churned into pellets, and regurgitated by the beast. These pellets are usually found near an owlbear's lair, and are thus a good indicator of an owlbear's presence nearby.

8. Owlbears, like humans, can rotate their forearms, and this gives them great strength and agility in seizing their prey. It is perhaps this feature alone which gives the owlbear its deadly ability to "hug" its opponents—and, as Griff just found out, allows them to make powerful side-swipes with their wicked claws.

9. Owlbears have a transparent third eyelid (also called a nictitating membrane) that they can flip across their eyes at will. This protects their sensitive eyes from dust, grit, and the like, but it also can protect them from strong light. Light spells are therefore ineffectual as blinding attacks against an owlbear.

10. So acute is the owlbear's sense of hearing that even in melee, it's almost impossible to sneak up on one. Owlbear ears are somewhat unique in that they are asymmetrical; one ear is higher than the other, and this makes it extremely efficient in pinpointing exactly where a particular sound is coming from. This fact has no doubt proven to be very unnerving to many a thief who tried using his ability to move silently to move past an owlbear.

11. Fortunately for Colin, once an owlbear gets a victim into a hug, it cannot use its claws to attack, relying on its crushing strength and sharp beak to kill its prey. Colin's surprise attack managed to neutralize the owlbear's claw and beak attacks, at the cost of automatic hugging damage each round.

12. Owlbear eggs are nearly perfect spheres. There will be from one to six eggs in an clutch; the eggs are laid several days apart. Once the young start to hatch, the parents provide them with freshly-killed meat. Owlbear "cubs" are carnivores

from the start, and even though the mother owlbear is half bear, she does not produce milk for her young. The young will be raised by the mother for the first two years, during which time she will teach the cubs how to hunt for themselves. After the end of the second year, the cubs will go off on their own and stake out their own territory.

13. The suggested revised experience-point value for owlbears with the extra abilities listed in this article is 650 XP.

In addition to the normal owlbear, there is also the arctic variety (hinted at in the *MONSTROUS MANUAL™* book), and, if your campaign world permits it, the winged variety.

Arctic owlbear

CLIMATE/TERRAIN: Any arctic

FREQUENCY Very rare

ORGANIZATION: Pack

ACTIVITY CYCLE: Day

DIET Carnivore

INTELLIGENCE: Low (5-7)

TREASURE: Incidental

ALIGNMENT Neutral

NO. APPEARING: 1 (2-8)

ARMOR CLASS: 5

MOVEMENT: 12, Sw 9

HIT DICE: 8 +2

THAC0: 13

NO. OF ATTACKS: 3

DAMAGE/ATTACK: **1-10/1-10/2-12**

SPECIAL ATTACKS: Hug, surprise

SPECIAL DEFENSES: Immunity to cold-based attacks

MAGIC RESISTANCE: Nil

SIZE: L (12' tall)

MORALE: Steady (11-12) + Special

XP VALUE: 2,000

Arctic owlbears are the polar cousins of the normal owlbear; they resemble a cross between a snowy owl and a polar bear. Both fur and feathers are a snowy white, while the claws and beak are both black. Yellow, glowing eyes look forward from a rounded head. Arctic owlbears speak the owlbear language, made up of loud screeches.

Combat: Arctic owlbears are as foul-tempered as their forest-dwelling cousins, immediately attacking prey with their front claws and wicked beak. They hug for 2-16 points of damage per round after scoring a claw hit with a roll of 18 or better. Once engaged in a hugging attack, the arctic owlbear cannot use its claws, but uses its beak to full advantage. A single attempt to break free from a hug is allowed; use the chance to bend bars/lift gates to determine success.

The arctic owlbear's fur and feathers are all multi-layered, protecting it from the coldest temperatures, even when wet. For this reason, the beasts are immune to all cold-based attacks. Additionally, due to their ability to blend into the arctic environment, they are 75% likely to surprise their prey.

Habitat/Society: Arctic owl bears live in the coldest areas of the arctic, often making their lairs in pre-existing caves or carving their own dens in banks of snow. However, they tend to be wanderers, constantly on the move in search of prey, and so do not settle in one place for very long. If encountered in their lair, a mated pair of arctic owl bears may have 1-6 eggs (20%) or young (80%) with them; there is only a 25% chance of one or the other. The young will be from 40% to 70% grown, fighting as creatures with 5 or 6 Hit Dice. Damage from an immature arctic owl bear is 1-6/1-6/2-8, and characters get a bonus of +20% to their bend bars/lift gates roll when trying to escape from a hug.

Ecology: Arctic owl bears live for about 20 years. They will prey on anything, but prefer seal meat above all else. Unlike normal owl bears, the arctic variety hunt primarily in the day, and, being good swimmers, will pursue their prey into the frigid waters without hesitation. They are well-equipped for their environment—rough, leathery pads on the bottom of their paws help them maintain stability over icy surfaces. The local inhabitants of arctic regions say that there's nothing worse than having an arctic owl bear on your trail, because of their stubborn de-

termination, nasty disposition, and constant hunger.

Winged owl bear

CLIMATE/TERRAIN: Any nonarctic
FREQUENCY: Very rare
ORGANIZATION: Family
ACTIVITY CYCLE: Late afternoon/early evening
DIET: Carnivore
INTELLIGENCE: Low (5-7)
TREASURE: Incidental
ALIGNMENT: Neutral
NO. APPEARING: 1 (2-5)
ARMOR CLASS: 5
MOVEMENT: 12, Fl 18 (E)
HIT DICE: 5 + 2
THAC0: 15
NO. OF ATTACKS: 3
DAMAGE/ATTACK: 1-6/1-6/2-12
SPECIAL ATTACKS: Hug, surprise
SPECIAL DEFENSES: Nil
MAGIC RESISTANCE: Nil
SIZE: L (8' tall, 20' wingspan)
MORALE: Steady (11-12) + Special
XP VALUE: 975

The winged owl bear is the ultimate synthesis of owl and bear. It looks like a standard owl bear, but in addition it has a pair of large wings growing from its shoulders. They are just as nasty-tempered as their ground-dwelling cousins, and speak the same language of screeches.

Combat: Winged owl bears fight as the wingless variety, utilizing their front claws, sharp beaks, and mighty hug. In addition, they are almost totally silent in flight due to the construction of their wing feathers, and this imposes a -6 penalty on opponents' surprise rolls.

Habitat/Society: Winged owl bears can be found in almost any nonarctic environment (when they can be found at all—they are very scarce), but seem to prefer wooded forests and mountainous terrains. Due to their flight capabilities, winged owl bears tend to claim larger territories as "theirs"—usually ten to twenty square miles.

Winged owl bears live in mated pairs. If encountered in their lairs, there is a 25% chance there will be 1-3 eggs (20%) or young (80%) in addition to the adults. The young are identical to normal owl bear young, as their wings will not support them in flight until they are at full size.

Ecology: Winged owl bears tend to live slightly longer than the normal variety, often reaching 25 years or so. They are sought after by wizards, even though to date no one has managed to domesticate one; nonetheless, eggs can go as high as 4,000 silver pieces, while the price for live young can reach 10,000 silver pieces.

Ω

It's "The World's Easiest Role-Playing System™" **TWERPS™ BASIC!** Second Edition

(GMS 10455)

\$3.00

This is where you start! TWERPS™ truly is "The World's Easiest Role-Playing System™": You can learn the basic rules for the game in less than 10 minutes! Character generation only requires ONE die roll—and the *only* die you need is included with the game! It's easy and it's fun, a great break from increasingly complex RPGs, a whimsical change of pace for your game group, and an easy way for first time gamemasters to learn the ropes. This *Second Edition* contains more NPCs and new adventure material—you even get a complete mini-adventure, "Watery Depths" complete with notes for the novice Twerpsmaster!—but we *didn't* mess with the rules! (We wouldn't do that to you!)

And for phantasmagorical fantasy fun...

TWERPS™ MAGIC, 2nd Edition (GMS 10457)

\$3.00

Hocus-Pocus! Alikazoo! Add MAGIC to your TWERPS™ campaign! This *expanded* accessory/campaign set provides complete rules for spellcasting and magical creatures, including the "Book of Spells" and magical record sheet. *PLUS* additional material for fantasy adventuring with TWERPS™! New counters, more creatures and NPCs, new maps—and TWO adventures! It's even more than before for more fantastic fantasy with TWERPS™! (TWERPS™ Basic needed to play.)

A surprised or injured opponent rolls D16 for combat instead of a D20 until he can best your number. A fatigued or dazed character rolls D16 to reflect diminished ability. Really fearsome dragons roll D16s for hit points instead of D8s. These are just a few of the possibilities! Uninked opaques are \$1.00; inked opaques are \$1.50. Uninked Gem™ colors are \$1.50; inked Gems™ are \$2.00.

Owlbear

“Nothing is as angry as an owlbear. Everything is its enemy and its food—from the mouse to the dragon. Nothing scares it, nothing calms it, nothing stops it. To an owlbear, every fight is its last, and it acts as if everything it meets will kill and eat it unless it kills and eats those it encounters first. The owlbear consumes everything it can fit in its mouth and breaks everything it can’t.

“Owlbears can be broken, it’s true, and trained in a fashion as guards. But how secure would you feel, knowing your safety relied upon the mind behind those angry, red-rimmed eyes?”

—from the Pathfinder Society primer
on monsters

Half predatory bird, half angry grizzly, owlbears combine two dangerous creatures in a hybrid form that is brutally efficient at killing. Half-mad from the moment they hatch, owlbears are terrors to anything unlucky enough to cross their paths. They respect only strength, whether that of another healthy male or a savage orc willing to lose eyes, fingers, and blood while trying to tame them. Born of magical experimentation, owlbears are loathed as unnatural and destructive, even by most druids.

OVERVIEW

Male owlbears grow to a bipedal height of 8 feet, and weigh up to 1,500 pounds, although larger specimens are frequently reported. The female is only slightly smaller. Some owlbears are furrier than others, but the majority of them are covered in coarse feathers (over an undercoat of short, thick hairs) which are much prized by scribes to make hardy quills. In all cases the creature has a truly horrid disposition and attacks anything larger than a mouse with which it comes into contact. An owlbear’s attack is a combination of non-retractable claws (which

are at least 2 inches long) and bites with its beak. Though it travels like a quadruped, in combat the owlbear usually rears up on its hind legs, and can even deliver a vicious hug attack. It has the ability to turn its head 270 degrees, which combined with its excellent hearing makes the creature difficult to sneak up on. An owlbear makes an unsettling cry as it attacks—a guttural roar rising to an ear-piercing scream—and communicates its territory to others by a low, growling hoot.

Owlbears tend to lair in nests—huge masses of bones and flotsam that can cover many square yards or encompass large areas of caves or dungeons, which is where they are most frequently found. Owlbears eat practically anything and, like their avian cousins, regurgitate anything inedible in the form of pellets—foul hairy clusters of bone and waste, which may contain treasure. The owlbear is not acquisitive, and any valuables in its lair are incidental to its feeding habits.

Most owlbears prefer to live in cave or dungeon settings—narrow spaces, tight corners, and the dark suit their combat techniques. They are also encountered in forests; these owlbears build huge nests in great trees and mark their territory by raking the huge trunks, often killing the tree and making the lair easy to spot. Such nests are unfortunately a beacon for any owlbear hunter or greedy (and foolhardy) individual. Forest owlbears have occasionally been seen gathering honey from beehives, but apart from their grizzly-like viciousness, this seems to be the only significant bear habit retained by the creatures—they otherwise live on meat. Owlbears hunt by day or night, depending upon the habits of their preferred prey in the region. They usually do not hibernate, but can do so in winter months when food is scarce.

ECOLOGY

Many fairy stories and folk tales, particularly “The Wicked Princess and the Wise Owl,” “Fetcher’s Second Fowl,” and “The Owl Bride and the Bear Groom,” offer plausible explanations for how the creature came into being. Some claim owlbears were created in the dungeons of Hell as nightmares for children, but the most commonly held theory is that they resulted from the dabbling of an insane wizard delving into the very weft of life. Frequent *legend lore* spells have enabled the wise to shed some light upon their origins, the most respected coming from *On the Origin of Monsters* by Erasmos Wedgwood:

“The Spurned One is credited by the wise with creating the first of the owlbears—forming them in his unholy crucible of life where the forms of many creatures were woven. Many fallen creatures created in the crucible were spared the foul hybrid life the Spurned One tried to give them, crawling away to die unseen in the dark dungeons of his lair. Here, however, he wove life between a great cave

CORRUPT REMAKING

Although little is known about the *corrupt remaking* spell, it is rumored to be a twisted version of *baleful polymorph*, which allows the caster to fuse several creatures into a single living thing. Fragmentary notes on the spell mention a *crucible of remaking*, a minor artifact reputed to enhance shapechanging and necromantic magic. Presumably the spell requires holding all affected creatures or creature-parts in the crucible, perhaps with alchemical reagents to encourage certain traits in the hybrid creature, with the overall shape and design chosen by the creator at the time of casting.

bear and a giant owl and gave rise to the first owlbear, a creature which survived from this early corruption and consequently thrived. Some surmise that the Spurned One learnt his dark secrets from the twisted fey and that his dabbings represent the only time a human has mastered the dark fey’s perverting magic school and used a terrible spell of corrupt remaking.

“For a time, these early owlbears served as useful guards for the Spurned One. However, despite brutal training, these first eventually broke their chains and slew all other guardians between them and the safety of the forests and dungeons that surrounded the Spurned One’s lair, and became the ancestors of the owlbear race.”

An alternative genesis, suggested by the conjurer Quarus Mobe, states that the owlbear is the result of a magical accident caused when a wizard with an owl familiar summoned a bear in an area of high latent transmutation magic, resulting in an arcane dislocation that created an owlbear from the two. Mobe goes on to say that, in fact, such accidents are common, but that wizards rarely live to tell the tale. He also philosophized about where the remaining flesh (which he calls “the bear-owl portion”) goes and why no one has ever seen one. This theory has been discredited by the wise, but persists in adventurer gossip and rumors passed by ignorant townsfolk.

Unlike their bear kin, adult owlbears mate for life—the process of finding a suitable mate kills so many that once they find one, another mate is never tolerated or sought. Such is an owlbear’s attachment to its mate that if the mate is slain, the surviving owlbear may drag around the corpse for several days or weeks. It is not unusual to find an older lone owlbear that cherishes (in its kind’s own way) the skull and rotting body parts of a deceased mate.

A mated female lays a clutch of 1–12 perfectly spherical eggs once per year, which incubate for 35–45 days before hatching. Rather than sitting on the eggs (which would crush them), owlbears rest near their eggs and warm them with body heat or exhaled breath, though sometimes a compost-like pile of leftover meat and regurgitated pellets in the lair provides a slow heat source. Eggs fetch

A FRIENDSHIP MADE IN HELL

Orcs have a special affinity for owlbears, admiring their savagery, tempers, and even their red-rimmed eyes. Some orc trainers have established a kind of affection for owlbears in their charge, and it is common knowledge that orcs make the best owlbear trainers. Orcs bearing owlbear-inflicted scars are greatly respected by their own kind, evidence that they have the strength to withstand the mighty owlbear.

It is considered a mark of great status for an orc to have an owlbear pet or mount, and those with more than one are afforded the greatest respect. Some orc tribes keep an owlbear as a mascot, and chiefs have been known to give owlbears names that otherwise might be given to strong orc sons. In some lands, this has developed into a boastful game of who has the biggest, fastest, greediest, or angriest owlbear, and travelers have reported seeing orcs riding garishly adorned, painted, or even plucked and tattooed owlbears.

Renowned orc chieftain **Bakarl Hosk** (CE male orc ranger 13) is a hulking brute with scar tissue covering one side of his face. He gladly tells the tale of how he came to have the injury—finding himself unarmed and facing the owlbear that is now his slave. The owlbear, Kharsk Fugg, is an iron-clad horror (banded mail barding, AC 21, speed 20 ft.) that acts as his battle mount.

OWLBEAR EQUIPMENT

Those able to train owlbears sometimes give them armor or other gear appropriate for their trained tasks. Usually these additions are designed to be very easy to attach or remove, as owlbears rarely tolerate anyone (even their handlers) reaching around and under them to tighten or loosen straps. Some “wild” owlbears still wear leather straps from these devices, showing they actually were once tamed and have since gone feral.

Owlbear Blinders: Used in siege warfare, these blinders restrict the owlbear’s vision to directly where its head is pointing, helping to stop the owlbear from getting distracted and allowing the rider to focus its attention. This gives the rider a +2 equipment bonus to Ride checks made to control the owlbear, but gives the owlbear a –2 penalty to Spot checks. **Cost:** 10 gp.

Thorny Breastplate: This barding is covered in thick metal spikes and is designed to protect the owlbear’s chest, shoulders, and neck, while leaving the limbs mostly free for moving and attacking. It provides a +5 bonus to AC, reduces the owlbear’s speed to 20 feet, and adds +1d8 piercing damage to its grapple attacks. **Cost:** 600 gp. **Weight:** 80 lbs.

around 2,000 gp on the open market. Parents are even more ferocious when defending their eggs; even male owlbears, who drag kills back to their nesting mates, are more belligerent and sensitive to the presence of intruders. Owlbear hatchlings reach maturity after about 2 years. The young are particularly vulnerable to hunters at this early stage—immature owlbears are the easiest to train, and a young owlbear can sell for up to 5,000 gp. This lucrative trade has led to the founding of several companies specializing in professional owlbear hunting—fearless souls expert in the insane behavior of their prey.

HABITAT & SOCIETY

Very occasionally a group of owlbears joins a particularly huge or fearsome male to form a pack. These packs tend to be short-lived, and as soon as the supply of food in the area dwindles, the owlbears turn on each other for sustenance. Owlbear hunters also note that owlbears come together in such packs when they are being hunted. Other than this, or when trained owlbears are kept together, they tend to be solitary or hunt in mated pairs.

An owlbear’s lair is usually a nest of great size, which is crammed with discarded items from its kills. Individual lairs vary greatly depending on available prey and the success of an owlbear’s hunting. One lair could be a vast heap of objects between trees containing wagon wheels from destroyed caravans, tree branches, and bones jutting up out of the main mass. Another could be a huge pit of filth, alive with lice and rot, barely covering a series of small caves filled with eggs. A different beast may lair in a huge cavern filled with a suffocating stench, its nest a chaos of haphazard construction near a churning pool formed by a subterranean river. In general, an owlbear lair has a 25% chance of having 1d6 eggs or young.

CAMPAIGN ROLE

Owlbears tend to be used as chance encounters or as guardians for lairs, but can also make for great infestation monsters, driven out of the wilds by necessity and humanoid encroachment into their habitats.

As noted earlier, owlbears react to being hunted by forming a pack, usually led by a particularly fearsome male. An adventure could take place during a harsh winter with the PCs holed up in a small village that is suddenly plagued by

owlbear attacks. These nocturnal ambushes provide a good hunter-and-hunted type of adventure, with the PCs asked to defend the village. This could then be extended by the sudden realization that the attacks are intelligent, and led by a druid or wizard who wants the locals distracted so he can rebuild a nearby stone circle that lies hidden beneath the winter snow. Conversely, the PCs might be contacted by a distraught naturalist seeking to save the “noble beasts” from bands of greedy hunters bent on harvesting their eggs, forcing the PCs to risk their necks for beasts that are more likely to attack them than appreciate their assistance.

Owlbears make great wild mounts and siege beasts (particularly in the company of orcs) or can be deadly companions of other humanoid creatures. Quests involving hunting, capturing, and even training owlbears may be interesting side treks to a main adventure plot.

TREASURE

If it is edible, an owlbear consumes it. If it can be broken, it is smashed. If it cannot be broken, it is attacked. Treasure tends to be on the paltry side in owlbear lairs. However, so ravenous is the owlbear that its stomach and pellets often contain the majority of its treasure. What is left in its lair tends to be badly damaged (an owlbear gets angry at things in its way), and therefore only those objects too large to be eaten or too sturdy to be destroyed tend to remain.

VARIANTS

Further magical experimentation and a few accidental mutations have resulted in several new types of owlbear.

Arctic Owlbear: These creatures have white fur and feathers (+12 racial bonus on Hide checks in snowy areas), and are at home on ice, snow, and even near-freezing water (swim 30 feet).

Darklands Owlbear: The Darklands are teeming with owlbears. While most of them look like those on the surface, nearly a third have blue or pink eyes and white or pale yellow fur and feathers, much like other darkness-adapted creatures that lose their coloration. Some of these pale ones have darkvision to a range of 120 feet, while others are eyeless and navigate with scent and tremorsense. Whether normal or albino, Darklands owlbears are commonly encountered in Nar-Voth and often seen in Sekamina, where the drow use them as guards or beasts of burden (pacified by charm magic).

Fruss Owlbear: These hollow-boned, magically bred owlbears can fly, though it is difficult and inefficient for them. Easily distinguished from common owlbears by their thicker shoulder muscles and longer forelimb feathers, fruss can fly at a speed of 30 feet (poor). Flying or gliding for a minute or more causes the owlbear to become fatigued. Though strong overall, the owlbear’s

OWLBEAR TRAINING GEAR

Trainers use specialized items in their work.

Enraging Whip: This whip has small caltrops or metal barbs woven into its length and a quartet of metal whistles attached to the fall; when snapped, the whistle sounds like screaming owlbear young. An owlbear’s rider uses this noise to enrage the monster, prodding it to attack the nearest creature. Anyone who attacks an owlbear with such a whip draws its attack in preference to all other targets. **Cost:** 10 gp.

Incubation Stove: Designed by dwarves, this iron potbellied stove is about the size of a halfling. It burns wood, coal, dung, or fungus stalks, and has a large moveable compartment on the outside to hold maturing owlbear eggs. The stoves need constant attention to maintain the right temperature, else the eggs get cooked rather than incubated. Some variations have a spring- or crank-turned device that turns the eggs. **Cost:** 750 gp. **Weight:** 250 lbs.

Target Dummy: Dummies come in various shapes and sizes depending on what creature or race the prospective owner of the owlbear wants them to hate most. **Cost:** 2–20 gp, depending on how durable and realistic the buyer wants them to be.

TRAINING AN OWLBEAR

Owlbear training is, of course, incredibly risky. Trainers use the Handle Animal skill, but the DC for all training checks on young owlbears increases by 5, and by 10 for adults. Training uses the same techniques as those for training an animal. An owlbear can be trained for one purpose just like an animal (typically combat riding, fighting, or guarding), and cannot generally be trained for heavy labor or performance. Training takes twice as long as usual, and a failed check means the owlbear attacks its would-be handler at some point during the training. Even if trained for riding or combat riding, a failed Ride check means the unruly owlbear follows its instincts, usually attacking a nearby creature or even attempting to harm its rider. Likewise, a failed Handle Animal check to get an owlbear to perform a known trick means the owlbear is likely to become dangerous to everyone around it. These habits mean that most creatures allied with an owlbear-tamer give him and his pet a wide berth.

flying muscles are weak, and they cannot carry more than 50 pounds when flying. A fruss can use improved grab while flying, but must immediately land if its opponent weighs more than 50 pounds.

Great Hook-Clawed Owlbear: Living in the Shafts of Lebb, these owlbears have developed huge claws to enable them to climb the endlessly deep dungeon shafts of that accursed place (climb speed 20 feet, base claw damage 1d8).

Screaming Owlbear: Native to the Maelstrom, these creatures are warped by exposure to chaos energy.

Stripped of their base natures as animal-like predators, they are now more like chaos beasts—horrors whose forms are governed by their anger. Screaming owlbears are immune to critical hits and transformation magic.

Siege Owlbear: Bred primarily by orcs from the heftiest owlbear stock, siege owlbears represent the largest and most brutal of their kin. Such grotesque beasts tend to be used as stud creatures by orcs and are much prized by chieftains. The siege owlbear is bred for battle, fed a special diet of magically and alchemically augmented meats from a very young age, and trained to tolerate riders or gear such as small ballistas or catapults. Such owlbears have to be controlled by a rider and tend to be unpredictable—often setting off in a direction that suits the mount more than the handler. Even when dealing with the best-trained siege owlbear, a Ride check (DC 20) is required for every new instruction the rider wishes his mount to carry out, failure resulting in the owlbear doing what it wants (which may include rolling onto its back to dislodge the rider so the beast can attack him); once the owlbear is out of control this way, it takes a DC 30 Ride check to get it to obey again.

TACTICS

Before Combat Like standard owlbears, siege owlbear are fierce and territorial. However, they are generally controlled by handlers and in such situations may be led into combat purposefully by their riders. If no rider is present, the siege owlbear reverts to its natural, untrained behavior.
During Combat The siege owlbear is, if anything, even more ferocious than its smaller standard cousin; it knows nothing of fear and attacks any enemy within reach.
Morale Siege owlbeats that are ridden are generally kept under control and are subject to their riders' commands. In normal circumstances, however, the siege owlbear fights to the death.

SPECIAL ABILITIES

Improved Grab (Ex) To use this ability, a siege owlbear must hit with a claw attack. It can then attempt to start a grapple as a free action without provoking an attack of opportunity.
Rend (Ex) A siege owlbear that hits with both claws latches onto its opponent's body and tears its flesh. This attack automatically deals an extra 2d8+10 points of damage.

Sleeyk Owlbear: Magically bred for speed and agility at the expense of strength, a sleeyk owlbear looks thinner and ganglier than a typical owlbear, though still muscular. A sleeyk has a speed of 40 feet, and Strength 19, Dexterity 18, Run as a bonus feat, and evasion.

Slime Owlbear: First reported by Pathfinder Herastus Quail in the Dungeons of the Mire Queen, this monster's feathers are coated with a green slime that didn't harm the creature.

Sloth Owlbear: Though these monsters don't grow quite as large as normal owlbears, they are still as ferocious as their land kin. Their claws are long and curved, allowing them to hang underneath strong branches and drop on prey. Sloth owlbears are slower than common ones (speed 20 feet) but are strong climbers (climb speed 10 feet).

Spectral Owlbear: A pack of ghostly owlbears called Herne's Vengeance occasionally rises from Estrovian Forest in Mendev on snowy nights. If slain, their bodies vanish at dawn, and locals believe these owlbears are actually undead, though they may be a magical variant with the power to enter the Ethereal Plane.

OWLBears ON Golarion

There are many great forests in Golarion, and these are naturally infested with owlbears to varying degrees. Owlbears are common in parts of the Hold of Belkzen, where they are considered holy, and wander the lands unmolested save for self-defense or when captured by rival tribes not sharing in their worship. Huge owlbears guard the Brimstone Haruspex, and a statue of a two-headed owlbear stands in the Coins district of Absalom. The goblin tribe called the People of the Stirge have 190 songs describing the terror of owlbear attacks, and their tribe banners often depict a savage owlbear disemboweling a goblin.

Varisians praise a wild spirit called the Wise Beast, which resembles a ghostly owlbear. A famous fiddle piece called the "Wild Dance of the Wise Beast" is played on stormy nights around Varisian gypsy campfires, and Varisian birth tattoos occasionally depict the Wise Beast.

OWLBEAR

This creature's heavy bulk is covered in a mix of rough hair and large feathers. It is built like a bear, with long, sharp claws on each foot, but its head is that of a huge owl. The creature's beak is jagged and bloody, and its huge, staring eyes are rimmed with red, giving it a crazed appearance.

TACTICS

Before Combat Owlbears are fierce and territorial. They attack nearly anything that moves which is larger than a mouse, and tend to rush headlong into the fray at the earliest opportunity.

During Combat Owlbears have a well-earned reputation for ferocity and aggression that is almost unequaled, and their tactics tend to reflect this. Normally they choose one target and kill it before changing opponents, though they will switch to focus on opponents that have been injuring them greatly.

Morale An owlbear never flees its nest or young, and they fight to the death in almost every other instance as well.

The Mammoth Lords speak of Ur-Buvos, the dire owlbear. Taller than a mammoth, he is white in winter and brown in the summer, felling demon, giant, witch, or careless hunter with equal ease. He may be immortal, touched by the gods or the same sacred ancient magic that brings warmth from the ground, for elders nine generations back have told stories of his terrible hunger and deadly claws. Other stories say feasting on his warm heart makes a man immortal, and many are the brave would-be heroes who tried and failed to claim this prize.

The Necrology of the Penanggalan

To Lord Briar of Thornwood, Grand Master of the Order of Storm.

Sire:

It is with the deepest sorrow and regret that I hereby resign from the Order of Storm.

True, the vows of paladinhood are supposed to be eternal and only can be taken away by our beloved Deity; yet in my instance, I know that this is simply a matter of time.

Let me assure you and my other brothers that this is not a matter of cowardice or failure to complete my first mission. You sent me to slay the beast of Boltang Swamp, and it is done. I did not hesitate to take this quest, nor did I falter when combat was joined. Strength flowed through my body in response to my prayers, and His aura shielded me from the worst of the beast's attacks. Although I was wounded, my sword found its way into the monster's heart, and now its head rests on a stake along the old swamp road.

Nor is my leaving the Order in any way related to what some of my brothers perceive as my "womanly weakness." I fully realize that you did not share this warped view, but there are several who sneered and whispered among themselves when I made my application. They cared little of my dying father's last wish that I become a paladin like him. Although he regretted not having any sons to follow his example, he did his best to mold me into a true holy knight. Well do I recall your decision to give me a chance, and I thank you for your faith in me, even though so many doubted.

Now my ambition to fulfill my father's wish, indeed my ambition to live, is gone, the spark extinguished; not from cowardice, not from female weakness, but from an all pervasive dooming evil that has consumed my body and soul beyond human aid or assistance. Having been thrown on to this evil path, I can do the only honorable thing, which is to resign, fast in the wilderness, and pray for divine relief from this curse.

It is my fervent hope that this letter reaches you so that others will learn of and avoid this threat's wicked grasp. The fellow I hired to deliver this letter was attracted by the fire at the Abbey, and he seems trustworthy enough. I can only hope that he finds the 20 pieces of gold I gave him enough incentive to make the long trek to Castle Midgard and put this in your hands.

How did this all begin? It started on the day that I slew the swamp beast. I wanted to press on and return swiftly, if for no other reason than to show my doubting brothers that a woman paladin indeed had a place in this world. But old Squint feared that I had been hurt too badly and insisted that we stop at the Abbey of St. Marlowe for the night. The beast had smashed my shield with his great spiked club and it had left my arm flaming with pain, so it took little persuasion to stop and ask for hospitality that night.

I should have known that something was amiss from the beginning. When I rang the bell at the gate, a young servant lady, about my age, came out bearing a torch. She introduced herself as Marla

and advised us that we were welcome but all the friars were absent, having answered a call of distress from Thistledale. It seemed that plague had broken out there, and the Abbey had been left in Marla's sole care. I was quite amazed at her friendliness and lack of fear for one who was all alone.

Looking back on it, I should have seen that this tale was highly improbable, but the pain in my arm distracted me from clear thinking. Why would the friars of St. Marlowe, a celibate order, keep such an attractive servant lady in their midst? She was quite pretty with shining raven hair, blue eyes, and a figure that most women would envy. And why would they not send for the aid of our Order to stem this outbreak of disease? And was it not unlikely for them to leave their monastery in the hands of one servant in a countryside all too well known for its fierce monsters and ruthless outlaws? Oh, would that I had been more alert!

Marla noticed my damaged shield and how I favored my left arm as I dismounted and offered to fix me a hot bath after a good meal. I gratefully accepted, hoping that a good soak would help on the morrow's ride. She then showed Squint where to stable our mounts and directed me to one of the austere apartments that the friars kept for visitors. After lighting the single lamp, Marla bade me take off my armor while she prepared my meal and bath.

The small room was quite plain: a simple bed with woolen blankets and pillow, a wardrobe with two doors, a few pegs on the wall, a chamber pot, and a small table

and candle by the bed. On one wall was a small painting of St. Marlowe, and there was one small window next to the door.

My armor was difficult to get off — some of the snaps and clasps had been jammed by the blow of the beast's club and several of the bands were bent inwards—so I had to call for Squint, housed in the neighboring apartment, to assist me. He had no more success than I, and had to go to the stables where he found some tools. These worked well, but it was obvious that my wonderful blue banded armor was due for repairs at the armorer once we were to get back to Castle Midgard.

Equally obvious was the fact that the beast's club had hurt me far worse than I suspected. Squint was the first to notice it. Just above my wrist were the edges of a large purple bruise. Rolling up my sleeve revealed the worst: it radiated all the way up my left forearm and no doubt it would eventually turn an ugly yellow. I uttered a quick prayer and laid my hand upon the area and the bruise receded a little, and it seemed that it would be a few days before the forearm would be totally healed.

It was while I was contemplating the severity of the wound that Marla returned. As she opened the door, she saw me praying with my hand on my injured arm, and Squint of course was kneeling in prayer as well. I confess that I did not even hear her open the door (nor did Squint), and when she asked in an icy voice whether she wanted her to return later, both my squire and I jumped a little.

Looking at her, I was taken aback by her truly frightening look: her forehead was tightly creased and she positively glared at us. Her face was such a mask of fury that for some reason (instinct? training?) I clutched my holy medallion and attempted to detect for any evil.

Simply put, there was none,¹ which was hardly a surprise. (After all, how could a simple serving girl emanate powerful evil?) Still, her look was so intense that I had to say something, so I said, "Marla, is something wrong?"

"No, milady," she replied stiffly, "I see you want privacy so I shall leave."²

Suddenly I saw what she was thinking, and I laughed.

"No, Marla, it's all right. Squint and I were just uttering a prayer together. Squint is an old family retainer and my squire. He often prays with me when I am healing."

She looked confused for a moment, then asked, "Healing? Are you not a knight, milady?"

"Yes, Marla," I replied, "a knight I am, but did you not notice the emblem on my shield?"

She looked to the corner where my poor shield, though battered, still clearly showed the three yellow lightning bolts. She shook her head.

"Lady Rebecca, I know not these colors."

"Well," I explained patiently, "this is a shield of the Order of Storm, a brotherhood of paladins, holy knights who heal the sick and protect the weak. Our keep is Castle Midgard, two days west of here. You have never heard of us?"

Marla parted her lips slightly and her eyes widened in curiosity and she said, "A paladin? But I only thought men...."

I interrupted: "Generally, yes; but the world is changing, girl. As far as I know, I am the only one in this land, but I doubt that I shall be the last."

At this, she smiled widely³ and stated that she had brought us supper and that a warm bath awaited me when I was done. She then brought in a tray with a bowl of hot mushroom and lentil soup, a loaf of bread, and jug of herbal tea. The smell of something other than cold jerky and dark tack was wonderful and as I took my first sip of the soup, Marla told Squint that his food was waiting in his room.

After my meal, she took me to the monks' bath house where a large tub of steaming water was waiting. Marla insisted on personally attending to me as I was still hurt, and I did not complain. How wonderful the water felt, and how gentle this raven-haired servant was. Best of all, she washed my hair with a delightful soapy mixture that smelled like newly picked strawberries, and after it was dried, my hair, short as it was, looked positively lustrous.

After I returned to my room, Marla loaned me a comfortable, high-necked nightgown, bade me a good night's rest, and left. It did not take me long to drift off into a deep, peaceful slumber.

But, my lord, my sleep did not remain that way. Upon reflection of the last few days' events, the memory of my dream has returned. At first, it was a wonderful dream. There I was on the grassy banks of the River Excelsior. It was sunset and the breeze was cool but not overly so. As the sun reached the horizon, it turned the waters a lovely pink, and then orange, and then red. And then a deep red-like blood—and the hitherto clear waters became choppy while the wind transformed into a long, hot breeze. Then an endless line of heads, bobbing on stakes, came floating down the river. To my horror, I saw that they were all the heads of the beast of the Boltang Swamp. As each passed me by, it laughed and laughed and laughed."

At dawn I awoke feeling absolutely awful — my head was throbbing, my mouth was parched, and my body seemed sluggish. I drained the small water jug next to the bed as if I had not drunk in days, and then tried to get up. As I got to my feet, I nearly fainted, and I had to sit on the bed. What was wrong? A hot bath, good meal, and warm bed (even if the sleep hadn't been all that pleasant) should have rested me for today's trip, but I hardly felt refreshed!

As I pondered this, Marla came in with a breakfast of two eggs, thick sausage cakes, and more of the Abbey's bread. She looked very pleased and happy — her cheeks were all aglow, apparently from the morning chill,⁵ and she had a wonderful sunny smile. As she set down the tray and poured me some tea, she remarked that Squint was already up and about saddling the horses, and that he would be in to pick up my armor to pack it up (since it could not be worn). She talked about some other small things as well, but I paid her no further mind; the warm breakfasty odor of the meal was too much and I ate like I had never eaten before, even the entire half loaf of bread.⁶ When I had eaten all there was, I laid back down for just a few moments because I was still a bit tired, and I promptly fell back asleep.

Some time later, Squint was shaking my shoulder. My loyal squire gasped and asked what in the nine hells had happened. I told him nothing, just a bad dream, and then got out of bed to look for some riding clothes, and promptly fell down on the floor. Squint pulled me up gently, saying that I looked terrible, and that no, I was not all right, and that he was terribly worried. I repeated that I was fine, but then he held me up to the mirror, and sure enough, I was quite pale. Something was not right, and that moment was another opportunity to realize that there was an evil infecting the Abbey (and now me).

Instead, I became plagued with self-doubt and blame. Paladins, once ordained, were not supposed to get ill, yet here I was, quite weak and sick. Had I done something contrary to the Order? Was He punishing me? I had fought bravely and completed my mission, as well as offering prayers of thanks following my victory. Severing the head of the beast and putting it on display might have seemed barbaric, but you had expressly ordered me to leave a sign for any other denizens of the swamp to dissuade further raids. The display, I had reasoned, would also reassure the local inhabitants that law and order had prevailed. Surely this could not be the reason for the punishment?

Squint summed it up in his usual blunt manner: I needed another day of rest, no arguments, no discussion. Over his shoulder, Marla — who had observed all of this from the doorway—agreed. I got up to protest, but it was no good, I could not even stand up on my own accord.

I reluctantly went back to bed and Squint decided to take the day to sharpen our weapons and see what he could do with my armor. I tried reading from my book of prayers but I had trouble focusing, and instead just rested and enjoyed the sunshine and songs of the robins outside. Marla came back twice during the day, once to change the bed linens and empty the chamber pot, and another to bring another fine meal of roast beef and

lemonade. Yet another opportunity to unlock the mystery passed by for had I been able to pay attention I would have noticed that on both these occasions the robins stopped singing and would not return as long as Marla was around.⁷

That night, after another fine dinner and bath, I instructed Squint that no matter what, we had to get back to Castle Midgard. Although I felt only a little bit better, I was determined to return and report on my victory. Also I wanted desperately to speak with Father Matthias to see if there was something that I had done so wrong to deserve this illness and what I could do to atone for it. Prior to blowing out the candle, I uttered another prayer and laid hands upon my bruise and again it retracted, but the weakness and dizziness still persisted.⁸

That night my dreams again started wonderfully, with my charger and me relaxing on a hill and enjoying the colors and smells of fall leaves, but then the top of the hill collapsed inward and we fell for a long, long time. I hit the ground hard and found myself weak, broken, and helpless. Next to me was a blood-red iron coffin, barely illuminated by the light at the top of the hole. Then I saw the small brass label, and its writing was clear: "Here lies Lady Rebecca, the first and only woman Paladin of Storm." Then I heard laughing from above as the light went out, and looking up I saw two small red dots upon a black background. They slowly descended toward me, and as I lay helpless the laughter got louder and the dots became eyes that dripped salty blood all over me.⁹

The morning after went much like the previous day. I could not recall the dream, and I was even weaker. Squint disobeyed my previous day's orders and stated flatly that we were staying another day and that if I were not better by the next morning, he was going to ride to Castle Midgard for help. I was in no mood (or condition) to argue the point. The rosy-cheeked Marla readily agreed and reiterated that we were honored guests and could stay as long as we wanted. She also speculated that perhaps the brothers would return to the abbey that day or the next, and perhaps they could help. (Oh, Lord Thornwood, where were my brains? Why did I not question their absence at the outset?)

By now I was afraid to sleep: while I could not then recall the specifics of the dreams then, I knew they were bad. In desperation I prayed long and hard but got no insight at all. I even tried my power to cure disease on myself (I, who could not be diseased!), and not surprisingly, I felt no better. I did feel a little better that evening when I laid hands on my shoulder and the bruise completely healed and vanished. And of course Squint and I enjoyed Marla's good cooking.

Amazingly, on the third night I slept well. If I had a good dream or vision, I do not recall it now. Nor do I remember if it

was bad, only that I slept deeply, the best night's rest since we had stopped.

And when I awoke, I actually felt a little better. Wobbly still to be sure, but my mind was not as muddled and my fear was gone. But all of this was dashed to pieces when a very concerned Marla came in with breakfast and announced that Squint had left. This made me sit straight up and ask (probably in a not too pleasant tone) what had happened. Marla sat at my bedside and looked me in the eyes (hers seemed so lifeless!) and told me that I had cried out so loudly in the night that Squint, sputtering a slew of Dalish curses, had saddled up, told her that he was riding to Castle Midgard for help, and that no matter what, she was to care for me until he returned.

Well, this was a mess. Here I was actually feeling a little better, and Squint had ridden off. Apparently the fever was beginning to break and it would only be maybe another day and I would be able to ride. Perhaps my application of curing disease had done something after all? In any case, I was frustrated and humiliated as I realized how ridiculous my first adventure would turn out. Instead of riding in to the castle in glory, a rescue party of healers would have to come and get me! No doubt they would insist on bearing me in on a litter. This was awful.

And what made it worse was that there was little I could do about it. Although my spirits were up, my body was still weak, even with my laying on of hands and Marla's cooking. I simply did not have the strength to ride yet. But I did persuade Marla to help me out to a chair in the courtyard where I could enjoy the sunshine. Of course she insisted that in return I had to allow her to prepare me a bath that evening, and of course I agreed readily.

This brings us, my Lord, to the final night, the time when I discovered the evil that was infecting my body and soul. And I am sorry to say that I missed the final clue that would have revealed the curse of this place. The clue was in the bath house itself and seemed insignificant. After I had taken off my nightgown, slipped into the warm, soapy water, and begun to wash, my hands ran across some small scabs at the base of my throat.¹⁰ I asked Marla what she could make of these, and she said that apparently I had been bitten by mosquitoes at some point. She suggested that perhaps they had been the cause of my illness. At any rate, she said, they looked well healed. I though no more of it and enjoyed the rest of the bath.

The night's rest was short. It started with peaceful slumber, but soon reverted to an evil nightmare involving a flooded river of blood with me nailed to a circular wooden raft. As it spun in the wild current, I heard a roaring sound, that of a waterfall, and then I was falling down into a wide-opened mouth filled with incredibly sharp teeth.

And as I fell to my doom, I prayed hard and saw that what surrounded the mouth was a face. It was a familiar one: that of Marla, the Abbey's serving girl and my good hostess these past days!

With a shriek I tore my hand free and slashed and cut. But no longer was I on the raft of doom. I was in my room and I was clutching the dagger I always kept under my saddlebag or pillow. My breath was ragged and I scanned the dark room but all I could see was a veil of black with two glowing red eyes. And my breath was not the only rasping sound in the room. Tentatively I reached out with my detection of evil and was repulsed by a sickening glow of pure, seething evil.¹¹

With a hiss, the thing swooped at my throat, and I quickly kicked out of the covers. Simultaneously I grabbed my pillow with my free hand and held it out like a shield. Whatever it was hit it with a thump and a snarl. I rolled out of bed, releasing the pillow and leaving the monster choking on feathers. I fumbled with the door to the stand up closet, then got it opened, and reached for my sword, only to find it gone.

Something hit me in the back of my head and knocked me sprawling into the closet, and I nearly passed out. But I knew that to give up would mean death. Gasping, I got to my feet. The monster was just above the bed and it sounded like it was having quite a time with the pillow. When she got it out of her mouth, I knew she would try again. I saw the crimson eyes again, and they were staring at me malevolently. Slowly they weaved back and forth, and I rued the day that I had declined Sir Tristan's offer to teach me how to fight blindfolded. It would have made this a little easier, but at least the eyes (not to mention the amazingly strong glow of evil) helped me focus. In the darkness of my apartment, I could even see what appeared to be a black glow.

All I had was my dagger. No armor, no shield, no lance, no sword... just a dagger. And judging from the blow that nearly felled me, Marla had something else at her disposal.¹² What was I to do? Then it came back to me: your words at my ordination, that no matter how desperate the struggle, no matter how naked and afraid one might be, and despite a lack of strength or weapons, the paladin's greatest asset was his mind and his ability to think, reason, and-if necessary-outwit the forces of evil. So I thought, reasoned, and came up with a plan.

"Come, you twisted bit of nothingness and taste my blade!" I cried. Cackling horribly, the monster hissed and made right for my face. Just before it got there, I fell straight to the ground, and the back of the wardrobe resounded with a satisfying crack. I reached up quickly and slammed the closet door shut, and thrust my dagger between the two handles, effectively locking the creature in the wardrobe.

Oh, what a thumping and pounding she caused! I thought that she would shake the wardrobe to pieces and for a moment I doubted that the dagger would hold, so I fled with the crashing on the thick oaken wardrobe walls ringing in my ears.

I found a lantern and looked for my missing equipment. It was in a barn stall along with Truscott, my noble steed, and Brandy, Squint's mare. Neither looked like they had suffered from whatever this evil creature was, but then I remembered: Squint had left, according to Marla, so what was Brandy doing here?

Taking the lantern, I went back to the small apartment where my squire had been housed and opened the door carefully. Squint was still there all right, sprawled in his bed, dead white, with two puncture wounds in his neck, right where the "mosquito bites" were on mine.¹³ I had seen death before, but never had one so close been lost to such a foul monster, and I burst out in wracking, heaving sobs. Why had I not seen through this foul thing's guise?

It took me at least an hour to gather myself, and by then the dim glow of dawn was lighting the horizon. I felt exhausted, but I knew that I had to drive myself to see what other horrors were lurking in the abbey. All of the brothers' cells were empty, and the chapel was in reasonably good order, although it had not been cleaned in some days. But in the basement I found them. Each and every one of the peaceable brothers of St. Marlowe were dead, killed in the same way as Squint, and they had been stacked in the wine cellar like so much cordwood.¹⁴

By now, I had precious little energy left and it was good to find the Abbey's healing room. I took two of the brothers' potions and immediately felt the pain recede from the back of my head, where the monster's tail or whatever it was had struck me. But I still felt far weaker than I should have, and a third potion did not help at all.

Weak or not, I still had to confront the monster and put this matter to rest. So I took my sword and went back to my room. At first, I was shocked when I saw the wardrobe laying on its side, but then saw that the dagger holding it in place was still in place. I thumped it on the side and immediately it began to bump and shake again. For a moment I considered leaving the creature there and riding for the Castle to get your aid, but then I had visions of Squint riding by my side and telling me stories (for the 37th time) of my father's glorious quests before he had gotten married and had a daughter. My eyes misted over, knowing that I would never see Squint again, and that decided it for me. I did what my father would have done.

"Be still, evil one, I will let you free," I said, "and know you that it will be a short freedom, for today I shall destroy you."

With that, I reached down, removed the dagger, and jumped back, sword in one hand, dagger in the other. The doors immediately banged open and out she came.

Never, my Lord, have I seen a more despicable, unholy sight. It was indeed Marla, but only her head attached to a slimy, tapered, black appendage that was a little longer than my sword. Two of Marla's front teeth were incredibly long, much like the fangs of a snake, and she hissed and gurgled as she flew about. I swung at her, and the creature easily and quickly backed away, chuckling wetly.

But its laughter was short-lived because as soon as she retreated, she flew right into the sun's early morning rays coming in the apartment's window. And as soon as that happened, Marla gave a sharp gasp and the entire fell creature, head, tail, and all, fell to the ground with a thump and did not move.¹⁴

This was truly amazing, and I was immediately suspicious and thus approached cautiously. This was too easy, yet it just lay there quite still, although still making damp gurgling sounds. Even when I pricked the thing's black tail with my sword, it did nothing. So, I thought, you don't like light, do you? Well, let's get you nice and warm. And so I sunk my sword into the black tail, picked it up, and took it outside in the yard, leaving a blood trail all the way out.

Now its muttered curses grew louder, and if it could have squirmed away, I'm sure it would have done so. But it just spluttered away with curses I supposed, for I could not understand any of its warbly speech.

But then, yes, I could make out that it seemed to be calling my name. So I pinned the black part to the ground, and knelt by Marla's face, dagger ready to thrust right into her eye if she made so much as one move. Incredibly, there was a fresh slash just above the left eye from my first dagger cut, but there was not even one drop of blood showing from this wound. Yet on the tail, there was still bright red blood flowing from where my sword had pierced it. This was truly a horribly mystifying monster.¹⁵

"Rebecca," it croaked, in such a horrible way that I barely understood the words, "come here, I would talk to you."¹⁶

"What is it, you fiend? A plea for mercy, perhaps? You will surely be disappointed," I replied, waving the dagger right in front of her eye.

Marla seemed to gulp and then smiled, "Ah, you don't understand, milady. Soon you will be with me in sisterhood., just like me. Nothing can stop it. I have tasted your blood, and it is just a matter of time. It is inevitable. You will drink blood just as I have, and you will enjoy the taste forever. Now, please, let me go back to my body."

"Rubbish!" I cried. "Never, do you hear? I am a knight, a paladin of the Order of

Storm! Nothing could ever make me like you!" I gave the head a solid kick, but that did not silence her. She laughed a horrible, gurgling laugh.

"Little one. You don't know what you are saying. There are powers greater than you. Shout all you want, but it will happen. Feel your neck."

So I did, and in spite of all the curing, I could still feel the marks and I could sense within myself the brutal truth. I had been healing myself for days, and I had drunk enough potions to bring huge Sir Bertram back from the dead, but my strength and health had not returned. In fact, all had gotten steadily worse. There could be only one answer: I was infected with evil — paladinic powers notwithstanding—and now I was apparently doomed to the worst of fates: being like the drooling thing at my feet, an undead feasting on the helpless whom I was sworn to defend.

The rest of my tale, Lord Thornwood, is as brief as my remaining days among the living. I did a thorough search of the rest of the abbey grounds and in a shed of gardening tools I found Marla's headless body. I could even look down into the body cavity and seen that her organs were all dried and withered. And I took this body, that of Squint, and those of the priests and stacked them all atop Marla's head. I confess that it took most of my remaining energy to do this, and I had to rest for a good hour before I could muster a little strength to douse the pile with oil and set it ablaze. Marla shrieked and cried pitifully, but I cared not.

Although Truscott and Brandy did not look like they had been harmed by Marla, I did not want to take any chances if I were to become like her, and so I set them free. I then burned the rest of the abbey as well. No doubt it was somehow infected with the same evil as I was, and only the purifying cleanliness of fire could assure anyone that the grounds were free of Marla's curse.

As for myself, my Lord, I regret that I fell prey to such a horrible fate, but I cannot run the risk that I would return to become an avenging evil spirit among my brothers. I will therefore make my way as far from Castle Midgard as I can, but if any of the members of our Order should meet me, they should know, from the account of this letter, what I am and how to go about destroying me.

In the meantime, this peasant is waiting for me to finish this letter, and I must be off. Please have the chaplain pray for my soul, and if Marla's prophecy is true, seek me out soon before I unleash myself.

-Rebecca of Kryptgarden

Lord Thornwood sighed, then shook his head. "Sir Kaye!" he bellowed.

"Sire!" answered a hard-looking knight.

"Get you to the Beastmaster and tell him to ready our griffons with two days' rations!"

"All of them, my lord?"

"Yes. Now hurry!" Lord Thornwood replied tersely. As Sir Kaye trotted off, he called out again. "Sir Tersted!"

"Sire!" Another knight stepped from the shadows into the light of the Grand Master's dais.

"Go down to the chapel and disturb Father Belding's prayers. Give him my apologies, but then advise him that he is going to take a griffon ride with Sir Bertram, Malerius, and me, as soon as he can get ready... which means in 15 minutes, no complaints, no excuses!"

Sir Tersted nodded and headed quickly for another hallway.

"Sir Tersted, one more thing!" called Lord Thornwood.

"Milord?" The other knight stopped and turned around.

"Tell Father Belding that if he does not have a dispel evil spell quick at hand, he had better come up with it before we leave or he will have to take along one of his precious scrolls!"

"Aye, milord!" Sir Tersted returned to his errand, running off down the corridor. "Sir Bertram!"

"Yes, Lord Thornwood?" replied a huge, bearded man with an unusually large battleaxe at his side.

"Old friend, go on up to Malerius' tower and tell, er ask, him to join us, and if he wouldn't mind, he needs to bring along that crystal ball of his if we have any chance of finding her."

"Finding her? Finding who, milord?"

"Bertram," Lord Thornwood whispered, "a fellow paladin, our only sister, is in trouble, and we are going to save her soul."

Sir Bertram nodded solemnly. As quickly as he could, he lumbered away to find the mage and his crystal ball. Ω

FOOTNOTES

1. While in human form, the penanggalan exudes the alignment it had in its previous life. Thus Lady Rebecca's detect evil ability did not work. Had Rebecca been a wizard or cleric casting a *know alignment* spell, she would have learned the alignment it had in its previous life, but that is all. The same applies for the clerical *true seeing* spell. Note that had Marla had an evil alignment in her pre-penanggalan days, Rebecca's ability might have worked if Marla had been strongly aligned and intent upon evil actions previously. About the only spell that works reliably with these creatures is the wizard spell, *detect undead*.
2. A creature of the Nine Hells, a penanggalan is incapable of showing feeling or articulating love in any form. Yet it is intelligent enough to realize that love is something that should be experienced and desired. Being incapable of love in any form, a penanggalan becomes furious if she witnesses any intimate act,

however innocent, between a couple. From that moment on, the female of the couple will be singled out for the vampiress' attention, even ahead of a female of a higher charisma. The male will also be targeted for a later attack, and the monster will not rest until both have been death with.

3. The penanggalan will always prefer a female with high Charisma as its victim above all other females (except one who has shown affection to a man). Hence a female paladin is the victim of choice due to her high Charisma and her strong lawful good alignment. Although the paladin's protection from evil aura and +2 bonus to saves makes such a conquest risky, the penanggalan will go to great lengths to make her an undead sister.
4. Victims of a penanggalan are always attacked while asleep. If they fail their saving throw (with a -3 penalty), they are effectively hypnotized and acquiesce to the monster's draining attacks without awakening. Nothing is remembered from the experience, but victims often have horrible dreams of blood, corpses, and other ominous images.
5. Another subtle clue that one is dealing with a penanggalan is her complexion. Prior to feeding, it is rather pale. Up to ten hours after draining a victim, however, her complexion is rosy and flushed. This is even noticeable with penanggalans of all but the darkest skins.
6. Although weak and dizzy, a penanggalan's victim always awakens with a tremendous hunger and thirst. And although satisfying the body's appetites is an attempt to recover the lost hp, Strength, and Constitution, once the process starts, it is inevitable.
7. Animals are generally good at knowing when something is not right. They usually flee at the sight of undead, and although they won't do so when in the presence of a penanggalan in human form, they will slink or fly away just on their instinct that it is not a friendly person. No matter how hard a penanggalan tries, it cannot attract an animal to come to it.
8. Although lost hit points due to "non-penanggalan wounds" can be restored by magical curing spells, potions, and abilities, the hit points, Strength, and Constitution drained by this horrible vampiress can only be restored after a *dispel evil* spell has been cast upon the victim.
9. After the first attack, future attempts on a victim entitle her to another saving throw, but with an additional -2 penalty (hence the second night's attack is at -5, the third at -7, etc). Note that the paladin's +2 bonus on saving throws still applies against these penalties.
10. If a penanggalan leaves a victim alone one night, the cumulating -2 penalty

from consecutive attacks no longer applies, and the victim's saving roll is subject only to the initial -3 penalty from a first night's attack.

11. When the head is detached from the body, the penanggalan's strong evil alignment is quickly revealed by any *detect evil* or *know alignment* spells. Note that a victim awakening from a penanggalan feeding is almost completely unheard of: only someone very strongly aligned with good has any chance of doing so.
12. The black "tail" of the penanggalan's head has a strength of 19 and is used as a whip to snag and choke victims, causing 1-4 hp damage (+7 for the 19 Strength) each round. In total darkness it glows with an eerie black luminescence.
13. While the penanggalan will slowly drain a female victim over a period of several evenings, she will kill a male victim outright in one night's feeding.
14. A penanggalan typically inhabits desolate, deserted places, such as abandoned buildings and graveyards. Yet if she can get away with it, she will take up residence in an inhabited area, such as a wayside inn or monastery, to wreak havoc and feed for several nights running.
15. The greatest weakness of this undead monster is its absolute vulnerability to sunlight, for once that strikes the penanggalan while in "head" form, it falls to the ground paralyzed and helpless.
16. The tail of the penanggalan is a reservoir for blood that it has taken from its victims. It serves the same function as a camel's hump, although it can also serve as a whip-like club with a strength of 19. No other part of the penanggalan will ever bleed, even when in human form. This is another way to find out if one is dealing with one of these creatures, but such a method has obvious risks, particularly if the object of the experiment is *not* a penanggalan!
17. While in "head form," the penanggalan speaks in a gurgling manner that is barely recognizable as Common. A listener who makes an Intelligence check can understand the speech, but the monster's conversation is about impending doom of the listener or the joys of being undead.

The ecology of the **PERNICON**

by John Nephew

(The following are excerpts from the diaries of the Emir of Yandark, later High Sultan of Kiralsh, Jesouhd Ye'esif.)

During my recent visit to the eminent Colonel Endrivan of Olcoran, once an adventuring companion of mine and always a friend, he expressed some interest in a creature he had heard lived in the Iriahb Desert of my homeland. This creature, the insect known as the pernicon, captured his interest for the water-divining powers which have made it known. We discussed the topic for some time, since I have had some experience with the creature in my desert travels. It seems to me that little is commonly known about the pernicon, and many "facts" about it have been distorted. Since visiting with the colonel, I have taken some interest in the particulars of the creature and learned what new things I could of it. I record here that which I have learned, and hope the knowledge will be of use to the desert traveler and naturalist, and of interest to others.

The pernicon is in basic form similar to a locust, or grasshopper, of about two inches in length. There are several points that distinguish it from its smaller cousins. Coloration is vastly different, with red, yellow, ochre, and blue being common, as well as some rarer shades among those, such as orange-yellow or greenish-yellow. Another difference I have seen is that the pernicon lacks wings — it is a crawler and jumper.¹

The pernicon lives in the outer reaches of deserts, probably so that it has a supply of vegetable matter available for consumption when there is a lack of animal life²; again, unlike the grasshoppers and locusts, it is truly an omnivore. The creature feeds on

animals by jumping on them and clenching exposed flesh (or soft body parts, in the case of some creatures) with pincers at the rear of its abdomen. Through this, the insect drains the fluids of the victim — and often its life.³

The pincers continue to siphon out one's endurance even if the insect is slain, and removal of the pincers is a delicate and painful task.⁴

Though they are small and weak, the trouble in killing pernicons lies in **hitting** them, because of their size and swift hopping. Always beware those pincers; a pernicon dodging your blow may at the same time be launching its own attack. Of course, a pernicon that is attached to you makes a much easier target.⁵

One seeking these creatures should hope to find a small foraging group of pernicons, rather than the thousands that infest a lair. Though one or two cause little trouble to anyone with fighting experience, a large group poses a threat even to the most able of warriors.⁶

The lairs of the creature are found near the desert's edge⁷, as mentioned before, near their plant and animal food supplies. A lair almost resembles a town, being made of many mounds resembling large anthills raised from the sand.

I caution the reader to remember that they are **hills**, with burrow entrances. Make sure that they are just that; near many pernicon "towns" are the pits of ant lions, which are giant insects of greater power and aggressiveness. Those ant lions living in

such places often feed on pernicons which leave the lair to forage, though a little variety in the ant lion's diet is welcomed. On occasion, the ant lions become the prey rather than the predator. Once I saw a huge swarm of pernicons attacking one, covering its body and draining its life. I would guess that it had dug unwittingly into one or more of the pernicons' tunnels and was paying the price of annoying the occupants.

This brings me to the mention of their tunnels. The burrows from the mounds go down at least six feet, to where the ground is more firm. It is here that the pernicons rest, breed, and spend much of their time. They dig long tunnels, each usually no more than half an inch high — which is ample space for the insects. I have heard from some men and women of the desert that the pernicons, by their water-detecting powers, tend to dig down where there is a supply of ground water. I would suppose then that in some places there would be tunnels going down a hundred feet or more! The learned sage Elkir Hildar of Ye'nassa told me that they need these humid "wells" to lay their eggs in, lest the eggs shrivel up and the young die before birth.⁸

After the pernicons have eaten all the food near their "town," they move on to another location, abandoning their old lair to seek a new place with more food. The entire colony moves at once — a great multicolored blanket moving across the land: crawling, jumping, devouring everything in their path until they find a suitable site for a new tunnel complex.⁹ Hundreds die on the journey, but hundreds more live. They are the hated enemies of farmers and those who live off the fertile land. As they eat plants around their new "town" in great quantities, they enlarge the desert.

But just as the farmers loathe them, the nomads and travelers of the desert treasure them almost beyond gold. The antennae of the creature have a curious water-detecting power. When within two score yards of great amounts of water¹⁰, the antennae vibrate and hum.

The creature's water-divining power has

been cause for much speculation and theorizing among sages. It does not seem to be magical in a strict sense; many bards consider a sunset magical, and augurs see magic power in the flight of birds and the entrails of beasts. This is, however, no place to argue the difference between "magical" and "natural." No magical power is required in the preservation process. Through the length of the antenna from outer tip to anchor is a clear, oily liquid. In the presence of the elements of earth and air it remains still, but water causes the fluid to become agitated, vibrating the antenna. Close contact with fire renders the liquid a brittle solid, which has no divinatory powers. The sage Carthin of Ethrenor speaks of each element having its own radiation (similar to the energy of the Positive and Negative material planes), and suggests that the antenna's content is sensitive to the radiations of the water element.¹¹

Among many nomadic tribes, the pernicon antenna is a sacred religious object offered by some shamans to their deities for water.¹² To some desert cultures, the insect itself is sacred and is the symbol of deities. The ancestors of one nomadic tribe I know of sacrificed criminals to the pernicon swarms. It is ironic that while some hold the pernicon sacred for religious reasons, among other groups (most notably the royalty and very wealthy classes of my land) the pernicon is sacred for culinary reasons. There are several ways to prepare the insect, though always the antennae and pincers are removed. In my favorite recipe, the pernicons are fried in olive oil and served with salt and camel butter. Cooked properly, they are light, crispy and delicious; furthermore, they are a status symbol indicating great wealth. Attempts have been made to domesticate the creatures, but none yet successfully.

Despite being a culinary delicacy, even more valued are the creatures' antennae, as mentioned before. It is not easy to find them on the market. Near the eastern edge of the Iriahb Desert, in the city of Grindar, they are sold for considerable sums of money, but they are often improperly preserved (disintegrating in the buyer's hands moments after being purchased) or were not correctly removed from the creature (and thus are completely useless). In all likelihood, you will have to find and preserve the antennae yourself to ensure their quality.

The first problem, once you have found and slain the pernicon, is the careful removal of the antenna. The antennae have a bulbous portion not far below the outside of the skull. This anchors the antenna, but still allows it movement. There are tiny muscles in the anchoring chamber. With them, the antennae may be moved together or in different ways. This is helpful in finding the direction of water. One antenna is aimed one direction, and the other the opposite. The creature can detect the most minute difference in the frequency of vibration, and the antenna vibrating faster is closer to the water. Humans using an antenna have to

move around, with the antenna indicating the direction of the source.

Beneath the "anchors," the very bases of the antennae are short, thin projections with rounded tips. Each tip touches a sensitive, rubbery tissue atop the creature's brain. This tissue detects the vibrations of the antennae (if any) and the direction it is aimed, and sends them to the brain, which can interpret the signals.

To correctly remove the antenna, the skull must be pulled apart to either side of the anchor, and the antenna cut free from the muscle tissue and removed. Most professionals use a special tool, a spring-tweezers, to remove the antenna; if these are not available, the next best things are some of the more delicate instruments found in most sets of thieves' tools.¹³

Though small and delicate, an antenna lasts quite a while if you care for it well. If allowed to become damp, it disintegrates. It is by nature dry, and immersion in water causes it to explode harmlessly.

An antenna is also brittle, and crumbles to dust unless handled with utmost care. It is good to have it stored carefully and used only when necessary. The Bilndiah nomads have a simple but effective means of storing their antennae, which I use myself and recommend to all travelers. They use a bone map case, in which is placed a roll of camel hide (with plenty of cushioning fur) around the antenna. It does an excellent job of protection, so that the antenna will usually remain intact even if dropped quite a distance;¹⁴ it also keeps the antenna silent and still when not needed. If the case is watertight, it is even more useful. Some folk, such as some merchants I know, prefer metal or wooden cases, often inlaid and decorated with precious metals and stones.

A last word of advice must go to the traveler: The antenna can only detect water — if there is no water near, the antenna is of no more use than another grain of sand.

Notes

1 — The distance that a pernicon can jump varies greatly. This author suggests a base horizontal range of 10' and a vertical range of 5'. These figures should be adjusted at the DM's discretion, in consideration of such factors as wind speed and direction, and temperature. Pernicons function more sluggishly in lower temperatures, but this is not generally a factor in their desert environment.
